At the annual business meeting of the Physician Veterans of World War II, on May 20, 1949, the following resolution was unanimously approved:

"Whereas we have served under a regime of regimented medical care and found it to be ideal for combat wartime conditions but totally inadequate and too demoralising for both patient and doctor in peacetime conditions: Be it so

"*Resolved*, That we, the Physician Veterans of World War II do hereby declare ourselves completely opposed to any form of compulsory medical insurance care and are specifically opposed to the plan proposed by President Truman as expressed in S. 5."

EUGENE J. MCDONALD, M. D.,
Secretary-Treasurer, Physician Veterans, World War II.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1949

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter from Ralph Teetor, of Hagerstown, Ind. Mr. Teetor has given much time and thought to the problem of Federal aid to education, as the letter evinces.

PERFECT CIRCLE CORP.,
Hagerstown, Ind., June 9, 1949.

Hon. RALPH HARVEY,
House Office Building,
Washington, D. C.

DEAR REPRESENTATIVE HARVEY: I have been keenly interested in the congressional discussion and reports on committee hearings on the Federal aid-to-education proposals. The 12 years I spent as a member of the local school board acquainted me with many school administration and education problems. This experience naturally has resulted in my interest and concern over developments in our educational system.

After studying the provisions of S. 246, passed by the Senate, I am convinced that there is a better method to give aid to education than is provided in that bill. I wonder what you and your colleagues feel about the reaction of the people in many States which are in a situation similar to that of Indiana? That position is one in which the return to the educational system of the State would be substantially less than the taxes paid to the Federal Government for the aid-to-education plan. Indiana is generally a little above average in education standards and would have to contribute more than it would be allocated under the plan.

It is true that there is not enough money spent for education purposes in any State. All need more. But Federal Government participation as proposed is not going to make more money available more easily. The money must come from exactly the same source it does now—from all the people.

It appeared to me that the Senate plan would not effect an over-all improvement. S. 246 simply takes from Indiana money that could be used to improve our schools and passes it along to other States' schools with lower standards. This would only serve to equalize education standards throughout the country rather than improve the general standard.

Furthermore, the $300,000,000 which has been proposed is only the smallest fraction of what is needed. Amounts of $5 to $29 per pupil per year will not make possible minimum standards throughout the Nation. Don't you agree with me, then, that S. 246 only establishes the precedent for the Federal Government to assume responsibility for setting minimum standards of education rather than actually making an improvement?

I am concerned also about this precedent the Federal-aid-to-education bill sets and the trend it perpetuates. You know as well as I do that with financial strings go political influences and ideologies. Even though there may be no intention on the part of those establishing the plan to inject such influence into the educational system, you must agree that it offers the opportunity to those who may wish to use it in the future. Certainly our educational standards and system would only stand to suffer from such influences.

The Federal Government can encourage higher educational standards without assuming control. Don't you believe that some of the suggested plans in which the States would retain a percentage of the Federal income taxes collected from their citizens in proportion to their need for education aid would accomplish that? Such plans would leave the control at the local and State level which I believe is extremely important.

In addition to this advantage, such a plan would provide a greater percentage of the tax dollar for direct application to the schools. Administration of such funds would be far more economical than if it were necessary for them to be handled through a Federal bureau and readministered back again at the State and local level.

I hope the House will consider establishing a much more desirable plan for aid to education than is provided in S. 246 or H. R. 400 and that the Senate would concur on such a change in the program.

Sincerely,
RALPH R. TEETOR, *President.*

The Patriotic Women's Groups Speak Against Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1949

Mr. SMITH of Kansas. Mr. Speaker, if there is one organization that I believe throughout its history has never wavered in promoting the cause of fundamental Americanism and our way of life, it is the DAR—Daughters of the American Revolution. There are many other outstanding women's organizations who zealously guard our age-old fundamentals. These fine patriotic women's organizations have made a most important discovery that many other pressure-group organizations have not made. It is simply this—we can't solve our modern problems by putting on rose tinted spectacles of a dream world.

These great patriotic organizations such as the DAR know full well that the Declaration of Independence and our Constitution are the anchor of our Republic and that we can't deviate from their principles. In every generation there must be organizations and individuals who will resist the encroachments of the enemies of our American Republic.

Many forces are at work in America to try and control American education.

I recommend to your attention the statement given below by the representative of Patriotic Women's Group before the House Committee on Education and Labor on June 1, 1949:

TESTIMONY ON BEHALF OF NATIONAL SOCIETY, DAUGHTERS OF THE AMERICAN REVOLUTION, NATIONAL SOCIETY OF NEW ENGLAND WOMEN, NATIONAL SOCIETY, WOMEN DESCENDANTS OF THE ANCIENT AND HONORABLE ARTILLERY COMPANY

Mr. Chairman and members of the committee, my name is Madalen Dingley Leetch (Mrs. Wm. D.). Today I represent the National Society, Daughters of the American Revolution, the National Society of New England Women, and the Women Descendants of

UNIVERSITY OF MICHIGAN LIBRARIES

the Ancient and Honorable Artillery Company (of Boston 1634) and the American Coalition of 85 participating societies. It was my privilege to serve as chairman of resolutions for the Twenty-third Women's Patriotic Conference on National Defense which is composed of 35 participating organizations and more than 2,000,000 women. Each of these organizations adopted resolutions opposing Federal aid to education and also opposing the subversive indoctrination of young and old by left-wing educators, textbooks, and national study magazines. Copies of resolutions submitted herewith.

These women are the descendants of the founders and patriots of this country whose battle cry, "Eternal vigilance is the price of liberty," is their appeal to arms.

The dominant motive of the founders was to establish a society where individual liberties should be forever secure. These patriotic women are alarmed that already socialism, proclaimed by the Communist manifesto itself to be the "pocket edition" of Communism, has invaded our Constitutional Republic and caused Mr. Bevin, England's Prime Minister, to predict that America, like Britain, is going socialistic.

If nationalization ever becomes the normal method of American life, it will be too late to do anything against it, because government will then have usurped the status of master of the people, instead of their servant. The oppressed British people know this today too well and too late, as do also the French people and many others. Every well-grounded American knows that the objection to nationalization is a matter of principle rather than of degree. Fundamental Americanism requires that the individual be free to direct his own life.

Federal paternalism toward our free, independent States is inherent in Federal aid to education. It is a reversal of the American principle which rests upon the personal initiative of the individual, of the local community, and of the separate States to be self-supporting.

The real meaning of education, from the American viewpoint, is clearly set forth in the Oregon school cases decision of the Supreme Court (268 U. S. 510) rendered in 1925, and which was unanimous. The Supreme Court said:

"No question is raised concerning the power of the State reasonably to regulate all schools, to inspect, supervise, and examine them, their teachers and pupils; to require that all children of proper age attend some school, that teachers shall be of good moral character and patriotic disposition, that certain studies plainly essential to good citizenship must be taught, and that nothing be taught which is manifestly inimical to the public welfare."

The Court then expounded the fundamental theory of liberty in the American Republic, as follows:

"As often heretofore pointed out, rights guaranteed by the Constitution may not be abridged by legislation which has no reasonable relation to some purpose within the competency of the State. The fundamental theory of liberty upon which all governments in this Union repose excludes any general power of the State to standardize its children by forcing them to accept instruction from public teachers only. The child is not the mere creature of the State; those who nurture him and direct his destiny have the right, coupled with the high duty, to recognize and prepare him for additional obligations."

No one having an American mind can possibly disagree with this Supreme Court decision which states fundamental American principles.

In 1943 Senator TAFT in a minority report on Federal aid to education said:

"This proposal is in fact the beginning of a revolutionary change in one of our most fundamental Government activities. Congress ought not to give away Federal funds to the States with no Federal control over the spending of funds. If, on the other hand, the Federal Government is to retain control over the expenditures and to dictate them, then it means Federal control of education, an alternative equally obnoxious. There is no middle ground."

Nothing about these truths have changed. Only Senator TAFT has changed. Patriotic women reject Senator TAFT's compromise with truth. Federal aid to education, which means still further extension of the subsidy process to usurp additional Federal power, is still "obnoxious."

The Supreme Court has held in *Wickard* v. *Filburn* (317 U. S. 111, Nov. 9, 1942), that it is a natural and lawful thing for the Government to supervise that which it subsidizes.

General Eisenhower, now president of Columbia University, takes the view that "The Federal Government has no right to take tax money out of our pockets and then give it back to us without some form of supervision" (October 16, 1948).

S. 246 and H. R. 4643 require reports be made by the States to the Commissioner of Education. Supervisory power is inherent in this proposal.

Is it not a dangerous experiment to give Federal aid to education equally to all the 48 States and Territories which might secure the votes necessary to pass this legislation, but which would place them all under the same political control? If this is not the purpose, why is it done?

Patriotic women are deeply concerned further with the taxing away of liberty in behalf of greater spending, both domestic and foreign. Unless the trend of taxation is reversed, income and inheritance taxes at the present rates will destroy not only surplus wealth, both principal and income, but also the whole American system. Karl Marx realized this when he wrote the Communist Manifesto a hundred years ago, setting down abolition of private property and calling for "heavy progressive or graduated income tax," as all-important Communist devices.

If it is a fact that the Federal tax take is so great that the States can no longer support their own schools, the obvious remedy is to take immediate steps to cut down the Federal take, instead of increasing it. Sincere Federal aid would be to reduce Government taxing and spending.

Senator WILLIAMS and others have pointed out that during the period 1936–48 the States have actually improved their financial position. He said in a speech in the Senate March 29, 1949:

"Federal aid to the public schools of America is not desirable and it is not necessary. The debt of the Federal Government is over $250,000,000,000. The debt of all the 48 States added together, is about $2,500,000,000. The debt of the Federal Government is therefore 100 times as much as the total debt of all the States combined. * * * There is not a single one of the 48 which has not reduced its debt since 1940 and at the same time greatly increased State contributions to public schools. * * * The national average of salaries paid public-school teachers has increased 86 percent in the past 8 years. The average salary was $1,270 8 years ago. Today it is $2,362. * * * They have increased 156 percent in Mississippi; 150 percent in Alabama; and 157 percent in Arkansas."

The May 1949 Council of State Governments' report called the "48 State School Systems," indicates that $2,440 was the median average salary for teachers for the school year 1947–48.

The National Education Association itself, through its journal of March 1949 states that salaries for teachers have gone up from an average of $1,846 to an estimated $2,750 in the last 4 years. This is an increase of 50 percent.

Senators Taft, Walsh, Wherry, and Ball, when making a minority report on S. 637 in 1943 state that "The entire proposal (Federal aid to education) is placed before us by representatives of the teachers and other educational interests."

The principal registered lobbyist for Federal aid to education is the huge National Education Association, made up of innumerable departments, committees, commissions, and divisions. Of these the American Association of School Administrators and the Association for Supervision and Curriculum Development and other members will direct the spending of such Federal aid within the States.

"Education for the New America," was described by William E. Givens, executive secretary of the National Education Association in a report of that title before the old Department of Superintendence as long ago as 1934. Mr. Givens in making his report said:

"In our fragile interdependent society the credit agencies, the basic industries, and utilities cannot be centrally planned and operated under private ownership. Hence, they (the teachers) will join in creating a swift Nation-wide campaign of adult education which will support President Roosevelt in taking over and operating them at full capacity as a unified national system in the interests of the people."

Education for the "New America" has been going on ever since. These educators, who will spend the Federal-aid funds, sponsored the National Education Association's textbooks known as the "Building America Series." These textbooks were brought to the attention of the California Sons of the American Revolution, who, after making a study of them, reported their findings in a pamphlet entitled "The Betrayal of America." They took their complaint to the California Legislature. After extensive hearings before the California senate committee on education on complaint of the Sons of the American Revolution against the State education authorities, during which 50 authors of Building America series were shown to be members of 113 alleged Communist-front organizations, the senate committee reported:

"The committee finds the Building America books to be unfit for use in our schools." (P. 19, third report, senate investigating committee on education, California Legislature, 1948.)

The California Assembly bill No. 973 to appropriate State funds for the purchase of free textbooks for the elementary schools, included the cost of Building America, $173,632. After debate, the following amendment was adopted and affirmed in similar language in all the textbook appropriations of the 1947 California Legislature: "*Provided, however,* That no part of this appropriation may be expended for the purchase of any textbook or supplement thereto which is in any way a part of the Building America series or a duplication thereof whether known by that name or any other name."

Although the California Legislature finds those textbooks "unfit" for use, the California State Superintendent of Schools, who will direct the spending of Federal-aid funds for the State, thinks highly of them according to the National Education Association's journal for May 1948. The State superintendent of Public Instruction in his report supporting the textbooks, said that "This program" is expected to "condition much of the thinking of our youth."

A State may deny use of its funds for unfit purposes of education, but might not be able to prevent the perversion of "uncontrolled" Federal aid in the hands of educators.

The New York Journal American of April 23, 1949, in an editorial, "The 'Free Textbook' Peril," says, "And into the classroom has come a kind of textbook which conscientious and patriotic parents would not choose for their children * * * thousands of American children are being surreptitiously indoctrinated into various degrees of Marxism, collectivism, socialism, and communism. * * * The Employers Association of Chicago has dared to offer a leaflet, one subtitle of which truthfully says, 'Textbooks Can Be Red Propaganda.' That assertion may be classed as a modest understatement, because some textbooks are red propaganda."

The new 241-page report of the Committee on International Relations, Association for Supervision and Curriculum Development and National Council for Social Studies, all of the National Education Association, calls for a sustained educational campaign to indoctrinate children and adults with "world-mindedness" and to abate the evil of excess loyalty and patriotism. Acknowledging a grant of Carnegie Corp. money to aid them, they have discovered "ten marks" of a "world-minded American."

"The world-minded American knows that unlimited national sovereignty is a threat to world peace and that nations must cooperate to achieve peace and human progress. Enduring peace cannot be attained until the nation-states surrender to a world organization the exercise of jurisdiction over those problems with which they have found themselves unable to deal with in the past." (Education for International Understanding in American Schools, p. 44.)

In a news release of February 28, 1948, outlining the program and scope of the plan of the National Education Association, they say:

"Carefully worked out, along practical lines, our program stresses education for all. It sees the future need for compulsory education from 6 to 60, such as exists today from 6 to 16. To secure these, an increase of $5,000,000,000 yearly expenditure is proposed."

If some of you gentlemen have not reached 60 and are not "world-minded Americans" the National Education Association is out to educate you. It is not sufficient that some Americans have already earmarked themselves as world-minded, but all Americans are to be put into the educational hopper of "world-mindedness" in the new America. $300,000,000 a year of the long-suffering taxpayers' money will apparently be only a primer for our universal indoctrination.

Patriotic women protest the use of their Federal tax dollars by left-wing educators to aid them in an educational endeavor to scrap America's hard-won Declaration of Independence for "surrender to world organization."

America has forged ahead by the inspiration of the fires of nationalism and patriotism with such phenomenal success as to enable her to succor a mendicant world. James Madison said, "The patriotism of the people will continue and be a sufficient guard to their liberties." If the left-wing educators succeed in watering down patriotism with tax money, what then becomes of the "safeguard to their liberties?"

Patriotic women ask you to consider the significance of a poll recently taken among 10,000 high-school students in all sections of the United States, according to an editorial in the Manchester (N. H.) Morning Union, April 23, 1949:

"Asked about government control of food, clothing, rent, automobiles, farm equipment, etc., an overwhelming proportion declared themselves in favor of such regimentation. Their views are disquieting but not surprising * * they have been exposed to the virus that is socialism * * * blind to the dangers that threaten American basic freedoms."

The first step necessary toward successful totalitarian government is to control the thinking of the people.

Is it safe, for the survival of America, to give uncontrolled tax dollars to further this indoctrination of the voters of tomorrow?

From the May 16 testimony of the new United States Commissioner of Education, Dr. Earl J. McGrath, before this committee, you have the chart of the course he sets, when he tells you, "As a people we are determined that education shall not be used for nationalistic or selfish ends." Into his hands, via Federal aid, it is proposed to give the wheel of the ship of public education to chart its course through "recommendations and comments as in his judgment the Congress should consider" (S. 246, p. 8; H. R. 4643, p. 5) over an uncharted sea for the new America. Dr. McGrath, in a press dispatch February 2, 1949, declared he "favored aid to schools from kindergarten to college." Does he hope by this means to insure that no selfish nationalistic ideas will invade the minds of any Americans?

Dr. McGrath was a member of the President's Commission on Higher Education which made a national survey and formulated recommendations in three volumes, one sentence of which reads:

"The United States Office of Education must be prepared to work effectively with the State Department and with the United Nations Educational, Scientific and Cultural Organization. * * * (Report of the President's Commission on Higher Education, vol. III, p. 48.)

Senator MUNDT, Senator MCCARRAN, and others are currently proposing an investigation of the UNESCO as a haven for discharged Government loyalty suspects, at least 12 of whom have jobs in the UNESCO helping formulate planned mass education in this country and with whom the United States Office of Education is to work.

Dr. McGrath was formerly Professor of Education at the left-wing University of Chicago, some of whose professors recently have been under investigation by the Illinois Seditious Activities Committee as alleged members of Communist-front organizations.

It was Prof. Milton Mayer, of the University of Chicago, who, when addressing a meeting of wildly applauding one-worlders in Syracuse, said:

"We must haul down the American flag, and if I wanted to be vulgar and shocking, I would go even further and say, haul it down, stamp on it and spit on it." (From the CONGRESSIONAL RECORD, 80th Cong., Mar. 6 1947, vol. 93, pt. 2, p. 1720, Extension of Remarks by Congressman BERTRAND W. GEARHART.)

Congressman GEARHART then commented, among other things, "It is high time the American people started hauling down, not the flag, but the professors."

Gentlemen, it is your responsibility to see that no Federal tax money finds its way into the hands of those who would haul down the American flag.

The NEA report to which I referred on page 6 of my testimony comes out flatly with the assertion that "education for international understanding involves the use of education as a force for conditioning the will of a people." "Conditioning the will of a people" is a phrase that has unpleasant connotations of totalitarianism. It is a novel thought that in a free republic, education or any other medium has the mission of conditioning the will of a whole people. If that is the mission of education, we must conclude that education is not devoted to the development of free minds arriving at free opinions, but is an instrument of propaganda, shaping minds to preconceived dogma. Who gave free, tax-supported education any such mission?

The President's Speech at Little Rock, Ark.

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1949

Mr. MANSFIELD. Mr. Speaker, the President of the United States made a speech at Little Rock, Ark., on Saturday, June 11, 1949. Although his speech was before the Thirty-fifth Division of the First World War, his remarks were directed to the peoples of the world. The remarks of the President were meaningful and significant and show an awareness of the responsibilities of his high office.

There is no double-talk in this speech. It is a statement of what must be done if we are to bear our responsibilities, and I commend it to the Congress for its most earnest and serious consideration:

TRUMAN'S SPEECH ON WORLD AFFAIRS AT LITTLE ROCK

Governor McMath, Mr. Mayor of Little Rock, comrades of the Thirty-fifth Division, and ladies and gentlemen, we are here to dedicate this beautiful park to the dead of two world wars whose memory we should always hold dear.

The brave men who lost their lives in those wars would approve of the way you have chosen to honor them. This park will be a place of rest and recreation. It is fitting that a war memorial should be something that can be used and enjoyed by the people. Nothing could be more appropriate than to devote a war memorial to those values of human life which our soldiers died to preserve—the values of freedom and peace.

We are not a militaristic nation. We do not glorify the military way of life. Some nations have taken greater pride in their military victories than in any other of their national achievements, but it has never been so with this great country. When we think of war, it is with a prayer that the sacrifices our dead have made will never have to be repeated.

RESOLUTIONS NOT ENOUGH

After every war we have solemnly resolved to prevent future wars. We have learned, however, that it is not enough to make resolutions. It is not enough to utter them in speeches or engrave them on monuments. We have learned that we must devote the best efforts of our whole Nation to make those resolutions come true.

We entered the First World War to restore peace and to preserve human freedom; but when that war was finished we turned aside from the task we had begun. We turned our backs upon the League of Nations—the international organization which was established to maintain peace. We ignored the economic problems of the world and adopted a tariff policy which only made them worse. We let our domestic affairs fall into the hands of selfish interests.

We failed to join with others to take the steps which might have prevented a second world war.

This time we are fully aware of the mistakes that were made in the past. We are on guard against the indifference and isolationism which can only lead to the tragedy of war. This time we will not let our decisions be made for us by a little group of men who are concerned only with their own special interests.

UNIVERSITY OF MICHIGAN LIBRARIES

This time we have taken vigorous and far-reaching measures to preserve peace and restore prosperity throughout the world. We have assumed the responsibility which I believe God Almighty intended this great Republic to assume after the First World War. We have shouldered the enormous responsibilities that go with our tremendous strength.

We have been fortunate in having many public servants of ability and vision who have devoted themselves to the problems of foreign affairs and national defense. We have able leaders in the Congress who have mastered the complex details of our relations with other nations. They have made themselves familiar with the effects of our policies in all parts of the globe. They have labored painstakingly to enact a body of legislation to carry out the responsibilities we have assumed.

PEOPLE SAID TO UNDERSTAND

Most significant of all, the people of this country understand the supreme importance of our foreign policy and the great objectives toward which we are moving. Public debate has threshed out the basic questions of our foreign policy. The people have made up their minds. They have supported, and will continue to support, the measures necessary to maintain peace.

We have had to work for peace in the face of troubled conditions and against Communist pressures. But because we have been united in our determination to use our strength and our substance we have already turned the tide in favor of freedom and peace. The disintegration of the democracies of Europe has been halted. To free peoples in many parts of the world have been given new hope and new confidence. The restoration of a system of world trade has begun. And all this has been accomplished without closing the door to peaceful negotiation of the differences between the free nations and the Soviet Union.

But we are only midway in carrying out our policy. We have a long way to go before we can make the free world secure against the social and political evils on which communism thrives. The cause of peace and freedom is still threatened.

Yet there are some who have grown weary of the effort we are making. There are voices which claim that because our policy has been successful so far, we can afford to relax now. There are some who want to slash the aid we are giving to the economic recovery of other nations; there are some who want to reject the measures that are necessary for defense against aggression; there are some who wish to abandon our efforts toward the revival of world trade. Those are the same voices that misled us in the 1920's. They are misguided by short-run considerations. They refuse to face the plain facts. They try to convince us that we cannot afford to pay the price of peace.

But the people of the United States will not be misled a second time. We know that the short-sighted course, the easy way, is not the path to peace. The task is difficult and requires firm determination and steadfast effort.

We know that if we are to build a lasting peace in the world we must achieve three essential conditions.

First, this Nation must be strong and prosperous.

Second, other nations devoted to the cause of peace and freedom must also be strong and prosperous.

Third, there must be an international structure capable of adjusting international differences and maintaining peace.

The first condition is our own strength and prosperity.

It is unusual for this Nation to maintain substantial armed forces in time of peace. Yet so long as there is a threat to the principles of peace—the principles on which the United Nations is founded—we must maintain strong armed forces. Any uncertainty as to the ability or the willingness of the free nations of the world to defend themselves is just an invitation to aggression. We have seen the truth of this statement in the outbreak of two world wars.

Our national strength is not, however, simply a matter of weapons and trained men. Even more important are our economic growth and continued prosperity.

Our economy is the center of a world economy. The hope of economic revival throughout the world depends in large measure upon the prosperity of the United States. If our production and purchasing power are badly impaired, if the buying and selling and investing that we do in other parts of the world are cut off other nations will be plunged into chaos and despair.

COMMUNISTS? WRONG AS CAN BE?

It is a prime belief of the Communist philosophy that our kind of economy is doomed to failure. The Communists predict that our prosperity will collapse—bringing the rest of the free world down with it. But they are wrong—just as wrong as they can be.

We know more today about keeping our economy strong than we have ever known before. We know how to strengthen our economy through the expansion of production and the purchasing power and the improvement of standards of living. We understand that constantly rising national output, increasing real wages, and a fair income for our farmers are basic elements of our economic strength.

To maintain these elements of prosperity, it is not sufficient to drift with the tide. We must take advantage of the new opportunities, the increased demands which result from the natural growth of our population. We must develop our natural resources and restore those we have depleted and wasted. We must establish a fair distribution of business opportunity; we must have a free labor movement able to hold its own at the bargaining table; we must protect the purchasing power of Americans against the hazards and misfortunes of life.

These steps are necessary if we are to continue strong and prosperous. That is why our domestic programs for the development of resources, for protection against economic hazards, for the improvement of social conditions, are fundamental to our national effort for peace.

OTHER NATIONS MUST BE STRONG

The second condition essential to peace is that other nations, as well as our own, must be strong and prosperous.

We need other nations as our allies in the cause of human freedom. We have seen free nations lost to the democratic way of life because of economic disaster. We know that despair over economic conditions will turn men away from freedom and into the hands of dictators.

It is to our interest, therefore, to aid other nations to restore and maintain their economic health. Our aim is not only to help other nations to help themselves, but also to encourage economic cooperation among them.

We have taken the lead in cooperating with other nations to restore a mutually beneficial system of world trade. No nation today can achieve prosperity in isolation. Only through participation in the trade of the world can a country raise its own standards of living and contribute to the welfare of other nations.

For years before the war world trade was crippled by high tariffs, import quotas, exchange manipulation and other artificial devices for securing commercial advantage. These practices were a symptom of international anarchy. They resulted ultimately in idle ships, idle men and economic chaos.

We have come a long way toward correcting these evils. Since 1934 we have worked out a multitude of agreements with other countries to reduce specific tariff barriers. In the general agreement on trade and tariffs of 1948 we struck a world-wide blow at these obstacles to trade.

But this work is not yet finished. If we are to succeed it is vital that the authority to negotiate reciprocal trade agreements be extended. We should then go on to establish a permanent international trade organization to apply standards of fair dealing in the commerce among nations.

ERP "HALTED DISINTEGRATION"

The same cooperative principle has been applied in our great undertaking to restore the economies of the western European nations to a self-sustaining basis. The food, fuel and equipment which have been sent to Europe have been matched by the efforts which these nations have made to restore their own economies and to cooperate with one another in increasing their production and raising their standards of living.

It is fair to say that the European recovery program has halted the social and economic disintegration which threatened the countries of western Europe with communism and civil strife.

Nevertheless the European recovery program is still in its early stages. At the outset it was estimated that it would take four years before these countries could again become independent of special economic aid. Only a little more than one year has passed since we began.

If we were to falter now and cut down our aid, the momentum of recovery would be destroyed. The people of these countries would be thrown into confusion and their advance toward economic self-reliance would be blocked. A slash in the funds available for European recovery at this time would be the worst kind of economy. It would cancel the hopes and the plans of the western European nations. It would be a great gain for communism.

I am confident that we shall not make this mistake.

Our concern with the economic health of the world also extends to its underdeveloped regions. The prospects for peace will be immeasurably brighter if we can offer a future of hope and a better life to the people of these regions. In these areas there are millions who for centuries have known nothing but exploitation and poverty, and whose economic life is still primitive.

I have offered a program for bringing these people the benefits of our modern civilization. It is not a program of relief. While it is intended ultimately to bring about a great movement of capital through the channels of private investment for the development of these poverty-stricken regions, it is not a program of imperialism. The development of these areas offers enormous potential benefits to a growing world economy.

PROGRAM TO CONGRESS SOON

We have to lay the foundations for this program with care. I expect shortly to send to the Congress recommendations for initial legislation. This will be but the first step of many that we shall take, over the years to come, in this cooperative effort to better the living standards and to unlock the human skills and the natural resources of the underdeveloped parts of the globe.

The third condition essential for peace is an international structure capable of suppressing international violence. However well conceived our economic programs may be, they cannot succeed unless there is some assurance against the outbreak of aggression. Neither our own prosperity nor the prosperity of other nations can survive unless we can protect the operations of economic life from the threat of war.

Such protection depends on two factors. First, there must be constant efforts by all

nations to adjust their differences peacefully. Second, there must be an agreement among nations to employ overwhelming force against armed aggression.

The United Nations is the instrument for accomplishing these ends. It has already achieved the peaceful settlement of difficult issues. It has stopped hostilities in the Near East and in Indonesia. It has done a great deal to explore and find solutions for many of the economic and social problems which afflict the world.

Much remains to be done, however, to carry out the principles of the United Nations. Within the terms of the United Nations Charter, we and certain other countries have undertaken to provide greater assurance against the danger of armed conflict. That is the purpose of the North Atlantic treaty. The idea behind this treaty—the association of democratic nations for mutual defense—is well understood in this country. Perhaps we do not understand, however, the importance of this pact in the eyes of the other democratic nations which are parties to it. They have been greatly weakened by war. They have been haunted by the fear of again becoming the scene of conflict. By assuring them of our support the pact goes a long way to dispel their fears.

SEES SENATE'S O. K. FOR PACT

I have been greatly heartened by the unanimous report of the Foreign Relations Committee of the Senate this past week in favor of the North Atlantic treaty. I believe that it will soon be passed by an overwhelming majority in the Senate. The effect of this action will be immediate and far-reaching in allaying the fears which have retarded the economic recovery of Europe.

It is of vital importance that the Atlantic pact be followed by a program of military aid to increase the effective strength of the free nations against aggression. This military-assistance program is based upon mutual help—will give additional confidence to the people of those nations as they continue to rebuild their economies.

These measures will bring a stability to the democratic nations of Europe which has not existed since the end of the war. They will at the same time contribute directly to the security of the United States of America.

I have discussed the three essential elements of lasting peace—a strong and prosperous United States, a strong and prosperous community of free nations, an international organization capable of preventing aggression.

We have given greatly of our effort and our strength to build a firm and enduring foreign policy upon these essentials. The burdens we have had to assume in this enterprise have been enormous and unusual.

Never in the history of the world has the victor contributed to the recovery of the vanquished as this country has done after the second world war. The size of the national budget shows that we are engaged in an undertaking without parallel in the history of our country or in the history of the world.

But the goal we seek is a great one and that goal is worth the price. Never has a nation had the opportunity which we have today to do so much for the peace and prosperity of mankind. Never has a nation had a better chance of reaching this high goal.

We must not falter now.

We must not defeat our own efforts by doing only half the job that lies before us.

The brave men whose memory we honor here did all that was required of them. They did not fail us. We must not fail them in our efforts to reach the goal for which they died.

We must press on in the confidence that we will succeed in the mission a divine providence has assigned to us.

Address of Mr. Herbert Hoover to Graduating Class

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1949

Mr. REED of New York. Mr. Speaker, under unanimous consent heretofore granted, I am inserting in the RECORD the speech of Mr. Herbert Hoover, which he delivered to the graduating class of Wesleyan University, in Ohio, on June 11. The speech appeared in the New York Times on Sunday, June 12, 1949.

HOOVER TALK URGING SELF-RELIANCE AS KEY TO PROGRESS

DELAWARE, OHIO, June 11.—The address of former President Herbert Hoover at today's exercises here marking the formal inauguration of Dr. Arthur S. Flemming as ninth president of Ohio Wesleyan University follows:

"This season you and a mighty host of 500,000 other American graduates are lining up to receive your college diplomas.

"Once upon a time, I lined up just as you are. For me, it was a day of lowered spirit. The night before we had omitted the cheerful song about the Owl and the Pussy Cat, and chanted of Working on the Railroad, and that immortal college dirge about going Into the Cold, Cold World. The dynamic energy and the impelling desire to crack something up had sunk to low-action levels.

"I had to listen to an address made up of the standardized parts which were at that time generally sold at commencements.

"It took over an hour for the speaker to put the parts together. We were warned that our diploma was an entrance ticket to jungles of temptation and hard knocks. Our speaker dwelled upon the founding fathers, the division of powers, upon Herbert Spencer and John Stuart Mill. He said we were living in a new era in the world. He described it as liberalism.

STANDARD SPEECH DESCRIBED

"The idea had to do with free minds and free spirits. It included the notion that America was a land of opportunity—with the great ideal of being a land of equal opportunity. We were told that life was a race where society laid down rules of sportsmanship but let the best man win. The encouraging note in his address was emphasis upon Christian in the Pilgrim's Progress and Horatio Alger.

"I confess my attention on that occasion was distracted by a sinking realization that I had to find a job—and quick. Also, I know a girl. Put in economic terms, I was wishing somebody with a profit motive would allow me to help him earn a profit, and thus support the girl. At the risk of seeming revolutionary and a defender of evil, I suggest that this basis of test for a job has considerable merit. It does not require qualifications either of good looks, ancestry, religion, or ability to get votes.

"It is true that I had some difficulty in impressing any of the profit and loss takers with the high potentialities of my diploma. But I was without the information at that time that I was a wage slave. I was buoyed up with the notion that if I did not like any particular profit taker, I could find another one somewhere else."

DID NOT FIND COLD WORLD

"And let me add that under that particular new era I did not find a cold, cold world. I found the profit takers a cheery and helpful lot of folks, who took an enormous interest in helping youngsters get a start and get ahead in life. And you will find that is also true today. Indeed, their helpfulness has improved, for, as technology becomes more intricate, they are searching for skills, and your diploma commands more respect.

"And now voices tell us that we are in another new era. In fact, we seem to have a newer era every little while.

"Incidentally, I entered the cold, cold world in the midst of what the lastest new era calls a disinflation. We mistakenly thought its name was depression. But as I did not then know that governments could cure it, I did not have the additional worry of what the Government was going to do about it.

"The new era of today seems united in the notion that they have just discovered real liberalism and that all previous eras are reactionary. Some tell us that in their new era, life is still a race, but that everybody must come out even at the end. Another modernistic school adds to this that life still may be a race, but that each step must be dictated by some official or unofficial bureaucrat with stop-and-go signals. They hold out the attraction that with this security you will finish with an old-age pension and your funeral expenses from the Government."

"SECURITY" HELD JOY KILLER

"Whether these newest eras are right or wrong, 'security,' which eliminates the risks in life, also kills the joy that lies in competition, in individual adventure, new undertakings, and new achievements. These contain moral and intellectual impulses more vital than even profits. For from them alone come national progress. At all times in history there have been many who sought escape into 'security' from self-reliance.

"And if you will look over the workings of these newest new eras throughout the world, you may notice that the judgment of the Lord on Adam has not been entirely reversed, even by the Supreme Court of the United States. Moreover, governments have not been able to fix the wages of sin. Nor have they found a substitute for profit and other personal stimulants.

"America has not yet embraced all these new ideas. The reactionary notion of equal opportunity with the right of everyone to go as far as his ambitions and abilities will take him, provided he does not trespass on others, still holds in the American dream.

"How far he can get has been damaged by two great wars and inefficiently organized government, which we have to pay for. To pay it, you will need to work 2 days out of the week for the Government for a long time. The commission upon which President Flemming and I have taken part is trying to take a few hours off that penalty."

WHAT UNITED STATES HAS DONE

"And there is something more to be said for the old reactionary notions which held to basic freedoms of mind and spirit, holding aloft the lamp of equal opportunity. In the years since, the founding fathers, a God-fearing people, under these reactionary blessings, built up quite a plant and equipment on this continent.

"It teems with millions of comfortable farms and homes, cattle and hogs. It is well equipped with railroads, power plants, factories, highways, automobiles, and death warnings. It is studded with magnificent cities and traffic jams. The terrible reactionaries have filled the land with legislatures, town councils, free presses, orchestras, bands, radios, juke-boxes, and other noises. It has a full complement of stadiums, ball players, and college yells.

UNIVERSITY OF MICHIGAN LIBRARIES

"Furthermore, they sprinkled the country with churches and laboratories, built 10,000 schools and a thousand institutions of higher learning. And somehow, these reactionary-minded taxpayers are squeezing out the resources to maintain a million devoted teachers, a hundred thousand able professors, and to keep over two million of you in colleges and universities. Possibly another ideology could do better in the next 173 years. But I suggest we had better continue to suffer certain evils of free men and the ideal of equal opportunity than to die of nostalgia."

GREAT JOB SEEN FOR GRADUATES

"It is very sad, but did it ever occur to you that all the people who live in these houses and all those who run this complicated machine are going to die? Just as sure as death, the jobs are yours. The plant and equipment comes to you by inheritance, ready to run. And there are opportunities in every inch of it. But the best of these jobs are never filled by security seekers.

"Moreover, there are other vast opportunities for those who are willing to take a chance. If we just hold to our reactionary ideas of free minds, free spirits, and equal opportunity, we have another glorious opening for every young man and woman. Science and invention, even during these troubled years, have given us further mighty powers of progress. New discoveries in science and their flow of new inventions will continue to create a thousand new frontiers for those who still would adventure.

"You have the blood and the urge of your American forebears. You are made of as good stuff as they. I have no doubt of your character and your self-reliance. You are better trained and equipped than we were. I know you are champing at the bit to take your chance in an opening world.

"Do not fear it will be cold to you."

PRAISE FOR PRESIDENT FLEMMING

"I am glad to come to Ohio Wesleyan University today to take part in the formal installation of my friend, Arthur Flemming, as your president. I know more about him than I do about John Wesley. But every American knows Wesley as the founder of a great movement which has inspired millions to righteous living.

"I am, however, concerned with Mr. Flemming. I need not tell you that he is a son of this university, or of his years of public service in war and peace.

"I have worked with him intimately for the past 2 years. He was better fitted for the work of the Commission on Organization of the Executive Branch of the Government than any of the rest of us. He brought high statesmanship and great understanding of its human problems. I can condense the many things I could say of Dr. Flemming into two short sentences:

"President Flemming will be one of the great American university presidents. That is one of the highest positions of leadership in our American life."

The Ominous Rise in Unemployment

EXTENSION OF REMARKS

OF

HON. CHARLES R. HOWELL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1949

Mr. HOWELL. Mr. Speaker, a grave national problem, which has been seriously worrying me, and I am sure, many other Members for several weeks, has been brought into sharp focus over the week end. I refer to the ominous rise in unemployment. The Census Bureau has reported 3,289,000 unemployed as of May 14. The President's Council of Economic Advisers believes this figure too low. Its figure is 4,800,000—well over a million more men and women out of work. Whatever figure you take—and from the increasing lay-offs in my own district, I believe the higher one more realistic—we are in for serious trouble unless steps are taken now to stop this decline in jobs.

The same papers that carried the story of the conflict between the two estimates of unemployment figures, carried a report of a statement by Americans for Democratic Action calling for immediate attention, by Congress and the Executive Branch, to this most serious situation.

I believe with ADA that now is the time to act. Under leave to extend my remarks in the RECORD, I include a statement by the National Board of Americans for Democratic Action. I commend it to the attention of all Members who share my concern about the increasing number of our constituents now without work.

STATEMENT OF NATIONAL BOARD, AMERICANS FOR DEMOCRATIC ACTION

The national board of Americans for Democratic Action is deeply concerned with current trends in unemployment and production, and believes that real economic danger may lie ahead. Latest Government figures show that unemployment is rising seriously and nearing the danger point in many localities. Total production is still falling off.

We do not feel that this is a time for panic, but neither do we believe America can be serene about the future. In our judgment we are on the thin ice of a recession, and unless we act quickly and effectively, we may plunge through into disaster. A major depression in America would be a stunning setback to the free world.

From all the economic wisdom our country has gained in the past 20 years, surely we must recognize that the time to act is now. To ignore the present danger signs would be incredibly foolhardy. To defer action until the "bust" is here may require the imposition of harsh and disagreeable controls and long years of deficit financing. We believe our national leaders are capable of exercising as much foresight in domestic economic matters as they are in foreign affairs. Just as they recognize that the Atlantic Pact is designed to prevent future, costly liberations, so they should recognize that wise economic planning now will make unnecessary a costly recovery from a future depression.

We are unwilling to rely on the "wait and see" school of economic thought, which is the present-day version of the "too little, too late" economics which led us into the 1929 holocaust. We urge the President and the Council of Economic Advisers to include in their forthcoming midyear report an unvarnished analysis of the current economic situation, without panic but also without sugar coating. If an emergency is found to exist, we urgently request that they present to Congress recommendations for increasing consumer purchasing power. A precise report on the present plans for public works and a time schedule stating how soon they can be started should be included in such a report.

There are several other steps which can be taken immediately without further study to increase consumer purchasing power. Many of these have been available for some time. Only congressional inaction has prevented their use. We refer to the administration's proposals for an expanded 75-cent minimum wage, extended and increased social security benefits, a public-housing program, Federal aid to education, and the Brannan farm program. These measures should be passed immediately. Big business can give immediate help by making price and wage adjustments in high-profit industries. Another way of checking a drop-off in spending is to reduce consumer (excise) taxes, offsetting this to the extent necessary through a revision of the personal and corporate tax structure more in line with the principle of ability to pay.

We reaffirm our long-standing support of full employment, and vigorously oppose any false economy in Government expenditures which jeopardize programs designed to attain this end. In time of economic stress budget balancing must not be the prime consideration. As the late President Roosevelt said, "We must make every effort to balance the budget of our human and natural resources."

For the near future, we urge serious consideration of the principles and objectives of the Economic Expansion Act of 1949, soon to be introduced by Senator JAMES MURRAY and several other Members of Congress. ADA insists that hearings on the bill be held immediately after introduction. This bill—with its incentives to production and investment; its attempt to bring about a better balance between wages, prices, and profits; its reserve of public works projects to bolster a sagging economy; and its aid to the unemployed—embodies the very kind of advance economic planning which ADA believes America must undertake at once.

We feel that the proposal as now drafted should be expanded to include a clear plan for prompt action in the event that the present trend of unemployment continues. Provisions for direct Federal emergency unemployment compensation and relief programs should be included in the bill.

Since the problem of heading off economic disaster concerns all elements in our national life, and since the Murray bill is a legislative attempt to meet this problem, ADA is calling for July 12 a meeting in Washington of all public-interest groups who agree that we must take positive action now. At this meeting Members of Congress, officials of the executive branch, and leaders of liberal, labor, and farm groups will discuss proposed measures and rally support for a workable, democratic program to stop the depression before it starts.

Polish Leaders Shun Trappings of Power

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks, I wish to include a very interesting and informative article written by Joseph C. Harsch, which appeared in the Christian Science Monitor on Thursday, June 9, 1949. Mr. Harsch is on a European tour as a special correspondent for the Christian Science Monitor, and is writing a series of articles on conditions in eastern European countries. Mr. Harsch is a correspondent who has established a splendid record as an unbiased and objective writer:

(By Joseph C. Harsch)

WARSAW.—Although they seized power 4 years ago and gradually have increased their

grip on it ever since, Polish Communists still hesitate to assume the outward trappings of power.

They still hesitate to proceed rapidly even with the socialization, let alone the communization, of Poland; still conceal the basis of their power behind the screen of a coalition government and the United Workers Party. Technically, there is not even a Communist Party in Poland.

This is the first thing to be noted about Russia's most important political dependency in Europe today.

The second is that for the very reason that the Communists have kept themselves out of sight as a party, the government which they control enjoys considerable credit in the eyes of the great bulk of the Polish people. It is a curious kind of credit; a credit mixed with doubt and uneasiness and apprehension of the future; a sensitive condition which could very easily be disturbed, disastrously for the government.

ON THE CREDIT SIDE

But one must begin with the credit if one is to try to build a basis for assessing the future in Poland.

The fact is that at the end of the war Poland was pitifully weak, badly divided and terribly damaged. Its population was down from 33,000,000 to 24,000,000 persons. Its capital was in ruins—the worst damaged of any major city in all Europe. Its boundaries had been picked up bodily and shifted westwards and it was necessary to fill the empty new territories with people and make the fields and mines and factories in those areas operate.

If the government which the Communists control had put communization of Poland at the top of its priority list, the story might be very different today. But it did no such thing. It put the physical and economic reconstruction of Poland first. And in doing that Polish communism associated itself with the basic urge of the great majority of the Polish people.

The Communists were not the only people in Poland who wanted to get these things done. Every other Pole had the same desire. And it is quite possible that the accomplishments of the past 4 years toward the rebuilding of Poland would have come just as fast under a non-Communist Government.

COMMUNISTS IN CONTROL

But the Communists saw to it that they controlled the government, and directed the reconstruction effort. In effect, they stole the leadership in the great task of Polish reconstruction; and under their leadership Poland has in fact performed prodigies of reconstruction.

Whether the accomplishments are because of, or in spite of, the Communists and how much they are due just to the energy of Poles and Polish love of country are questions which can be debated endlessly and fruitlessly. No one can say. The important thing is that enormous reconstruction has been achieved and that the Communists have ridden along with it as inconspicuously as they could.

Some western observers in Poland even contend that reconstruction has been faster because of Communist methods employed. For one thing, communism tolerates no strikes where it is in control. There have been no strikes in Poland to delay or confuse the reconstruction effort.

For another, Communists who are the first to howl against the speed-up when employed in a non-Communist country are the first to employ the speed-up where they are in control. The speed-up has been the first characteristic of Polish industry and mining since the war.

ECONOMIC UNIT

Whatever the price, however, Poland has become a working economic unit. Its mines have been supplying coal to Russia and Italy, Czechoslovakia and Sweden, Hungary and France. Its food is flowing to Britain in return for western machinery. Poland's trains run on time. The recovered territories—East Prussia and Silesia—have been populated. And Warsaw is rising like the phoenix out of her rubble and ashes.

Warsaw is the most spectacular job of reconstruction to be seen anywhere in Europe. Two years ago when I visited this city it was alive, but it was a life dominated by ruins. The new shops and houses were mostly jerry-built temporary structures dug into the ruins. Now the ruins no longer dominate. Fresh, brightly painted newness is the dominant.

Two years ago, there were 10 buildings standing in the street of the New World, and 80 in ruins. Today 80 are new and finished and only 10 are still in ruins. And the new street is actually more beautiful than the old for the buildings have been restored from the original designs and therefore stand out in their original eighteenth century unity and beauty, free from the encrustations of the Victorian period.

LITTLE EXHIBITION

With all this the Communists have associated themselves, the meanwhile avoiding those Communist exhibitionisms which are so much more prominent in other of the people's democracies.

Polish communism has not yet put the red star into the heraldry of the state; has not even put it on the cap badge of the soldier as it has in all the others. The hammer and sickle are rarely seen. I have not seen a single picture of Joseph Stalin in Warsaw, although I am sure they are to be found if one searches. Polish troops still march to church in formation as part of their regular exercises.

Private enterprise still flourishes in many sectors of the Polish economy. Private ownership is permitted if the enterprise employs less than 50 persons on each shift. Most retail shops in Warsaw are privately owned. Much of the reconstruction of Warsaw has been financed by private persons and executed by private contractors.

Collectivization of farm lands exists so far only as a propaganda Potemkin village. The launching of numerous farm collectives has been announced. But western observers have been able so far to locate only one which amounts to more than a manager with a title. The press has not been permitted to visit a collective; the reason apparently being that nothing which could be visited really exists yet.

In short, Poland is on the surface the least communized of the Russian dependencies just as, ironically, Yugoslavia is the most communized.

That is the condition now; the condition at the end of 4 years of gradual increase of Communist power; and the condition as the Council of Foreign Ministers debates the issue of Germany at Paris.

You Can't Please 'Em, At Least Not All the Time

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, you can't please 'em, at least not all the time; and that is a good thing, for, if you could and Congressmen were so advised, their heads would be apt to swell—at least, while here in Washington.

Free press and free criticism are not only constitutional rights here in the good old United States of America, but criticism of Congressmen is a popular indoor and outdoor sport. A legitimate sport, for everyone helps pay the Congressman's salary and everyone is his boss. Hence, there is no reason why the Congressmen should not be told.

Moreover, your Congressman would not be happy if there was not free discussion in his District and he might become indolent if he was not explaining or advocating during his waking hours.

All of which brings me to an editorial from the News-Palladium, edited and published by Stanley R. Banyon at Benton Harbor, Mich., and which reads as follows:

EVERY LITTLE BIT HELPS

Congressman HOFFMAN has introduced a bill providing a 5 percent voluntary reduction in congressional salaries and expense accounts.

Congressmen now get a salary of $12,500 a year, plus $2,500 in nontaxable expense money. (They don't have to buy postage stamps either.) This adds up to $15,000. Five percent of $15,000 is $750, which would make the annual take-home pay of House Members $14,250 if the bill should be passed.

This sounds to us like those $15 cuts on $2,000 motorcars.

Just the last sentence, no more, of the above was reprinted in an editorial by Harry Whiteley of the Dowagiac Daily News.

Here in Washington during the last few weeks Senators and Congressmen have been hearing about economy from the folks back home who at last realize that if there is not less spending here in Washington taxes will be higher, there will be a drop in business, more unemployment, and eventually we will all go "bust." So the people's representatives, instead of just talking economy, have started to really do something about it.

The Hoover report, printed and verbal comments thereon, gave the people a little accurate information as to the extent of the stupendous waste and inefficiency in their Federal Government. So they began to write their hired men in Washington. The hired men, especially those in the House, who must seek reelection every 2 years, are beginning to listen to what their bosses say.

A group of Senators—both Democrats and Republicans—proposed a 5-percent cut in expenditures in the executive departments. Senator TYDINGS suggested a 5-percent cut in Senators' and Congressmen's salaries. Your humble servant introduced a bill to cut the salaries 5 percent. He also objected to the move to give Congressmen additional clerk hire of $3,000 per year. That particular item was not so bad because the money can be wisely used. However, as practically everyone seems to be tightening up his belt and, either voluntarily or otherwise, taking a cut, I thought it consistent for Congressmen, if possible to do so without denying the home folks service they needed, to forget the additional clerk hire, but in any event to take a cut in their own salaries.

The News-Palladium was quite nice about it for it did caption its editorial

UNIVERSITY OF MICHIGAN LIBRARIES

with the statement that "Every little bit helps," but then it ended with the statement that "This sounds to us like those $15 cuts on $2,000 motorcars." Editor Whiteley forgot any words of commendation.

A $750 cut on the salary we get isn't very much, but it is the same percentage that we were asking the executive departments to take and if the advertising men of these two papers will cut their prices 5 percent on my political advertising, I will be thankful, though being human, I would rather have them cut 50 percent, which I do not ask them to do.

All right, folks, I am not complaining. Just calling attention to the fact that I was trying to be consistent; that I will have difficulty in inducing the Congressmen to take even a 5-percent cut and that I never expect to please everyone all the time.

I will just continue to heave a little, push a little, pull a little on the economy program every time I get a chance, hoping all the time to please a majority of the home folks at least half of the time.

Moral: Do not expect too much of me; I am just human, and not too many folks are willing to take a cut. Am just a lowly citizen, trying to do my best on the job you have entrusted to me and for which I am grateful.

The Basing-Point System and the State of Ohio—Ohio Had Only Three Basing-Point Mills—All Cement Mills in Center of State Were Non-Basing-Point Mills—Phantom Freight in Evidence to Hundreds of Ohio Destinations—Bids to Ohio State Highway Department Identical Before Supreme Court Decision—Small Business in Ohio Foundation of State's Industrial Progress

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1949

Mr. PATMAN. Mr. Speaker, in the early days of our colonial history the territories which now comprise the State of Ohio were the goal of thousands of pioneer folk from most of the Original Thirteen Colonies. The first settlement in Marietta in 1788 and later in the same year the founding of Cincinnati was the signal for the pouring in of people from New England and the Middle Atlantic States. By 1800 many settlements were established, and in 1802 the present boundaries were fixed with the exception of the northern boundary which was finally settled in 1836. On February 19, 1803, Ohio was admitted to the Union.

Bountifully supplied with hardwood forests and deep rich soil Ohio soon assumed the important role in our United States which she has occupied ever since. Her shores, washed as they were on the north by the Great Lakes and by the beautiful Ohio River on the south, as well as numerous rivers and lakes within her borders, provided access to a ready means of transportation. With the advent of railroads Ohio was early transversed by our great continental railroads. Her ports on the Great Lakes and her river traffic all contributed to Ohio's growth as a great industrial as well as agricultural State. Ohio has great mineral resources in coal, clay, petroleum, natural gas, salt, and many other natural resources. Ohio abounds with limestone and other materials for the manufacturing of portland cement. Ohio's history is one of steady progress and development in the arts and sciences; in the manufacture of objects of beauty as well as utility, and her contribution to the general welfare of our country has been magnificent.

One cannot visit Ohio without being impressed with the unique position Ohio occupies in our galaxy of States. From the very beginning of our good roads development Ohio has been in the forefront of the movement. U. S. No. 30, the Lincoln Highway, was one of the first transcontinental highways to be completed, and Ohio was one of the first States to give impetus to the movement to complete this great artery on which one can now travel from coast to coast.

Ohio's whole highway system gives evidence of the careful planning and the utilization of local materials which abounds in most sections of this State. Ohio's program of improvement and her educational facilities are classic examples of American progress in looking ahead toward the welfare of the generations to come. No State in our Union is more entitled to our admiration for her accomplishments than is Ohio.

OHIO PAYS PHANTOM FREIGHT LIKE ALL OTHER STATES UNDER THE BASING-POINT SYSTEM

In the purchase of cement, steel, and other commodities for her great highway system and public and private works, Ohio and her citizens have been subject to the same unhappy situation that has been found to exist all over the country. Prior to the Supreme Court decision in the Cement case on April 26, 1948, the price of cement at all destinations in Ohio showed the same identity as elsewhere. Under the old Pittsburgh-plus system, with steel mills scattered the length and breadth of Ohio, Ohio and Ohioans were forced to pay enormous sums in phantom freight. When the Pittsburgh-plus was outlawed and multiple basing points established for steel, this condition was helped, but Ohio still paid vast sums under this system for steel and other products.

BASING-POINT AND NON-BASING-POINT CEMENT MILLS IN OHIO

Carefully placed around the borders of Ohio are the basing-point mills as set up prior to the Supreme Court decision. At Ironton, Ohio, in the southern part of the State, there was located a basing-point mill of the Alpha Portland Cement Co.; at Silica and Bay bridge, on the northern border of Ohio, were the basing-point plants of the Medusa Portland Cement Co. For all practical purposes, Ohio had two basing-point cement mills.

Non-basing-point cement mills were located more toward the center of the State as follows:

East Fultonham: Pittsburgh Plate Glass Co.

Middle branch: The Diamond Portland Cement Co.

Osborne (2): Southwestern Portland Cement Co., Universal-Atlas Cement Co.

Painesville: Standard Portland Cement Division of Diamond Alkali Co.

Superior: Superior Portland Cement Division of New York Coal Sales Co.

It is not clear from the record whether or not the sales territory in Ohio was controlled by a basing-point mill or mills in Ohio or outside the State. There were basing-point mills in western Pennsylvania and southern Indiana which may have controlled a portion of Ohio territory. Such a deduction is not without foundation because it has been found, for example in the case of southwestern Virginia and western North Carolina, that the basing point for that territory was, in fact, Ironton, Ohio. It has been pointed out time and again that, even when the Cement Trust was brought into the courts, the full facts of territorial divisions could not be learned. This is because of the secrecy necessary to the operation of basing-point systems of pricing.

The very nature of artificial price systems makes it incumbent upon the users of such systems to not leave even a fingerprint behind for evidence.

ILLUSTRATIONS OF PHANTOM FREIGHT ON CEMENT IN OHIO

The destinations set out below are used as examples of the payment for phantom freight under the basing-point system in Ohio before the system was outlawed by the Supreme Court. The rates used to compute the table are those filed as an exhibit—Federal Trade Commission's Exhibit No. 1110–W in docket 3127 of the Commission, rates which have been increased since that time. The rates as used from the Commission's exhibit are those compiled and published by the Cement Institute as provided for in tariffs on file with the Interstate Commerce Commission and the Public Utilities Commission of Ohio, effective November 27, 1936. The table setting forth phantom freight follows:

Destination point in Ohio	Applicable or lowest basing-point freight charge per barrel	Lowest mill freight charge per barrel	Phantom or excess freight per barrel
Cincinnati	$0.42	$0.32	$0.10
Columbus	.40	.32	.08
Cleveland	.32	.29	.03
Dayton	.44	.19	.25
Piqua	.42	.29	.13

Ashtabula	.34	.29	.05
Jefferson	.34	.30	.04

Inasmuch as the exact delineation of territories assigned to the various basing points within Ohio's borders and in other States adjacent to Ohio, are not known, the above table has been computed on the basis of the lowest basing-point freight charge. Even so, computing the table on this basis clearly shows that on the millions and millions of barrels of cement purchased by public and private sources in Ohio, that these purchasers have paid phantom freight.

Production and consumption of cement in Ohio

Year	Production	Consumption
	Barrels	*Barrels*
1939	5,799,726	6,308,707
1940	6,664,115	6,538,166
1945	4,604,294	4,777,250
1946	8,034,762	9,027,415
1947	9,382,564	9,684,602

Source: U. S. Department of the Interior, Bureau of Mines Yearbook.

It can readily be seen from the foregoing table, that includes two prewar years and three postwar years, that the use of cement in Ohio is increasing rapidly as it is everywhere else. With fine cement-making materials Ohio should have increased production in keeping with the increased demand.

The production and consumption of cement will never properly balance out unless the natural resources of each State are utilized to the fullest extent. Cement is a heavy basic commodity. It should be a low price commodity, relatively speaking, and it should be procured in a free market at free prices from the closest available source of supply. The Cement Trust has artificially restricted the production of cement and artificially restrained and hindered the sale and distribution through the use of the multiple basing-point system. Ohio nor any other State in the Union will ever be free from this monopolistic burden if any law is passed which will upset existing law and decisions of the courts which have been so painstakingly brought to fruition.

BIDS TO OHIO STATE HIGHWAY DEPARTMENT OF HIGHWAYS SHOW IDENTICAL PRICES PRIOR TO SUPREME COURT DECISION IN THE CEMENT CASE

It has been pointed out many times that, prior to the Cement decision, governmental agencies, dealers, contractors, and all other purchasers of cement were confronted with the lack of competition. This lack of competition evidenced itself through identical bids regardless of the quantity of cement involved, the destination, or the purchaser. The rate books referred to above included all mills serving a particular area. The key to identical prices was the basing-point mill rates in the book plus the base price of the mill in the territory controlled by that mill. All other members of the Cement Trust bidding to a particular destination could bid identical prices through the use of the rate book and the knowledge of the controlling basing-point mill base price. As examples for the State of Ohio, I include several tables of abstracts of bids for cement purchased by the Ohio Department of Highways prior to the Cement case decision. It will be noted that in each instance bids are identical at each destination, save for a few minute and apparent errors. The tables follow:

TABLE 1.—*Invitation 1240, requisition 8479, Oct. 6, 1947—300 barrels air-entraining portland cement, in paper bags, M–1.1, delivered to Middletown, Ohio*

Company	Per barrel	Brand name	Delivery
Medusa Portland Cement Co., Cleveland, Ohio.	$2.73	----------	As soon as possible.
Southwestern Portland Cement Co., Osborn, Ohio.	2.73	Miami	Depends on availability of boxcar.
Universal Atlas Cement Co., Dayton, Ohio.	2.73	----------	When car is available.

TABLE 2.—*Invitation 1462, requisition 1039–B, December 17, 1949—225 barrels cement in paper bags, State specification M–1.1, to be delivered to Lima, Ohio*

Company	Per barrel	Brand name	Delivery
Universal Atlas Cement Co., Dayton, Ohio.	$2.80	Universal Atlas.	1 day.
Diamond Portland Cement Co., Middle Branch, Ohio.	2.80	----------	4 days.
Medusa Portland Cement Co., Cleveland, Ohio.	2.80	Medusa	As soon as possible.

TABLE 3.—*Invitation 979, requisition 1715, Aug. 4, 1947—225 barrels cement in paper bags, State Highway M–1.1, to be delivered to Lima, Ohio*

Company	Per barrel	Brand name	Delivery
Pittsburgh Plate Glass Co., Columbia Portland Cement, Zanesville, Ohio.	$2.61	Columbia	1 day.
Lehigh Portland Cement Co., Allentown, Pa.	2.66	Lehigh	Promptly.
Huron Portland Cement Co., Detroit, Mich.	2.66	Huron	3 days.

Southwestern Portland Cement Co., Osborn, Ohio.	2.97	Miami	At once.
Universal Atlas Cement Co., Dayton, Ohio.	2.97	Universal Atlas.	1 day.

NOTE.—Discount 10 cents per barrel for payment within 15 days.

There is one exception, in several instances, to identical prices in the above tables; namely, a few of the tables show one bidder 1 cent higher per barrel. In my study of the sale and distribution of cement, this occasional departure from the identity of bids is to be expected because a mistake will occur once in awhile, or a bidder bids slightly higher than the rest of the bidders because he is not particularly interested in the business.

DO WE WANT FIXED PRICES IN CEMENT AND STEEL, LEAD, GLASS, AND OTHER BASIC COMMODITIES?

The question asked in the above heading may be answered in the negative by most of us. The only people who want fixed, rigged, and artificial prices are the ones in the cement, steel, and other trusts who fix these prices. The question of monopoly and whether it will be nurtured and built up through the use of the basing-point system is before us. We cannot avoid it. We must meet the issue head on. Therefore, I repeat these questions:

First. Do we want monopoly fixed prices in steel, cement, lead, glass, and other basic industries?

Second. Do we want competition in industry and trade?

Third. Do we want small business institutions in this country to survive and prosper?

Fourth. Do we want the antitrust laws emasculated to the point that no one in business can survive and where the protection is removed which has afforded aid to the small and rebuked the powerful?

The answer to all of these questions and many more of a similar character must be answered by Congress very soon. I believe the answers are self-evident and need no elaboration.

OHIO SHOULD HAVE THE BENEFIT OF CEMENT AND STEEL-MILL LOCATION—SMALL BUSINESS MUST HAVE ITS NATURAL ADVANTAGES

Ohio and Ohioans in all of their diverse activities of agriculture, mining, manufacturing, constructing, and other normal pursuits of life should have the benefit of their natural resources. Small business in Ohio has thrived for generations and specialized in manufacturing, shipping its products far and wide on a quality and utility basis. The people of Ohio have been progressive and ingenious in building up the State and creating a market for its products. I know that Ohioans believe in free enterprise, free markets, and free prices. Their industry and capacity for trade and commerce is proof of this statement.

Ohio was, in reality, built up in its industrial field largely through the courage and ability of small business. That big business has come in and taken over in some instances is not by the wish or design of the people of Ohio, I am sure. If we are to protect small business in Ohio and in our country, the emasculation of our antitrust laws must be prevented.

I believe without a doubt that if the people of Ohio could speak as individuals on this matter the answer to each of the questions propounded above would be correct and emphatic answers. I feel positive that Ohioans would say strengthen our antitrust laws and uphold our enforcement agencies. They would say to the Congress—throw back the forces of monopoly and uphold the hand of small business.

UNIVERSITY OF MICHIGAN LIBRARIES

Equal Justice Under Law

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, in the CONGRESSIONAL RECORD of May 26 appears a resolution unanimously adopted by the Senate which calls upon the FBI to assist Michigan law-enforcing officers in apprehending and bringing to the bar of justice the criminals who attempted to kill Walter and Victor Reuther.

In my opinion, not only should the FBI make its scientific services available to law-enforcing officers in these two cases but in every other case where they can assist local officers.

Inasmuch as the other body has seen fit to call attention to this case, I suggest that the President and those in charge of law enforcement in the Federal Government, while it is not their duty, and they should not be asked to enforce State laws designed to prevent and punish crime, should at least, when mob violence comes to their attention, express public disapproval of those activities. This is especially true when the mob violence interferes with interstate commerce as so often it does.

That repeatedly there is violence by organized mobs, some operating under the direction of organized labor, is a matter of common knowledge. Sometimes local authorities adequately cope with the situation. All too often they do not, as is set forth in a piece by Pegler found in the Friday, June 10, papers, and which reads as follows:

FAIR ENOUGH

(By Westbrook Pegler)

Contrary to a superstition deliberately fostered by the criminal unioneers and the Communists of the Labor Board, in the thirties, the enforcement of laws against assault, riot, arson, and vandalism is a duty of local and State police and civilian officials.

Mayors, policemen, sheriffs, and the like who willfully fail to protect life and property, whether from cowardice or in obedience to the policy of some criminal defaulter in the mayor's or the governor's chair, may be prosecuted themselves.

I have reported the evidence of criminal default of duty by many local and State cops in Michigan in obedience to a policy of appeasement toward Communist goons improvised by Frank Murphy, of the Supreme Court, when he was Governor.

Today I present a more recent case of capitulation in Beaumont, Tex. This will be followed by a statement of the ideal policy and objective, unemotional, nonpolitical police work by George T. Barnes, supervising captain of the Chicago police, commanding the detail which deals with strikes and picket lines.

Relying on the Houston Post of June 3, we learn that Herman Brown, of Austin, was escorted out of Beaumont by local police after a riot in which 12 men were injured. Brown is president of a company which is charged with no violation of any law and which employed law-abiding, nonunion carpenters.

He said policemen, with a sworn duty to enforce the laws against violence and a criminal liability for willful failure, told him that unless he left town and withdrew the law-abiding carpenters they could not guarantee to handle the trouble that might ensue.

The victims in such case have a right to shoot to kill anyone who attacks them or to shoot indiscriminately into an oncoming mob. Two victims of CIO mobs actually did shoot two goons in the head and killed them in insurrections last year and both were acquitted by juries.

The carpenters' union in the present case is the old-style craft union of the A. F. of L., with headquarters in Indianapolis. The boss president of the carpenters is William L. Hutcheson, a Republican.

Brown personally appealed to Governor Jester for the protection of the Texas Rangers, who have a reputation for courage. The Galveston News reported that the law-abiding carpenters were attacked by a mob of 150 goons, and chased into a tourist camp where they defended themselves with hatchets and hammers until the sheriff broke up the brawl.

The item mentions no arrests and says the law-abiding citizens were besieged all night and all the next day with union men patrolling the streets around the camp. The News said the sheriff told the Governor he needed no help. City police finally escorted 16 law-abiding carpenters out of town.

The issue here is not political or emotional. The case seems to present a typical surrender by the body sworn and paid to enforce the law, leaving the law-abiding citizen no choice but to kill or abandon his rights.

Few citizens thus far have had the resolution to kill, even with legal justification. The result has been a serious impairment of confidence in Government among good citizens and serious impairment of respect for Government by criminals.

Government is the force that protects one citizen from violence or death at the hands of another. Its reputation for reliable, impartial protection and justice should be precious to all men, whatever they may think about unionism.

Captain Barnes stated his case about a year ago before a subcommittee of Congress consisting of one member, CLARE E. HOFFMAN, of Michigan.

He first put on record the "Manual of Procedure in Strikes and Labor Controversies" governing the Chicago police. The manual says the general duties of the police in strikes are to protect life and property and maintain order.

Only the police may direct traffic and they are instructed to arrest pickets or goons who try to divert trucks or the personal cars of employees or other persons at struck premises.

The "policy" holds that anyone may enter or leave struck premises without being stopped or threatened. Union officials and pickets may speak to workers either in public or at their homes but only in an orderly manner. Pickets are not allowed to block entrances or impede traffic.

"When the picket line stops and becomes unruly it becomes a mob and subject to arrest," the manual says. "A mob consists of five or more persons. Sound trucks or loud speakers are a violation of a city ordinance."

Captain Barnes has the entire Chicago police force, about 6,500 trained men, at his command in emergencies. He goes to all dangerous situations himself whereas, in Michigan, one chief of police was afraid to apepar where a mob was, and another appeared but ran away.

"If I had a thousand men with bands on their arms and clubs 2½ feet long and caps with insignia and on my back the legend 'Flying Squadron' and I took over——" Mr. HOFFMAN began.

Captain Barnes interrupted: "You would be locked up. That would be a mob."

What would happen to him and his thousand men if they tried to direct traffic, Mr. HOFFMAN wanted to know. He was depicting actual conditions which unmanned government in Michigan.

"Your thousand men and you would be locked up," said Captain Barnes.

"How long would it take?"

They would be locked up as soon as Captain Barnes could get enough patrol wagons.

"The pickets, the employers, and the citizens are familiar with the police-department policies, and, as a result, they cooperate," the captain continued. "We have people who violate the law, but we lock them up.

"Our instructions are, anyone that violates the law, regardless of either side, lock them up. I have also locked up some people going to work. Some were carrying pistols. We don't allow anyone to carry clubs or knives or pistols in Chicago. It is a violation of law.

"When a vehicle comes to the picket line we holler 'Heads up, move back,' and the police move in, and when the way is cleared they motion the vehicle through at slow speed.

"When there was resistance the persons resisting were arrested and taken away. Some of our courts have held the pickets have a right to call them scabs, rats, and finks, but if anybody uses profanity, that is disorderly conduct and they get locked up."

In several forms Mr. HOFFMAN put the question to Captain Barnes whether any further Federal law were necessary to supplement existing State laws and local ordinances to control riotous insurrections and actual treason against the governments of the States on picket lines.

"I think we have all the laws we need right here," the captain said. "They are being enforced."

How a Government Agency Operates

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Minnetonka Herald of Wayzata, Minn. It is a vivid case study of how Government agencies almost invariably come to operate. We can be sure that if the Government takes over medical care or management of agriculture, its performance in those fields will be on a par. People imagine they are going to get more for less; what they get is less for more:

"SNAFU"

"Snafu" is an alphabetical term tabbing the machinations of Federal administration. The label defined as "situation normal, all fouled up" is a stock phrase in the Army, Navy, and Marines.

A vivid example of this "snafu" type of administration that characterizes the Federal Government is in evidence right here at home.

A sign on the right-hand door of the Wayzata post office reads, "Please use other door." That sign has been in evidence for

several months on one of the busiest entrances in the Minnetonka area.

Seems the closing mechanism on the door went out of order. Local post-office officials took immediate steps to remedy the defect, as would any private businessman whose operations were hampered by a defective entrance.

With the Post Office Department, however, repair or replacement of the defective part had to be "expedited" through required Federal channels.

(Federal bureaus use the word "expedite" freely—it loses most of its connotation, however, along the devious detours that characterize Federal efficiency.)

A request was promptly despatched to the Post Office Department in Washington for immediate repair of the faulty door closer. In the due course of time authorization for the repair was received here.

The mechanism, together with the repair authorization, was then forwarded to the post office equipment repair depot in St. Louis, Mo. There, along with items from other post offices in the United States, the tired door closer awaits rehabilitation and return to duty at the Wayzata post office.

Meanwhile, the door functions not.

Even more ironical is the fact that an efficient door-closing mechanism, assigned to the local post office reposes on the inactive list in the basement of the building. (Six brass cuspidors out of seven designated for duty here are likewise in the basement storeroom.)

This door closer, designated for the rear receiving door of the post office proved too powerful for the door frame to which it was attached and was therefore removed from duty. We are informed that this door closer would operate efficiently as a replacement for the disabled front-door mechanism.

Such a logical procedure is impossible, however. The closer has been inventoried by the Post Office Department to the rear door of the building. It won't work there, but once assigned the designation is irrevocable.

In defense of the Post Office Department, may we point out that it has long been recognized, and in fact is one of the most efficient department operations of the Federal Government. In defense of the local post office officials we have already pointed out that they immediately took the only course available to them to obtain adjustment of this defect.

The long delay stems from the fact that Federal administration means traversing a devious, time-consuming labyrinth of red tape.

The Hoover commission has pointed out that the paperwork done on every Government purchase transaction costs more than $10 in labor and materials. Yet, approximately half the several million purchase orders which the Government issues each year are for less than $10. As a result, the overhead is more than the cost of the goods.

The cost of replacing the broken spring in the door-closing mechanism on the post-office door has been estimated at $2.50.

If this type of administration constitutes efficiency—can we taxpayers by the most fantastic stretch of our imaginations conceive the utter inefficiency of our poorer-managed Government bureaus or departments?

When we ask Federal aid for education, health, housing, public works, Federal aid for anything; we are in effect offering to pay the Federal Government to manage our tax funds with this inconceivably, impossibly incompetent type of administration.

This continuing delegation of responsibility to the Federal Government by citizens, blinded by the pseudo-wizardry of New Deal economics perpetuates this SNAFU.

As P. P. Leslie, local paper company executive and a member of the Hoover Commission, has pointed out:

"Local government is the best government; it is a pipedream that things can be done in Washington that we can't do here!"

We might add that anything the Federal Government can do for us, we can do better, * * * and faster—if we are but permitted to retain the tax funds necessary for our own local projects.

Refugees Go North To Get Factory Work

EXTENSION OF REMARKS

OF

HON. ED GOSSETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1949

Mr. GOSSETT. Mr. Speaker, a few months ago I went with a committee of Congressmen to see the debarkation of the first shipload of DP's to arrive in the great Southwest. This ship docked at New Orleans. At that time there was much publicity about this ship carrying the first contingent of DP's, the majority of whom were farmers. There was trouble on the ship the night before the DP's disembarked, and there has been trouble since.

I am inserting for the RECORD an article appearing in the New Orleans Item on Saturday, June 11. This article is an unbiased, factual statement of how some of these DP's have conducted themselves since their arrival. Bear in mind these were supposedly the best of those seeking admission to this country. These were the farmers who were going to remain on the land and not go into overcrowded cities.

REFUGEES GO NORTH TO GET FACTORY WORK

(By Lee Davis)

Many of Louisiana's DP's—the European refugees brought here under the Displaced Persons Act—are disappearing.

They are leaving their jobs on farms and plantations and heading north to seek industrial jobs.

In most cases they haven't left forwarding addresses.

Just how many have left is not officially known, but a spot check on several plantations showed that the exodus may be as high as 30 percent.

Exact figures are not available because, says the Bureau of Immigration, DP's, once arrived in this country, are free to go wherever they please.

Although they are "required" to register changes of address, there is no serious penalty for not doing so.

PULL UP STAKES

In some cases, DP's have stayed only a few days on the jobs to which they were assigned.

Though they were brought over from Europe as farm workers, many of them have had little or no experience with farm life and are badly suited to it, plantation owners have found.

"We can definitely say that most of our DP's were not farmers," a representative of one large sugar plantation corporation said.

"It is easy to see why. These people are the cream of the crop of the refugees.

"They are the brightest, most ambitious ones. That is why they got themselves first on the list to be accepted.

"When they were told farmers were needed, it was easy to say, 'Sure, I am a farmer, I used to go out to my grandfather's farm every summer and help!' "

Another plantation reported that among the group assigned there as cane workers were an auto mechanic, a lathe-turner, a shoemaker, a carpenter, and a railroad clerk.

And another told of a case of a 46-year-old Armenian woman, who has changed jobs four or five times because none of the places offered suited her.

"I didn't come here to work," she was quoted as saying. "I came to get a rich husband."

LITHUANIANS AIDED

Lithuanian refugees are getting well-organized help, plantation owners believe.

They think an American society of Lithuanians is arranging to get these refugees to northern cities and to find jobs for them.

Almost all the Lithuanian settlers have left two of the largest sponsoring plantation corporations.

"Some of the Lithuanians had mail from this northern group and Lithuanian language newspapers already waiting for them when they arrived," a representative of one of the corporations said.

At one plantation it was reported that a man, representing a DP group and also the Lithuanian society, had taken some of the refugees away.

"When we ask these people where they are going," said a supervisor of one of the groups, which has left. "They just say 'Chicago' or 'New Jersey,' and don't give us any street address or any way to get in touch with them."

Despite the number who have left, those staying are adapting themselves well, the operators say.

They cite instances of many groups, particularly some Polish and Armenian families, farmers by tradition, and say that these people are happy and satisfied and doing well on the farms.

DISCOUNTS NUMBER

The Right Reverend Monsignor William Castel, head of the Catholic organization which sponsored most of the DP's sent to this area, said today he doesn't believe the number actually leaving is so large as reported.

"The numbers sound larger than they are because they involve families, sometimes with several children," he said.

He said that it was true that many of the refugees were definitely not fitted for farm work or for conditions in Louisiana.

"These people sometimes find it hard to settle here," he said.

CONDITIONS DIFFERENT

"European conditions are different. They are used to living in villages where there is a close social life with plenty of friends and amusement. Those who did do farm work went out by days and returned to the villages at night.

"The isolation of farms over here is something new to them. Also the heat is something they are not used to.

"Then there is the Hollywood idea of America as a land of easy riches and good times. Most Europeans have this impression, and our own officers and men overseas have fostered it by the lavish way they've thrown money around."

DENIES EXPLOITATION

Referring to the recent claim by the Reverend J. Stanley Ormsby, of the National Catholic Welfare Conference, that DP's in the Louisiana cane fields were being underpaid and exploited, he said:

"They have been paid at the same rate as our own native workers.

"A sugar planter can't underpay his workers, because his benefit payments on his sugar crop are all based on Government requirements, among them that he pays a stated minimum wage to his workers."

UNIVERSITY OF MICHIGAN LIBRARIES

Berlin Airlift Rugged

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1949

Mr. DOYLE. Mr. Speaker, the Berlin airlift has already made such a significant place in history that I felt certain that the following article which appeared in the Naval Aviation News for June 1949 depicting the stories of the great service rendered by the Navy transport squadrons VR–6 and VR–8, would not only be informative but would be inspiring and a definite contribution to all those who read the following:

BERLIN AIRLIFT RUGGED

The story of how Navy transport squadrons VR–6 and VR–8 stepped into the Berlin airlift and began setting records for freight carrying has been told. Behind the scenes is another story, not too glamorous, but just as necessary to keep the planes flying, the story of engineering.

On a few hours' notice, the squadrons were uprooted from Hawaii and Guam and sent halfway around the world to feed Berlin. When they arrived in the middle of winter, conditions in Germany were rugged. Let VR–8's engineering men tell their own story:

"The tasks confronting us were: Reorganization to fit the need of the job, establishment of shops, nosebays, working and office spaces and the immediate and pressing requirement of keeping 12 aircraft in the air. After balmy Hawaii, even the elements appeared hostile as we combatted the cold and mud. Concrete taxiways and hardstands were something you encountered further towards the center of things; we are on the end of the line.

"Circumstances at times seemed perverse and cruel: Our beautiful spares procured for us by Moffett Field from the resources of the Navy at a high priority and guarded constantly while enroute were lost. We were forced to turn them in to Air Force Supply; one plane taxied into a cletrac necessitating that engines 1 and 2 be changed and putting the vitally-needed cletrac out of commission.

"The electric lights were so dim that we could not read; the telephone service was erratic, and many a night was spent with no illumination other than that provided by flashlights. What could happen next? We ran out of flashlight batteries and were unable to procure them for a prolonged period.

"We live 10 miles from our base of operations, commuting by bus. Unusual fogs have grounded the busses on at least four occasions so the duty crew were unrelieved for 24 hours. The engineering officer started for operations office, a 10-minute walk. He arrived at the passenger terminal 4 miles away 4 hours later. He explained that his gyro slipped 90 degrees in the dense fog and that he had no idea where he had been.

"We had no fresh water, we had an outside 'Chic Sale' head, and we had no coffee mess. Also we were without the transportation necessary to visit the more enlightened areas. If an impression of a gloomy, starkly desolate working area has been created in the reader's mind, the actual conditions existent in November and December undoubtedly exceed the impressions created.

"Statistics reflect the concerted efforts and toil of all hands. However, while the overall picture takes into account this all-out effort, it conceals the sacrifice of the individual men working in relays because the bitter cold numbed fingers after 10 minutes; sweeping ice and snow from wings with brooms dipped in alcohol; sheltering spark plugs and leads from the sleet with articles of clothing while the water searched for and found openings in the clothing.

"Years of NATS training in precision flying certainly paid off in Germany, where they enabled VR–8 pilots to consider as commonplace the final approaches between apartment houses in Berlin when the weather is at or slightly above minimums. The squadron had been flying into Templehof 3 weeks before the ceiling lifted sufficiently to permit the crews to get startled glimpses of the apartment houses through the cockpit windows.

"All has not been easy for the crews. With the quarters 22 kilometers away in Frankfurt, the problem of getting back and forth to the flight line is not too pleasant. Rather, it means standing up in a crowded bus for an hour before and after a flight to Berlin."

FBI Documents

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1949

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial which appeared in the June 11 issue of the New York Herald Tribune:

CLIMAX OF CONFUSION

All the passionately debated arguments over "Communist conspiracy" on the one hand and "witch-hunting" and "character assassination" on the other seem to reach an insoluble climax of utter confusion in the Coplon case testimony. Fredric March and his wife, Edward G. Robinson, Dorothy Parker, Norman Corwin and other prominent people suddenly find their names blazoned from coast to coast as having figured in Federal Bureau of Investigation reports as Communists or Communist sympathizers. The source of the allegations is anonymous; there is no evidence that they are true, or even that the FBI thought them to be true; but there they stand in print, capable of doing lasting harm to the individuals concerned. It seems an appalling case of reckless misuse of privilege and unjustified witch-hunting.

But is it? And who is to blame? Miss Coplon, a confidential clerk in the Department of Justice, was arrested in company with a Russian employee of the United Nations, at a time when her handbag was full of what are alleged to be notes of confidential FBI documents. No one can blame the Department of Justice for prosecuting such a case; it would have been very derelict not to do so. Neither the FBI nor the prosecution wished to publish the reports containing these eminent names; it was Miss Coplon's attorney who insisted on reading the originals from which the handbag notes are alleged to have been taken, and it was the trial judge who upheld his right to do so over the strenuous protests of the prosecution. The Government, left with the alternative of publishing the material or abandoning the case against Miss Coplon, decided to go ahead, despite the damage it might do to the national interest and, incidentally, to persons mentioned in the documents. It can scarcely be said that the decision was improper.

Yet the ironic result is that imputations which are in themselves no part of the case against Miss Coplon—no more than the phrasing or the punctuation marks in the documents—which neither prosecution nor the FBI even suggests to be valid or credible, are spread broadcast. And there is no one or nothing to blame, unless it is the methods of Communist conspiracy which could alone give rise to such charges as those brought in the Coplon case. To deal justly and fairly and with full protection to the innocent with all the problems Communist conspiracy has raised is not easy and will never be made easier by passionate outbursts of emotion from either side. But in addressing them, the public must try at least to learn to evaluate evidence, to weigh both the sources and the implications of testimony and to do its own share in making our democratic methods operate soundly.

Commencement Address at Duke University

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my address given at the graduation exercises at Duke University, Durham, N. C., on June 6, 1949:

WHICH DIRECTION TOWARD PEACE?

Throughout the whole world today a fierce political and ideological struggle is being waged whose outcome will determine who really won World War II and probably whether, God forbid, there is to be world war III.

The plainest fact we face is that we don't have one world, as we had hoped we would have. We have two worlds. Men and nations are split from top to bottom.

It is not primarily a conflict between Russia and the United States; or between East and West; or between communism and capitalism as economic systems, as is so commonly said. It is far deeper than any of these. It is a conflict between two totally different philosophies of government. One believes that man's problems can only be solved from above down; the other believes that most problems can best be solved from the bottom up. One puts its primary faith in a few supposed supermen—"leaders"—at the top; the other puts its primary faith in the good sense, resourcefulness, and capabilities of ordinary people, if they are masters in their own house and able to choose their own representatives in genuinely free elections.

In reality, it is a conflict between two wholly different philosophies of life—two different concepts as to the nature of man; which means two different concepts as to the nature of God, and the nature of the universe in which we live.

Our free world has been unable to get agreement with the Soviet-dominated world because we are not pursuing the same objectives as its leaders. And we are not pursuing the same objectives because we don't believe in the same things.

A second plain fact is that we cannot go on indefinitely, or even very long, as two such worlds. Our planet is too small. We are too interdependent. The two worlds

must become one—at least in the sense of having one set of rules for carrying on relations between them.

There are only two ways by which the two worlds can become one. One way is by conquest; the other is by voluntary agreement.

Mr. Stalin understands this perfectly. More than 20 years ago he wrote, ultimately one or the other must conquer." He knows the two worlds must become one and he believes it must be by conquest.

We don't believe in that method. We don't want conquest of us by them; but we don't want conquest of them by us.

If to get the two worlds together by the other method—agreement—means that the Soviet must become democratic, or that we become Communists, then there is no hope indeed.

It is not conceivable that in any near future the hardheaded men in the Kremlin and their fanatical devotees in almost every other land, including our own, will abandon their beliefs and objectives and accept ours; or that we in the western world will voluntarily abandon our ideas, our values, our objectives and become Communists or totalitarians. But that in itself need not make the situation hopeless. It is not always necessary to become alike in order to get along in peace and order.

The birth of our Nation is evidence of the fact that it is sometimes possible to get good, peaceful, and even democratic relations between two systems, one or both of which does not have full democracy within it. The abolitionist world and the slaveholder world had economic and social systems that were not at all similar and their ideologies were in many respects unlike. Yet they were able to come together in a genuinely democratic organization, the United States of America, when they faced a set of circumstances where for each side there was more to gain by agreeing on how relations between the two systems, and between them and the rest of the world, were to be handled. It was not idealism; it was intelligent self-interest. As Franklin put it, they either had to hang together, or hang separately.

Likewise, our problems today are so urgent we cannot wait until all come to think alike. Our first objective must be to get workable agreement on a set of traffic rules for conducting relations between the two worlds, while strengthening those long-term forces like education and religion which develop mutual understanding, and thereby can, we hope, bring them closer together in ideas and attitudes.

It is clear that we cannot resolve our differences by appeasing aggression. For 10 years the world tried that method with Hitler and the Japanese militarists. It did not lead to real agreement and peace. It led straight to war and perilously near to slavery.

Unfortunately we refused to learn from that experience, and for several years both before and after VJ-day we tried to get agreement with Communists, in the Kremlin and elsewhere, by yielding to them. We scrapped our enormous military superiority within 6 months after VJ-day. We offered the atomic bomb to all—on terms of equality with ourselves. We also scrapped a lot of our principles and our promises; in secret conferences with the Soviet leaders we divided up other peoples' rights and territory—including those of friends and allies, like Poland and China. Such conduct of course could not and did not lead to better relations. They grew steadily worse; the differences became wider and deeper.

Two years ago our Government finally began to wake up to the fact that the Soviet Union is not a peace-loving democracy and does not respond to mere reasonableness. Step by step we have embarked on a five-fold program which I believe is sound as far as it goes and has some promise of success if continued firmly and expanded:

First, rebuilding enough of our scrapped military strength to fulfill our commitments overseas and to meet any probable emergencies or dangers. Strength, here at home, is indispensable if we hope to have any influence at all with the Kremlin.

Second, resistance to any further spread in Europe and the Near East of the glacier of tyranny moving out of the Soviet Union.

Third, economic assistance on a cooperative basis to certain European nations struggling to recover their economic stability against determined Communist efforts to weaken and subjugate them.

Fourth, military assistance, the North Atlantic Pact. From the beginning it was apparent that the economic recovery program could not move ahead at full speed without this additional step—a mutual defense program. A sense of security is essential if the people of Europe are to bring their resources out of hiding for investment in long-range productive enterprises, and put everything they have into the recovery effort. In fact, economic development without military security only increases their peril because they become a much more tempting prize for a potential aggressor. No one of the nations of western Europe alone, nor all of them together, can become strong enough in the next few years to withstand Russian attack. Their only hope of achieving military security, just as their only hope of achieving economic recovery is by making a most vigorous collective attack upon their problem. Our active support and assistance is based on the sound and simple principle: We help those who help themselves, and help each other, and help us.

The economic recovery program is not, as it was originally hoped it could be, an alternative to a European defense program; rather it is in support of a defense program, just as the defense program is in support of the economic program. Both are necessary for the success of either.

But progress in Europe cannot be enough. It is daydreaming to imagine the Soviets will alter their policies enough to come to real agreement with us as long as they are winning anywhere, and they are winning spectacularly in Asia.

For 3 years the Congress has tried in vain to get the administration to adopt and vigorously pursue policies in Asia similar to those in Europe—while there still was time to prevent the present developments in China which constitute a catastrophe beyond estimation not only to our own security but also to any prospect of having a balance of power in the world so strongly favorable to the free world that it can perhaps influence the Soviets toward cooperation rather than conquest.

Tragically, our Government has followed opposite policies on the opposite sides of the world with respect to nations striving to resist Communist aggression, from within as well as from without. In Europe we said, "We will help you only if you keep the Communist out of your government."

In China we said, "We will help you only if you take the Communists in!"

In Europe we follow the Truman policy of resistance to communism and the Marshall policy of assistance to freedom—and are making real headway; in Asia we still follow the Wallace policy of trying to appease communism—with total disaster.

Unless immediately—and it may already be too late—there is a drastic reversal of policy in Asia similar to that of 2 years in Europe, history can only record that we defeated Japan, but Russia won the war in the Pacific. We and the free world lost it.

By refusing to give vigorous, effective support to those opposing Communist aggression in China, because they did not yet come up to our standards, we actually intervened in favor of the Communists—the worst possible alternative, That is the measure of how immat[illegible]e we still are in the political and ideological fields.

That brings us to the fifth component of the overall program necessary if we are to influence the thinking and the actions of both friends and enemies. In addition to firm opposition to further extension of the Soviet system based on compulsion, we must gain a positive sense of mission to spread throughout the world our system based on voluntary cooperation. At last we are beginning to give to the world a more adequate presentation of the thrilling story of what has happened and can happen under freedom. Through press, radio, films, books, and magazines, and exchange of teachers, students, scientists, and technicians, we must demonstrate more effectively to the oppressed peoples of the world and the undecided peoples, that there is a better alternative based on performance, not just promises. The desperate measures Russia is taking to keep the story of freedom from getting through to those under her control and her own stupendous efforts in the propaganda field are the eloquent proof of how great is her faith in the power of ideas. The Russian rulers know what one man, Karl Marx, was able to start with an idea—and what two others, Lenin and Stalin, have been able to accomplish with that idea.

They know what another man, Hitler, did with an idea.

They also know what other men, the Pilgrims, when they came to this country over 300 years ago did with their idea—political liberty.

The greatest heroes in Russia are not scientists, or industrial magnates or even generals. The heroes in Russia, and the highest paid persons in the land, are the skillful users of words—those who know how to take an idea, and no matter whether true or false, present it in attractive, convincing form. They have learned it is their most potent and effective weapon through the world, in getting people to come along with them.

Why should we be less effective in using ideological measures to get people to come along with us? We do not have to tell falsehoods about America. But we do have to present the facts about it—and present them repeatedly and convincingly, emphasizing the great advantages that have resulted under freedom without in the least concealing the imperfections, or lessening our efforts to correct them.

When our system is such that under it 7 percent of the people of the world have created more wealth and distributed it more widely than all the other 93 percent put together, is it not shameful that it is presented so inadequately that many people not only abroad, but here at home, can be persuaded that it is progress, it is "liberal," to advocate abandoning the system developed by the 7 percent here and go back to one or another of the systems under which the 93 percent struggle?

Why should we be so almost apologetic about a system which while not perfect, is still by far the best this earth has ever known—judged solely by results for human beings?

All of the above are essential—but they are not enough. They merely buy time for a sixth step—give us one more chance to get the whole world organized politically on a sounder basis.

If we hope to win the fierce political and ideological war now raging throughout the world, before it degenerates into an atomic war with unforeseeable destruction, we must move boldly and imaginatively to try to strengthen the world organization so that it

UNIVERSITY OF MICHIGAN LIBRARIES

can handle effectively all threats to the peace from whatever source.

Concern for our own security has compelled us to assume in the present emergency the burden of assisting certain nations which are striving to stay free. But we cannot long carry that burden alone. We have neither the resources nor the wisdom.

The peaceful peoples of the world placed their faith in the United Nations as the agency to establish a just and peaceful order. The experience of the last 4 years has demonstrated that the United Nations in its present form cannot do the job. In fact, it is so constructed that any one of the Big Five, by its veto, can use the United Nations machinery to prevent the making of peace, to defeat the very thing it supposedly was set up to guarantee.

Most Americans were too naive to realize and too trustful to suspect that the Soviet rulers were coldly planning to use the big-power veto not to block war or arbitrary sanctions—which was our concept of its functions—but to block peace. They have not used the veto once to prevent war. They have used it repeatedly to defeat agreements by the free nations that were in the direction of peace.

At Tehran, Yalta, and elsewhere our leaders, in order to get Russia to come along into the United Nations, yielded to her on matters of principle and even on our own solemn pledges, apparently assuming that if Russia joined, it would be for the same reason we and others joined, namely, to help solve world problems. But it soon became clear that the Soviet Government came in for precisely the opposite reason—not to get agreement, but to insure disagreement; not to make the United Nations work, but to be in the best possible position to make sure that it does not work. Why?

The reason is perfectly clear. The Kremlin already has a world organization—the Communist Party. It has more than a dozen countries under its complete control, plus trained, disciplined units in every other country. Its world organization is already functioning, at full speed. It intends to win, and to do so it must keep any other world organization crippled and ineffective.

That is an intolerable situation. The remedy is not to abandon the United Nations or to continue to bypass it, but, rather, to strengthen it. We must get its structure modified so that it can and will work—with Russian cooperation, if possible, but without it if necessary.

On one hand, we must initiate action toward getting the Charter itself amended to correct demonstrated defects.

On the other hand, we must also work for better organization on the less-than-universal level.

If Russia will not agree to Charter amendments that would make all members subject to the same laws, and vetoes them, as would probably be the case, we do not need to withdraw or to drive anyone out. We should organize on a closer basis with all the nations that will agree—not outside the United Nations but inside it.

Just as the Communist-dominated members of the United Nations have always been a club within the club—so, under article 51 all the free nations—beginning with the 12 in the Atlantic Pact but not limited to them—can unite firmly for collective self-defense in another club within the club—leaving the door open for Russia and any others to join if and when they are willing to agree to and abide by the rules.

That is what our forefathers did at the Constitutional Convention. They did not withdraw from the confederation, or try to drive out those who did not agree with the new proposal. They simply drew up a tighter, more workable plan or organization, and provided that whenever 9 of the 13 States ratified it the new club would be set up—others to join or not as they wished.

This is not the way to wreck the United Nations—this is the way to rescue it.

As long as we indicate we will not do anything unless or until Russia agrees, of course she will not agree. Why should she?

But if we and the other free peoples demonstrate to the Russians, quickly, that we can and will, if necessary, get along without them, I am convinced that we may soon find it possible to get along better with them.

Whenever enough of the peaceful nations get together in a workable organization that makes it clear to the men in the Kremlin, first, that they do not need to go to war to get security or satisfaction of any legitimate grievances; and, second, that they cannot win even if they do go to war—at that point, and probably only at that point, is there a reasonable likelihood that they will begin to come along, because there would be nothing to gain by refusing.

It is plain that we cannot get them to change from obstructionism to cooperation by persuasion, or exhortations, or bribery, or secret deals, or denunciations. These have all been tried in vain. The men in the Kremlin will cooperate only when we confront them with a set of circumstances where agreement is more advantageous to them than continued disagreement or attempted conquest.

As to the prospects for peace or war in the near future, that depends largely I suspect on what the 13 men in the Politboro really believe. If they really believe that Marx was infallible when he said that every great war must be followed by economic break-down in capitalistic countries, then they will not start a war. They will help Marx along, of course, by making the European recovery program as costly as possible, disrupting the economies of Germany, Austria, Italy, southeast Asia, and everywhere else, in order to increase the drain on us. But they will not provoke a war. Why should they, if they are sure we will crack up in 3, 5, or 8 years?

I hope they believe the Marxian teaching completely—and then it is up to you and me to see that the predicted collapse here does not occur.

However, it may be that what they really believe is not Marx but the Lin-Stalin teaching that "Ultimately one or the other must conquer." Perhaps it is their deepest conviction that the free world will inevitably try to conquer them, unless they can break and conquer it first. If so, then they must at all costs try to keep us from pressing or even retaining the initiative we have seized in Europe in the last 2 years. They obviously have decided to change their tune and tactics in Europe for the time being, in the hope we will revert to our usual preoccupation with domestic affairs, or have a serious depression with internal disorder, or until they get the atomic bomb or some weapon of comparable destructiveness.

In the meantime, Berlin has served as a useful feint or diversion while they move rapidly ahead on the key battlefield, Asia. Suppose those courageous Chinese who have understood communism and fought it for over 20 years are compelled at last to give up their resistance (as they probably will without vigorous help from us, immediately, just as Greece, Italy, and France would have collapsed last year without such help from us and will do so next year if it should be withdrawn). With Communist dominance in China, Russia will have satellites and security all along her Asiatic frontier and be in a better position to risk new action in the Middle East or Europe, especially if, with her new lullaby line, she has been able to put us to sleep again.

Even if we maintain firmness in the west, but Communist forces get control of all China, and the other portions of east Asia which will certainly follow, the balance of resources in the world will have shifted so strongly in Russia's favor that the men of Asiatic temperament who run that tragic land may very well decide just to sit it out for a few years or decades until the western world, including the United States, has bled itself to death.

The weaknesses which have brought us to this ominous hour have not been primarily military or economic. Our greatest failures have been in the political and ideological and moral fields. Because for so long we had physical separation from the rest of the world, our young men and women were not challenged to become specialists in international relations and masters of the arts of diplomacy. Understandably we concentrated on the great task of developing this vast virgin continent and its resources.

As a result, how many Americans do we have in the field of diplomacy that are the equivalent of Marshall, MacArthur, Nimitz, Eisenhower, Spaatz, and scores of others in the military field? Or of the Fords, Firestones, Edisons, Ketterings, Rockefellers, and hundreds of other giants in industry and finance?

Russia has learned that when she competes with us in the fields where we have specialized—industrial, technical, military, managerial—she comes off second best. So she realistically yields on such things as the Berlin airlift, where we excel, and shifts the contest to the conference table, where up to the present she has excelled—frequently handling us just about as a cat plays with a mouse.

We go to the diplomatic conferences with representatives who are masters of the strategies and tactics of military and economic struggle—and too often come home with bloody noses.

Russia sends to the conference her Molotovs and Vishinskys with nothing but superb skill in the strategies and tactics of diplomatic and ideological warfare—and too often they go home with the bacon.

This grave deficiency in our resources is not the result of anyone's design. It is the result of everyone's neglect. We have tended to concentrate so largely on our own domestic life that we have failed to realize that whether it has a chance to continue depends to a great degree on what happens abroad—or rather, on how effective we can become in influencing what happens abroad, in directions favorable to world order and peace.

The leaders of the Communist world, as Hitler before them, have made perfectly clear what they intend to do, if they can. Like a man going across a lake in a sailboat, they tack when they run into head winds. That does not mean they are changing their objective; rather it is the means by which to achieve their objective. They are still going across the lake.

Our hopes of avoiding disaster lie in mobilizing to the utmost our strength and skill in political and ideological fields as well as economic and military. We will win only if we believe so intensely in those basic principles on which the Nation was founded and which are responsible for its greatness, that we can outthink, outwork, outsacrifice, and outlast those whose world is founded on lies and violence.

Our difficulties are not insurmountable if we can develop, here and among the other free peoples, a moral compulsion to build in the world the sort of decent order which our forefathers had the will to build in these United States—the will to make our system work here at home and spread it abroad.

It comes down to how sound and strong and deep is our faith. What our Nation and the world must have if they are to be saved is what Lincoln prayed for at Gettysburg, "Under God, a new birth of freedom"—a

new understanding of freedom—a new dedication to it.

To survive we must qualify as a worthy spiritual instrument in our generation, as the founders of our civilization did in theirs. They built the finest material civilization the world has seen—precisely because they sought first the dignity and freedom of individual man as a spiritual being. Because they put that first, not second, the political and economic system which they established was one which released, as has never been done in any other time or place, the creative capacities that are in ordinary men everywhere. Thereby has our progress been achieved.

Shall we now focus primarily on trying to preserve the material results? Or on reproducing the spiritual causes?

With all my heart I believe that the Constitution of the United States and the system of government by voluntary federation which our fathers established here, are incomparably the best set of political ideas ever put together in one place in the world's history. I think they are the hope of mankind. The achieving of one world depends upon the spread of those ideas—everywhere.

That is the only way we can ultimately turn back the tide of totalitarianism and tyranny which is sweeping over the earth and secure the blessings of liberty for ourselves and our posterity.

Who is so well-equipped to mold the attitudes of our people as you who leave these halls today to go to the ends of the earth—strong, sensitive, eager, well-trained, idealistic, and practical? How great, indeed, is your responsibility—and your opportunity.

Never was a generation called to higher duties, nobler living, harder work, greater usefulness, deeper satisfaction.

Moratorium in Basing-Point Controversy Is a Fair Deal Must

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1949

Mr. SHAFER. Mr. Speaker, if the Fair Dealers really want to give the businessmen, particularly small-business men, of this country any kind of a square deal, they will see to it that legislation to declare a moratorium in the basing-point controversy will be put on the calendar of the House of Representatives immediately and brought to the floor for swift action.

Literally thousands of the smaller businesses in this country, and hundreds of them in my own State of Michigan, have been bewildered and confused and penalized since the Supreme Court's famous basing-point decision of more than a year ago. This decision, which outlawed basing-point pricing, is penalizing the businessmen who have to get supplies from cement companies, steel companies, and other supplies of finished materials, yet do not live next door to these companies. Pipe fabricators in Michigan, for example, have to pay vastly more for the steel and other materials they use than do similar fabricators who have businesses in Pittsburgh.

As we know, the Senate already has passed a measure that represents a step in the right direction to protect many small businesses from collapsing due to the outlawing of basing points. Under this bill, freight absorption by a primary manufacturer is legal, if there is no collusion among the various manufacturers of similar products. There are, of course, many other provisions in this bill, some of which are good and some of which are more or less inadequate, but it is, I repeat, at least a long step in the right direction to clear away some of the confusion caused by the Supreme Court in the famous cement case.

I am getting dozens of letters from manufacturers in my district who are supplied by mills from our State of Michigan. They are being penalized severely while this Democratic-dominated Congress fails to act swiftly on this needed legislation. I hereby publicly again call on the Democratic leadership to bring this moratorium legislation to the floor immediately so that Congressmen can go on record for or against this legislation. Personally, since I am in the minority, there is nothing I can do except speak for such a moratorium and vote for the moratorium legislation when it is brought up. Any delay rests squarely on the Democrats who control this Congress lock, stock and barrel.

Under leave to extend my remarks, I include a letter from a Michigan manufacturer typical of many others regarding this subject:

MURRAY W. SALES & CO.,
Detroit, Mich., June 3, 1949.

Hon. PAUL W. SHAFER,
House Office Building,
Washington, D.C.

SIR: I wired you today as follows:

"We are paying $2.40 a ton more for steel pipe delivered Detroit than some of our competitors all because of the stupid controversy on freight absorption. The request for a moratorium to give Congress a chance to investigate has been before Congress for many months. In fairness to all industry it is imperative favorable action be taken immediately. I hope you can do something to expedite this moratorium or some other relief. Thank you."

Many industries are absorbing freight today to meet competition, including some members of the steel industry, for example Kaiser. However, most of the steel industry is still on trial with the Federal Trade Commission.

Mr. Freer, former Chairman of the Federal Trade Commission, was in favor of freight absorption. I understand his acting successor, Mr. Mason, takes the opposite view. Our courts are divided on this question right up to the United States Supreme Court. They split 4-to-4 on this question.

Congress passed the Federal Trade Commission Act to preserve and that Commission concedes that its obligation is to promote a competitive economy. We are not getting it under the freight rate controversy.

I sincerely trust that you will use your best efforts to get this moratorium in effect promptly so that Congress will have a chance to make an exhaustive study.

The present deplorable situation is hurting a lot of people.

With kind regards and best wishes, I remain

Yours sincerely,
D. G. MCLEOD, *President.*

Address by Hon. Scott W. Lucas, of Illinois, at Centennial Celebration of the North American Singing Societies

EXTENSION OF REMARKS
OF
HON. SCOTT W. LUCAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Tuesday, June 14 (legislative day of Thursday, June 2), 1949

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered in Chicago on last Friday evening, June 10, at the centennial celebration of the North American Singing Societies. The celebration was held at the Chicago Stadium, and nearly 25,000 persons attended, paying for their admission, the proceeds going to the underprivileged children of Europe.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, Mayor Kennelly, distinguished guests, and fellow Americans, it is indeed an inspiring moment for me to appear here this evening and to have the privilege of participating in your magnificent centennial celebration.

Wherever people of German descent congregate, there are always songs and music. I know this from family experience. My grandfather on my mother's side came from Frankfort, Germany. His name was George Underbrink. I was told that grandfather never lost his love for the beautiful songs he had learned in the land of his birth.

It was Mark Twain who said: "There are German songs which can make a stranger to the language cry."

Yes, my friends, this would be a splendid world if all the people in the family of nations could share the friendliness and the warm joy of participating in song. We would soon be able to overcome the pressing problems which make life so difficult for so many men, women, and children in the war-stricken areas of the world. If everyone could faithfully follow the words of the poet who said "I would rather be remembered by a song than by a victory," we could achieve the millennium mankind has prayed for since the dawn of civilization which is peace on earth, good will toward men.

Since the terrible tragedy of the Second World War came to an end, it has been my privilege to visit, last September, some seven countries of Europe. I had the opportunity of mingling with those people who have become the beneficiaries of our great and philanthropic Government.

In Italy, in Turkey, in Trieste, and in France, I witnessed with my own eyes the contribution that we are making as we rehabilitate those nations and once again place them economically on their feet. I also learned first-hand how the expansion of communism in these nations, with our help, had been successfully challenged.

One of the most interesting experiences of the trip was my visit to Berlin. I traveled there by air from Frankfort, landing at the huge Templehof Airport. It was there that I got my first glimpse of what the American and English airlift was doing in the way of supplying food and other necessities of life to the two and one-half million people in the beleaguered city of Berlin. I saw thousands of packages of food and clothing

UNIVERSITY OF MICHIGAN LIBRARIES

sent to the German people through the CARE organization, a private nonprofit group which has saved the lives of countless numbers of people on the verge of destitution. It was only through the airlift that the people in Berlin were able to receive these supplies.

I talked to Gen. Lucius Clay, one of the ablest soldiers and one of the finest gentlemen I have ever known. His achievement in launching and operating the stupendous airlift will never be forgotten by the German families in the western sectors of Berlin, who depended upon our planes for food, fuel, medicine, and other vital necessities after the Soviet Union imposed a land blockade to cut off the ground supply channels. As commander of the American forces in Germany and administrator of the American zone, General Clay showed a wise understanding of the truth about Europe. He pursued a policy of lifting Germany back to a productive level as rapidly as possible, because he realized that the enormous productive power of the German people was urgently needed in the economy of Europe.

The name of Lucius Clay will be long revered by the free people of western Europe, who are well aware of the fact that General Clay halted the advancing tide of destructive communism which had threatened to destroy all the countries of Europe. He resisted the pressures of those who felt that the German people in the western sectors of Berlin should be abandoned to the mercies of the Soviet military rulers. He kept his courage and stood firm although his position was extremely perilous.

The German people in Berlin justified the confidence placed in them by General Clay. The desire for freedom which had never been crushed in the hearts of Germans despite years of domination by a dictator was still alive in Berlin. German families underwent many hardships in the beginning, because the airlift could not bring in enough supplies to keep houses warm and factories going. There was widespread unemployment and physical suffering, but the quantity of supplies brought in by our planes rose steadily week after week, until at last the people had enough to carry on their lives.

I have just a few figures here which will give you an idea of the gigantic scope of the Berlin airlift. Through June 1, 1949, a total of 1,335,791 tons were flown into Berlin. Of this amount, more than 1,100,000 tons were for the use of the German population. There were 252,000 tons of food and 851,000 tons of coal. There were nearly 30,000 tons of miscellaneous items, including supplies for newspapers which kept the people informed of what was happening in these crucial months of the blockade.

The Soviet commissars made a fatal mistake when they tried to choke off the lifeblood of the people in the western areas of Berlin. Perhaps they hoped to drive the Allies from the German capital and to seize control of all of Germany. They planned to use Berlin as a symbol of the ruthless might of communism.

If these were their dreams, they were utterly defeated. The steady sound of American planes in the sky over Germany, the flash of wings soaring above the blockade lines, gave proof to the Germans and to the other peoples of Europe that America would not yield to the commissars who seemed willing to risk another war for the sake of conquest.

After a 3-hour conversation I had with General Clay in Berlin, I became convinced that the airlift was a great psychological and political stimulant to the people who were determined to preserve their freedom.

When I came home in October of 1948, I predicted that there would be no shooting war with Russia. I knew that the Russians would back down. I know that we will ultimately win the battle of Berlin, and I believe that we will win the battle for peace in the coming years.

In the last 9 months the whole atmosphere of Europe has changed for the better. The Soviets have gone on the defensive. Their failure to make the Berlin blockade effective has weakened them in many ways. Their propaganda of terror cannot shake the nerves of people who remember the Allied airlift over Berlin. Their sword-rattling is revealed as a colossal form of bluffing.

The Soviets asked us to meet them in a conference at Paris. That conference is now in progress. Secretary of State Dean Acheson is prepared to deal with the Russian representatives in a calm and reasonable manner. I can assure you that Mr. Acheson will be as courageous in defense of American rights, as firm in maintaining an honorable position, as his predecessor, Gen. George C. Marshall.

Mr. Acheson knows that President Truman, the leaders of Congress, and the American people are dedicated to a passionate faith in peace. He will do everything in his power to reach a satisfactory settlement with the Russians. I am hopeful that the conference will bring us a little closer to our goal of a stable and secure world.

Our policy with regard to Germany in the future will follow the lines laid down by President Truman in the past. We wish to see the forces of militarism eradicated. We are sending teachers to help the German people stride forward along the broad road of democracy. We know that there are many problems and many difficulties to be faced, but we also know that the people of Germany are talented, intelligent, and willing to cooperate.

In 4 short years we have moved from the military atmosphere of the Potsdam agreement to the drafting of a basic constitution for a united western Germany at Bonn. I believe that we have made great gains.

The political role of our military government has become one of giving guidance and encouragement to the various elements of German government and society, so that the democratic process will evolve as the basis of the future German way of life. The drafting of State constitutions, the formation of political parties, and the holding of elections at all levels of administration are definite milestones along the path of political self-determination.

Industrial production in the Anglo-American zones has increased by 250 percent since 1947. This brings the production figure up to three-fourths of the 1936 average. Rations have already been expanded to an average of 2,000 calories daily. The industrious German people have repaired and have begun to rebuild many of their devastated cities. Control of the Ruhr, the mighty industrial heart of Germany, has been kept in the hands of the democratic peoples. The vast capacities of German factories will not be used to meet the demands of the Communists. The Ruhr will pour out a stream of goods into the economic arteries of the free countries of Western Europe in the interest of peace.

I believe that a unified Germany will eventually be established, and that the new Germany will take its place in the ranks of the Democratic nations. I am convinced that there is a spirit of hope rising in Western Germany and Western Europe. There are many good reasons for the existence of that hope—the life of the people has become more confident, with the general economic revival under the European Recovery Program, and the new leaders of Western Europe are bringing home to the people the value of the democratic way of life.

Let me assure you that the Honorable Harry S. Truman, President of the United States, and the American Congress, are striving to find the best possible solution to the problems of Germany and the world. It is recognized that Germany is the key to the economic and political life of Europe. Upon the successful solution of these problems will depend in a great measure the future peace of the world.

Status of American Representative to the Irish Republic

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, June 14 (legislative day of Thursday, June 2), 1949

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me on the subject of raising the status of the American representative to the Irish Republic from that of Minister to that of Ambassador.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. LODGE. Mr. President, the Senate has just been informed of the adoption of resolutions by the General Court of the Commonwealth of Massachusetts memorializing the Secretary of State to raise the status of the American representative to the Irish Republic from that of Minister to that of Ambassador. This resolution was presented by me on behalf of my colleague, Senator SALTONSTALL and myself and comes as the result of a legislative petition presented to the Massachusetts House of Representatives by Representative Bernard M. Lally, who represents ward 17 in Dorchester, who was joined by Senator William J. Keenan, of Boston, and Representative John Pierce Lynch, of Springfield.

This resolution which has been presented to the Senate seeks to accord the same diplomatic status to the Irish Republic as is accorded other sovereign nations. The text of the bill as it was introduced in the Massachusetts Legislature is as follows:

"Whereas the ancient and honorable country of Ireland was formally proclaimed a free, independent and sovereign Republic on the historic day of Easter Monday, 1949; and

"Whereas the Commonwealth of Massachusetts and the people thereof have always maintained the closest ties with the Irish Nation: Therefore be it

"*Resolved*, That the General Court of the Commonwealth of Massachusetts respectfully urges the Honorable Secretary of State in order to accord the proper recognition to the new Irish Republic, increase the present status of the United States representative from that of a Minister to an Ambassador; and be it further

"*Resolved*, That copies of these resolutions be sent forthwith by the State secretary to the President of the United States, to the Presiding Officer of each branch of Congress, to the Members thereof from this Commonwealth, and the Honorable Secretary of State."

I feel that it is fitting that this document which led to the adoption of this memorial by the Massachusetts Legislature be incorporated in this RECORD of the proceedings of Congress.

Competition in Rubber Trade

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 14 (legislative day of Thursday, June 2), 1949

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Collyer Favors Competition in Rubber Trade," published in the New York Herald Tribune of May 24, 1949, containing a statement by Mr. John L. Collyer, president of the B F. Goodrich Rubber Co.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COLLYER FAVORS COMPETITION IN RUBBER TRADE—ASSAILS EFFORTS TO CUT UNITED STATES SYNTHETIC OUTPUT

DETROIT, May 23.—The current campaign by the British, Dutch, among others, to raise the price of crude rubber by getting the United States to restrict its production of synthetic rubber is not only a threat to our national security but is a "cartel road which leads to totalitarianism," John L. Collyer, president of B. F. Goodrich Co., said here today.

"The exclusive position which crude rubber enjoyed until near the end of World War II," he said, "is now a thing of the past. Healthy competition now exists between the two types of rubber. The need for maximum efficiency on the part of producers competing for sales in the world rubber market is apparent.

"In this situation, the opposition of the British and Dutch and other crude rubber producing nations is not difficult to understand," he added. "There can be no doubt that these nations will continue to press for some arrangement whereby the impact of American rubber upon crude rubber prices is sharply reduced or eliminated, making possible higher crude rubber prices.

"If in order to raise the price of crude rubber it is necessary that all concerned embrace control schemes that tend toward totalitarianism, let no one be misled that any headway is thus being made against the threat of communism," he asserted. "Instead, the reverse may well be true."

Mr. Collyer said the crude rubber producing nations contend that raising prices will help to alleviate the so-called dollar shortage in producing areas and will lessen the need for American aid. He pointed out that the dollars which these countries receive do not depend solely on the price of a pound, but that the quantity they sell is equally important.

"Last year," he continued, "the United States imported 728,000 long tons of crude rubber or 50 percent more than in 1939, and the price a pound averaged 36 percent higher than in 1939. The total of dollars paid by the United States for rubber in 1948 was more than twice those paid in 1939. In the face of competition with man-made rubber—a higher price of crude could result in less demand for crude."

Coal Stoppage

EXTENSION OF REMARKS
OF
HON. MATTHEW M. NEELY
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 14 (legislative day of Thursday, June 2), 1949

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a recent editorial from the Fairmont (W. Va.) Times entitled "Coal Stoppage" written by Col. C. E. Smith, formerly a member of the Bituminous Coal Commission.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COAL STOPPAGE

When John L. Lewis calls for a 1-week stoppage just shortly in advance of the annual miners' vacation period and also shortly before the expiration of the existing contract, the newspapers get out the big type to tell you about it. Here in West Virginia the big type is used because anything that Lewis does is big news to everyone in the coal industry. It isn't because we're surprised about a work stoppage.

No doubt Mr. Lewis knows just now far he can go with the operators before some of them try to break away from the union. We all know there are some operators who would like to return to nonunion operation. But the mine chieftain has been a master at maneuver and at negotiation for many years. His mine union members are confident that he knows what he is about. Certainly his record of successful negotiation gives them good reason to have complete faith.

It is pretty well agreed now that the big boom in the coal market has ended. The situation is changing. Coal buyers are becoming more and more selective. The business is going more and more to the big operators who have big, modern coal preparation plants.

There is real fear that there is likely to be a price war within the industry. An attempt might be made by some to get business by price cutting and to maintain a profit by cutting wages, which would mean attempting nonunion operation. That's the story that we saw enacted here more than 20 years ago. That was the period of the mine wars, as they are recalled today.

We feel sure that there will be need for enactment of another bituminous coal act to establish minimum coal prices in order to prevent another war of cut-throat competition. We don't want to have to go through that again and minimum coal prices fixed by law can prevent it.

No Election Mandate Was Given To Repeal Labor Law

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1949

Mr. JOHNSON. Mr. Speaker, under leave to extend my remarks I include an editorial from the Sacramento (Calif.) Bee. For many generations the Sacramento Bee has been a vigorous and independent exponent of what it believed to be for the public interest. It has fought many battles for the underdog. It has never taken a partisan viewpoint, merely because some particular group wanted a particular viewpoint espoused to help its particular interest. It has conducted many crusades and in the best newspaper tradition sought to support what the paper and its editorial staff considered in the real public interest. No matter what one may think of the Bee and its editorial policy no one has successfully denied that it was not independent in arriving at its conclusion.

I merely mention this to give my opinion of the editorial which emphatically states, and I believe convincingly, that no mandate to repeal the labor law can be gained from what occurred in the last election. The paper has taken an objective view of the matter and has come up with the conclusion that there was no mandate. The Bee has frequently supported the policies in which the labor groups have been interested. It also has at times differed with their opinions concerning the wisdom of certain policies which they espoused or for which they fought. For these reasons the editorial is a very interesting statement on the controversial issue which has been discussed in both Houses of Congress as to whether or not the Congress does have a mandate to repeal the present labor law. Very few, if any, Members dispute the fact that perhaps we could make some amendments to the labor law which would make it more workable and better help solve the labor-management problem. The only issue seems to be whether or not there should be outright repeal of the 1947 act and a return to the Wagner Act or whether the present legislation should be modified so as to make it better able to cope with labor-management conflicts, not only for the particular groups involved but primarily for the public, not directly affected by these conflicts.

The editorial follows:

NO ELECTION MANDATE WAS GIVEN TO REPEAL LABOR LAW

Chairman ELBERT D. THOMAS of the Senate Labor Committee opened debate on new labor legislation with the now familiar and oft reiterated declaration that President Truman's reelection last fall was an unequivocal mandate to Congress to repeal the Taft-Hartley Act.

On the basis of what supporting facts is so sweeping a claim made?

It is true the Democratic platform pledged such repeal and that President Truman's speeches reflected the language and sentiments of the platform.

But a curious paradox developed in the actual voting. It was not in the big industrial areas where the unions have their greatest voting strength that Truman won his victory.

In most instances, his totals in those areas fell far behind the vote for Franklin D. Roosevelt 4 years before. Had he done no better elsewhere he would have lost the election.

But the farmers unexpectedly rallied to his support and enabled him to squeak through. This was particularly true in the decisive States of Illinois, Ohio, and California. It was his surprising showing in the rural areas

UNIVERSITY OF MICHIGAN LIBRARIES

of these States that gave him their precious electoral votes.

And not even Philip Murray or William Green has the hardihood to claim the farmers are red hot for Taft-Hartley Act repeal.

Irrespective of the pros and cons of repeal, to argue the election result was a mandate to wipe out the whole act is tommyrot.

An even stronger argument can be made for the belief President Truman was re-elected not because of his advocacy of repeal but in spite of it.

Subversive Activities

REMARKS
OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1949

Mr. KING. Mr. Speaker, I notice in the press that my colleague the gentleman from California, Congressman NIXON, is again taking upon himself the job of criticizing the prosecution of subversive cases by the United States Government. Of course, my colleague should know it is highly inappropriate for him to comment upon cases now on trial in the courts, and particularly cases that involve the prosecution of persons who allegedly are attempting to overthrow our Government.

I see, however, that my colleague suggests that the Attorney General should have dismissed the present prosecution against a former Government employee, Judith Coplon, who is alleged to have stolen secret papers from a Government agency with intent to deliver them to a Russian agent. I am amazed that anyone would make such a suggestion, because in so doing he encourages others to engage in espionage. The gentleman from California [Mr. NIXON] has always insisted, in the past, that cases be prosecuted, irrespective of evidence, and where the Attorney General has refused because of a lack of evidence the gentleman from California [Mr. NIXON] has done everything in his power to highly publicize the individuals involved in the cases, even though they may be innocent. Now he wants the Attorney General to drop a most important case, not only a reversal of his attitude, but also thereby depriving the accused of a fair trial in our courts. Such is the proposition of my colleague the gentleman from California [Mr. NIXON].

The gentleman from California [Mr. NIXON] is quoted as demending that the Attorney General be called upon to explain why he has proceeded with the Coplon trial. I believe the answer to be obvious. The Attorney General proceeded because it is his duty, under the Constitution and his oath of office, to prosecute those against whom he has sufficient evidence of violating Federal statutes. The Attorney General apparently takes his oath seriously. He prosecutes every case where the evidence is sufficient, but he prosecutes them in the courthouse, and not elsewhere. If the gentleman from California [Mr. NIXON] had read the Attorney General's record in the prosecution of subversives and the great fight he has waged to protect our country against foreign ideologies, including communism, I am sure he would not have made the suggestions attributed to him in the press. Let me give you just a part of that record.

The program of the Department of Justice against Communist subversion has struck through action in the Federal courts, through deportation proceedings, and through such legislation as the Alien Registration Act and the Foreign Agents Registration Act. The program functioned administratively inside the Government through President Truman's Government employee loyalty procedure, which ferreted out any disloyal Government employees.

Prosecutive action in tne courts against Communists in the United States was as follows:

Eleven top-flight Communists are now on trial before a jury and Judge Harold R. Medina in the Federal court for the southern district of New York. Charged with conspiracy to overthrow the Government of the United States by force and violence are: Benjamin J. Davis, Jr., New York City councilman; John Williamson; Eugene Dennis, the party's general secretary; Jack Stachel, educational director; John Gates, editor, the Daily Worker; Gus Hall, chairman, Ohio Communist Party; Gilbert Green; Carl Winter; Robert Thompson; Harry Winston; Irving Potash.

All are members of the Communist National Board which is the party's high policy-making politbureau.

William Z. Foster, head of the Communist Party, is under indictment with his 11 comrades, but has been declared too sick to undergo trial at this time.

Thirty-four alleged Communists have been convicted in Washington for contempt of Congress.

Twenty-nine of them are out on bond, appeals to the higher court pending. Five paid fines of $500 each and received suspended sentences. Seventeen of them were members of the Barsky Anti-fascist Refugee Committee, 10 were Hollywood script writers.

Sixteen alleged Communists have been convicted in California on charges of civil contempt for refusing to testify before a Federal grand jury. Fifteen are out on bond, pending appeal to higher courts, and one was fined and paid $2,500 for refusing to answer subpena, thereby obstructing justice. He will be summoned to appear before the grand jury again. Conviction of 10 of these 16 has been affirmed by the Ninth Circuit Court of Appeals in San Francisco. The appeals of the other five to the circuit court are pending.

Seven alleged Communists were convicted in Denver, Colo., on charges of contempt for refusing to testify before the Federal grand jury in connection with the investigation of the alleged disloyalty of a Government employee. They are out on bond pending an appeal to the circuit court.

The Department of Justice struck at Communist disloyalty and subversion among Government employees through the President's employee loyalty program launched on March 21, 1947. The FBI checked over 2,471,000 incumbent and appointee forms. Of these, 8,708 were set aside because of derogatory information for full field investigations, 5,459 being incumbents and 3,249 appointees. This is one-third of 1 percent. Director J. Edgar Hoover, of the FBI, reported that since the inception of the loyalty program 2,462,013 employee loyalty forms marked "No disloyal data" have been returned to the Civil Service Commission for transmittal to the employing agencies, an extraordinary evidence of the overwhelming high proportion of Government employee loyalty.

Of those Government employees under investigation some left the service while the investigation was under way. Others were found ineligible to continue on the Government pay roll and were dismissed. Some are being prosecuted for giving false statements to the FBI.

As the result of the President's loyalty program sufficient evidence to warrant prosecution in the Federal courts was found against seven Federal employees.

These cases are:

Carl Marzani, Department of State employee, convicted of giving false statement in connection with his employment, and now serving a jail sentence of from 1 to 3 years, his case having been carried to the Supreme Court, which sustained his conviction.

Verne Wasley Howard, employed by the Government as an aircraft mechanic at Lowry Field Army Air Base, Denver, Colo. He pleaded guilty to making false statements to the FBI about his membership in the Communist party, and was sentenced to 6 months in jail.

Now under indictment and awaiting trial for allegedly making false statements in connection with their employment are:

Bertram Schaeffer, a postal clerk, indicted in Philadelphia.

Rafael Baroana, Agriculture Department employee, indicted in San Francisco.

Robert Edgar Himmaugh, Department of Commerce employee, indicted in New Orleans.

Alger Hiss, former State Department employee, has been indicted for perjury in New York City and now on trial on evidence growing out of the Federal grand jury investigation.

Judith Coplon, Department of Justice employe, has been indicted and is now on trial in the District of Columbia for espionage and for taking Government documents, and is scheduled to go on trial in New York for conspiracy to commit espionage and other charges.

The most recent action by the Department of Justice was taken against Harry Renton Bridges, Henry Schmidt and J. R. Robertson, in San Francisco, where a Federal grand jury returned a criminal indictment against them. Bridges is alleged to have fraudulently denied he was a member of the Communist party

when he sought naturalization as a citizen of the United States. Schmidt and Robertson are alleged to have testified falsely in support of Bridges' petition knowing of his Communist affiliations. The United States attorney in San Francisco also filed a civil suit against Bridges for the purpose of revoking and setting aside the order which admitted him to citizenship and canceling his certificate of naturalization on the ground of fraud.

In addition to prosecutive action, the Department of Justice has for several years been carrying out deportation proceedings against aliens suspected of subversive tendencies.

As of April 15, 1949, there were 3,278 aliens in the United States, most of them Communists who cannot be deported to the countries of their nationality because of passport refusals of their own governments. Of this number 2,147 are deportable to countries behind the iron curtain. Of the latter group 2,079 entered the United States prior to 1933. All the top-notch Communists came into the United States before the first administration of Franklin Delano Roosevelt, arriving during the Harding, Coolidge or Hoover periods. Now under President Truman they are being shipped back as fast as law and visa conditions permit. Some have been deported. Gerhardt Eisler fled. Others deported by stipulation, and still others are to go within the next few weeks.

Alexander Stevens, alias J. Peters, who recently flew to Hungary following the issuance of a deportation warrant, and who was described by the Eightieth Congress House Un-American Committee as the brains of the entire Communist underground in the United States was allowed to enter the country in 1925 during the Coolidge regime. He left, and was allowed to return in 1928 under the Hoover administration. Other high command Communists who entered the country during the 20's and up to 1933 were: Claudia Jones, member of Young Communist League, State Educational Director and State Chairman of the National Council of the Young Communist League, and also member of International Committee Communist Party, entered in 1924; Alexander Bittleman, member of National Committee of Communist Party and active writer on behalf of Communist Party entered in 1912 when Taft was President, left and came back again in 1931 under the Hoover administration; Charles A. Doyle, active member of Communist Party, entered in 1923; John Santo, who was ordered deported and left the country on June 10, 1949, long member of Communist Party, entered in 1927 during the Coolidge days; Jack Stachel, National Board Member and Educational Director of the Communist Party, entered in 1931, when Hoover was President.

Sixty-eight undesirables entered between 1933 and 1945, and none has entered since Attorney General Clark assumed his post. In addition to the deportation cases as of March 31, 1949, Attorney General Clark had under investigation the cases of 389 naturalized citizens for the purpose of determining whether steps should be taken to cancel or revoke such citizenship because of suspected subversive activities. At the present time the Attorney General has under investigation through the immigration service looking to deportation or under actual deportation proceedings the cases of 833 aliens who, prima facie, are deportable under the act of October 16, 1918, as amended.

On February 5, 1948, the Attorney General recommended legislation to the House Un-American Activities Committee so that deportable aliens might be detained in custody while they negotiate for documents for entry into countries willing to receive them. He also asked for amendments to the Foreign Agents Registration Act, the Voorhis Act, the Smith Act and the Alien Registration Law. But the Eightieth Congress failed to act. There is now before the Eighty-first Congress a bill which, if enacted into law, would go far to correct this situation. Attorney General Clark advised the committee that such a plan would also give the Department of Justice an opportunity to curb their activities.

Among the notorious deportees and others obliged to leave the country were: William Bigelow, a Canadian, March 30, 1948; Emil Gardos, a Rumanian, April 1948; Badrig Selian, a Russian, May 18, 1948; Hans Eisler and Sam Carr departed on March 26, 1948, and February 11, 1949, respectively; John Santo, of the Transport Workers Union, June 10, 1949. Other Communists ordered to leave the country and who are scheduled to depart in a few days are: Ferdinand T. Smith of Jamaica; Cando Dimitroff, a Bulgarian; and Gustav Johnson, of Sweden.

The record discloses deportation proceedings brought by the Department of Justice against prominent Communists as far back as 1933 when the Roosevelt administration came into office. There were 25 cases in which important Communists were prosecuted for offenses against the United States. Most of these prosecutions have been for passport violations or other byproduct offenses arising out of Communist activities, these being the only cases provable against them.

Among the 25 may be named Charles Krumbein, one-time New York State secretary of the Communist Party and member of the Political Committee of the Communist Party, U. S. A.; Nicholas Dozenberg, Mikhail N. Gorin, Welwel Warzower, who is also and better known as Robert William Weiner, one-time head of the International Workers Order and member of the Communist Party National Committee; Philip J. Jaffee, Allen E. Blumberg, and Earl Browder, the then top man of the party in the United States.

I believe the country is fortunate indeed to have men of such rare ability and integrity as Tom C. Clark as Attorney General of the United States and J. Edgar Hoover as Director of the Federal Bureau of Investigation.

Old-Age Assistance

REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1949

Mr. GAVIN. Mr. Speaker, I desire to associate myself with those of my colleagues who have supported the idea of a better pension for our elder citizens.

Old-age assistance now provides, on an average, slightly over $1 per day for those who are fortunate enough to be on its rolls. In many of the States the amounts paid are much less, some even going down to about half this amount. When we consider the qualifications that exist, little wonder that millions of our deserving old folks suffer on in silence rather than subject themselves to the qualifications that are now imposed on them in order that they might receive these pittances. It is a sad commentary on the history of this country, that we boast of the greatest wealth in all the world, while at the same time we provide less than the cost of one good meal per day for those honorable elders who, in the declining years of their lives, need our help.

Old age assistance today, while slight increases have been made during the recent years, is less adequate for the needs of our citizens than when the Social Security Act was passed back in 1935. It is true that there have been small increases. These increases have not kept pace with the rising cost of living, hence we find our old folks in worse condition today, in spite of the increases, than they were back in 1935. This condition, Mr. Speaker, has been permitted in spite of the multiplied millions, yes billions, that we have provided for other purposes. The needs of other nations seem to sound more forcibly on our ears than the needs of our own. During the war it was UNRRA, that carried our tearful sympathetic billions to needy people in other lands. Of course we were told that was only temporary. It was merely a war emergency that would stop when the war ended. It did stop, of course, but it was succeeded by many other proposals, and the billions lasted on up and until the Marshall plan was constructed as another emergency measure. I am of the opinion there will be conceived some other plan to take over just as soon as the Marshall plan model becomes antiquated. So, it goes Mr. Speaker. Of course each is for a very definite emergency. Yet, we seem to be able to manufacture one emergency to follow another, and so our commitments for relief to other countries continue, month after month, year after year. Billions upon billions of American dollars can be provided. All we need to know is how much money is required for these seemingly endlessly recurring demands.

But, Mr. Speaker, when some of us propose that we pay a decent old-age

UNIVERSITY OF MICHIGAN LIBRARIES

pension to our aged people, we suddenly become very poor. In fact it is surprising how all of our wealth is suddenly gone. Billions have been appropriated for people all over the world but we become tax conscious when it comes to afford relief for our own people.

We can get hundreds of billions to fight wars.

We can find multiplied billions to spend for foreign trade.

We can find continuously multiplied billions for relief of people in other lands.

The record shows we can find the billions for all of these purposes. Now, Mr. Speaker, many of us feel it is high time that we find the funds that are necessary to pay at least a reasonable old-age pension. We do not advocate anything unreasonable. The proposal to enact a reasonable uniform Federal pension to take the place of old-age assistance, is certainly the fair thing to do. I trust that the committee considering this legislation will let us without further delay have such a bill for the Members to consider on the floor.

Admiral Halsey Suggests United States Marine Corps Maintain Minimum Force at 6 Percent of All Services

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1949

Mr. MANSFIELD. Mr. Speaker, Fleet Adm. William Halsey, addressing the veterans of the Fourth Marine Division Association on June 11 in Washington, D. C., called for the fixing of a minimum limit of strength of the Marine Corps proportionate to the size of the rest of the Military Establishment.

This, to me, sounds like good sense and sound judgment. I hope the Congress of the United States will always remember the debt of the people of this country to the Marine Corps and will ever be alert to its accomplishment and cognizant of its needs.

If the Congress ever reaches the stage where, in the interests of unification, it will reduce, abolish, or weaken the functions of the corps it will be betraying the trust of the American people. While the corps is small in size, it is large in achievement. The American people—who love, admire, and respect the corps—are looking to us to see that its position is safeguarded not only for the present but for all time. The one way to prove that interest is for us to follow Admiral Halsey's suggestion and to set the strength of the corps at a minimum of 6 percent of the rest of the Military Establishment.

Mr. Speaker, the reunion of the Fourth Marine Division was an outstanding success. The veterans of the Marshall's, Mariana's, and Iwo Jima campaigns are keeping alive the spirit of their comradeship and are remembering the almost 75 percent casualties they suffered during the war. They have earned the recognition so generously bestowed on them and part of that recognition is an awareness on our part that the retention of the famous corps, to which they contributed so much, is a must in our Military Establishment.

Mr. Speaker, under unanimous consent, I am inserting in the RECORD news stories carried in the Washington Post on June 12 and 13 and also an editorial from The Word, published by the Marine Corps Reserve Officers' Association, for June 1949:

[From the Washington Post of June 12, 1949]

ADMIRAL HALSEY SUGGESTS MARINES MAINTAIN MINIMUM FORCE OF 6 PERCENT OF ALL SERVICES

(By V. R. Montanari)

Fleet Adm. William F. Halsey, Jr. (retired), declared yesterday the United States should fix a minimum limit to the strength of the Marine Corps, proportionate to the size of the rest of the Military Establishment.

"In that way," said the carrier warfare leader who had many Marines under his command, "we will have what this country needs, a perpetual Marine Corps."

Admiral Halsey, who spoke at the Sylvan Theater, had just reviewed the all-Marine parade of the Fourth Marine Division, veterans of Iwo Jima and other epic battles of the Pacific war.

In khaki and in civvies, some 500 veterans of the Fourth, here on a 2-day reunion, marched down Constitution Avenue with 400 members of Washington's Fifth Reserve Infantry Battalion and 1,000 regulars of the Twenty-second Battalion from Quantico in full combat gear.

FOUR BANDS PLAY

Four bands, including the "President's own" Marine Corps Band, in white caps, scarlet blouses, and blue trousers, made the "Halls of Montezuma" echo and re-echo.

Equipment in the line of march included a battery of antiaircraft vehicles, amphibious personnel-carrier "ducks" on wheels, and a 50-ton LVTA, the latest armored amphibious tank model, marked "Abel Mabel—Maui to Iwo Jima."

Admiral Halsey said the Marine Corps had been called the elite corps of the country. That's a gross understatement, snorted the retired five-star admiral.

"I think it's the elite corps of the world," he declared, adding that its esprit de corps is unparalleled.

SUGGESTS 6-PERCENT MINIMUM

"We must never let anything happen that will in any way break down this wonderful corps," he continued. "If we establish a ceiling for the Marine Corps, there should be a flooring, too."

He suggested that 6 percent of the personnel strength of the other services should be established as a minimum for the marines' strength.

Taking the parade salutes with Admiral Halsey in the reviewing stand on Constitution Avenue between Fifteenth and Sixteenth Streets NW. were Gen. C. B. Cates, Marine Corps Commandant, who commanded the Fourth at Iwo Jima; Maj. Gen. Franklin A. Hart, president of the Fourth Marine Division Association; Under Secretary of the Navy Daniel A. Kimball; Assistant Secretary John T. Koehler; and Vice Adm. Harry W. Hill.

The 22-minute parade, impressive for its color and precision, was the first all-Marine march down the Avenue since 1924, when President and Mrs. Coolidge reviewed a Marine expeditionary force returning from duty in the Caribbean area.

HELICOPTERS COVER ROUTE

Overhead, 200 or 300 feet over the line of march, were six helicopters from the First Helicopter Squadron at Quantico, which covered the marchers several times on their route between Fourth Street and the reviewing stand on Constitution Avenue.

General Hart, who commands the Second Marine Division at Camp Lejeune, paid a tribute to the dead of the Fourth Division at a 2 p. m. memorial program in the Arlington Amphitheater. He called on the survivors of four operations which killed 17,722 of their comrades to prove themselves worthy of the sacrifices they have seen.

Rear Adm. William N. Thomas, Navy Chief of Chaplains, rendered a memorial prayer, and Lt. Comdr. John H. Craven, Fourth Division chaplain, gave the benediction. General Hart placed a wreath at the Tomb of the Unknown Soldier.

[From the Washington Post of June 13, 1949]

IWO VETERANS CONCLUDE REUNION

Veterans of the Fourth Marine Division in their week-end reunion in Washington heard Fleet Adm. William F. Halsey ask for a 6-percent flooring on the corps and were advised by Senator SALTONSTALL, Republican, of Massachusetts, that Congress doesn't want to put the Marine Corps out of business and couldn't do it even if it tried.

These developments high lighted the visit of 500 combat veterans of the Marshalls, Marianas, and Iwo Jima campaigns at a time when the corps is uneasy about its future. Present at all gatherings was Gen. C. B. Cates, Marine Commandant, who commanded the Fourth at Tinian and Iwo.

In the solemn stillness of Arlington's Amphitheater, the veterans and their families heard Maj. Gen. Franklin A. Hart, retiring association president, warn we cannot do away with our defenses until we are sure that threats of war have been done away with. He reminded his listeners, whose division suffered almost 18,000 casualties, 75 percent, that "we are guardians in peace of what our comrades fought and died for in war."

Rear Adm. William N. Thomas, USN, Navy Chief of Chaplains, in his memorial prayer, compared the young Marine dead "to the young man of long ago on His cross whose work was so perfectly done and whose sacrifice has changed the course of history."

The division's veterans combined with Marine bands and regulars to give the Capital its first all-Marine parade in 25 years. It was reviewed by Admiral Halsey, the Assistant Secretary and Under Secretary of the Navy, and Marine Members of Congress and other dignitaries. In startling contrast to the 1924 parade of expeditionary troops, helicopters covered the Constitution Avenue route and a mounted armored amphibian tractor lumbered down the line of march.

Admiral Halsey addressed more than 1,000 marines and their friends at the Sylvan Theater, calling the Marines the elite corps of the world and asking for legislation which would fix the minimum strength of the Marines at 6 percent of the total Army Navy, and Air Force strength.

"The 6 percent ratio would give us what this country needs—a perpetual Marine Corps," he said, saying that no further protective legislation would ever be needed.

Senator SALTONSTALL, whose son, Peter, was killed with the Marines on Guam, told an overflow banquet crowd at the Statler Hotel Presidential Room that the corps "has more glamour, more political pull than any other

outfit." A member of the Senate Armed Services Committee, SALTONSTALL said that, in his opinion, the present changes in the Unification Act would enable the military to operate more efficiently and more economically. "We don't want to lose the cold war by spending ourselves into the ground as some of our former allies hope we will," he told his audience.

Reunion delegates elected their chairman, Col. E. A. Pollock, USMC, as 1950 association president, and New York was selected for the next convention, June 1–3, at the Hotel New Yorker.

Marines, both Regular and Reserve, who have grown old in the service of their country were thrilled by the demonstration of the Marine Barracks crack ceremonial drill team and the music of the Marine Band and the drum and bugle corps from the Washington Barracks, commanded by Col. L. B. Cresswell, former regimental commander in the Fourth. Martial music, the Marine colors with 44 streamers, emblematic of 88 victorious battles in 173 years, and the precision of the marching men made a deep impression upon banquet guests and marines alike.

A 5- by 3-foot telegram from the Maui Chamber of Commerce reminded the marines who spent several months on that Hawaiian "valley isle" in between engagements, that "every man, woman, and child" wished them well and a fond aloha. Other wires came from as far away as South America and many other United States cities.

[From the Word for June 1949]

THE BOX SCORE NO. 2

The United States Senate has passed S. 1843 (amended version of S. 1269). The House has not yet held committee hearings on the controversial bill, requested in the interests of "economy and unification."

In the Senate debate promises were made regarding safeguards for the Marine Corps and naval aviation. Amendments were passed which prohibited transfer of personnel by the Defense Secretary and which limited the number of officers serving on the staff, Joint Chiefs of Staff.

Major features of the Senate version of the National Security Act amendments of 1949, which MCROA and others have opposed, include the following:

1. Establishment of a Chairman of the Joint Chiefs of Staff as the principal military adviser to the President and Secretary of Defense.

2. Establishing a Department of Defense and giving the Secretary supreme authority, loosely worded and seemingly with few checks.

MCROA is not alone in opposing the fundamental policy of establishing a Prussian-type General Staff in America. Mr. Ferdinand Eberstadt, Chairman of the Hoover Commission's Task Force Committee on the National Security Organization, raised very serious objections to it before the Senate committee which heard few witnesses in opposition. Generals Vandegrift, Cates, and Edson, among others, have inveighed against this military scheme in the past. MCROA has long opposed it.

This bill, giving the Defense Secretary such unusual authorities within the NME, is most unusual in legislative history. Generally, the executive departments follow rather specific rules and regulations set down by Congress. Under the provisions of this omnibus bill, violent and drastic changes could take place without proper study or evaluation.

For these two reasons, the one being that it is unwise to establish a Supreme Chief of Staff and a General Staff in America, under whatever name, and that the Defense Secretary at present seems to be moving with alacrity and dispatch in various matters now under his jurisdiction with his present authority, MCROA believes further study and public consideration of S. 1843 is necessary and that H. R. 3845 (Vinson bill) deserves full and complete legislative consideration and amendment before passage.

Further, no convincing proof has been given that this Senate bill will produce either economy or greater unification. No satisfactory figures have been drawn up to show where a billion or a billion and a half dollars can be saved. Similarly, no real unification will be served if arbitrary actions, such as the super carrier cancellation, are to be the rule for the future. Tomorrow it could be the B–36 or the flame thrower, the marines, or naval aviation.

Economy in Government

EXTENSION OF REMARKS

OF

HON. WALTER NORBLAD

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1949

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an excellent editorial from the Silverton (Oreg.) Appeal-Tribune sent to me by Mr. J. R. Hainesworth of that city. I commend its reading to every Member of this House.

Those in Washington who advocate higher and higher taxes, including the President, might do well to ponder the words of one of America's great leaders, Thomas Jefferson, who some 150 years ago wrote this sage advice in the following words:

"I place economy among the first and most important virtues, and public debt as the greatest of dangers. To preserve our independence we must not let our rulers load us with perpetual debt.

"We must make our choice between economy and liberty, or profusion and servitude. If we can prevent the Government from wasting the labors of the people under the pretense of caring for them, they will be happy. The same prudence which in private life would forbid our paying our money for unexplained projects forbids it in the disposition of public money."

The proposals that the state can make everyone comfortable, secure, well educated, and healthy besides safeguarding old age, the unemployed, all without cost to the individual are tempting but vain and illusory.' Why should anyone oppose such a system, they ask.

The answer is, of course, that nobody would, if such a utopian condition could actually be brought about without cost but, more important, the taking away of the individual's freedom.

The magic word of security is being substituted instead of dependence in the attempt to take in the unthinking once and for all.

Only when one remembers that State by itself never creates anything does the awakening come. The State doesn't earn a dollar. It can only give what the people pay for themselves. Before giving anything it must first extract the cost from the people and add it to all the bureaucratic cost of collection and distribution.

The clear fact is that in so doing Mr. John Q. Public simply transfers his right to buy these benefits to his State with the added costs attached.

Under the New Deal when billions were being handed out to both city and farm population, by putting a large mortgage on the Federal Government's credit, the average man had little concern, as long as he got his share of the largesse.

But now in country after country stomachs are getting empty and the check is being handed out to the people for payment for the banquet they enjoyed.

And this check is taking the form of higher and higher taxes. Taxes seen and hundreds of taxes unseen, are draining the returns of the average land owner, businessman and laborer to the point that in any case the man concerned sees himself giving too big a share of his labor to support a profligate Government.

The demand of the people through their congressmen should take vigorous support of all methods to economize in our Government and do away with overlapping and unnecessary Government bureaus.

Democratic Leaders Seen as Subservient to CIO

EXTENSION OF REMARKS

OF

HON. CHARLES E. POTTER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1949

Mr. POTTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial written by Mr. Frank R. Kent, which appeared in the June 12 Washington Star. This article should give every thinking person concern. Certainly it causes us to wonder who is actually running the Government today.

DEMOCRATIC LEADERS SEEN AS SUBSERVIENT TO CIO—LUCAS, M'CORMACK PICTURED JUMPING WHEN MURRAY CRACKS THE WHIP

(By Frank R. Kent)

A more unpleasant exhibition of political servility than that of the Democratic leaders in Congress some days ago would be hard to imagine. It was an utterly unconcealed performance, too—right out in the open. Strangely, it got slight newspaper attention.

Reference is to the extraordinary manner in which, after the unctuous Mr. Philip Murray, head of the CIO, cracked the whip over their backs, these Democratic leaders cravenly swung away from the position they had assumed and obsequiously chorused, in effect: "Yes, Mr. Murray." "Yes, indeed, Mr. Murray." "You are perfectly right, Mr. Murray." "We are in complete accord with you, Mr. Murray." Previously they had given every evidence of not being in the least accord with Mr. Murray. On the contrary, they had publicly promulgated the view that most of Mr. Truman's fantastic Fair Deal program was doomed so far as this session is concerned.

Publicly, Mr. Truman rejected this notion—though there is reason to believe he privately accepted its truth. He piously hoped at a press conference that most of his proposals would be enacted before adjournment. Paying slight attention to this, administration leaders declared that only the North Atlantic Pact, the reciprocal trade agreements and the Taft-Hartley repeal could be acted upon at this session. Everything else would have to go over until next fall.

UNIVERSITY OF MICHIGAN LIBRARIES

Adjournment would be not later than July 31. That was the way things stood up to May 31. On that day, speaking as one with authority, Mr. Murray sternly rebuked the Democratic leadership. He abruptly ordered it to halt its drift toward congressional inaction. He called upon it for a forthright statement of its purpose to stay in session until substantial sections of the Fair Deal program are enacted. He sneered at the reputation of the Eighty-first Congress and sharply criticized its leaders.

The immediate result was a stampede to reverse themselves. Mr. Murray's May 31 statement was in letters to Senate Leader SCOTT LUCAS and House Leader JOHN MCCORMACK. On June 1, Mr. MCCORMACK replied to Mr. Murray substantially as follows: "I am in receipt of your letter and there is nothing in it with which I am not in full agreement." With equal speed, Senator LUCAS replied that much of what Mr. Murray demanded had already passed the Senate (which is not at all accurate) and that it was the House that lagged. "If, however," he said, "it is impossible to pass the major measures demanded by July 31, we will extend the time for adjournment."

Other leaders followed with similar stultifying declarations. Literally, overnight their attitude changed. But the realities, of course, have not changed. It is just as true as before that the bulk of Mr. Truman's domestic program will not go through at this session; first, because sentiment in the country does not favor it; second, because a majority of Congress is opposed. Mr. Murray, with his solemn mandate, has not changed a single vote in Congress but he has accomplished two things. For one, he compelled the Democratic leadership publicly to put on a show of shameful subservience such as has not been seen in our politics before. Of course, since 1936 the Democrats, nationally, have been allied with the CIO and acquiesced in its claim of being indispensable to Democratic success. But, previously, there had been no uncamouflaged admission that they took orders from it.

That is exactly what the party leaders have done this time. A considerable number of their followers are humiliated. It is one thing, they say, to play politics with the CIO; it is quite another to submit openly to CIO dictation. The second thing Mr. Murray has accomplished is to postpone Senate action on the terribly important Atlantic Pact, for which Secretary of State Acheson and General Marshall have earnestly appealed. Until he cracked the whip and the leaders jumped through his hoop, the pact had the right-of-way in the Senate. Due to the unselfish patriotism of Mr. Murray and the noble nature of the Democratic leaders, it has now lost priority and the Taft-Hartley repeal proposal has taken its place. This may mean weeks of labor bill debate before the pact can be taken up at all. At a very critical moment this has weakened our hand at the Paris conference. In his statement Mr. Murray mentioned practically everything else but significantly said no word for the pact, perhaps the most vital of all administration measures.

The pathetic feature of this fortifying Democratic performance is that it is so completely unnecessary. Fear of Mr. Murray is so completely unfounded. Politically, he is a bluff, a bully and a fraud. As proved in the last campaign (in which the CIO pledged itself to drive out of public life every candidate for Congress who had supported the Taft-Hartley bill), he is totally unable to deliver his own votes. The claims of his organization are demonstrably absurd. As shown by the 1948 Dunn surveys in some States and many districts CIO support is more a liability than an asset. It all adds up to make Democratic leaders in Congress seem a particularly pusillanimous lot.

Address of Hon. Charles F. Brannan, Secretary of Agriculture

EXTENSION OF REMARKS

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1949

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include herewith the address of the Honorable Charles F. Brannan, Secretary of Agriculture, delivered at Des Moines, Iowa, June 13, 1949. My colleagues from Missouri join me in directing your attention to this address which deals with one of our most vital problems. Our economic stability depends upon an adequate and sound farm program. We invite your attention to this address and to an effort to further develop a sound farm program.

The address follows:

It is a real pleasure to meet with you in this wondrous and safely democratic stronghold, the State of Iowa.

It is fitting that we should meet in Des Moines. In addition to its many other distinctions, this has recently become known as the city near Dexter, Iowa.

For in Dexter, not many miles from here, not many months ago, a great American President fired a shot heard "round the world." Opening his campaign for reelection, his target was special privilege for the few. His cause was the very core of democracy—government of, by, and for all the people. Tirelessly, against great odds but with confident conviction, he led the battle day by day. In the end came one of the greatest victories in the world's political history—a victory of the people and Harry S. Truman.

It is in direct consequence of that victory that we are meeting here today. The victory was not merely a confirmation of the policies of President Truman and the Democratic Party. Even more important than that, it brought opportunity and responsibility to carry forward those policies. People do not vote merely to confirm the past. They vote for their future, for their hopes and aims. We meet here to consider ways and means to achieve some of those hopes and aims.

This great meeting is a demonstration of our mutual determination to meet the challenge of victory with a constructive program.

Here in the Midwest it is well known that one of our greatest opportunities as well as one of our greatest responsibilities lies in the field of farm program development.

The party of Roosevelt and Truman is the only party in history that has concretely demonstrated its awareness of the need for an effective farm program. Recognition of this fact is the reason the people of this Nation trust it more than they trust the Republican Party or any splinter group to maintain and develop a sound farm program.

It is also one of the big reasons our party gained in leadership last fall, especially in this great agricultural region.

The people's trust runs deep. They accept, on faith, the assurance that we will continually work to develop the strongest, soundest, and best farm program that we are capable of developing.

We have accepted their confidence.

We will justify their faith.

Toward this end, we are making substantial progress. In place of the International Wheat Agreement which was allowed to die last year, we have negotiated a new agreement. It has been reported favorably by the Senate Foreign Relations Committee and is currently being considered by the Senate.

We are also bringing order out of chaos in the grain-storage situation. This is one essential to the success of any price-support program. The Congress has restored to Commodity Credit Corporation the storage authority which was cut off last year. Because of this, we have been able to start a program on distress wheat, which will free farmers from the necessity of forced selling on a glutted market. Also, because of the fact that commodity credit has had its storage authority renewed, we are able to have a loan program which directly encourages farmers to build their own storage. At the same time, the CCC is going ahead to increase its own storage facilities. This progress has not come easily. Those who have tied the hands of the CCC last year are still attacking. But, thanks to the present Congress, we are going to have adequate storage as the basis for our price supports and safe reserves.

These actions illustrate our party's vitality.

The traditions and principles of the Democratic Party provide the foundation upon which our farm program is built. If we keep this fact in mind, the future requirements are clear. As the party of Jefferson, Jackson, Wilson, Roosevelt, and Truman, we seek a fair deal for all the people—special privilege for none. There we have the first requirement of our farm program. Let us ask ourselves, then, how we can best serve the needs of all the people at this particular time.

I suggest to you that the answer is quite simple. The great need is to use the abundance that our farms can produce. On this point the interests of the farmer and all the rest of us coincide.

Let us see where we stand.

American agriculture today is more productive than ever before in history. We set a new all-time production record last year. It was the sixth new record in 9 years.

Compared with averages of 20 years ago, our crop yields per acre were higher by an amazing 50 percent.

Last year we exported three or four times as much food as we exported in the prewar years, and we still consumed 12 percent more food here at home.

We have hybrid corn, which is generally credited with adding at least 20 percent to our yields. We can expect that more farmers will use it as time goes on. Higher-yielding hybrid are being developed in other crops and in livestock. In the last few years DDT and 2,4–D and other remarkable chemicals have made it easier to control the insect, disease, and weed enemies of farm crops and animals. More new chemicals are on the way in our laboratories.

More and more farmers are using modern machines, which enable them to do their field work when it has to be done. Here in the Corn Belt we have seen how this has helped to maintain yields in spite of bad weather at crucial times. Some parts of our country are only beginning to mechanize their farming operations.

Today, because of a program initiated in 1935, about 7 out of 10 farms have electricity, and this too makes the Nation's agriculture much more efficient than it was a few years ago.

These are only a few elements of our new efficiency—a few indications of American agriculture's capacity for abundant production. In all the world, there is nothing comparable to the American farm plant.

The taxpayer has helped to create this productive capacity by supporting scientific research, education, soil conservation, and other programs. The farmer has used these aids and through his own hard work has built up the productive capacity of agriculture to the present peak.

UNIVERSITY OF MICHIGAN LIBRARIES

Thus, all of us have an investment in abundant production.

It is a good investment. It makes possible an abundance of food and other agricultural products for every one of us. For farmers, it makes possible the creation of more new wealth from which in simple justice they should be able to retain a reasonable share.

But let us understand this too: Our great productive power makes possible the biggest surpluses, the most colossal waste, and the greatest economic crash the world has ever seen. Our productive power is still increasing, and except in case of prolonged depression or neglect of our basic resources it will go on increasing. If and when there is a decline in export markets, which have been absorbing so much of our increased production, we must be prepared to avert extremely serious consequences.

Like atomic energy, our great agricultural productive power can be used for either good or evil. It is up to us to choose.

I have here in my hand a little symbol of the last great depression. It is a leaflet published by Iowa State College as a service to the people of this State. It is entitled "Comparative Values of Corn and Coal as Fuel for House Heating." The first two sentences are as follows: "With coal high in price and corn at a low figure, with the cribs full of corn and the coal bins empty, many farmers have suggested burning corn because it seemed cheaper than coal. The engineering extension department at Ames had hundreds of inquiries from those who wanted correct information on the subject." The leaflet then goes on to say that 40 bushels of Iowa corn equal 1 ton of Iowa coal.

Please understand me. I have nothing but praise for this service by the college in time of dire trouble. But I am abhorred and repelled by the failures of human society which made necessary this type of service.

The memory is repugnant to all of us.

Cribs full of corn, coal bins empty.

Corn growers broke, coal miners hungry.

Hogs fat, people thin.

Those were the days when the Nation's corn growers received a season-average price of about 32 cents a bushel—and prices of farm commodities averaged 55 percent of parity.

In 1932, we were dealing with a big corn crop—2,500,000,000 bushels.

People talked about the curse of abundance.

Last year we produced well over 3,500,000,000 bushels.

Must our abundance again become a curse?

Must we sit idly by and let it happen?

Must we fail?

I say the answer is "No."

The people say "No," and that is why they stand with Harry Truman and the Democratic Party.

We are confronted with a basic test of democracy. We can fight the Communist doctrine with all our strength. And we should. We could expose every Communist organizer and every executive who sold out to the Nazis. We might test the loyalty of every officer of every labor union, every Government clerk, and every businessman with foreign dealings. But if we let our economic system fail again, if we allow depression, if we allow abundance to become a curse, we open wide the door to the foreign and native totalitarians who stand ready to proclaim the end of the great American experiment of democracy.

The Democratic Party has not won leadership for the privilege of starring in the final act of a human tragedy. Like those who pioneered before us, we dedicate our lives, our fortunes, and our sacred honor to a better future.

What then can we do?

Today we are studying the farm front. That is where you and I can make our greatest contribution. It is not the only front on which action is required, but it is one of the most important, as the people of the Middle West thoroughly understand. You know that agriculture is a basic segment of our economy—indeed, the foundation of our entire civilized society. From agriculture come most of the necessities of life. It provides much of the new wealth. It is a major starting point of business. Although the economic pyramid that rises from the agricultural base is made in part from metals and chemicals and personal service, even today half of all the business in this Nation directly involves the use of agricultural products.

The major weakness of our agriculture is its low resistance to falling price—declines that far exceed those of other prices and deepen into economic collapse.

Our depressions are farm-led and farm-fed.

The great depression that stopped the wheels of business and stilled the whistles of our factories in the thirties had its origin in the farm depression of the twenties.

As we face the 1950's, we must use the lessons of history.

The public interest demands a forward-looking agricultural policy and at the heart of that policy a strong farm-price-support program.

In my opinion, this is one of the greatest responsibilities for which you and I are accountable.

We cannot deal in theory or beautiful abstractions.

We must deal with the realities as we find them.

Last year agriculture increased its output about 9 percent. Industrial output increased 3 percent.

Last year the prices of farm crops came down an average of 20 percent—with some crops, such as corn, coming down much more. Livestock prices came down about 7 percent, making an average reduction in farm prices of 13 percent. Meanwhile, prices paid by farmers for farming essentials reached a new peak last August and came down only a little by the end of the year.

So far in this year 1949, the farm prices have continued to come down in relation to prices paid by farmers. Compared with January of 1948, farm prices now average 17 percent lower. And prices paid by farmers are still only about 2 percent lower than they were at the peak last August.

The purchasing power of farm commodities has dropped to the lowest point since June of 1942. Ask not only the farmer but the merchant on Main Street, the supplier and the manufacturer who fill the merchant's orders, and the unions that make and move the goods.

These are some of the realities we face. Yet some would have us weaken the farm-price-support program.

As realists we dare not weaken it. We must strengthen it.

As you know, the agricultural committees of the Congress are entirely aware of the developing problem. When the Eighty-first Congress organized, Chairman THOMAS of the Senate and Chairman COOLEY of the House set the wheels in motion for a study of existing legislation, developing problems, and the need for new price-support legislation. As Secretary of Agriculture, it become my duty to testify first.

In preparation for the testimony, I attended the annual meetings of major farm organizations. I met with leaders at smaller meetings. Privately, I studied what I believe to be every serious proposal that has been made. I studied the parity formula. And I studied the legislation which was passed by the Eightieth Congress and scheduled to go into effect at the end of this year.

Let me say a few words about this new legislation that is on the books—title II of the act of 1948. First, it was not studied by the Agriculture Committee of the House of Representatives before it was passed. The CONGRESSIONAL RECORD shows it was reported out of conference committee after repeated deadlocks and was passed with the reservation that it would be studied later and revised as necessary. Second, it was passed in a great hurry in the dark hours of the Sunday morning when the Eightieth Congress was trying to wind up its chores so that the Republican Members could go to their party convention. Third, although it was hailed as a great new long-range program, it was in reality a series of amendments to the Agricultural Adjustment Act of 1938—a minimum gesture toward modernizing the Democratic program of the thirties when we were still struggling to gain back the prosperity that was lost in the depression. It was a "me too" program, with variations.

As I looked into its provisions, I found that it assured support on only a few commodities, and those represent only one-fourth of gross farm income. And even on those the support might range from 60 to 90 percent of parity. It assured support on only one perishable, namely potatoes. The act expressly forbids Commodity Credit Corporation to support any other perishables. It revises the parity formula but retains a base period of 30 years ago regardless of how prices are behaving today. Thus, the legal minimum support prices would not necessarily be related to recent actual prices.

Under some circumstances, it would prevent the Secretary of Agriculture from announcing dollar-and-cent support prices in advance of the planting season or breeding time. It provides for acreage allotments and marketing quotas but then provides for support at 50 percent of parity even when producers reject marketing quotas in disregard of a surplus. It would give just as much support to the producer who mines his soil as to the man who conserves his soil.

I took into consideration the main arguments of those who are committed to that legislation. They maintain that the way to bring down the production of a commodity that threatens to become surplus is to bring down the support price. I looked up the record and found that time after time in our history, falling prices have brought increases—not decreases—in crop plantings. Falling prices have forced farmers to plant more. And their desperate effort to maintain their income has resulted finally in harm to their families and destruction of their land.

I have been asking myself why some people feel so firmly committed to the legislation which is now scheduled to go into effect at the end of this year—legislation which was passed so strangely and with so many obvious faults. They beg us to try it anyway—like disappointed cooks insisting that we try the flavor of a cake that fell.

What lies behind the peculiar attitude, this blindness to the problems of our times, this deafness to the voices of the people who want something better? Who is served by such an attitude?

For my own part, I firmly believe the program which they ask us to accept is far from adequate.

I believe we can and must develop a program that will serve the interests of all the people by helping to prevent depression, maintain high-level production of farm commodities, conserve natural resources, maintain reserves for national security, build bigger industrial markets, provide jobs for workers at good wages, and insure a strong rural America.

I say to you, as I have said to the congressional committees, that I do not offer my recommendations as the final and complete answer to the problem. But I have stated my proposals, and I am glad to have this opportunity to summarize them for you.

Here is what I have proposed:

First, let us find a means of keeping supports in line with recent actual prices and experience. We are much less concerned about a price relationship some decades ago than we are in a fair deal and sound economics today.

My own view is that there must be a level of farm income below which it is not in the public interest to permit that income to fall. Once this level is agreed upon, we should use it as the base for computing farm price supports.

The farm income standard I have suggested is that amount which will maintain farm purchasing power as high as the average of the last 10 years. For 1950 this would require a dollar income of $26,200,000,000. There are those who say this is too much. But it is 15 percent less than last year's dollar income of $31,000,000,000 and 15 percent less than last year's purchasing power. How much faster do they want farm prices to drop in relation to other prices? How much lower does the public interest permit?

Remember now, this income standard is used only as the starting point for computing price supports. No income is guaranteed. This is strictly a price support plan based on an income objective.

My second main point is that we should assure definite support on those commodities that rank highest in importance to farm income and to the national diet. The commodities I have suggested for priority use of price support funds include corn, cotton, wheat, tobacco, milk, eggs, chickens, and the meat animals—hogs, beef, cattle, and lambs. These account for around 70 percent of cash farm receipts. By including livestock and livestock products, we can encourage the production of foods that consumers want in greater amounts. We can eat more of our potential grain surpluses in the form of livestock products. We can keep more of our land in grass and legumes and thus conserve our soil.

The third major part of my recommendation has to do with method of price support. If we are to support prices of perishables, such as meat and milk and eggs, we need another and less wasteful method than that now provided. Loans and purchase agreements work very well on the storable commodities. We need large reserves of them anyway. But for perishables we must have a method which permits the entire production to get to the consumer. Otherwise, waste is inevitable. I have suggested use of the production payment method. Under the payment method, the farmer can produce with assurance. He can sell on the regular market. The product finds its own price level without interference. The consumer buys at the price set by supply and demand.

If the average price received by producers is lower than the support level, the producer receives a production payment for the difference between the support price and the average market price. If his own selling price was higher than the average, he is that much ahead. If he had to sell for less than the average, he is that much behind. This fact has been misrepresented. I want to make it clear that the farmer has just as much incentive to get the best possible market price under the payment method as he has at any other time.

The fourth part of this proposal deals with conditions and limits on price support. I have proposed that a farmer's eligibility for price support should be tied to a soil-conservation requirement, to acreage and marketing limits when wasteful surpluses make them necessary, and to volume per farm of supported commodities. The reasons for these conditions and limits can be stated very briefly. To me it seems illogical for the public to spend money encouraging soil conservation and at the same time to provide price support to the producer who disregards the soil and the public's interest in the soil; also, it seems plain that in return for the privilege of price support farmers should be and are willing to accept responsibility for keeping market supplies in line with genuine demand.

As to limit on the amount of support for any one farm, I would merely point out that we have a long history of public policy encouraging family-type farming. If we provide support for big-scale, industrialized farming, we are following a conflicting policy. I have not proposed that we withhold price support from any farm, no matter how large, but merely that we limit the amount of support per farm. This limit would apply only on farms that are bigger than the biggest family-type farms, and even those big-scale farms would enjoy as much price support as the biggest family-type farms.

As you study my recommendations, I think you ought to be fully aware of the objections that have been raised against it. These are very interesting.

You know, you can sometimes judge a program or an administration as well by the enemies it makes as by friends and its positive achievements.

One of the first and most persistent charges made against the proposed new program is that it means regimentation. The Republicans have used that one for so many years that it is now almost a compliment, meaning, "We can't find anything wrong with it except that we didn't do it first." The truth is that the recommended program asks for absolutely no new type of authority or control over agriculture, and the only real control that has ever been in effect is the marketing quota. That can be put into effect only when accepted by at least a two-thirds majority of producers voting in a referendum. Farmers themselves fought for the right to use the quota when necessary and have shown no intention of giving up the right. This is illustrated by a statement issued by some leaders of a farm organization here in Iowa. They raised the question, "Can farmers exist on 60 percent of parity?" And they answered it by saying, "No one has asked them to. The Agricultural Act of 1948 actually provides a minimum support of 72 percent of parity when acreage allotments or marketing quotas are in effect."

The second great hue and cry was cost. We were asked to visualize five, ten, and twenty billions of dollars floating away like the morning mist. Nobody bothered to give any economic analysis to back up the "guesstimates," but it was obvious that they were based on a belief in depression. If you assume that a depression is coming you can dream up much worse costs than that of a farm price-support program. But does the Gloomy Gus who predicts a depression-time cost propose a farm program that will help prevent depression? He does not, and that's the difference between us. The Democratic Party is in power to prevent depression. Remember that a price-support program does not cost anything until farm prices have already dropped down out of line as compared with nonfarm prices. That has been true in the past and would still be true under the program I have proposed. And even then apparent costs must be balanced against gains.

It has also been charged—and this is extremely painful to me—that my proposal is political. In fact, one spokesman went so far as to call it "politico-economic philosophy," which I believe is meant to convey the idea that he doesn't like my politics. Well, I want to confess to you that I do think there should be and is such a thing as party responsibility. I am also under the impression that the people have devised a political system for the purpose of self-government.

I am proud of the American political system. I think it is the best in the world. And one of the best things about it is that it fosters the free competition of ideas, reserving to the people themselves the power to judge and choose.

If it is political to appeal to the judgment of the American people in farm program matters, so be it. Let us be done with this nonsense. Let us trust the people.

But the charges I have mentioned are only the top dressing. Now we get down to the real argument. It has probably been stated most clearly by an eastern financial journal, the New York Journal of Commerce. Speaking of the proposed program, this paper said, "We believe that it promises farmers more than they are entitled to and that it promises consumers more than it can deliver." This is a very concise attack on both the support level and the production payment method of supporting farm returns. But like all the opposition it fails to say what the farmer is entitled to, and it fails to state how a farm program can better serve the needs of consumers. This attack is echoed by a New York Herald Tribune editorial. It charges that the administration program would bestow upon the farmer what it calls "the privileged income position."

So we come to the real issue. Privileged income position means the same as promising the farmer more than he is entitled to.

What is this so-called privileged income position? Last year farm people had an average net income of $909, including the value of home-produced, home-consumed food and what they earned off the farm. The average income of other people was $1,569. Where is the farmer's privileged income position? Farm people are almost one-fifth of the total population, they get less than one-tenth of the national income.

When I hear that the proposed program offers the farmer more than he is entitled to I want to know what he is entitled to. I am almost ashamed to confess that the program I have proposed would let farm prices go down in relation to other prices to such an extent that farm products would have 15 percent less purchasing power than they had last year.

How far down does farm income go before the farmer is getting what he is entitled to?

We owe our thanks to the opposition for bringing this issue out into the open at last. In their hearts the people have long known the issue existed. They voted accordingly last fall. Today the challenge is even plainer. It is one we must meet.

I have attempted to meet it in my own way. I do not ask you to accept my recommendations as your own. I hope you will study them. I hope you will improve upon them. And most of all I hope that all of us may unite in support of a farm program which means, for all the people a Fair Deal.

Roy E. James Case

EXTENSION OF REMARKS

OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1949

Mr. CASE of New Jersey. Mr. Speaker, under unanimous consent, I include in the RECORD a telegram which the Honorable Tracy S. Voorhees, Assistant Secretary of the Army, sent to the editor of Newsweek on June 4 in order to correct

an erroneous quotation attributed to him in regard to the Roy E. James case:

DEPARTMENT OF THE ARMY,
June 4, 1949.

EDITOR, NEWSWEEK,
New York City, N. Y.:

Your story re James case (June 6, p. 19) erroneously quotes me as affirming that Congressman WALTER "had a hand" in loyalty charges against James.

Believing that neither you nor your reporter would wittingly imply that the Army, through me, would allow the loyalty program to be subjected to political or personal misuse, I feel you will wish to have the facts:

It was not so used. When James asked me who was the source of the loyalty charge, I declined to tell him. Executive order concerning the handling of loyalty charges prohibits such disclosure. When James mentioned WALTER as the source, I stated specifically that it was not—repeat, "not"—WALTER.

TRACY S. VOORHEES,
Assistant Secretary of the Army.

Polish-American Citizens' Clubs of Massachusetts

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address made by me at the annual convention of the Polish-American Citizens' Clubs of Massachusetts, on Sunday, June 5, 1949, at St. Michael's Hall, Lawrence, Mass.:

Mr. Chairman, representatives from the Polish-American Societies of Massachusetts, and friends, someone once said that there were 57 nationalities in the world, of which you will find about 51 in Lawrence.

So you see we had our own league of nations here, in this 2 by 3 city of 85,000 people, long before they tried to establish one on a world-wide scale.

We even have Poles and Russians living side by side as friends and neighbors, because these Russians fled from their homeland to escape the persecutions of the czars and the commissars, and so they qualify as fellow human beings.

You know, I have even toyed with the idea of inviting some of the delegates of the United Nations Assembly to visit Lawrence and see how well our various people get along together. You don't find members of different racial groups suspicious of one another, or engaging in never-ending quarrels. You are more likely to find them intermarrying, as they come to know, and understand, and appreciate one another. When people marry, they have to make adjustments and compromises for the sake of harmony. But this is something which "bachelor" nations don't seem to comprehend. All wrapped up in their individual pride, they stand off from one another, engaging only in that diplomatic double talk which seldom results in a meeting of the minds.

The paper treaties made today can be broken tomorrow. And the government which commits itself to a certain policy may soon be succeeded by the opposition party with a completely different viewpoint.

But the people in any country are always on the job. Day in and day out they go about their business of earning a living, raising their children, providing for some security in their old age, and praying that their lives may be worthy of God the Father.

The average person does not want to steal his neighbor's property, or to lord it over his fellow man. He just wants a chance to work and earn his progress, to be able to buy a home and a car, to educate his children, and to enjoy his hours of leisure without fear or insecurity.

Above all, he wants peace, for without it he cannot live a normal life.

He wonders at the strange language and the strange ways of those who represent him at the peace table. He has not too much confidence in this method of solving problems, all the noise and all the pictures which make it look and sound like play acting instead of reality.

Down deep in his heart, even though he is an humble, hard-working man without much book knowledge, he knows that he is able to get along with people. It is not difficult, and it does not require the acrobatics of fancy words. He knows, with sure instinct, that if the peoples of the world could get to know each other, much of the suspicion and hostility among nations would vanish like fog before the bright sun.

You men and women of Polish origin come from a nation which is caught between two large and powerful neighbors. Time and time again the land of your fathers has been taken over and divided up by Russia and Germany. But such conquest never endures. History proves that whenever Poland has lost her independence to aggressors she has, in due time, won it back. And the present is no exception.

I have always admired the patient strength of the Polish people, supported by their eternal faith. Come what may, they never lose their courage. It is this which gives them supreme confidence in the inevitable triumph of justice. And all the secret police in the world cannot prevail against it.

You understand that the Russian people and the German people are not to blame, for they, too, are the victims of autocratic leadership. When people finally break through the iron curtains and join hands, then the cause of world peace will make its greatest advance.

Just as we have learned to work and live together as friends in the cosmopolitan city of Lawrence.

If the people can do it, why can't the governments?

There is increasing evidence that the housewife, the mill worker, the storekeeper, dissatisfied with the chess play of governments, are going to take the job of working for peace into their own hands.

The flood of food packages and letters which have gone out from this country to the sufferers of war shows the good conscience of the plain people. This help is building good will across all boundaries and frontiers except that of Communist Russia.

Here is the weak spot of communism. It is afraid that if people become friendly, all the propaganda that pours from the Kremlin won't be able to stem the mounting tide of cooperation and mutual respect, as Russians and non-Russians discover that they are partners in humanity. The Bolshevik bosses maintain their power only by keeping a tight rein over their subjects, while diverting attention away from their domestic failures by conjuring up fear and suspicion of Russia's neighbors. The purpose of the iron curtain is to seal off the Russian worker and the Russian farmer from any contact with the outside world, and to keep them in ignorance of the progress which is possible through mutual understanding.

Americans, from their own experience with freedom of opportunity, clearly see that this must be the goal of a true world policy. And they insist that our representatives at the Big Four Council of foreign ministers, in session at Paris, shall work hard to breach this iron curtain to permit freedom of communication, and freedom of travel, and exchange of students, and the opening up of trade and commerce among all nations.

By raising and maintaining this barrier, the Communists are denying themselves certain goods and services which they need. At the same time they are faced with a growing pressure within their own country and in those nations which they temporarily hold in bondage. The millions and millions of soldiers and secret police and bureaucrats which are necessary to supervise and watch every activity, constitute a drain on the Russian economy. The Russian people must slave to support this top-heavy class which consumes but does not produce. This is bound to stir up resentment which, as the pressure increases, will inevitably explode. In spite of Soviet efforts to jam our broadcasts, the Voice of America is getting through to some Russians. By sticking to undeviating truths, our information program is certain to open the eyes of many more in the concentration camp called Russia to the fact that they are being cruelly exploited by their own government.

The Communists know of this danger which they cannot publicly admit. It is impossible for them to draw attention away from their failures by leading their weary people into war, for this might precipitate a revolt within Russia which would destroy communism. Therefore I maintain that communism must either relent or relinquish its control altogether if we persistently strive for people-to-people friendship based on absolute freedom of communication. The iron curtain stands in the way of a peoples peace. It must retire to the past, of which it is an outmoded relic.

The first to benefit will be the citizens of Poland, who have so many relatives and friends in the United States, from whom they have been isolated by a government which follows the Moscow line. Some nations have accepted the Communist yoke without protest, but not Poland. Its clergy speaks up bravely against oppression. Bands of patriots hide in the forests by day and sally forth at night to plague the supply lines of the Red armies, or to help their fellow citizens who are in danger, to escape from the clutches of the secret police.

There was one man who used to know how to deal with the Russians under such circumstances. I am sure that the memory of his skill, his courage, and his passionate faith in freedom inspire the young men who are members of the Polish resistance movement of 1949. His name, which is also that of a distinguished American patriot, is Gen. Casimir Pulaski.

Together with General Kosciusko, he contributed much to the success of the American Revolution, and in so doing, I believe that he set an example for his own countrymen to follow. It is significant that no other nation gave two such outstanding generals to help the American colonists in their struggle for independence. I like to think it is due to the fact that the people of Poland and of the United States have so much in common. They know that freedom is everybody's business, and they back up their words with deeds.

Americans of Polish origin have a right to feel proud as they consider how much the mainstream of American life owes to their efforts and those of their forefathers, from the beginning, right down to the present time.

The members of your organization can take cheer from the thought that if we are alert and steadfast in working for freedom, then the progress of the United States, the eventual liberation of Poland, and the objective of world peace, all these can and will be won.

UNIVERSITY OF MICHIGAN LIBRARIES

The Housing Bill

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1949

Mr. MARSHALL. Mr. Speaker, I would like to speak briefly on the rural section, title IV, of the housing bill, H. R. 4009.

The provisions of this part of the bill will provide farmers with the assistance they need to bring their homes up to the American standard of living. Long-term loans at reasonable rates of interest will be available for construction and repair of both houses and barns. Farmers will be able to obtain technical advice when planning new homes or improvements. And there will be special provisions to improve the housing of those whose farms are so small and unproductive at the moment that they cannot pay the full cost of needed construction or repairs.

And right here I want to make one point very clear. The financial aid that will be available to farmers under this title is strictly limited to those who are unable to obtain the financing they need from private credit sources. There will be no competition with banks, building and loan associations, insurance companies, or any other private lenders. Any time a regular credit agency wants to make one of these loans the Government will step out of the picture.

Now there are several questions that can be asked about the farm section of this bill.

First of all, why have a special section for farmers?

The answer to that lies in the peculiar relationship between a farmhouse and the farm itself. They belong together. They have to be considered together. You cannot build farmhouses the same way you build city dwellings. In the city a man can live in one neighborhood and work in a factory or office miles away. He may lose his job or change his job a half dozen times and still live in the same house.

But in the country the house a man lives in is located right at his place of business. As a result any plans that are made to help a farmer get a decent house must also consider the farm the house is to be built on. The bill recognizes this by placing the administration of this section of the act under the Department of Agriculture. It also recognizes the special problems of rural housing by providing assistance suited to the construction and repair of individual dwellings, rather than groups of homes or the multiple-unit dwellings that fit urban conditions.

Another question to be considered is the need for rural housing. Quite a few people these days hold the belief that all farmers are rolling in wealth. What they fail to understand is that the farm prosperity of recent years has benefited only those who were able to grow large quantities of farm products. Those who lacked the land, tools, and capital were not able to benefit from the increase in farm prices. These folks account for about half the farm population, several million in number.

About the best way to find out if there is a need for more and better farmhouses is to drive out through the country, particularly along the back roads, and in the less prosperous farming areas. You'll see hundreds of dwellings that are just as drafty, leaky, overcrowded, and unsanitary as the worst city slums.

Even in the Midwest, where farm incomes have been among the highest, only about 1 home out of 5 has modern bathroom facilities, 2 out of 3 lack running water, and more than 1 out of every 10 are in need of major repairs, according to the 1947 housing survey of the Bureau of the Census.

Granted that there is a need for rural housing. I don't think there is anyone of reasonable judgment who has argued against that point. The case boils down to this: Is title IV of H. R. 4009 the way to do it?

What are the alternatives?

One way, the way of the past, is to build farm homes out of farm incomes. A very laudable and on the surface a very sensible way. If a farmer needs a home, let the income from his farm provide it. If he does not have enough income, lend him the money he needs to increase his production and get that income. Unfortunately, in far too many cases, that way has not worked. If it worked we would have decent homes on every farm in the country today.

Why has it not worked? Principally because farm homes cost several thousand dollars to build and by the time a farmer can save the cost of a new house out of his income he is too old to enjoy it.

The hard truth is that a farmer and his wife need the biggest house with the most facilities when they are young and raising a family. If they depend upon their savings to build that home they will get it about the time the children are ready to marry and have families of their own.

Another way to build rural houses would be to let private lenders do it unaided or with the aid of Federal Housing Administration insured loans. Unfortunately, this way has not worked either. Banks have had money to lend and the FHA laws have been on the books for several years, but we still have rural slums.

Banks, as a general rule, have shied away from financing farmhouse construction. The special circumstances that separate farmhouses from urban houses, the fact they as an investment are not worth a dime unless the farm they are on is a good farm, has tended to keep bankers out of the rural housing business.

That brings us up to the last alternative—direct Government assistance. And that is what title IV provides.

H. R. 4009 does not set up any system of credit that will compete with the current methods of financing rural housing. If the private lenders want to extend their efforts further into this field, the bill provides that the Government withdraw.

Nor will any additional governmental agencies need to be created to handle the provisions of the act. Bureaus within the Department of Agriculture, the Farmers Home Administration, the Extension Service, the Agricultural Research Administration and the Bureau of Agricultural Economics will take over the administration of title IV and carry it on along with their already assigned duties.

This bill is needed to strengthen our country, to give urban and rural people alike a tight roof over their heads. I urge its passage.

Dedication of Memorial by the City of Lawrence, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the remarks of Brig. Gen. Ralph A. Palladino, ORC, commanding general, Ninety-fourth Infantry Division, at the dedication of a memorial by the city of Lawrence, Mass., on Sunday, May 29, 1949:

Gold star mothers and fathers, members of the clergy, Mayor Meehan, Mr. Chairman, distinguished guests, ladies and gentlemen, I have come here to Lawrence to join with you in paying tribute to your brave sons who fought and died in order to preserve and protect the ideals and the principles of this great land of ours.

I want you to know that I am grateful to you for inviting me here.

It gives me an opportunity to add my humble tribute in recognition of the heroic deeds of these sons of Lawrence who are not with us today, because they made the supreme sacrifice for their country.

I am sure that you do not want a long harangue from me this afternoon on the sacrifices made by these brave men. Nor do you want me, I'm sure, to use up my time recounting their heroic deeds.

All of you here today are well aware of the price they paid for your and my liberty. If we, who also served but were more fortunate enough to come back, and the others for whom they died, don't appreciate their sacrifices and their deeds by now, then I'm afraid that anything I might say in addition would make but little impression.

So let us give our thanks, and our thanks again and again, for all they did to help keep America the land of the free.

And let us pray that there will never again be cause or reason for other sons of yours and mine to make the supreme sacrifice for the same ideals and principles in another war.

We are gathered here today to dedicate this memorial to the sons of Lawrence who have given their lives in World War II.

Memorial Day is set aside each year in honor of these American dead. Originally memorial services, through a Memorial Day, were observed in honor of the soldiers killed in the War Between the States. Later, it was adopted to honor soldiers of all our past wars—not only the men who died at Bull Run, Gettysburg and other battlefields of the South, but also at San Juan, the Argonne, Flanders Field, in the air over and

in the oceans, and now we have added to that list, Pearl Harbor, Bataan, Okinawa, North Africa, Anzio, Normandy, and the Bulge, to mention only a few of the battlefields on which our American soldiers have fought and died.

Each year on Memorial Day, we pause in tribute to those American servicemen who have made the supreme sacrifice. It is a day when we should pause and recall to mind the ideals for which hundreds of thousands of Americans paid with their lives. We should take stock of the price they paid, and the ideals for which they paid the price.

But today is not a salute to the past alone, no matter how glorious that past may be. We do no credit to our heroic dead if all we do is mourn them or praise them. As Abraham Lincoln said at Gettysburg in 1863, "It is for us the living, rather, to be here dedicated to the great task remaining before us."

So this Memorial Day of 1949 should be a day for us, the living, to rededicate ourselves to defend the principles for which others have fought and died. It is for us, who live, to shoulder the responsibilities these honored dead have turned over to us; it is up to us to make sure that these dead have not died in vain.

The past war was the costliest in the history of mankind. We as a Nation have left our soldiers at Pearl Harbor and Corregidor, and on Guadalcanal, Tarawa, and Iwo Jima, on the desert stretches of North Africa, in Sicily, at Anzio, and Cassino. We left our soldiers in Normandy, Belgium, Holland, Germany, Austria, and other European countries, to mention only some of the places.

Our military and naval dead rest beneath the lands and seas of all the continents, and their memories and deeds are still sharp and clear in our minds. Our Nation is now engaged in completing the task of bringing back for final resting place on American soil the thousands of these honored dead who fell in foreign lands.

The great majority of these servicemen, as was the case in other American wars, are products of a citizens' Army and Navy—men who left the workbench, farm, office, or classroom to shoulder a gun in a crisis. These citizen soldiers, sailors, and airmen were ready when their country called.

They knew that every American is "Endowed with the rights of life, liberty, and the pursuit of happiness"—rights which we must always be prepared to defend. They knew that theirs was a country worth fighting for, a Nation that gave each of them an equal opportunity.

The American dead, your dead, have sacrificed their lives so that each of us can enjoy these democratic rights. It is, therefore, necessary that each one of us strive always to be worthy of their sacrifices.

Today we honor their memories and deeds, and we know that now is the time to safeguard the peace for which they paid so dearly. We can show our gratitude to those men who did not return, and our appreciation and sympathy for those who still mourn them, by guarding the principles for which they fought.

This does not call for a vague and impractical pacifism. That has not saved us from war in the past, and it will not save us in the future.

Only a peace based on justice will last, and we can best honor our departed soldiers by working with courage and constructive thought toward the achievement of such a peace.

In our short history, our Nation has passed through many crises, but in each case it has come through stronger and greater than ever before.

But with this additional strength and greatness, our Nation is called upon to display sound leadership and inspiration to guide all freedom-loving peoples of the world.

As leaders we must be imbued with an unshakable faith to build the spiritual foundations that will bring about and maintain a permanent peace. We must act under a sense of moral compulsion as a people who will establish an atmosphere of confidence and mutual trust between the nations of the world.

In the past, it seemed characteristic of the American people, due perhaps to their headlong quest for the American way of life, to have short memories about the tragedies of these pasts.

For example, in the First World War, we joined the Allies when the American people came to the sober conclusion that the aims and purposes of imperial Germany were in conflict with the basic fundamentals upon which the life of America is founded.

We did not have to fight then, we could have allowed our ships to be sunk, or we could have kept them in a safe harbor. We could have bought a peace at a price—a humiliating price—a price which we justly were unwilling to pay.

After the war was won, we crawled back into our shell of isolation, and we neglected our responsibility. We neglected the peace by allowing ourselves to grow militarily weak. We invited aggression because of our weakness. History tragically records the results of our weaknesses, in the thousands of fallen dead we honor today.

I sincerely hope that we do not make the same mistake again. Somehow I have confidence that we will not, for the people of today have seen the consequences of the robot bomb, and the rocket, know the world-shaking possibilities of atomic warfare, and have heard rumors of warfare even more deadly, if such a thing is possible.

Today we can no longer consider that we can isolate ourselves from the rest of the world. Our geographic isolation has disappeared. Scientific and mechanical progress in the past few years has reduced international time and space to a minimum. London, Berlin, Moscow, Rome, Tokyo are closer to us today than your fair city was to our Nation's Capital only one short century ago. No longer are the Pacific and the Atlantic Oceans and the north polar regions natural obstacles guarding our shores.

Whether we like it or not, America has reached the position of leadership in world affairs. We must accept this obligation. We cannot and must not shed the responsibilities that it involves.

To be free people means more than a mere recognition of the debt we owe the men we honor here. It means that we—like them—recognize that eternal peace is the ultimate goal of all mankind; but that peace at the expense of freedom is worse than no peace at all.

We must recognize further, that eternal vigilance is the price of freedom, and that we as true citizens are the guardians in peace of what those in war fought for.

We find ourselves in a world today that is maintaining about 20,000,000 men under arms. Are we to assume that we are immune to the international unrest and dangers that are rampant today?

Every realistic and practical person knows that international prestige and leadership require more than good intentions and high ideals. Until we approach an international utopia, we must rely on military strength to back up our policies.

Europe and Asia know from bitter experience that military power demands respect. Foreign aggressors are well aware of it. Twice within a generation we have had to stop aggressors—but each time, thank God, we have been given the opportunity to gather our strength before putting it to the test.

Now that we are the world's richest prize, it is folly to think that any future aggressor would be stupid enough to repeat that mistake a third time.

In our role as world leaders, we must go all the way. If military power is the "Big Stick" we must carry in order to guide the world to everlasting peace, then we must fearlessly shoulder that responsibility.

As world leaders, it is our responsibility to guide world opinion toward a just and durable peace. Let us not allow the spirit of good will between nations to evaporate now that the war is over.

Each one of us should bear in mind that the same energy and intelligence that was necessary in winning our biggest and toughest war, must continue in effect to insure our own national security.

All of us should recognize the fact that national security is not a problem for the armed services alone. Our security program, if it is to be a bulwark of democracy, must be the concern of every citizen. It is everybody's business to see that we do not again allow ourselves to become militarily weak and thus a tempting target for would-be aggressors.

And so as we gather here today in grateful memory, let us not forget that the reason for our meeting here will have failed of its purpose unless it becomes a daily reminder to each of us that we must become and remain strong.

We have a duty to these honored dead. That duty is to see that the cause for which they gave their lives is carried forward. That the principles of life, liberty, and the pursuit of happiness are turned over to our next generation untarnished and unsullied.

This heritage of freedom, this heritage which is America, we must pass on to our coming generations, for unless we do, then these honored dead will have truly died in vain.

A Prayer for Peace

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1949

Mr. GORDON. Mr. Speaker, under leave to extend my remarks, I include in the RECORD a prayer for peace offered by Robert Gale, founder of the International Peace Church:

WE CAN HAVE PEACE IF WE PRAY FOR IT

(By Robert Gale, founder International Peace Church)

Yes, the peace that is inevitable can be ours if we pray for it.

Not a once-or-twice-a-week prayer, but a constant every-day prayer, a counseling with the Lord for the one great need of the universe—peace.

No matter what your religion, sect, or denomination, go into the churches and the tabernacles and pray to the Lord, no matter, what His name, and pray each and every day for peace.

Halt your prayers for personal health and gain; even for community needs; sacrifice your everyday desires for the need of an entire war-weary and war-impoverished world to pray exclusively for peace.

What's more, spread the word around that there will be peace if you pray for it. That the Lord will listen to prayers and the world will listen and hear of our sacrifice and will not lose hope in the idea of peace on earth, good will to men.

No matter what your creed, you are a believer in the end of all war—outlaw it forever by praying in your house of worship, or your own home if you wish. But pray every day—do a service to your religion and your country—pray only for the peace that will surely come.

UNIVERSITY OF MICHIGAN LIBRARIES

The Growth of the Aluminum Co. of America Has Gone Hand in Hand With the Development of Tennessee and the Tennessee Valley Authority

EXTENSION OF REMARKS
OF
HON. JOHN JENNINGS, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1949

Mr. JENNINGS. Mr. Speaker, 39 years ago, when the aluminum industry was little more than in its infancy, the Aluminum Co. of America came to Blount County, Tenn., and began a survey of the hydroelectric power possibilities in the streams of eastern Tennessee and western North Carolina.

Some 35 years ago dirt was first broken at Alcoa in Blount County for the construction of the modest beginning of what is now the greatest aluminum plant in the world.

On Friday, July 8, the Blount County Chamber of Commerce will sponsor a dinner in appreciation of the benefits that the Aluminum Co. of America has brought to Blount County and to our section of the country. The industrial development and the prosperity brought to Blount County and surrounding regions by this great organization have conferred unparalleled benefits upon our people.

BENEFITS FROM ALUMINUM CO. OF AMERICA OPERATIONS AT ALCOA, TENN., YEAR 1948

In the year 1948 the company employed an average of 9,021 persons.

Its total pay roll for the year was $25,507,500.

It purchased in supplies in Tennessee, $6,641,500.

For transporting materials to and finished products from its great plant at Alcoa it paid out the sum of $4,401,600.

It paid taxes in Tennessee of $1,223,800. This includes unemployment taxes paid to the State of Tennessee.

It purchased and used in its operations, electric power, $4,051,600, making a total of $41,826,000 paid into the channels of trade and to the taxing authorities.

The company sold in Tennessee aluminum and aluminum products of the value of $4,335,000.

Its net benefits to the State during the year 1948 were $37,491,000.

The following facts with reference to this great enterprise are now before me and I wish to place them before the country.

ALUMINUM AT ALCOA

Tennessee and Alcoa have much in common, and for more than 35 years a striking parallel has existed between the growth of aluminum as a commercial metal and the industrial progress of the State. The potentialities of the State and the metal have scarcely been realized, with the good fortunes of one adding in considerable measure to the success and growth of the other.

Sixty years ago aluminum, an infant among commercial metals, entered into competition with hundreds of other materials which had been used by man for some thousands of years. That the producers of the new metal, aluminum, struggling to establish its superior qualities of beauty, durability, resistance to corrosion, lightness and strength, should select a site in Tennessee for one of its major developments was not surprising. Tennessee had that essential requisite, water power—barely developed 50 years ago—from which adequate quantities of electricity could be produced for the separation of aluminum from other elements with which it is always combined in nature.

WATER POWER

The power of a swiftly flowing stream does not in itself make electricity. It requires vision, courage, and a vast expenditure of money to transform this force of nature into electrical energy.

As early as 1910, Aluminum Co. of America surveyed the power potentialities of Little Tennessee River and its tributaries. Since then, five large hydroelectric plants have been constructed to supply electric energy for the manufacture of aluminum at Alcoa, in Blount County, Tenn. These plants are located at:

Cheoah, on Little Tennessee River, near Tapoco, N. C.; placed in operation April 13, 1919.

Santeetlah, on Cheoah River, in Graham County, N. C.; placed in operation June 7, 1928.

Nantahala, located on Nantahala River, in Macon and Clay Counties, N. C.; began producing electric power August 3, 1942.

Calderwood, on Little Tennessee River, near Calderwood, Tenn.; placed in operation April 19, 1930.

Glenville, on the West Fork of Tuckasegee River, in Jackson County, N. C.; began operations October 14, 1941.

The combined capacity of these plants—420,000 horsepower—still is not sufficient to supply the ever-increasing demand of Alcoa Works for electricity. As a result, Aluminum Co. of America has entered into contracts with Tennessee Valley Authority for substantial quantities of power to meet its needs and to supplement its requirements in years to come.

ALCOA WORKS

Simultaneously with the study and development of hydroelectric-power plants on the Little Tennessee River system in Tennessee and North Carolina, Aluminum Co. of America built a reduction works on farm land 1 mile from Maryville and 15 miles south of Knoxville, for the manufacture of aluminum. The first unit was completed and placed in production in 1914. Five years later, a carbon plant was constructed to supply the necessary electrodes for the reduction works. Steadily expanded since 1914, the reduction-works buildings have a total of 42 acres of floor space—the largest aluminum-reduction plant in the United States.

The west plant, a rolling mill for the manufacture of aluminum sheet, was placed in operation in 1920, and was followed in 1929 by construction of a plant to manufacture aluminum paint pigment. The second fabricating unit of the west plant, a rolling mill for the production of strong alloy aluminum, was completed in 1931. The west plant now includes 35 acres of floor space. A mill for rolling aluminum foil has since been added to its production facilities.

By 1940, the demand for aluminum had increased to such an extent that Aluminum Company of America, in October of that year, began construction of the largest and most modern aluminum rolling mill in the world, Alcoa's north plant which started operations September 23, 1941.

The buildings housing this plant cover 58 acres of floor space. With the companion west plant, these buildings represent the largest sheet-aluminum producing center in the world, a fact that seems paradoxical when it is realized that all the raw materials necessary for the production of aluminum, except electricity, must be brought in from great distances.

Bauxite comes from Arkansas and South America, but is refined at other plants and shipped to Alcoa in the form of alumina; cryolite comes from Greenland; and coke, pitch and tar come from other sections of the Nation.

First in the chain of operations at Alcoa is the reduction works, in which commercially pure aluminum is smelted. Here, in long rows of electrolytic cells, the aluminum oxide (alumina), a fine, white, powdery substance obtained from bauxite, is placed in a bath of molten cryolite and separated into its component parts—aluminum and oxygen—by means of electricity. The oxygen unites with the carbon anodes to form carbon dioxide, while the aluminum drops to the bottom of the cell and is drawn out as the silvery metal which has become so useful commercially and now is so common in our daily life.

When Charles Martin Hall, just out of Oberlin College, discovered the process for electrolytic production of aluminum in 1886, he paved the way for a vast industrial works at Alcoa. In those early days, only 50 pounds of aluminum were produced in a 24-hour day. Research, modern equipment and volume production have enabled the company to reduce the price of commercially pure aluminum 30 percent since 1939—a far cry from its $8 a pound cost in 1886.

The vast quantity of electrodes consumed in the electrolytic cells at the reduction works are produced in the Alcoa carbon plant. Three-fourths of a pound of electrode is consumed for each pound of aluminum smelted.

Sheet, foil, and plate, made of commercially pure aluminum or from one of the many high-strength alloys developed by Aluminum Co. of America's research laboratories, are fabricated in the rolling mills of the west and north plants for manufacturers of thousands of commercial products.

The aluminum made in Tennessee spreads prosperity across the Nation. Approximately 30 percent of all the new aluminum produced by the aluminum industry in the United States emanates from the Tennessee Valley area, providing jobs for Americans throughout the country. More than 95 percent of the aluminum products produced at the Alcoa works are shipped to the 47 other

States for further processing, involving great amounts of additional work on the basic or semifinished aluminum materials before they are ready for final use.

CITY OF ALCOA

Around the reduction and fabricating works lies the city of Alcoa. A small community in 1916, Alcoa has grown in order to keep abreast of expansion in the company's works. In 1919 the municipality was incorporated under the city manager form of government. There are three commissioners, one of whom serves as mayor.

The population is made up largely of families of the folks who gain their livelihoods in the company's works. Citizens either own their homes under an easy 10-year payment plan, or they may rent homes at moderate rates. Lots for home building are sold at reasonable prices.

Five modern schoolbuildings care for the educational requirements of the community. The two high schools are noted for their courses in manual training and home economics. Plans are continuously being advanced to expand the school system. In Alcoa there are 13 churches, serving virtually all principal denominations.

Beautifully landscaped city parks, wide, well-paved streets, playgrounds, an 800,000-gallon municipal swimming pool, and an abundant supply of pure water make Alcoa a desirable place in which to live.

Filtered and chemically treated soft water is pumped from Little River 4½ miles away. It flows through mains of sufficient capacity to serve a city of 25,000 population; the sewers also were planned to accommodate a city of that size. Sufficient land has been set aside to provide 1 acre for parks and playgrounds for each 100 residents as the city grows.

USES OF ALUMINUM

From its first use for cooking utensils through research and experimentation, applications for aluminum have increased to more than 4,000 reaching into the daily lives of every person in the United States.

Because it excels in lightness, durability, splendid conductivity of heat and electricity, ability to withstand rust and corrosion, aluminum today is reaching into countless new fields of usefulness.

Aluminum and its alloys can be worked into all forms known to the metal-working art: sheet, plate, foil; bar, rod, wire, rolled and extruded structural shapes; tubing and extruded moldings; impact extruded products; screw-machine products; rivets, and nails; pigment for paint; forgings and various types of castings.

Truly this metal is the backbone of the Light Metal Age. It has risen to the position of first-ranking non-ferrous metal of industry from the standpoint of volume produced, yet there is no foreseeable limit on its future possibilities.

Mr. Speaker, it has been my great privilege as the Representative from the Second Congressional District of Tennessee, of which Blount County is a part, actively to support measures in the Congress, the purpose and effect of which were, among other things, to advance the welfare, the growth, and prosperity of this great company, its thousands of employees, and the people upon whom it has conferred such great benefits.

On January 18, 1940, 15 days after I became a Member of the Seventy-sixth Congress, I supported, spoke in favor of, and voted for the construction of what is now known as the Fort Loudon Dam on the Tennessee River at Lenoir City, in Loudon County, in the Second District of Tennessee.

In what I said in support of this dam, I pointed out the facts that within 16 miles of the city of Knoxville, at Alcoa, is one of the largest aluminum plants in the world; that there were shipped yearly to that plant from St. Louis, Mo., more than 800,000 tons of alumina which at the Alcoa plant is made into aluminum, from which at that time were being fashioned the fighting planes being built for the armed forces of this Nation.

CHEROKEE DAM

In July 1940, there was introduced in this House a measure authorizing the appropriation of more than $60,000,000 for the construction by the Tennessee Valley Authority of a great hydroelectric dam on the Holston River near Jefferson City, in Jefferson County, Tenn., and the construction by the TVA of one of the greatest steam power-producing plants in the world near the Watts Bar Dam in Rhea County.

The construction of these power facilities was absolutely necessary to provide this country with an adequate defense in the way of airplanes, because at that time, we stood on the threshhold of the Second World War.

In order to thoroughly familiarize myself with the facts that made imperative this power facility to the end that this country and its fighting men might have an adequate supply of fighting planes and bombers, I went into the Aluminum Co.'s great plant at Alcoa and witnessed the processes by which the 1,000,000 pounds of alumina shipped to that plant daily from St. Louis, Mo., was converted into aluminum. I now quote from what I had to say on that subject:

Mr. Chairman, the measure now before the House provides for the construction of what is known as the Cherokee Dam on the Holston River near Jefferson City, Tenn., and for the installation of three electric generators, two at the Wilson Dam and one at the Pickwick Dam; and also for the construction of a steam-generating plant to supplement and equalize the production of firm power from these nine dams in the Tennessee Authority during periods of drought.

If the reasons advanced in support of this measure are sound and if the facts stated in support of it are true, the measure should pass. It has just been stated here by the distinguished gentleman from New York that the Tennessee Valley Authority had induced a large number of industries to come down there in order to use this power. That is not in accordance with the facts. This was an industrial region before the Tennessee Valley Authority came there and it is such today. And today one-third of the critical war materials that are produced in this country are produced in the Tennessee Valley area. This includes copper, iron, and aluminum.

At Alcoa, in Blount County, is located the largest aluminum plant in the world. It is located on a tract of 3,000 acres of land. The buildings themselves cover 90 acres of that land. There is shipped each day of the year to Alcoa 1,000,000 pounds of alumina, which is an aluminum oxide which has been produced from bauxite at the company's plant in St. Louis, Mo. That ore is mined in Arkansas and in South America.

The 1,000,000 pounds of aluminum oxide is there, by the use of electric current, separated into its component parts. This is done by mixing the alumina with cryolite in a molten state, and by submerging in the mixture 24 electrodes, and by passing from the electrodes electric current to carbon-lined sides of the melting vat. From the 1,000,000 pounds of alumina received there each day, 500,000 pounds of pig aluminum is produced. Under the old method of manufacturing aluminum before the use of electricity came into vogue it required 24 hours to produce 30 pounds of aluminum, which sold then at $8 a pound. Now, by the use of this current, it is possible to produce 30 pounds of aluminum in 10 seconds.

We all know that in the manufacture of airplanes for war purposes aluminum is absolutely essential. There is required 5 tons of aluminum to produce one airplane. Would it not be a tragic thing that as a result of dallying in this hour of our Nation's peril and quibbling over something that is already an accomplished fact, the time should come in America when our children and our housewives would be gathering together aluminum pots and pans, as they are doing in England today, in order to build airplanes for defense purposes?

The construction of these power facilities made possible the building and the putting in operation by the Aluminum Co. of America of additional facilities for the manufacture of aluminum for war purposes. These additional facilities consist of a building which covers 55 acres of land. The construction of this building and the installation of machinery in it was accomplished within a period of 12 months.

DOUGLAS DAM

On January 23, 1942, in a speech in favor of the construction of Douglas Dam, I pointed out the fact that at Alcoa, in Blount County, Tenn., the Aluminum Co. of America was then producing 75 percent of the aluminum and aluminum alloys out of which our war planes were constructed.

I emphasized the fact that its plant was located there long before the First World War because of the availability of cheap hydroelectric power. And in support of the proposal to build the Douglas Dam, I stated on the floor of the House that the construction of the Douglas Dam was recommended by every governmental agency charged with the duty and responsibility of building an adequate number of airplanes for the defense of this Nation in order to insure victory over Germany, Italy, and Japan, and that, to win, this Nation must have an overwhelming superiority of air power. This superiority of air power would never have been attained by our country but for the fact that the Aluminum Co. more than trebled its output of aluminum for war purposes within the first 2 years of the war.

The Aluminum Co. not only gave the Nation the benefit of the aluminum produced in its own plants, at the request of our Government the Aluminum Co. supervised the building of aluminum

UNIVERSITY OF MICHIGAN LIBRARIES

plants for the production of aluminum by other concerns. It gave to these other producers of aluminum its secret processes and the benefit of its know-how acquired through the years of its existence, through the ability and learning of its chemists, its engineers and research departments, in the development of this marvelous metal.

It is altogether fitting and proper that the public-spirited members of Blount County's Chamber of Commerce should honor this great industrial enterprise and public benefactor in a manner that is in keeping with what it has brought to and done for the splendid people of Blount County.

Renaming the Enid Air Force Base

EXTENSION OF REMARKS
OF
HON. GEORGE H. WILSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1949

Mr. WILSON of Oklahoma. Mr. Speaker, there recently appeared in my home-town paper, the Enid Morning News, an editorial which I wish to quote:

RENAMING THE AIR BASE

The decision to rename Enid Air Force Base in honor of some military man who gave his life in the service of this country is a wise one. It is also fitting that the people of Oklahoma should have some say in the choice of the name.

Enid Air Force Base has been a satisfactory name, but it is somewhat cold, impersonal and lacking in color. A personal name out of the categorical class and reminditul of unusually valorous service in the defense of the Nation will be much more satisfactory.

There are few really effective ways to memorialize the State's war heroes. Oklahomans should welcome the opportunity to enshrine one of their native sons so notably. Surely there could be no more fitting memorial than a large establishment actively engaged in the present defense effort.

Participation in the name choosing should strengthen ties between Oklahomans and the air force base. Further good feeling between the personnel at the base and the people of Oklahoma is much desired. The renaming of the base is a project worthy of full public participation.

Mr. Speaker, Oklahoma has produced many heroes who have given their lives in the service of their country and who deserve the recognition that will be afforded one such hero in renaming Enid Air Force Base. My attention has been directed to the courage of one such valiant hero whose name will receive the consideration of the authorities selecting a new name for Enid Air Force Base. The citation contained in General Order No. 1, War Department, 4 January 1945 eloquently sets for the story of his courage:

Lt. Col. Leon R. Vance, Jr., O22050, Air Corps, United States Army. For conspicuous gallantry and intrepidity at the risk of his life above and beyond the call of duty on 5 June 1944 when he led the * * * Bombardment Group (H) in an attack against defended enemy coastal positions in the vicinity of Wimereaux, France. Approaching the target his aircraft was hit repeatedly by antiaircraft fire which seriously crippled the ship, killed the pilot, and wounded several members of the crew, including Colonel Vance, whose right foot was practically severed. Despite his injury, and with three engines lost to the flack, he led his formation over the target, bombing it successfully. After applying a tourniquet to his leg, with the aid of the radar operator, Colonel Vance, realizing that the ship was approaching a stall attitude with one remaining engine failing, struggled to a semiupright position beside the copilot and took over control of the ship. Cutting the power and feathering the last engine he put the aircraft in a glide sufficiently steep to maintain his airspeed. Gradually loosing altitude he finally reached the English coast whereupon he ordered all members of the crew to bail out, knowing they would make land safely, but he had received a message over the interphone system which led him to believe that one of the crew members was unable to jump because of injuries; so he made the decision to ditch the ship in the channel, thereby giving this man a chance for life. To add further to the danger of ditching the ship in his crippled condition, there was a 500-pound bomb hung in the bomb bay. Unable to climb into the seat vacated by the copilot because of his foot, hanging onto his leg by a few tendons, had become lodged behind the copilot's seat, he nevertheless made a successful ditching while lying on the floor, using only aileron and elevators for control and the side window of the cockpit for visual reference. On coming to rest in the water the aircraft began to sink rapidly with Colonel Vance pinned in the cockpit by the upper turret which had crashed during the landing. As it was settling beneath the waves an explosion occurred which threw Colonel Vance clear of the wreckage. After clinging to a piece of floating wreckage until he could muster sufficient strength to inflate his life vest he began a search for the crew member who he believed to be aboard. Failing to find anyone he began swimming and was found approximately 50 minutes later by an airsea rescue craft. By his extraordinary flying skill and gallant leadership, despite his grave injury, Colonel Vance led his formation to a successful bombing of the assigned target and returned the crew to a point where they could bail out with safety. His gallant and valorous decision to ditch the aircraft in order to give the crew member he believed to be aboard a chance for life exemplifies the highest traditions of the armed forces of the United States.

Mr. Speaker, later as Col. Bob Vance was being returned to the States, he was lost at sea; and still later the Congress awarded posthumously the Congressional Medal of Honor to this gallant hero. It is such courage that helps make us all plan and act for a strong defense of our country.

Reds in Hollywood

EXTENSION OF REMARKS
OF
HON. A. LEONARD ALLEN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1949

Mr. ALLEN of Louisiana. Mr. Speaker, under leave to extend my remarks, I wish to place the following editorial entitled "Reds in Hollywood" from the June 9 edition of the Alexandria Daily Town Talk, Alexandria, La., in the Appendix of the RECORD:

REDS IN HOLLYWOOD

The amazing disclosures by the FBI that some of the Nation's top movie idols are members of the Communist Party is just another in a series of events pointing up the threat to America's internal security.

When professional people who play a major role in molding public opinion and exerting influence upon youth are permitted to operate long after their loyalty has been questioned, it becomes time for real Americans to call a halt.

If the actors listed by the FBI as being within the Communist orbit are truly Communists, there can be no excuse for letting them continue to pollute the minds of American theatergoers. Barring them from films is the least that can be done to curb the menace which they represent.

The FBI disclosures should also serve as a sober reminder to true Americans that the Red menace is all around them, in corners where it is least expected, working stealthily to uproot our way of life.

Americans everywhere, in Alexandria as in Hollywood or New York, must call for a showdown now, before it is too late. The mere listing of names by the FBI or congressional investigators as Communists does not get the job done. Reds are anti-American. Americans must become as rabidly anti-Red, and take steps to see that Communists will have no opportunity to impose—directly or by subtle means—their ideology upon our free people.

Postal Salaries

EXTENSION OF REMARKS
OF
HON. EARL T. WAGNER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1949

Mr. WAGNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following round-table discussion between Congressman GEORGE P. MILLER, of California, National President William C. Armbrust, United National Association of Post Office Clerks, and National Vice President Andrew T. Walker, over radio station WMCA, New York City, on Wednesday, June 8, 1949:

We now present a discussion between Congressman GEORGE P. MILLER, of California, William C. Armbrust, national president of the United National Association of Post Office Clerks, and Andrew T. Walker, president of Branch 1, of the association in New York City, on the vitally important subject of postal salaries, a question of importance not only to the 495,000 postal employees throughout the country, but to the public as well. Congressman MILLER has introduced several bills providing for salary increases, longevity, promotions, veterans' credit, and a general reclassification of the existing laws applicable to postal personnel. These measures are strongly supported by the many employees' groups including the United National Association of Post Office Clerks, the oldest and largest of its kind in the country, with members in all of the 48 States and the possessions.

The next voice you will hear will be that of Mr. Armbrust.

UNIVERSITY OF MICHIGAN LIBRARIES

Mr. ARMBRUST. Thank you. The United National Association of Post Office Clerks is grateful to this station for the opportunity of discussing this question tonight. And every postal employee owes a real debt of gratitude to Congressman MILLER for his deep and constructive interest in the welfare not only of the postal employees, but in the progress of the postal service as a whole. Congressman MILLER, do you feel that there is an urgent necessity for the passage of the legislation provided for in H. R. 87, 88, 2496, and 4495, which you have introduced?

Congressman MILLER. Thank you very much, Mr. Ambrust, for your generous words. I have always had a very high regard for the employees of the postal service and believe that the increase in salary granted during the Eightieth Congress was inconsistent with their loyal and excellent service. After discussing the matter with many representatives of postal organizations and reviewing the past history of postal-pay legislation, I introduced, several months ago, the bills you have mentioned. Bills that provide for an increase in salary of $650 for regular employees and an increase of 30 cents an hour to substitute employees. That sounds like a sizable sum, when we are trying to reduce Government costs. Yet, when we realize the comparatively low pay now being received by postal workers and realize the high prices which they must pay for necessities; and when we further recognize that we can neither secure nor keep the highest type of employee in this vital service if we do not establish wages comparable to those paid in private industry, it is apparent that some action is required. Remember, however, that postal salaries have lagged behind other salaries. This is the fault of the Congress and I seek to correct it.

Mr. WALKER. Do you feel, Congressman, the general level of postal salaries to be adequate under ordinary circumstances and that the present situation calls for action by the Congress?

Congressman MILLER. Even in normal times, Mr. Walker, wages paid to postal employees were low by other standards. Now, with the greatly increased cost of living, these wages have come to be most unrealistic. Under present circumstances, it is literally impossible for some postal employees to maintain even a modest standard of living on present wages. That families of many postal workers are adequately clothed and educated is more of a tribute to their household management than it is to the foresightedness of their employer—the Federal Government. We have placed the good housewife of the postal worker at a great disadvantage. I compliment her on that good management. We do not like to increase wages at this time because unquestionably there can only be some inflationary effect. However, faced with these facts, there seems little else we can do. Incidentally, I would like to point out here that our considerations in the House Post Office and Civil Service Committee have not been limited to postal employees alone. We are quite well aware that there are many other Federal employees in the lower income brackets who likewise deserve, and should get, some increase in pay. However, because the Postal Department is a separate organization, and does not have a common pool of employees as do most other Government departments, it has always seemed most important to me that we continue to treat the Post Office Department as a separate case.

Mr. ARMBRUST. Knowing postal employees as I do, I must say, Congressman, that your appraisal of the situation is accurate; unfortunately so. On the basis of need alone it is clear that your bills are entitled to the support of every Member of Congress and of every American citizen.

Congressman MILLER. It is not a matter of financial need alone, Mr. Armbrust, which should encourage us to grant increases in salary to postal workers. We all know that the best interests of our people cannot be served if we pay only the lowest possible wages. I am told that it is becoming increasingly difficult to recruit personnel for the postal service because of low beginning salaries and because of the slow steps in advancement. We can not gain by a penny-wise-pound-foolish policy. That would be a false economy which could only soon result in poor postal service and resentment on the part of the people.

Mr. WALKER. We postal employees feel that we are engaged in a vital service and we want to see it improve in efficiency and effectiveness. We like to feel that this is the view of those we serve, as well.

Congressman MILLER. The postal service is indeed a vital enterprise, Mr. Walker. We need only consider what difficulties would be caused to each of us personally, what the effect on business would be, and what the effect on our whole national economy would be, if the postal service ever broke down. The postal service has been built up over a long period of years and is staffed by trained and skilled clerks, carriers, the maintenance men, and others who work together efficiently to deliver our mail quickly and cheaply. Because we have become so accustomed to the efficiency of its service, we sometimes fail to appreciate how rarely the mail is delayed or how rarely mistakes are made.

I would like to commend the service and the loyalty of the members of your own organization, the United National Association of Post Office Clerks, and the members of other postal employee's organizations who have helped to find a realistic solution to this problem of maintaining an efficient postal service by attracting good workers through paying adequate salaries.

Mr. ARMBRUST. Thank you, Congressman MILLER. We, and all postal employees, regard it as a singular opportunity to be able to serve the Government and people of the United States. Congressmen, do you feel that the increases provided in your bill should be regarded as a final figure?

Congressman MILLER. I believe the figure of $650 as originally contemplated in my bill was, and is, a justifiable one which can be supported by evidence. But whether that figure will be agreed upon under existing circumstances is doubtful. We are all fully aware of the budget, and Government expense problems that now face us. The important point is to get some adequate increase—as much as the Congress believes is feasible. No doubt the Congress will want to consider carefully all aspects of the question. It is important to remember that the important point is not how much is the increase, but rather, does that increase place postal employees' salaries on a par with those paid to people with positions of comparable responsibility in private business and private industry. It is my own belief, from the studies we have made, that for jobs requiring comparable skill and responsibility, the scale outside the Government is far higher and may still be higher by comparison even if this increase is granted.

Mr. WALKER. Is it not a fact, Congressman, that your bill has the support of many Members of Congress?

Congressman MILLER. Yes; I believe that is true, Mr. Walker. Certainly there is a wide general agreement on the need for some increase. The questions are, how much, and for which employees? But let me emphasize strongly that it is not only the postal employees or Members of Congress, or administrative officials who should be concerned about this matter. After all, the postal service is a service owned and operated by all our people and as shareholders in that organization, we should all be concerned about the functions of the service which is the business of all of us. We all know the postal workers as our neighbors, as fellow townsmen, as good citizens, and as Americans, who are doing an important job for what many believe is insufficient pay. If we improve and properly reward our postal workers, all of us, as shareholders in the organization, will be the eventual gainers.

Mr. ARMBRUST. Congressman MILLER, do you believe in a career service for all postal employees and promotion within the ranks? And do you endorse the principle of credit to veterans for military service?

Congressman MILLER. I believe that many times we have had too much politics in our postal service, Mr. Armbrust. When Postmaster General Donaldson, a career man, was appointed to his present position, I thought that was an excellent move in the right direction. But it seems to me that this should be carried on all the way down the line. I certainly believe in granting to veterans, entering the postal service, full credit for military or naval service toward promotion in salary. We are now holding hearings on the bill I have introduced, H. R. 87, which provides for that credit. I feel confident that the House Post Office and Civil Service Committee will take favorable action.

Mr. WALKER. Congressman, how does this pay increase fit into efforts to reduce Government expense?

Congressman MILLER. Mr. Walker, during my experience in public life as a Congressman I have become convinced that no business, public or private, will gain financially, or otherwise, by underpaying its employees. Savings can, and are, made by reducing unnecessary services and by eliminating unnecessary personnel. We will not, and cannot, gain by holding down the wages and rewards of those who carry on essential Government work. Economy can only be effected by eliminating the unnecessary and improving the necessary services.

I personally greatly admire postal employees as a whole for their loyalty under real hardships and for the high morale and efficiency of the service which we often take for granted. I believe that this bill, H. R. 2496, is worthy of active support because it is more than just a measure to increase salaries—important though that is to the people concerned. It is also a method of strengthening the morale and giving new, needed vitality to this important arm of our Government. It is a method of building a sound and solid business. Quite properly, our Government is today engaged in far-flung enterprises unprecedented in the history of our own, or any other nations. These enterprises involve billions of dollars which we willingly expend in the hope that we can thus maintain peace in the world and so safeguard our own way of life. Recognizing the great importance of these efforts, we cannot allow ourselves to become so concerned with them as to ignore or delay the consideration of domestic problems and among our domestic problems is this one we have discussed tonight. I believe there is solid justification for the bills I have introduced, and sincerely hope and believe that within the next few weeks Congress will act in the interest of the thousands of postal employees who deserve this recognition from their Government.

Mr. ARMBRUST. Congressman MILLER, may I express to you my deep appreciation—not only on behalf of the United National Association of Post Office Clerks, and its members everywhere throughout the land, and for postal employees generally—but as a citizen concerned with the welfare of an essential service agency of our Federal Government.

We appreciate your appearance on this program tonight; we are deeply grateful for your interest in a problem which touches all of us so closely—all Americans everywhere under the flag.

To an Atom Scientist

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1949

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communication from a recent issue of the New York Herald Tribune:

TO AN ATOM SCIENTIST—SOME PARENTAL REFLECTIONS ON PATRIOTISM, FREEDOM, AND RESPONSIBILITY IN FIELD OF FISSION

To the NEW YORK HERALD TRIBUNE:

Among the problems stirred up by the investigation of the Atomic Energy Commission and David Lilienthal is a personal one. My son, now 31, a doctor of philosophy in chemistry and working for the Commission in the nonsecretive zone, wrote me the other day questioning the investigative action and upholding the rights of free speech and action on the part of young scientists. I cannot send you his letter, but your readers may be interested in my reply, which is appended:

"DEAR SON: Your letter and opinions on the Lilienthal matter are, as you say young scientists are, so intellectually proud and socially naive. I would emphasize the naive if I were you, for a while, I think. You talk grandly about democracy, you are proud that young scientists do not like to be told what to do; you are quite sure that if these proud scientists are so told only second raters will take their place. But, nowhere, my son, do you mention the one word which this country needs to hear and which is as much a part of democracy as freedom, and that is duty or, if you choose, responsibility.

"You talk about democracy. Did you ever stop to think who created our democracy? It wasn't the scientist. It was the layman, the statesman, the politician, the military man, and the ordinary everyday businessman and laborer. But now the scientist wants to take advantage of that democracy to do as he pleases irrespective of the rest of the country. I am quite sure that when he talks of freedom of speech, freedom to do as he chooses, of individual liberty, he doesn't know what he is talking about.

"Democracy is a society, son; a conglomeration of individuals gathered together in an attempt to live peacefully, happily, and in prosperity. An individual living in a society has only such liberty as will allow all others to have the same liberty—he is free only to do such things as will not prevent the others from doing as much. In addition to considering the other individuals, he must consider the community as a whole. There is no such thing as absolute liberty of the individual—not in society. If you want it outside of society, go out into the wilds by yourself—and find out how much liberty nature allows you.

"Of course, it is true that the purpose of a democracy is to provide the maximum of liberty for the individual—that is the basic idea back of that form of government. But that does not include liberty to the individual to destroy democracy itself does it? Especially by violence? Must democracy provide for its own destruction? Or is it democracy when the society provides for changes in accordance with the true will of the greater part of the society? Isn't it an absurdity to say that a society must acquiesce in its own suicide? Of course it is. Then, democracies, in providing for the welfare of the greater part of their members are justified—nay, required—to limit the freedom of those of the society who would destroy it.

"When the proud young scientist refuses to do anything he is told—irrespective of whether it is for the good of others or the good of the community; when in his demand for personal freedom he does not stop to consider whether his acts are going to damage the country which has given him that freedom or his neighbors who have helped preserve it; in other words when the proud young scientist forgets his duties as well as his responsibilities, he should be reminded of them—forcibly if necessary. And, if he resents that, then he had better get out and try it somewhere else.

"I would love to see him try it in Russia!

"We want freedom—all of us—just as much as we can have while giving the other guy the same thing and having a society which will work along those lines. We know that the Communist idea is entirely different. And we know that the Communist is determined to destroy our way of life by violence and through the use of trained minorities! Communism is not a political creed. It is a fanatical faith—a religion for its followers, an irrationality of belief that transcends reason. To talk about it as if it were a philosophy of the mind, another kind of political party, an idea to be discussed in the drawing room—that way lies suicide, for that is just what the Commie hopes we will do and it is just as dangerous as appeasing Hitler was.

"In dealing with communism we had better treat it as we would a forest fire; the only way to win is to put it out; you can't compromise with it.

"To train Communists, then, in nuclear research is just the same as setting up schools for murderers—murderers of democracy. I don't care whether the boy is just playing with it or not. You can't take a chance. Suppose he happens to have not been playing with it? What do we do, then, take his knowledge away from him?

"The atom bomb is not just the plaything of the scientists any more—to use, develop and handle according to his ideas of what should be done or how it should be done. When you boys invented that thing you entered the great, big world, outside of your laboratories, and became an integral and most important part of your society—all of your society; politics, business, government and all the rest of it. The lives of all of us may depend on the thing and what is done with it. And that means that our ideas of what is liberty of speech and what is security take precedence over yours—except as you are part of us—even if we're wrong!

"After almost 60 years of life, I have come to the conclusion that Plato was pretty nearly right: the only whole men I have ever met have been the practical philosopher type; those men, who, having lived a practical life among the material facts of life, such as running a business, arguing cases in court, curing the sick, building bridges, have, in addition to that, acquired a classic education—if subconsciously—a knowledge of history, of the philosophies (not deeply but casually), of literature and, to some extent, the arts. All the rest of humanity see out of one window only, that window through which they have been gazing so intently at their own particular interest; chemistry, physics, the counting house, Wall Street, the bank, the railroad, the art of painting, the joy of words and so on. (I am one of them.)

"None of us is to be trusted; we are not well rounded enough to be able to find the answers for humanity in this weird monster of a world that you scientists are creating.

"We are all valuable—immediately so—but we—all of us—ought to have keepers over us to see that we do not run berserk after our special interest. And the only ones competent enough to be such keepers are the practical philosophers.

"And that, I believe, is going to be the eventual end of democracy; a society intelligent enough to see that such are the men who ought to run government and of its own volition, sensible enought to put them in that position.

"Of course that will happen about 100,000 A. D. if you scientists do not disintegrate us first."

CORIOLANUS.

WASHINGTON, D. C., *June 5, 1949.*

We Have the Best-Paid Army in the World

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1949

Mr. WHITE of Idaho. Mr. Speaker, from these shores we have watched the course of militarism in the Old World. We can visualize today where their system of military ascendancy has led them in the past. We have welcomed the young Frenchman and the young German that came to our country to escape military service in their native lands to share with us our peace and prosperity.

Now that we have won the war we must direct our efforts to preserving our form of democratic government and our American way of life by peaceful means. That my colleagues may have an expression of my views there is inserted herewith a letter recently received and my reply thereto.

BOISE, IDAHO, *June 8, 1949.*

Hon. COMPTON I. WHITE,
Member of Congress,
Washington, D. C.

DEAR REPRESENTATIVE: While I do not live in your district, it has come to my notice that you did not vote on H. R. 4591 and just wonder if you are opposed to an honest and just pay boost for the military services.

You have probably read the speech of Gen. Omar N. Bradley delivered May 31 before the Political Study Club of Washington. If not, I would respectfully request you to get and read it, as it sets forth the facts as only an experienced general can.

This morning's edition of the Idaho Daily Statesman has a leading editorial on the question, quoting some of General Bradley's remarks, and I trust that you will read it. It may not be in until the Thursday mailing edition.

I trust that you will see the justice and the need of an adequate pay boost for the military services now and will work and vote for the new bill which has been proposed Monday. Otherwise the best young officers will be obliged to retire and seek other employment.

Respectfully,

A. W. SMITH.

JUNE 14, 1949.

Mr. A. W. SMITH,
Boise, Idaho.

DEAR MR. SMITH: Answering your letter of June 8th, while I appreciate the matchless

service of our Army officer personnel in the defense and protection of our country, I feel that our efforts should be directed to easing the tax burden on the American people, rather than increasing the load, and now that we have subdued our enemies, we should direct our efforts toward peace rather than war.

In recent months I have been impressed by the wholesale promotions of army officer personnel, every one of which carries an increase in remuneration. During the war we cheerfully voted for military appropriations running as high as $42,000,000,000 in a single appropriation bill. Now with the best paid Army in the world, I am sure you will agree with me that there is a limit to the military burden the American people can carry with safety to our Government and our American way of life.

Sincerely yours,

COMPTON I. WHITE,
Member of Congress.

A Toast to the Flag

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1949

Mr. PATTERSON. Mr. Speaker, today being Fag Day, I deem it particularly appropriate to have placed in the RECORD "A toast to the flag" by John Jay Daly. This epic first appeared in the New Britain (Conn.) Herald at the start of World War II and is a most stirring tribute to the national emblem we so greatly revere:

A TOAST TO THE FLAG

(By John Jay Daly)

Here's to the Red of it—
There's not a thread of it,
No, nor a shred of it
In all the spread of it
From foot to head,
But heroes bled for it,
Faced steel and lead for it,
Precious blood shed for it,
Bathing it Red!

Here's to the White of it—
Thrilled by the sight of it,
Who knows the right of it
But feels the might of it,
Through day and night?
Womanhood's care for it
Made manhood dare for it,
Purity's prayer for it
Keeps it so White!

Here's to the Blue of it—
Heavenly hue of it,
Beauteous view of it,
Star-spangled dew of it,
Constant and true;
States stand supreme for it,
Diadems gleam for it,
Liberty's beam for it
Brightens the Blue!

Here's to the Whole of it,
Stars, stripes and pole of it,
Body and soul of it,
O, and the roll of it,
Sun shining through—
Hearts in accord for it,
Swear by the sword for it,
Thanking the Lord for it,
Red, White and Blue!

The Law of Requital

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1949

Mr. DAVIS of Georgia. Mr. Speaker, I recently read an article in the Gospel Advocate written by Rev. J. M. Powell, minister of the Druid Hills Church of Christ in Atlanta, Ga. The title of this article is "The Law of Requital." It is an article well worth reading, and under leave previously granted, I insert it herewith:

THE LAW OF REQUITAL

(By J. M. Powell)

"And Adoni-bezek said, 'Threescore and ten kings, having their thumbs and their great toes cut off, gathered their food under my table: as I have done, so God hath requited me. And they brought him to Jerusalem, and he died there." (Judges 1: 7.)

In recent years we have been shocked at the sadistic brutality and atrocious savagery practiced by warmongers. But retributive justice has already come to the war criminals. It should be pointed out, however, that barbarity is not confined to our generation alone.

In Judges 1 we read of Adoni-bezek, who lived about 1,400 years B. C. This man conquered 70 little kingdoms. He showed their kings rough hospitality by cutting off their thumbs and big toes, and then put them on a starvation diet. But, as with the usual case of tyrannical leaders, Adoni-bezek came to an inglorious end. In due time his reign of terror was overthrown. His own thumbs and big toes were cut off. (Judges 1: 6.) He died later in Jerusalem a captive. This reminds us of the bloodthirsty and power-hungry leaders of the recent World War. Where are Hitler, Mussolini, and Tojo. The law of requital has caught up with them. "I have seen the wicked in great power, and spreading himself like a green tree in its native soil. But one passed by, and, lo, he was not: yea, I sought him, but he could not be found." (Psalms 37: 35, 36.) "As for transgressors, they shall be destroyed together: the end of the wicked shall be cut off." (Psalms 37: 38.)

The story of Adoni-bezek illustrates a severe, but holy, war—the law of requital. "As I have done, so hath the Lord requited me." (Judges 1: 7.) "Whoso diggeth a pit shall fall therein; and he that rolleth a stone, it shall return upon him (Proverbs 26: 27.)

This law of requital belong to the Christian dispensation as well as the Jewish. It is enunciated in tones clear by Jesus, Paul, and others in the New Testament. "Judge not, that ye be not judged. For with what judgment ye judge, ye shall be judged: and with what measure ye mete, it shall be measured unto you." (Matthews 7: 1, 2.) "Be not deceived; God is not mocked: for whatsoever a man soweth, that shall he also reap. For he that soweth unto his own flesh shall of the flesh reap corruption; but he that soweth unto the Spirit shall of the Spirit reap eternal life." (Galatians 6: 7, 8.)

Then there are commonplace expressions which delineate this same principle. Among these expressions we have: "Chickens will come home to roost"; "It will come home to you"; and "Pay day, some day." Let us study some the bearings of this law as it relates to the masses of mankind.

"Be not deceived; God is not mocked." That is the irrevocable law of God. Men may deny it, they may theoretically disregard it; but they cannot escape it. Man can no more flee the judgment of God than he can flee his shadow. A case in point is the story of Ahab and Jezebel (I Kings 21 and 22). This story concerns the wicked Jezebel and her spineless husband, Ahab, who through chicanery, deception, and murder got control of a vineyard which belonged to Naboth, a man who feared God. As Ahab went down to take possession of his ill-gotten vineyard, he was met by Elijah, the prophet of God. Elijah said to him: "Hast thou killed, and also taken possession?" But that was not all that the prophet said, he continued: "In the place where dogs licked the blood of Naboth shall dogs lick thy blood, even thine." In other words, Elijah said: "Ahab, it is coming home to you. You have dug a pit, and you will fall in it. Your chickens are coming home to roost. You have sown, and one day you shall reap what you have sown. The law of requital will catch up with you." Some years later Ahab entered into league with Jehoshaphat, the king of Judah. In disguise Ahab entered the battle against his old Syrian enemies. At Ramoth-gilead an arrow shot at random mortally wounded him, so that his chariot was filled with blood; and his body was taken back to Samaria. "And one washed the chariot in the pool of Samaria; and the dogs licked up his blood; and they washed his armour; according unto the word of the Lord which he spake." But that is not the whole story. Jezebel, who perpetrated the diabolical scheme to murder Naboth, reaped what she had sown. She was thrown from a building at the behest of Jehu. "And some of her blood was sprinkled on the wall, and on the horses; and he trode her under foot. And when he was come in, he did eat and drink, and said, Go, see now this cursed woman, and bury her: for she is a king's daughter. And they went to bury her: but they found no more of her than the skull, and the feet, and the palms of her hands. Wherefore they came again, and told him. And he said, This is the word of the Lord, which he spake by his servant Elijah the Tishbite, saying, In the portion of Jezreel shall dogs eat the flesh of Jezebel." (II Kings 9: 33–36.) From this we learn the power and certainty of God in carrying out his own retributive providence, that men might know that his justice slumbers not. Even though the mill of God grinds slowly, it grinds to powder; "and though his judgments have leaden heels, they have iron hands."

"Avenge not yourselves, beloved, but give place unto the wrath of God: for it is written, vengeance belongeth unto Me; I will recompense, saith the Lord." (Romans 12: 19). Adoni-bezek acknowledged his plight as a divine visitation when he said: "The Lord hath requited me." This law of requital may explain many reverses that come to us. Why have we suffered loss? May it not be that we have opposed or neglected the poor and needy? Why are our plans delayed and thwarted? Maybe we have been obstinate and unfriendly toward plans of others. Why are we held in disesteem or neglect? Could it be because of the contempt in which we have held our brethren? Why are we friendless? Is it because we are unfriendly ourselves? "A man that hath friends must shew himself friendly." (Proverbs 18: 24, A. V.) Do we have bad neighbors? It may be that we are not good neighbors ourselves. Let us not forget the words of Paul when he said: "For whatsoever a man soweth, that shall he also reap."

The law of requital is effective on both sides of the ledger. "God is not unrighteous to forget your work and the love * * * that ye ministered unto the saints, and still do minister." (Hebrews 6: 10.) "The liberal soul shall be made fat." (Proverbs 11: 25.) "And whosoever shall give to drink unto one of these little ones a cup of cold water only in the name of a disciple, verily I say unto

UNIVERSITY OF MICHIGAN LIBRARIES

you, he shall in no wise lose his reward." (Matthew 10: 42.) "Give, and it shall be given unto you." (Luke 6: 38.) "Your labor is not vain in the Lord." (II Corinthians 15: 58.) God takes note of every good deed that we do and rewards us accordingly. The words of the following poem, written by Madeline S. Bridges, are suggestive:

"THERE ARE LOYAL HEARTS

"There are loyal hearts, there are spirits brave,
There are souls that are pure and true;
Then give to the world the best you have,
And the best will come back to you.

"Give love, and love to your heart will flow,
A strength to your utmost need;
Have faith, and a score of hearts will show
Their faith in your word and deed.

"For life is the mirror of king and slave,
'Tis just what you are and do;
Then give to the world the best you have,
And the best will come back to you."

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1949

Mr. GWINN. Mr. Speaker, under leave to extend my remarks, I wish to include the thoughtful statement of Dr. Robert A. Millikan on the inherent dangers in Federal aid to education:

DANGERS OF FEDERAL AID TO EDUCATION

The American educational system, stemming originally from English ideals of freedom, is unique in this respect. The whole huge elementary and secondary school system, the greatest business in this great land, though tax-supported and free to all, has been thus far practically wholly in the hands of the local communities, which not only tax themselves to support it but control it through their locally elected boards of education.

KEY TO FREEDOM

This local self-government in education is one of our most priceless American heritages. According to the greatest thinkers of the past, Spinoza, Montesquieu, John Locke and our founding fathers, it is the key to the maintenance of the freedom of a great Republic.

It is the great safeguard against the malignant disease politely called patronage, better called political corruption, which is the chief device through which the party in power in Washington can, and to no small extent already does, seek to indoctrinate the public in the interests of the maintenance of its own power.

Local cancers in humans or in the States can be eliminated before they have spread throughout the whole body, but when the whole system has become infected the patient dies, whether that patient be a man or a great Federal Republic.

WORDS OF HISTORIAN

Listen to the exact words of the historian and political philosopher Montesquieu (1747) whose writings were carefully studied and were also very influential with our founding fathers:

"If a republic is small, it is destroyed by a foreign power; if it is large, it destroys itself by an inner vice. So it is very likely that men would have been forced to live always under the rule of one man (a despot) had they not imagined a constitution which combines the advantages of a republican form of government and the external force of a monarchy. I mean a Federal republic. Made up of small republics, it enjoys the high political quality of each (such small republic) and toward other powers it has by virtue of a federation all the advantages of monarchies."

MENACE TO FREEDOM

No clearer statement of the menace to the freedom of a great Federal republic that arises from the loss of local self-government through the unnecessary concentration of power in the Federal Government has ever been made.

That is why the founding fathers, who have been said to have had greater wisdom, insight, and understanding as a group than any assembly ever brought together anywhere, so definitely limited the authority of our Federal Government and reserved all unallocated powers to the constitutent States and local communities.

But I do not need to go back to Spinoza, Montesquieu, and the founding fathers for pointing out the menace which they all saw, and particularly in the centralization of education in a great republic like the United States

JOINT REPORT

A joint report was put out in March 1945 by the problems and policies committee of the American Council of Education and the educational policies committee of the NEA. It states the views of some 20 of the most distinguished educators in the United States.

The following quoted paragraphs are taken from this joint report, the first four of them from the section entitled "The Drift Toward the Federalization of Education in the United States." These paragraphs read as follows:

"The first purpose of this document is to warn the American people of an insidious and ominous trend in the control and management of education in the United States. Its second purpose is to propose policies and procedures by which citizens may resist and reverse this dangerous trend.

"DANGEROUS WATERS

"For more than a quarter of century, and especially during the last decade, education in the United States, like a ship caught in a powerful tide, has drifted ever farther into the dangerous waters of Federal control and domination.

"This drift has continued at an accelerated rate during the war. Present signs indicate that unless it is sharply checked by an alert citizenry it will continue even more rapidly after the war.

"It is the deliberate and reasoned judgment of the two educational commissions who join in the appeal which this document makes to the people of the United States that the trend toward the federalizing of education is one of the most dangerous on the current American scene.

"How did this trend come about? Do the people of the United States really want to place their schools and colleges under the predominant control of the Federal Government?

"We are sure that they do not. It should be remembered that the control of education is reserved to the States under the tenth amendment to the Constitution. The people have shown repeatedly during more than a century that they want to keep education primarily under State and local control and administration.

"Furthermore, in a recent public-opinion poll, our citizens favored keeping the predominant control of public education in State rather than in Federal hands by more than 3 to 1.

"SHIFT IN RESPONSIBILITY

"It is the mature conclusion of the commissions responsible for the issuance of this report that a continuance of recent and current trends in Federal and State relations in education will, within a measurable period of time, transfer predominate responsibility for the control of education in the United States from the States and localities to the National Government.

"Already we have traveled farther along that road than is generally realized.

"Recent decades have witnessed a mounting tide of centralization. It has swept into Government and other spheres of life. It is world-wide as well as Nation-wide.

"CENTRAL DOMINATION

"Is this an irresistible trend, inherent in the industrial revolution and other momentous changes in the affairs of mankind? Have forces been released which are beyond human control—forces which are destined to place all phases of life under centralized domination—including the education of children and youth?

"The commissions responsible for this statement reject the gloomy conclusion that impersonal forces beyond the control of men are destined to submerge the individual, the home, and the local community in a rising tide of indiscriminate centralization.

"HIGH ON LIST

"While it is recognized that new factors in contemporary civilization require closer organization and increased centralization of some areas of life, other areas can be permitted to come under central control at our peril.

"The fact that the National Government must be the predominant authority in waging warfare and in determining the routes of transcontinental highways does not mean that it should similarly dominate such areas as the distribution of news and the education of the young.

"Education should be placed high on the list of services to be continued under State and local control. The ability to make distinctions as to what should and what should not be centralized permits some nations to preserve their liberty. Those which cannot so distinguish succumb first to totalitarianism and then despotism."

EXTREMITY OF PERIL

Nothing that I might be disposed to say could add any cogency to the foregoing warning issued as the collective judgment of a distinguished group of modern educators. The extremity of the peril could scarcely be more strongly stated.

Some of the men who signed the foregoing report have alined themselves behind the bill now before Congress on what seems to me the wholly unrealistic assumption that Federal subsidy does not carry with it or tend strongly toward Federal control, but the decisions of the United States Supreme Court make this judgment wholly untenable.

In general, the man who pays the piper is the man who calls the tune, and experienced and wise men know this without Supreme Court pronouncements. I am all for increased pay to teachers but not at the cost of undermining the foundations of our Republic.

The Late Lew Wentz

EXTENSION OF REMARKS
OF
HON. GEORGE H. WILSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1949

Mr. WILSON of Oklahoma. Mr. Speaker, last Thursday Oklahoma lost one of its first citizens in the death of Lew Wentz, of Ponca City. Wentz, rich in his own right

from the diligent pursuit of oil production, always gave unselfishly and abundantly of his time and his money in the promotion of charitable and worthy projects and in giving relief to the needy. He served his State in the capacity of State highway commissioner during the administration of Gov. William J. Holloway and was always interested in public affairs. Among his philanthropic enterprises was the creation of the Wentz education camp northeast of Ponca City, Okla., complete with stone lodgings and tile swimming pool at a cost of $400,000. The youth of Oklahoma and neighboring States will long remember the creator of this fine camp. A promoter of the Oklahoma Society for Crippled Children, Wentz was its treasurer when he died. These are but a few of the many and varied philanthropic enterprises of Lew Wentz.

Oklahoma has lost a solid and worthy citizen, but it will continue to gain from having known Wentz, for his influence for good will live on. Mr. Speaker, I know that Congress joins with the Oklahoma delegation in mourning the passing of a great man.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1949

Mr. GWINN. Mr. Speaker, yesterday I placed in the hearings of the Subcommittee on Education a very statesmanlike letter I received from Gen. Dwight D. Eisenhower in opposition to a general Federal-aid-to-education program. I am now extending this letter in the RECORD so that the full membership can have the benefit of the wisdom of this great soldier and scholar.

COLUMBIA UNIVERSITY,
New York, N. Y., June 7, 1949.

Hon. RALPH W. GWINN,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN GWINN: Preoccupations with commencement and related duties have prevented me from sending an earlier answer to your letter of May 28. Even with commencement out of the way I have an accumulation of engagements and commitments that piled up on me during my 3 months enforced absence due to illness and the performance of duties in Washington. As a matter of fact, I have not yet been able to find the leisure necessary for a thorough reading of the Federal aid bill and Congressman JOHN W. BYRNE'S testimony which you sent me.

Consequently I hope that you will not find it necessary for me to appear before your committee. There is the further consideration that I have been connected with the educational world only a relatively short time and even during the past year have been able to give only a portion of my attention to it and its manifold aspects. Undoubtedly there are many others whose views would be far more valuable to the committee than mine, especially where those views deal with details of proposed methods and procedures.

However, in my own mind I am perfectly clear as to basic principle and have more than once made public statements to the effect that I definitely oppose every unnecessary intervention of the Federal authority and the Federal Treasury in what should be local business and local responsibility.

I am well aware that there are certain sections of this country where the tax revenue potential of each will not provide for all of the children in that area that level of education deemed generally required in discharging the duties of enlightened electorate.

In such areas I would heartily support Federal aid, under formulas that would permit no abuse, no direct interference of the Federal authority in educational processes and no opportunity to expand the flow of Federal money into areas where need could not be clearly demonstrated. I would flatly oppose any grant by the Federal Government to all States in the Union for educational purposes. Such policy would create an ambition—almost a requirement—to spend money freely under the impulse of competition with other localities in the country. It would completely decry and defeat the watchful economy that comes about through local supervision over local expenditures of local revenues.

In short, unless we are careful, even the great and necessary educational processes in our country will become yet another vehicle by which the believers in paternalism, if not outright socialism, will gain still additional power for the central government.

In no way should my position be interpreted to mean that I am opposed to Federal contractual arrangements with schools for scientific research which is essential to the public interest. Federal Government support of such ventures, and even certain types of fellowships and scholarships to meet unusual Federal requirements, would not weaken local government or sap community enterprise. These specific items are a far cry from a blanket usurpation of local responsibility and obligation.

The completely spurious argument is frequently advanced that because the Federal Government skims off so much of the available tax revenue it must, as a consequence, bear more of the local expenditure. This is putting the cart before the horse. If local communities do their job, then there will be no need for additional centralized revenues for Nation-wide subsidies of an essentially local character; and we will avoid the certain pitfalls of extreme centralization.

Very frankly I firmly believe that the army of persons who urge greater and greater centralization of authority and greater and greater dependence upon the Federal Treasury are really more dangerous to our form of government than any external threat that can possibly be arrayed against us. I realize that many of the people urging such practice attempt to surround their particular proposal with fancied safeguards to protect the future freedom of the individual. My own conviction is that the very fact that they feel the need to surround their proposal with legal safeguards is in itself a cogent argument for the defeat of the proposal.

If you feel that your committee would seriously like to have my own simple views upon this important matter, I have no objection whatsoever to your using this letter for that purpose. I do earnestly believe in the need for education, I so earnestly believe that a thorough education is the best assurance we can provide that our American free system shall endure, that I don't want to see the educational processes used directly or indirectly to weaken that free system.

Sincerely,

DWIGHT D. EISENHOWER.

Memorial Day Address of Commander R. M. Metcalf

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, I am happy to be able to place in the Appendix of the CONGRESSIONAL RECORD the Memorial Day address delivered at Lake Mills, Wis., in the Second Congressional District, by Commander Ralph M. Metcalf, United States Navy, now serving as executive officer of the Naval Reserve Officers unit at the University of Wisconsin. Commander Metcalf has a distinguished record as commanding officer of submarines in World War II.

I commend Commander Metcalf's remarks to my colleagues.

Ladies and gentlemen, I want to take this opportunity to thank Post Commander Roberts for his kind and rather flattering introduction, but I must also mention that combat experience does not necessarily qualify one for oratory.

I am, nevertheless, very glad to be here today, and it was very kind of Mr. Eshleman, acting in behalf of your Memorial Day committee, to invite me.

I'm very glad to be here for two reasons: First, because this is the sort of a community that I was born and brought up in. I spent the first 18 years of my life in a small town down in central Illinois. Consequently, I feel very much at home here. Second, and most important, I'm glad to be here because in my opinion the true strength of the United States resides in communities like these, whose citizens are not easily swayed by propaganda, prejudice, or foreign ideologies, and who always answer loyally our country's call to the colors in her hour of need.

The Middle West has been traditionally isolationist in sentiment. We have distrusted foreign alliances; we have insisted that only the people, through the Congress of the United States, can bring about war; and we have tried to avoid war if it was possible, because we have realized that it is a terrible thing and that even the victor loses more than he gains.

But when events have forced us into war, this same isolationism has always immediately been replaced by a common patriotism. Our young people flock to the colors and those who stay behind give them full support.

The people of Wisconsin have always showed their patriotism to the fullest throughout our country's history. When the Civil War started the State had a population of less than 800,000, yet she furnished more than 90,000 soldiers to the Union Armies. The most famous fighting unit in the Army of the Potomac, and the one with the highest casualty rate, was the Iron Brigade—the First Brigade, of the First Division, of the First Corps. This brigade was composed of the Second, Sixth, and Seventh Wisconsin Regiments, the Nineteenth Indiana, and the Twenty-fourth Michigan.

Wisconsin furnished four infantry regiments and an artillery company in the Spanish-American War. In World War I more than 125,000 men from this State served with the colors. Wisconsin and Michigan National Guard units in the Thirty-second Division served with distinction in France, as did several Wisconsin National Guard companies that were incorporated into the famous Forty-second or Rainbow Division.

UNIVERSITY OF MICHIGAN LIBRARIES

World War II is so recent that I am sure most of you know the extent of Wisconsin's participation far better than I do. Few States had a higher percentage of men in the armed services, and Wisconsin men served on every battle front and in every arm of the service. It fell to the lot of the same Thirty-second or Red Arrow Division, composed again of Wisconsin and Michigan National Guard units, to see early and bloody combat in the jungles of New Guinea. Inadequately supplied and equipped, and committed to battle when it seemed that the Japanese were invincible, they did a magnificent job, and suffered heavy casualties.

True patriotism demands that we not only support our Nation in time of war, but also that we remember and honor those who made the supreme sacrifice. This is the purpose of Memorial Day and this is the reason for this gathering. In 1868 Gen. John A. Logan, then commander in chief of the Grand Army of the Republic, proposed that May 30 be set aside as a day for decorating the graves of those comrades who died in defense of their country. Since then there have been other wars and other men have lost their lives in battle, in enemy prison camps, or in training. On Memorial Day we honor these men, and we take occasion also to remember those who served their country well in time of war and who have now passed on to the great reward.

I counted 23 names on your World War II honor roll. Many services are represented, and I am sure many distant, foreign battlefields as well, for this was truly a global war.

My own first-hand knowledge of this war was confined to submarines. For this reason I would like to tell you a little more about the way in which one of the men on this honor roll gave his life for his country. His name was Robert H. Taylor and he was a fireman, second class, United States Navy. He was lost in action on the U. S. S. *Gudgeon*, the SS211.

The *Gudgeon* had a distinguished record. She had sunk the Japanese submarine *I-173* on her first war patrol and at least 11 other Japanese cargo ships and warships. She had made a total of 11 war patrols in such diverse places as the South China Sea, off the east coast of Japan, in the Java Sea, off Truk, in the Philippines, off Saipan, in the East China Sea, and off the northern New Guinea coast.

The *Gudgeon* left Pearl Harbor for the last time on April 4, 1944. She fueled at Johnston Island and should have reached her patrol area in the Marianas about April 16. She was not heard from again and when she did not return to Midway on May 23 as was expected, she was reported overdue and presumed lost.

At that time we had many submarines off Saipan to prevent the Japanese from reinforcing or supplying their garrison. Our own landings on the island were to be made a month later.

After the war was over we got a certain amount of information from captured Japanese records. The Japanese Navy claimed to have sunk a submarine by a combined aircraft and surface ship attack on May 12, 1944, in a position corresponding to where the *Gudgeon* should have been at that time. We assume that the *Gudgeon* attacked a convoy and was in turn sunk. All on board were lost, 8 officers and 71 men; among them was Robert H. Taylor, of Lake Mills.

Now I will grant that we still live in a world from which the threat of war has not been banished. It is a world in which isolationism is no longer possible due to the terrible new weapons of modern war. Half of this world has come under the cominance of a basic philosophy of life that is in utter contradiction to our own, and that endeavors constantly in every conceivable way to undermine the social structure of this country and all others like it.

Yet I will quarrel violently with those who say that the sacrifice of the 23 men whose names are on this honor roll, and the other thousands of honored dead in this country, has been in vain. As the direct result of their sacrifice, this country is still rich and prosperous beyond any other nation in the world, it is still a democracy, its Government directly responsive to the free will of the people, its foreign policy is established by the President and by Congress, and not by military men, and most important of all, we continue as citizens to live in a country where the freedom and dignity of the individual, as opposed to the theoretical welfare of the state, are paramount.

No man can tell what the future will bring. If we believe that our country and our way of life are worth maintaining, then we must be ready to defend them again, as long as world government remains a topic of debate on the United Nations agenda, and not an actuality. These men we honor today dramatize for us the fact that the privileges of citizenship carry with them certain obligations, and foremost among these obligations is the duty to defend one's country. Let us hope that no further sacrifices will ever be necessary, but let us also remember these men, and do as well as they, should our country again need us.

Not All Waste

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1949

Mr. ENGLE of California. Mr. Speaker, I call the attention of the House to an editorial appearing in the June 6, 1949, issue of the Red Bluff Daily News in regard to an article appearing in a national magazine by a former Governor of Wyoming relative to the waste caused by the competition between the Army engineers and the Bureau of Reclamation. The article very properly points out, I think, that although this competition may cost the taxpayers some money it has not caused a waste of all the money spent by either or both of these agencies. The editorial referred to follows:

SLIGHT EXAGGERATION

A former Governor of Wyoming, perhaps overcome by the ease with which billion-dollar statements are tossed about these days, has written an article which taxes the credulity of even dollars-hardened present-day observers.

He makes the statement that feuding between the Army engineers and the Bureau of Reclamation has resulted in the waste of $50,000,000,000. That's right, billions.

The ex-Governor, Leslie A. Miller, is a member of the Hoover Commission investigating means of streamlining the executive branch of the Government.

Where he gets such a whopping figure, we wouldn't know.

But somewhere in the body of the story, he presents such a figure as the total of irrigation, flood control, and reclamation projects in the United States.

Possibly there has been added a certain amount of waste because of competition among the two agencies.

But to take his figure at face value, one would have to subscribe to the theory that every publicly built dam, power plant, flood-control levee, or canal was a complete failure, and hence a waste of funds.

He charges that the two agencies are engaged in a "senseless" race to see which can build the most water projects of some kind or another.

What he has not mentioned, is that by far the great majority of these projects are demanded by a public which is rapidly becoming more and more educated to the need for such construction.

For instance, it has been claimed by experts that only limitations on water will ever prevent the ultimate growth and development of California to top State in the Union.

Can anyone say that projects supplying this water, could be called waste?

We cannot argue with Miller that there has been some duplicated effort, but when he talks of $50,000,000,000 waste, he is speaking in typical political exaggeration.

Peace Taxes

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1949

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Herald of Tuesday, June 7, 1949:

PEACE TAXES

Two and a half years have passed since President Truman declared the war to be formally over. We no longer need to restrict train travel nor restrain spending for luxuries. Indeed we need to do precisely the opposite. Yet the system of excise taxes that were set up to support the unique requirements of a war economy are being preserved in a peace economy. In fact, these are the only taxes that have not been considerably altered since the war.

President Truman has steadfastly resisted any reform, and has even sat tight on a reported recommendation by his economic advisers for reductions. This penny-wise, pound-foolish attitude will almost certainly cost the Government more in total revenue than the little that may be preserved by clinging to the present schedules.

In the first place, the retention of obvious inequities is likely to arouse the public to demand too sharp a reduction in excise taxes. Indignation already runs high.

The 20-percent cosmetic tax on baby oil and talcum is an unwarranted burden to many a mother. A working girl who contrives to save $100 for a mouton coat and is taxed $20 extra isn't pleased to know that the wealthy lady who buys a tailor-made ermine-lined velvet evening wrap pays no tax, because the fur is not three times the value of the other material.

If there are to be anything more than sales taxes, they must have in the public mind some consistent moral purpose. The levies on luxuries like club dues and the nonessential toilet articles are comprehensible. But why, the women want to know, is face powder taxed when shaving cream isn't? What justifies a tax on a cheap handbag when a woman has no other place to carry her impedimenta? What luxury is there in an electric light bulb? Such disparities can be accepted in wartime but not in peace.

There is also the damping effect on the general economy from many of these taxes. During the war it was well to discourage

travel with a tax. But to continue to discourage travel now is to add to the subsidy needs of the air lines and the financial difficulties of the railroads. A $4 tax on a $20 leather bag is a sales curb on one group of manufacturers.

No one expects to do away with excise taxes. But we can insist that they really distinguish between luxuries and necessities, and that they do not deprive the Government of greater revenue by unwisely restricting demand. Republican leaders in Congress have recognized the need for revision; Mr. Truman may lose some popular support by refusing to accede.

Effects of Basing-Point Decision

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1949

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article entitled "Effects of Basing-Point Decision" appearing in the May 27 issue of Railroad Data.

The United States Supreme Court decision in the celebrated Cement case is so drastic and far reaching as to make it clear that immediate legislation is necessary if we are to prevent a complete change in our competitive system of business.

The article follows:

EFFECTS OF BASING-POINT DECISION—RAIL EXECUTIVE SAYS CURTAILMENT OF TRADING AREAS WILL SERIOUSLY AFFECT RAILROADS AS WELL AS MANUFACTURERS

If American industries are compelled to adopt universally an f. o. b. mill system of pricing in place of delivered prices as a result of last year's decision of the United States Supreme Court in outlawing the basing-point practice of the cement industry, "the free movement of goods will be severely restricted and the volume of commerce drastically curtailed" in the United States, Fred Carpi, vice president, traffic, of the Pennsylvania Railroad, declared recently.

In an address before the Philadelphia chapter of the Association of Interstate Commerce Commission Practitioners, Mr. Carpi stated that this curtailment of trading areas would exert a most serious effect on the Nation's railroads as well as on the manufacturing industries themselves. He said the result might well be "serious impairment of the financial stability of the railroad industry * * * [because of] a decrease in the total volume of commerce, but more directly from the shortening of hauls in the marketing of goods."

The basing-point system of pricing, Mr. Carpi explained, permits the establishment by industries such as cement, iron and steel, farm equipment, and building supplies, of uniform delivered prices at each destination, and thereby permits all producers, regardless of location, to compete in each market.

"Under this method," the Pennsylvania Railroad executive continued, "the delivered price of a commodity is determined by adding to the base price at each basing point, the freight charge to the point of delivery, and the lowest price so determined becomes the charge to the buyer."

Showing the merits of this system, Mr. Carpi added: "It is evident that the basing-point pricing system permits any manufacturer to expand his market to the extent that he is able to absorb freight charges in order to meet his competitors' prices. This is an essential element of a free economy without which the forces of supply and demand would be largely nullified. Producers having efficient operations based upon improved methods would be unable to market their products nationally if deprived of this opportunity.

"If this method must be completely abandoned after many decades of use in this country," Mr. Carpi said, "many disadvantages are certain to follow." Among them he cited these:

1. A monopoly area will be established around each plant or production district, leading to inevitable deterioration in the quality of the goods produced by the local industry.

2. With the lessening of competition, there would be less incentive to cut costs and improve methods—a factor which in the long run might well result in increased prices to the consumer.

3. The very economic factors which have been responsible for our Nation's advanced industrial development—such as equalization of supply specialization of labor and large-scale production—would be severely hampered and curtailed, and the socialistic state with its planned economy would become much nearer to reality.

4. In many cases, the local monopoly areas would not provide sufficient outlet to sustain capacity production and, in some instances, would not furnish adequate volume to justify continuation of the plant. This would lead to relocations of plants, the appearance of ghost towns, and much unemployment.

Concerning the effect of the change in industrial pricing methods on the railroads, Mr. Carpi declared, after noting that f. o. b. mill pricing would cause a shortening of hauls in the marketing of goods.

"The railroad plant was built for mass transportation and depends for its existence upon a heavy volume of long-haul traffic. The continuing heavy volume of long-haul traffic through the years made possible these low costs per ton-mile. A large portion of the investment in railroad plant is in the terminal areas—likewise, a very substantial portion of the operating expense is incurred by terminal service. Short-haul traffic alone would not produce adequate revenues to offset these high terminal costs and earn sufficient return to maintain a productive and healthy plant. This is the basic economics of the situation with which every student of rail transportation is familiar.

"Probably the most serious aspect from the standpoint of the railroads is that short-haul traffic is particularly susceptible to handling by motor truck. The trucking companies have low overhead costs, particularly as a result of their use of public highways, which enables them to make lower charges than the railroads for the shorter hauls on many classes of traffic. The eastern rail carriers would be more adversely affected than those in other sections of the country due to the close proximity of the large centers of population and production—distribution would be localized to a greater extent than in the more sparsely populated sections.

"Another serious potential development which might flow from a rigid f. o. b. mill pricing system would be an influx of goods from foreign countries to the heavy consuming areas along the Atlantic seaboard. If interior manufacturers are prevented from competing in these markets on a delivered price basis, the foreign producers with the advantages of cheap labor and low-cost ocean transportation would be able to place their goods in these markets at a lower price than domestic producers. This influx of foreign wares would adversely affect not only the railroads but would also produce repercussions throughout the entire economy."

Communist Tactics

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1949

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Clinton (Mass.) Daily Item of June 13, 1949:

"A GRAVE SITUATION CONFRONTS THE WORLD," SAYS CONGRESSMAN PHILBIN, IN DECRYING COMMUNIST TACTICS IN THE UNITED STATES

Speaking at the Franco-American reception to Gov. Paul A. Dever, at the Leominster Municipal Auditorium, last night, Congressman PHILIP J. PHILBIN, of this town, warned of the pending crisis, the outcome of which he stated would determine the future of democracy and the free American way of life.

Deploring the sinister attacks by long-haired, brain-tied doctrinnaires upon the fundamental make-up of our economic system and our parliamentary institutions, Congressman PHILBIN asserted that only courageous, unflinching, honest, and far-sighted public servants stanchly supported by a determined American people could definitely insure the continuance of democratic government and the basic freedoms associated with it.

"No governor has had more difficult tasks than Governor Devers," said Congressman PHILBIN. "He is beset by a multitude of complex problems—financial, political, social, and economic. The way these problems are decided will affect for good or evil the whole future course of State government. It is fortunate, indeed, that he brings to these tasks such outstanding ability, experience, and courage. In the vital work at hand, he is entitled to the encouragement and sympathetic consideration of every citizen regardless of race, creed, color, or partisan attachment."

Referring to the current international outlook, the Clinton Congressman warned that the situation in the world, as a whole has greatly deteriorated since the end of the war, and still continues to be extremely grave.

"The same tactics which were used in scuttling the efforts of the United Nations to bring about an orderly, peaceful, democratic world are now being used in international conferences to check every possibility of satisfactory settlement of the great problems of democracy and peace. It is regrettable but absolutely necessary that this Nation, mindful of the progress and aims of the world-wide Communist conspiracy, should maintain its armed forces in a state of preparedness and readiness to defend the Nation in case of emergency and to implement a firm, unyielding, pro-American, pro-democratic foreign policy."

Touching on domestic questions, Congressman PHILBIN deplored the trend toward socialization which he declared is largely responsible for present recessionary economic conditions in this country. "There are some signs that our great American business machine is threatening to stop at dead center because of lack of confidence, uncertainty as to the future, and the fear of oppressive taxation which if continued would ruin the traditional profit system upon which the employment and prosperity of our citizens so largely depends. This Nation cannot socialize its institutions or move further in that direction without completely destroying the confidence and incentive of those who have heretofore provided the spark and motivating force of our unmatched productive enterprise. Regimentation of our busi-

UNIVERSITY OF MICHIGAN LIBRARIES

nessmen, our professional men or any other class of our citizens along socialistic lines is not only a violation of American principles but would be destructive of our business prosperity and would produce widespread unemployment and an economic stalemate," he said.

"It is high time for us to recognize that the power to tax is indeed the power to destroy, and that if we seek to put greater burdens upon our businessmen and working people that we will bring down upon this Nation the same baneful consequences which have followed such policies in other countries. As we fight against communism, as we strive for a forward-looking progressive government eagerly aware of and responsive to the social needs of our people, let us make sure that above all we preserve and maintain the fundamental tenets of our political and economic system which have kept the spirit of freedom alive and which have contributed so greatly to our own achievements and our contributions to the whole civilized world."

Congressman PHILBIN lauded the Franco-American people as unexcelled in their devotion to God and country and the high order of their patriotism and citizenship.

"When I think of the services to America in war and peace of the Franco-Americans, I am virtually at a loss to express appreciation for their magnificent contributions. The American people are profoundly grateful to your God-fearing, liberty-loving, industrious and patriotic group who, through the years, have furnished such an inspiring example of constructive citizenship and unfailing loyalty to America and all it stands for."

The Fantastic Arizona Project

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1949

Mr. ENGLE of California. Mr. Speaker, the attention of the House is invited to the fantastic central Arizona project and what it means, if authorized, to western reclamation, the taxpayers, and the Nation generally.

The central Arizona project, if authorized:

First. Will cost more than a billion dollars—more than the combined cost of TVA and the Boulder Canyon project, and more than twice the cost of the Panama Canal.

Second. Require a capital subsidy of at least $1,750 per acre, or $280,000 per 160-acre farm, because the irrigators cannot repay any of the $400,000,000 of capital to be invested in irrigation works.

Third. Pump water 985 feet, nearly twice the height of Washington Monument, and transport it a distance of 315 miles (farther than from New York to Washington) to grow cotton, corn, and other crops now subsidized by the Federal Government.

Fourth. Consume energy for pumping in such quantities that over 2,000,000 barrels of fuel oil per year must be burned to replace it.

Fifth. Add $400,000,000 to the power bills of the Government's public power customers, to provide just part of the subsidy. The taxpayers furnish the rest; for example, writing off $35,000,000 for "recreation."

Sixth. "Rescue" 150,000 acres of desert land put into cultivation during the war, owned by fewer than 500 men.

Seventh. Will have no water supply unless it takes it away from projects already built and operating that can repay every dollar of their costs.

Communism and Education

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1949

Mr. VELDE. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD excerpts from a speech which I delivered at the Bradley University alumni banquet in Peoria, Ill., on June 11, 1949:

Tonight I would like to talk to you about communism and education. Every time we pick up a newspaper we see headlined some new investigation of communism. We see the infiltration of communism into the Atomic Energy Commission and other fields of scientific investigation. We see it rear its ugly head into labor-union groups, into our schools and our churches, and as a matter of fact, into practically every free institution necessary to our American way of life. Today our American educational system is faced with one of the greatest dangers in our history. Stalin has sent an army of spies and agents to our shores to establish in the minds of our children the philosophy of communism and the socialistic way of life. Stalin realizes that our free schools are the most fertile fields for furthering his plan for the overthrow of our democratic system of Government and establishment of world dictatorship of the proletariat. He realizes that the children of today are the men of tomorrow—that if he can govern the thinking and beliefs of our children now, they will, later on, help him realize his ambitions for world power.

So in order to be prepared for the fight to keep our free schools and to retain our democracy, let us pause for a moment to examine the Soviet school system as it is maintained today. How does the Russian school system differ from our own system? That question can be answered simply. In our great country, we teach children how to think. In Russia they teach children what to think. One of the first things that Communists did in Russia when they came to power was to smash the existing school system. They deliberately broke down college entrance standards and abolished degrees like the bachelor of arts, master of arts, and doctor of philosophy. Universities became cheap diploma mills. Any person, regardless of intelligence or ability, could graduate if he had learned to take orders from the Kremlin and could forget there was such a thing as individual thinking. Why did Russian political leaders do this? Because they knew they could never control the public mind until they had first smashed the school system as it had existed. After the break-down and explosion period following the Revolution, they rebuilt the school system into a tremendous machine for training rather than education—to teach children what to think, not how to think. Today, a teacher under communism never has freedom, academic, or otherwise. He teaches only what the government tells him to and police watch to see that he does.

Now just how does the Kremlin propose to change our educational system to correspond with its own? By three principal methods: First, by treacherously converting our teachers and educators to believe in communism so that they will teach their students what to think instead of how to think. Secondly, by establishing and promoting Communist organizations and front groups among the students themselves, and lastly, by actually setting up private schools of communism where only Communists will be allowed as instructors, and where only communism will be taught.

The dangers of Communistic domination of the American educational system are real and close at hand. We here tonight must join hands—as teachers, as businessmen, as political leaders, and as everyday American citizens—to take up the battle against this menace which seeks to destroy us. We must first know the facts and be prepared to face the facts. We must be prepared to face accusations of "witch hunting" and "Red baiting." Above all we must remember that whatever we do we must always keep the Constitution of the United States in one hand and common sense in the other. Our object must be, not to destroy academic freedom, but to stop communism before it destroys us. The Communists can be stopped under our system of laws and must be stopped before it is too late.

Deserved Recognition Comes to Hon. John C. Kunkel, of Pennsylvania

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1949

Mr. DAGUE. Mr. Speaker, a deserved recognition has come to a distinguished Member of the Pennsylvania delegation, the Honorable JOHN C. KUNKEL, who has just received the degree of doctor of laws from Franklin and Marshall College, which is located in my district.

The older Members of this House have long recognized his worth as a legislator, but it is to the members of the Banking and Currency Committee and especially to his colleagues from Pennsylvania that a calm and somewhat retiring exterior has come to conceal a keen analytical mind and a studious approach to the problems which daily confront us. A farmer by inclination, a banker by profession and a lawyer by training at Harvard Law School, JOHN KUNKEL has a multifaceted experience upon which to draw in the discharge of his legislative duties. Indeed, his reports to our delegation on pending measures are perhaps as brilliant analyses as this House will ever be permitted to hear.

In addition, however, to these compelling considerations which have recommended him for this signal honor he possesses an open-handed generosity and a heart-warming personality which invite and hold the esteem in which he is regarded by all who come in contact with him. In my humble opinion, Franklin and Marshall College in honoring JOHN KUNKEL brings honor to itself as well.

Economic Expansion Act of 1949

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1949

Mrs. DOUGLAS. Mr. Speaker, on June 6 of this year, Mr. WRIGHT PATMAN, of Texas, inserted in the Appendix of the RECORD, a draft of the Economic Expansion Act of 1949, a bill designed to carry out the objectives of the Murray-Patman Full Employment Act of 1946. This is not only a good bill but the most important one to be drafted in this session.

Cosponsors of this bill in the Senate are Senator MURRAY, of Montana; Senator SPARKMAN, of Alabama; Senator THOMAS, of Utah; Senator MCMAHON, of Connecticut; Senator KILGORE, of West Virginia; Senator KEFAUVER, of Tennessee; Senator HUMPHREY, of Minnesota; and Senator PEPPER, of Florida.

I shall introduce this bill along with WRIGHT PATMAN in the House.

I am for this bill for four reasons:

First. It will promote regional expansion in our great underdeveloped areas, including the west coast;

Second. It will provide positive and direct assistance to small business and aid in the prevention of monopoly;

Third. It will eliminate bottlenecks in our industrial economy which are holding back industrial production and employment; and

Fourth. It will provide for the advance planning of public-works projects so that in the event of a downswing in economic activity, the machinery for providing jobs through public-works projects can rapidly be set in motion.

In regard to the first point, regional expansion, the bill provides that an Office of Regional Economic Development shall be created in the Department of the Interior which shall (a) assist State and regional development organizations, both public and private, in making studies of the needs of their own areas for economic development; and (b) provide insurance for private investment in regional development organizations which lend money to private business for regional expansion.

Everyone knows that the expansion of the underdeveloped areas must be stimulated. It has been estimated, for example, that between 1948 and 1955 the nonfarm population on the Pacific Coast will increase by nearly 20 percent. The rapid increase in our population, combined with the displacement of farm workers resulting from improvements in agricultural technology, makes it absolutely essential that regional expansion be vigorously promoted. With the passage of this bill there is a good prospect that this vital objective will be accomplished.

In addition to promoting regional expansion, the bill also provides direct means of assistance to small business everywhere in the country. Specifically, it provides for (a) the insurance of loans by private banks to small business; (b) where such credit assistance is not available, direct loans to small firms; (c) technical and scientific aid to small business; and (d) continuous investigations of the extent to which production and investment, including the expansion of small business, is held back by monopoly.

Hardly anyone disputes the facts that small companies are unable to go to the capital markets for their funds; that they have great difficulty in securing long-term credit; and that even on the short-term loans which they do secure, they have to pay much higher interest rates than does big business. Scores of bills have been introduced into the Congress over the past two decades designed to provide adequate financial aid to small business. This bill would at long last provide the means of accomplishing that objective.

Just as there is general agreement that small business must be provided with financial assistance, so also is there general agreement that small business must receive the fruits of scientific research and development. Everyone knows that the large corporations are in a position to avail themselves of the benefits of modern technology; and everyone also knows that the continuous channeling of the benefits of modern scientific research to the large members of our industrial community can only lead to the disappearance of small business. It is only through governmental assistance, such as that provided in this bill, that small firms can be placed on anything approaching an equal basis with big business in obtaining the fruits of modern technology.

The bill will also help small business by turning the spotlight of publicity on these actions and practices of monopolies which hold back the natural growth of our economy. This spotlight of publicity should not only serve to dissuade large corporations from engaging in antisocial practices which they might otherwise adopt, but in addition it will provide us with a continuous fund of knowledge on which to base permanent and more effective legislation designed to deal with this critical problem of monopoly.

The bill also provides for specific ways and means of eliminating individual and particular bottlenecks that have held back the expansion of the economy. Contrary to certain comments made in the press, there is nothing vague and ambiguous concerning this provision of the bill. The individual bottlenecks are spelled out by name; specifically, steel, freight cars, iron ore—including taconite ore—and iron ore shipping facilities; manganese and chromite; copper, lead, and zinc; bauxite and aluminum; synthetic liquid fuels; electric power; fertilizers; timber; and newsprint. It is obvious that if we are to maintain a high level of production and employment, the bottlenecks represented in these specific fields must be eliminated.

In order to step up the output in these critical areas the bill provides for (a) accelerated amortization which was so successfully used by the War Production Board during World War II as a means of bringing about a rapid increase in private investment; (b) the use of the powers granted elsewhere in the bill for the expansion of small business through credit, research, and technical service; (c) the purchase abroad and stock piling of certain of these strategic materials; (d) the rehabilitation and expansion of Government war plants to be leased or sold to private enterprise.

After all of these steps have been exhausted, the bill provides as a means of last resort that in the case of the most critical bottlenecks, synthetic liquid fuel, steel, freight cars, or fertilizer, the Federal Government, by or under contract with private enterprise, may construct the needed plants or facilities or equipment, for lease or sale to private enterprise. In regard to this last step, which will undoubtedly be vigorously opposed, I want to stress, first, that it can be taken only after it has been found that the needed expansion cannot be obtained any other way, and, second, that the plants built under this provision by the Government must be leased or sold to private enterprise.

Finally, I am for the bill because it provides for advance planning of public works. We must recognize the fact that unemployment in this country is growing. The next few months will probably hold the answer as to whether unemployment will continue to rise or whether it will taper off at its present moderately low levels. In any event, however, it is only the better part of wisdom for the Federal Government to step up its advance planning in this critical field. When, as, and if we become faced with a large body of unemployed workers, we must have on the shelf plans and blueprints fully developed for the immediate initiation of public works. Competent authorities have maintained that the severity of the disastrous depression of 1929–33 could have been greatly lessened if a comprehensive public-works program had been put into immediate operation as soon as economic activity began to move downward. It is only common sense that we do not again repeat this disastrous mistake of failing to plan.

In summary, the bill simply recognizes the compelling necessity of promoting regional expansion; of aiding small business; of eliminating certain specified bottlenecks in industry; and of planning for the possibility of substantial unemployment, a possibility which none of us wish to see.

These are the basic problems which the bill recognizes and is designed to meet. In my opinion it meets them adequately and within the accepted American tradition of free private enterprise. The philosophy of this bill is the achievement of a desirable and indeed necessary economic and social objective by the expansion of private enterprise, an expansion which is to be stimulated in a number of specified and particular ways by indirect Government action. This is a type of business-Government relationship which has long characterized American history and one which is wholly consistent with our democratic traditions and ideals.

UNIVERSITY OF MICHIGAN LIBRARIES

Legislation for Gold Star Wives and Their Children

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1949

Mr. TEAGUE. Mr. Speaker, I wish to have inserted in the RECORD a letter sent to me by the Dallas chapter of the Gold Star Wives of America concerning the necessity of providing appropriate legislation to help them care for themselves and their children. It has been my sincere belief since I have had an opportunity to study the entire veteran program that those who gave the most during the war are receiving the least now. Certainly a wife who lost her husband and the children who lost their fathers as well as the parents who gave their sons are the ones who are suffering the greatest losses.

These persons together with our veterans who have been injured or wounded during their military service should receive priority and first consideration from the Veterans' Affairs Committee and the Congress when legislation is taken up.

The letter follows:

GOLD STAR WIVES OF AMERICA, INC.,
Dallas, Tex., June 10, 1949.
COMMITTEE ON VETERANS' AFFAIRS,
United States Congress,
Washington, D. C.

HONORABLE CONGRESSMEN: Following World War II, and the cessation of hostilities, there has been peace for the civilian world. The battle rages on for the Gold Star Wives of America, and the children of the men who died. Our trials and burdens increase by the day.

If you, as Congressmen, could by some instrument of science, more telescopic than television—look into the homes of the wives and children who are left with the wounded and the dead, you would not hesitate to see that our homes are those in which tragedy dwells, not for today—but for always.

You would not hesitate to use all speed in legislating on those matters which would relieve, partially, the heavy burden that is ours now. No burden or responsibility is greater than that of the Gold Star Wives. We are responsible for the care of our wounded and disabled, as only the wounded and disabled, and their wives know the heartaches that follow. Those who have lingered, and then died have suffered too greatly. Our children have suffered with their fathers, as have we.

Today, our children need medical care. We have nothing to provide medical care. Twenty-five dollars monthly won't buy food for these children much less clothes, and pay the rent. Must our own orphans at home suffer so, while the United States Congress pours out billions to Europe, and our voices go unheard?

Congress has appropriated millions for the GI schooling program.

Congress has given many benefits to the veterans who came home without casualty.

The veterans, abled and disabled, who have been able to take advantage of such benefits are getting along.

The Gold Star Wives who have children are handicapped in a manner Congress has not yet seen. Let us earnestly call your sincere attention to the fact that $75 plus $25 for the first child, and $15 additional child is about the only source of means we keep alive. Our children are young. We cannot leave them, to go out to work. If we did leave them, the expense of paying someone to give them decent care is more than we would earn. Therefore, the majority of us are in the same position. We, as a group, are most of the time, desperate, as to how we shall provide for our children now, tomorrow and tomorrow.

Congress has appropriated billions for overseas relief. Most of our children in America, who are Americans own orphans of World War II need badly, food, clothes and shelter. You would not hesitate to give us adequate pensions, if you fully realized our great need.

We, as Gold Star Wives of the Dallas Chapter do so respect and approve of our countrys ruling legislators, but there are places in all rules and regulations for the affected to put across a more thorough understanding of its consistency.

We are asking for that which we feel only fair to those who have given, and who now should receive some helpful compensation in return. The Gold Star Wives cannot continue to meet the high cost of living with the present compensation allocated to her and the children. There is little time for us to earn more to supplement our pensions.

The wives and children of our casualties of World War II should be more thoroughly covered by the approval of the bills now in Congress which will, if passed immediately, come to our relief. We therefore urge you to pass the following bills:

H. R. 1433.

H. R. 148, for the education of the widows and children of men who died in service or whose death resulted from service disability.

H. R. 2747 and S. 685, increased compensation for children and wives.

S. 1084, for a charter for the Gold Star Wives of America, Inc.

H. R. 2746, for adjustment of social-security laws.

The Gold Star Wives of Dallas earnestly request that some of you introduce a bill immediately which will grant the wives and children of the deceased and the disabled hospital and medical care. In time of war, this was true. How sorely we need such a benefit at this date. Will you give this your most immediate attention. When our children are ill, we cannot wait to take them to a doctor. When we have taken them, we cannot pay the bill. Where is the peace our men died for?

We shall appreciate a personal reply to the Dallas chapter. The wives in Texas are too far away to make a personal appeal to you in Congress. Will you hear our plea from across the miles in the only way we can present our cause—by letter?

Our thanks we extend to you all for your efforts in the past. Our thanks to you, we send in all sincerity for your future assistance.

Very sincerely yours,
The Gold Star Wives of Texas, Dallas Chapter: Lettie R. Andes, Mildred C. Eupay, Mary Ruth Gray, Lois Hais, Ruth Richard, Alene Niemann, Roberta Schnitznis, Wanda Stone.

Enlistment of Aliens in the Regular Army

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1949

Mr. PHILBIN. Mr. Speaker, I have today introduced a bill to permit the enlistments of aliens in the Regular Army.

In this action, I am prompted by the views and recommendations of high-ranking Army officers and other military experts who see an urgent need at this time in our armed forces for accomplished linquists who also possess special knowledge of the history, ethnology, customs, psychology, geography, and political characteristics and peculiarities not only of our future potential allies but also our potential enemies.

I am also mindful of the large number of former Polish Army officers and personnel who fought valiantly for the allied cause during the recent war, but are now unable to secure admission to the United States. Many of these heroes who fought bravely and gallantly against our enemies have close relatives and friends in this country. Other nationalities who assisted us and fought for our cause are in the same status. Under the terms of this bill these men could enlist in our Army and later become eligible for American citizenship. A limit is placed upon the number which can be enlisted. It is contemplated of course that all enlistees will be scripulously and rigidly screened as to fitness and loyalty.

Gulf States Marine Fisheries Commission

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1949

Mr. TEAGUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a resolution adopted by the Continuing Conference Commitee of the five Gulf States expressing its appreciation to their congressional delegations for obtaining passage of Public Law 66 of the Eighty-first Congress. This law gives Federal consent to the Gulf States marine fisheries compact.

Whereas representatives of the States bordering the Gulf of Mexico have been meeting for the past several years to form a compact known as the Gulf States Marine Fisheries Commission; and

Whereas in order that such compact be given legal recognition, it was first necessary to gain consent of the Federal Government through congressional action; and

Whereas Senate Joint Resolution 42 in the Congress of the United States, upon its passage, became Public Law 66 granting the consent and approval of Congress to an interstate compact relating to the better utilization of the fisheries of the Gulf coast and creating the Gulf States Marine Fisheries Commission; and

Whereas Public Law 66 of the Eighty-first Congress of the United States was approved by the President of the United States on May 19, 1949, thus giving the Gulf States marine fisheries compact the existence for which the several Gulf States had been working: Now, therefore, be it

Resolved by the Continuing Conference Committee of the Five Gulf States, That a resolution be prepared expressing the deep appreciation and gratitude of said committee for the efforts and guidance of the congressional delegations of the five Gulf States, in steering to a successful passage Public Law 66 of the Eighty-first Congress of the United

States, which has given Federal consent to the Gulf States marine fisheries compact as required by the Constitution of the United States; be it further

Resolved, That copies of this resolution, expressing gratitude for the able work of said congressional delegations and for their tireless efforts, be sent individually to each member thereof.

Respectfully submitted.

A. J. HARRIS,
Attorney, Department of Conservation, State of Alabama, Acting Secretary, Continuing Committee.

Un-American Internationalism

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1949

Mr. WOODRUFF. Mr. Speaker, Mr. E. F. Tompkins, of the editorial staff of the Hearst newspapers, has written an outstanding article entitled "Un-American Internationalism." This article seems to have been inspired by the fact that on June 7, 91 Members of the House of Representatives—64 Democrats and 27 Republicans—introduced a resolution whereby the Congress would formally declare that world government is the fundamental objective of American foreign policy.

To me, Mr. Speaker, that declaration is tantamount to a repudiation of the oath which every Member of Congress takes when he assumes his seat in this House. I say this with all respect to the purpose of seeking an end to war which impelled some of my colleagues to sponsor this resolution.

Mr. Speaker, I beg my colleagues not to forget that even under our own Constitution of a Federal Government, conditions once arose which brought about the most frightful fractricidal struggle of which there is any record on the pages of history.

If the Members of this House will look back to volume 6 of the report to the Immigration Commission entitled "Dictionary of Races or Peoples," presented by Senator Dillingham on December 5, 1910, and actually read that book, I believe they will wonder what on earth impelled them to suppose that it would be possible to establish a workable form of government for such divergent races and peoples other than an all-powerful and ruthless dictatorship.

There is actually in existence today a government whose fundamental purpose is known to be the establishment of the supremacy of its system over all peoples of the earth. I refer, of course, to the Soviet Union. The population of that country is composed of 182 different nationalities, speaking 149 different languages or dialects, and the Government of the Soviet Union only maintains itself in power by the exercise of a ruthless dictatorship, which is utterly unthinkable to people who believe in popular self-government.

I doubt that there is a single one of the sponsors of the resolution which I am discussing who would venture to suggest that the United States seek admission into the Soviet Union. But, logically, as a dictatorship is the only system which could control the heterogeneous mass of people scattered throughout the world, that is the position in which they find themselves.

Mr. Speaker, I say to my colleagues that there is no way to simplify the problem of maintaining peace other than through the development of a moral code in the minds of every man and woman that war is absolutely unjustifiable, except in defense of their own country and their own people.

Mr. Speaker, under unanimous consent, I insert Mr. Tompkins' article in the RECORD, and I hope that every one of my colleagues will read it from an objective point of view:

UN-AMERICAN INTERNATIONALISM
(By E. F. Tompkins)

The stealthy crawling movement to denationalize the United States and to submerge its sovereignty and independence in a visionary but predatory world government has grown into an alarming portent.

It was pointed out in these columns some weeks ago that the legislatures of 21 States had favored resolutions to repeal the Declaration of Independence.

On June 8 the Christian Century—an undenominational religious periodical—presented approvingly as its leading editorial a summary of the State attitudes.

It noted that the Tennessee Legislature had authorized the election of delegates to an international convention, to be held at Geneva next year, to write a constitution for a federal world state.

The editorial reported that the legislatures of six States—California, Connecticut, Florida, Maine, New Jersey, and North Carolina—have approved an identical resolution which calls for a constitutional convention in this country to amend the Federal Constitution to expedite and insure the participation of the United States in a world federal government, open to all nations.

Approval of the resolution by 32 States would compel Congress to call such a convention.

That this may happen soon is indicated by two circumstances.

First, the résumé by the Christian Century shows that 14 legislatures, besides those already mentioned, have adopted, in the so-called Humber resolution, a general approval of the idea of world government.

These are the Legislatures of Alabama, Arkansas, Georgia, Louisiana, Maryland, Massachusetts, Missouri, New Hampshire, Oklahoma, Oregon, Rhode Island, Utah, Virginia, and Washington.

Furthermore, proposals for popular referendums for or against American entrance into a world government are pending in New York, Pennsylvania, and Wisconsin, as well as in Maryland and Oklahoma.

Thus 20 legislatures out of the necessary 32 have been induced to put themselves on record, and 3 others may soon do likewise.

Second, action favoring world government has been suddenly instituted in Congress itself by a bipartisan coalition.

The congressional action occurred on June 7, when 91 Members of the House of Representatives—64 Democrats and 27 Republicans—introduced a resolution whereby Congress would formally declare that world government is the fundamental objective of American foreign policy.

To accomplish this objective, this country would pledge itself and its resources to support and strengthen the United Nations and to seek its development into a world federation open to all nations.

No Congressman could vote intelligently or patriotically on that singular proposition without thoughtfully considering what the United Nations is now, and what kind of world government it would provide.

Nonetheless, the development in Congress is significantly disturbing, because its participants include a majority of the Foreign Affairs Committee of the House of Representatives, which in itself seems to show that the world government resolution will be reported almost automatically to the House with a recommendation that it be adopted.

Thus, before the American people have any opportunity whatsoever to express their American sentiment, half of their Congress and nearly half of their legislatures may be committed to signing away their national freedom and involving them inextricably in a supernational entanglement.

Obviously, in a world government this country would be submerged by any plan of representation that could be devised.

It is proposed to bring into the organization all of the 64 nations on the earth.

If each nation has one vote, as in the United Nations, the vote of the United States will be equal only to the vote of Siam, while the British Empire will have five or more votes and Soviet Russia and its satellites will control a larger number.

There would be a constant danger, if not an absolute certainty, that we would sit incessantly as a defeated minority.

If a plan of proportional representation be accepted—one based upon populations—world government would be dominated by the vast populations of Asia, probably in coalition with Russia.

Our only safeguard would be in a voting system based upon national contributions; and other countries would never assent to that, as it would mean what they call "American imperialism."

Even at present, through the medium of the United Nations, we are about to lose control of our commerce, and be compelled to degrade our standards of living, by such devices as the reciprocal trade agreements scheme, the International Wheat Treaty and the International Trade Organization.

Other United Nations proposals would nullify our immigration restrictions, would alter the character of our citizenship, and would abrogate our labor laws.

We are already financing socialism abroad through the Marshall plan, and are presumably undertaking to finance all the backward and pauper areas in the world under President Truman's bold new program—point four of the proposals in his Inaugural Message on the State of the Union.

As to point four on June 2, in response to an invitation from the New Deal, Mr. Trygve Lie, Secretary General of the United Nations, submitted to the Economic and Social Council at Lake Success a report of 328 pages by which the United Nations proposes to expend $85,943,383 in 2 years.

Many projects are to be surveyed on a quota basis.

"In some cases, it is believed," the New York Times said, "the United States, as prime mover of the whole idea and as the country with the most money and technical resources, would pay the bulk of the initial costs."

Eighty-five million dollars is only the preliminary expense of the Truman program which apparently the United Nations is to direct.

Who then, will pay the bulk of the vastly greater subsequent costs, which will be numbered in billions of dollars?

The United States, of course.

These are facts which should be presented to the American people in any honest discussion of world government as a putative means of promoting world peace.

We are getting a taste of it. Do we want the whole menu?

UNIVERSITY OF MICHIGAN LIBRARIES

A Good Neighbor

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1949

Mr. KEATING. Mr. Speaker, in western New York the name Al Sigl is a household word. In print and on the air this capable but modest servant of humanity has devoted himself for years to helping others.

Men and women of all walks of life respond wholeheartedly to his suggestion of aid for an unfortunate. His activities are as varied as the weather.

In the Rochester area a family had its possessions wiped out in a fire. By nightfall the family was rehabilitated after he had told the neighbors about what happened.

A woman planned happily for the coming of a baby. Three arrived. The good mothers of the Rochester area made provision for the unexpected arrivals.

Someone poisoned a dog belonging to a very sick boy, and the lad promptly went into a physical tailspin. Al's neighbors provided 10 dogs for that lad, including a pedigreed collie.

A doctor said a little girl in a nearby village would not live long beyond her ninth birthday. The neighbors, by exact count, 1,702 of them, representing many sections of the Eastern States, gave that child a worth-while birthday. She has lived through her tenth birthday and is looking forward to many more of them.

More than 300 crippled Rochester area residents have the comfort of wheel chairs through his cooperation. Those able to buy them, and no longer needing them, at his earnest solicitation, turned them over to those unable to buy them.

Way back in 1937 he started a volunteer blood bank to serve Rochester and many other places. This unique group served with marked success for a decade, providing a pattern for other places and finally flowered into the present outstanding Red Cross activity.

He was among the first to bring the plight of children afflicted with cerebral palsy into the spotlight of public attention. From that beginning a movement developed which is spreading throughout the country.

In recent months he has brought hope to the many sufferers from "multiple sclerosis" in the Rochester area. Congress, United States Public Health Service, and private groups are enlisted in that cause.

Throughout the years, Al Sigl has endeared himself to countless thousands by his many contributions to the friendless, the needy, the ill, and anyone who has needed help.

Recently the Jewish War Veterans of the United States at their Western District Council, Department of New York Convention, honored Al Sigl through the award of a bronze plaque annually presented to the citizen of the community who best exemplifies the designation "A Good Neighbor."

Through the courtesy of Hyman T. Maas, honorary chairman of the convention committee and commander of David J. Kauffman Post, No. 41, my attention has been drawn to the short, simple, but powerfully eloquent, response which Al Sigl made in acknowledging this gift.

The high quality of American citizenship exemplified by his words, and the deep significance of the fundamental truths he speaks merit reading and rereading by those who, through public activities or private pursuits, are sincerely seeking to build a better country and a better world. The community which I have the honor to represent is richer because of the life of Al Sigl. Under leave to extend my remarks, his stirring words are included:

Mr. Commander, district officers of Jewish War Veterans, Mr. Mayor, ladies, and gentlemen, there are three phases in the life of every American of today which we all must recognize and respect but which, essentially, are none of our business. They are his religious views, his family life, and his political opinions. Add to them his racial origin. The one feature of his life in any community with which we all are entitled to concern ourselves is his type of Americanism.

You have gathered here tonight and paid me an impressive honor—an honor personally undeserved—but accepted with humble wholeheartedness because of what it represents.

It has been my proud pleasure, down through the years, to be the mouthpiece of a vast number of average run-of-the-mill, ordinary residents of this area, and the significance of this plaque, to me, is that I am privileged to accept it in their behalf because, after all, they represent what I regard as the highest type of Americans.

Perhaps I am queer. Many of you cheerfully will subscribe to that. But I don't like to think of men like Abraham Lincoln in the days of his glory in the White House. I like to think of him as the humble grocery clerk in Springfield, Ill., eager to do his little bit to make life easier for someone else. He built, by these little, fine acts, a sterling character which was to stand him in good stead in the dark days which followed. I like to think that Lincoln never even dreamed of what the years would bring to him in the way of honor and glory.

I like to think, in our own area, not of the men and women upon whom the spotlight of publicity has focused, but rather of those quiet, unassuming men and women upon whom the spotlight never shines. It's true we need a bit of clear vision to evaluate lives like these in terms of community life. Again it's been my privilege through the years to view the deeds of some of these average men and women. I've seen them rise at all hours of the night, at great personal discomfort, to go to a hospital, go give a blood transfusion for someone whose name they didn't even know. I've seen them in the dark days of the depression, go to their own meager store—and all stores were meager in those days—and take all they could spare for someone less fortunate.

I could devote hours to cite you similar instances, but the point I want to make is this, there never was any question of racial discrimination or color then. It was just a case of needing the helping hand and theirs was indeed the helping hand. This is the American way. None of us can go it alone. All of us need that helping hand. It may be nothing more than a cheering word, but the influence we all exert on the lives of others is astounding. It has been so from the days of the foundation of the Republic. Men and women both sacrificed then, just as men and women sacrifice their comfort and convenience now. What we have today we owe, in a large measure, to that spirit of neighborliness which has prevailed since the beginning of these United States. What the future will bring to us depends on how we can foster that spirit to even greater possibilities.

It has indeed been worth while to help develop this American spirit of neighborliness. Perhaps you are the best exemplars of that American spirit tonight. You have honored one of Dutch ancestry, of a religious belief other than your own and, by so doing, have made him a very happy man, eager for the opportunity to continue to be of service in this truly American way.

Who Is Holding Up Legislative Action on the Hoover Commission Recommendations, and Why?

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1949

Mr. GROSS. Mr. Speaker, there are steadily growing demands on the part of taxpayers in my congressional district in Iowa for action on the Hoover Commission recommendations.

They are demanding, and rightly so, that waste, inefficiency, and duplication in the Federal Government be ended now. The Hoover Commission recommendations point the way to an end to at least some of these evils, and the people are unable to comprehend why President Truman and his administration leaders in Congress have failed to bring about full consideration of the Commission's proposed reforms and economies with promised savings of hundreds of millions of dollars to the taxpayers.

There is no reason why the people of Iowa or any other State should be impressed with President Truman's plea for higher taxes until at least the House of Representatives, where tax measures originate, has given full consideration to the specific means by which economies can be effected.

Failure to launch action on the Hoover Commission reports and recommendations—action that should have started many weeks ago—rests squarely upon the Democratic majority which holds the whip hand in this Congress. There can be no shifting of this responsibility.

Typical of the letters I have received on this subject is the following from a fine group of women, speaking out as members of their church society:

JANESVILLE, IOWA, *June 3, 1949.*
The Honorable H. R. GROSS,
House of Representatives Office Building, Washington, D. C.

MY DEAR MR. GROSS: We, as members of the Woman's Society of Christian Service and of the Methodist Church at Janesville, Iowa,

strongly believe that our Federal Government should be less wasteful and more efficient. We wish to urge you to work for immediate and favorable action on the Hoover Commission's recommendations.

Very truly yours,

Mrs. Vernon Stribley, Chairman, Christian Social Relations and Local Church Activities; Mrs. Paul Asmus; Mrs. Edwin Vossberg; Mrs. William Johnson; Mrs. Harold Wagner; Mrs. H. V. Bannister; Mrs. F. R. Decker; Mrs. F. L. VanderVeer; Mrs. Amanda Hutton; Mrs. B. B. Shores; Mrs. C. E. Kyle; Mrs. Clifford Boomer; Arlene B. Warm; Mrs. Mae McMurray; Mrs. Vernon Stribley; Sandra Stribley; Mary Sietam; Anna Bryan; Mrs. Casper Koepke; Mrs. Glen Shere; Mrs. Floyd George; Mrs. Myron Rohrabacher; Mrs. Glen Winner; Mrs. John Huntzinger; Mrs. Paul V. Clements; Mrs. R. E. Bannister; Mrs. E. H. Hersog.

Does the Farm Bureau Represent the Farmer?

EXTENSION OF REMARKS

OF

HON. CECIL F. WHITE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1949

Mr. WHITE of California. Mr. Speaker, under leave to extend my remarks, I include therein the following letter which speaks for itself:

JUNE 11, 1949.

Hon. CECIL F. WHITE,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN WHITE: Proceedings of board of directors of the Orange Cove Chamber of Commerce, in regular session June 9, 1949, branded the statement recently made by a so-called representative of the leadership of the California Farm Bureau that the membership of the Farm Bureau favored the elimination of funds for the power facilities of the Central Valley project as an outrageous misrepresentation of facts.

The silly statement before the Senate committee that the Farm Bureau thinks the Reclamation Bureau lacks the ability to press more than one phase of the project at a time, is doubly silly when it is common knowledge that the power phase is essential to finance the irrigation phase. Such flimsy claim is an insult to the intelligence of the members of the Senate committee.

Very truly yours,

ORANGE COVE CHAMBER OF COMMERCE,
By DUANE MOSER, *Secretary.*

The Acute Need for Housing in Los Angeles

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include the following resolution which was passed by the County of Los Angeles Board of Supervisors on June 7, 1949:

Resolution in re housing conditions in the county of Los Angeles, calling attention of Washington Representatives to acute need of additional facilities

Whereas Los Angeles has experienced an unprecedented growth in population in recent years; and

Whereas a large proportion of the new residents are men who have seen service in the armed forces of their country; and

Whereas the aggravated housing condition that resulted has brought about many bad results such as domestic trouble and juvenile delinquency—which in turn place a heavy financial burden on the taxpayers; and

Whereas the housing shortage is being greatly aggravated by the building of freeways and the expansion of the civic center for courthouse sites; and

Whereas after exhaustive study of housing needs legislation has been introduced in Washington looking toward relieving the housing shortage, particularly for those in the low economic levels: Now, therefore, be it

Resolved, That the board of supervisors call attention of our Washington Representatives to the acute need of additional housing facilities and express the hope that Federal assistance will be made available for families, particularly with children whose families are on the lowest economic levels.

Villanova College Commencement Address by Hon. James P. McGranery

EXTENSION OF REMARKS

OF

HON. PAT McCARRAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 15 (legislative day of Thursday, June 2), 1949

Mr. McCARRAN. Mr. President, I hold in my hand the text of an address delivered by the Honorable James P. McGranery, Judge of the United States District Court for the Eastern District of Pennsylvania, upon the occasion of the graduation ceremonies of the class of 1949 at Villanova College.

I am very happy to inform the Senate that, as a part of those ceremonies, the honorary degree of doctor of laws was conferred upon Judge McGranery.

Many Senators, I know, number Judge McGranery among their personal friends. The address which Judge McGranery delivered to the graduating class at Villanova is one of the finest commencement day addresses I have ever read, and I think many Senators will be interested in reading it. Accordingly, Mr. President, I now ask unanimous consent that the text of this address may be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Very Reverend Father Provincial, Very Reverend Father President, members of the faculty, parents and friends of Villanova, members of the class of 1949: The ages of man have been described in varying phrases—but if this era in which we live is to be viewed at all in perspective by succeeding eras, if there are to be future eras of the world, then our time will be known as the heroic age of man—the century of heroism.

The world of tomorrow will be built not by the common man—but by the man valiant for truth. Not little men—but men great in their eternal dignity—will mold the coming days. For they will be men exercising calm dominion over their own humanity and ever conscious that in possessing patience, they will have: Justice, incapable of revenge; charity, incapable of hate; and meekness, incapable of anger.

As I greet you, the members of the class of 1949, I must speak of my deep gratitude for the privilege of addressing you on this day of dedication. You know well that I come not as a prophet, nor as a sage, but rather, as a comrade separated from you only by the years and closely united by shared experiences. Like many of you I fought in the armed services of my country during a world conflict; and like you I later returned and resumed my studies to prepare for a peacetime career. Like you, I ponder the shape of things to come.

Today, standing in the shadow of the spires of Villanova, I can sense your feelings, your hopes, and even the questions that confront you.

I might well say, as did the Egyptian scribe who wrote more than 2,000 years before the coming of Christ:

"Would I had phrases that are not known, utterances that are strange, a new language that hath not been used, free from repetition."

Yet I am thankful that you and I share a common tongue, for our language is one that has been enriched by the history of the coming of the Redeemer and that has been strengthened by the story of Christianity and her holy sons.

I rejoice with you that your college days have been passed at an institution endowed with a great tradition, with the legacy of Catholic learning entrusted to the Order of St. Augustine by the heroic saint who prayed:

"Strengthen me, that I may be able, grant what thou dost command, and command what thou wilt."

Again and again he announced with Paul: "I can do all things in Him who strengthens me."

Even today we can hear his confidence in the well-loved words:

"For Thou lightest my lamp, O Lord; O my God, enlighten my darkness."

The lamp of Augustine has burned with a holy radiance through the centuries. It was more than a coincidence that this mighty father of the church wrote his greatest work, "The City of God," as a consequence of the sack of Rome and in reply to the pagan onslaught upon Christianity. He had found his own way to God and had been baptized in his church at the age of 33; 4 years later he had been ordained a priest and within 5 years he had been consecrated a bishop. While the barbarians marched onward to plunder and to devastate, Augustine busied himself in the scholarly refuting of heresy. Yet Christopher Dawson has well said of him that:

"He was, to a far greater degree than any emperor or war lord, a maker of history—a builder of the bridge which was to lead from the Old World to the New."

This great saint was the link of western Europe to the classical tradition, the bond uniting the western church to its intellectual sources. For the Christian world he preserved all that was most precious in the classics; and it would be difficult, indeed, to appraise his influence upon the men in the centuries that followed.

It is recorded that His Holiness, Pope Gregory the Great read and reread the Confessions. Charlemagne and numerous other truly Christian rulers acknowledged their indebtedness to Augustine. All of the monas-

UNIVERSITY OF MICHIGAN LIBRARIES

tic schools, that guarded the light of civilization through the centuries, based their program upon the writings of the Bishop of Hippo, who "looked beyond the aimless and bloody chaos of history to the world of eternal realities."

His towering intellect, his mighty heart, his greatness of soul exercised an influence on world events, so far-reaching, that we, who are limited by our finite vision—can only guess—as "time in mists confounds."

We can look, however, upon the Order of St. Augustine, most venerable order of the church, and scan the monastic honor roll of priests and brothers, saints and scholars, missionaries and educators. What a joy it would be to trace their steps through the ivied, old abbeys, the stone chancels, the lofty arcades in other lands. Yes; it would be a blessed pilgrimage to follow them to the far places of the earth where they have steadfastly borne their Catholic faith to the pagan and to the unbeliever.

For this truly religious order has from the beginning been consecrated to the interests of religion and humanity. Militant in the forces of the kingdom of Christ, its missionaries have again and again sacrificed their lives in the service of their eternal Lord. Ever aware of their spiritual mission in every continent, Augustinian fathers have brought Christ to His people through the divinely inspired force of their saintly lives Never forgetful of a vocation to serve, these holy priests have ministered to the poor, the ill and the afflicted, and prepared the path for beauty and truth and salvation.

To call the roll of the Order of St. Augustine would be to utter the names of eloquent preachers, brilliant writers, eminent teachers, and distinguished men of science and the arts. Their spiritual memorials are the thousands and tens of thousands of alumni whose ranks you join today. Their material monuments are the many and varied universities, colleges, and preparatory schools encircling the earth and bearing constant testimony to the Augustinian ideal of education which is based upon a divine philosophy of life and aimed at the full and harmonious development of all the faculties of man.

Numerous and beautiful buildings of Villanova rise about us on this campus to enclose an institution of learning that has written its own glorious and gracious history upon the hearts of men. You are familiar with the scholastic excellence of her colleges of science and the arts. You have benefited by the high standards of her courses, whether they have prepared you for the competitive arena of business, for further study in the civil or military professions, or for the challenging sphere of public service.

Above all you are conscious that at Villanova you have been prepared to fulfill your vocation in society as gentlemen of learning, judgment, and character. You have been trained for citizenship with the seasoned comprehension and serenity of outlook which characterizes the great tradition of Catholic thought. You have been briefed in your role as citizens of earth who are "destined for eternal citizenship in heaven."

In your wisdom, you chose Villanova rather than one of the many institutions of learning of which America's foremost columnist spoke when she deplored that:

"Our universities have been given over for years now to a philosophy of historic relativism, under which there are no absolute standards for anything."

You have been fortunate indeed in your faculty who, whether they are drawn from the priesthood or the laity, are qualified not only in pedagogy—but also as men of firm convictions about the meaning of life and with the moral character capable of conducting a course of studies—physical and mental—which aims at training the heart and the will as well as the intellect: They are altogether unlike the men upon whom Walter Lippman places blame for the modern tragedy, "which has come about because men thought it clever to be cynical, and enlightened to be unbelieving, and sensible to be soft."

Grapple to your soul with hoops of steel the eternal criteria of judgment, the ultimate principles for action that you have gained at Villanova. Then the shield of your fortitude will never be pierced by the devious slanting of news practiced by a materialistic press; and the armor of your perseverence will keep you inviolate from the character assassination indulged in by reckless radio commentators and sensation-seeking columnists.

Whether you have chosen a civil or military career, today you enter battle ranks as colleagues with the rest of us in a modern legion defending the eternal values of humanity.

In the decades to come, you will think back on your years at Villanova with appreciation and tender affection for your fellow classmates and for the members of the college administration. Always there will be gratitude in your hearts for the vision and spirituality of Very Rev. Father Provincial, Dr. Mortimer Sullivan—for the firm farsighted leadership and inspiring devotion of your president, Very Rev. Dr. Francis McGuire—and for the wise guidance and direction of all those who have shown you the way to live and shared with you the zest and power and dignity of living.

In this day of decision, each one of us may well take inventory of our spiritual resources for the titanic struggle ahead. We are living in a period of revolution—and we can make it—we must make it—a revolution of the spiritual forces of men.

Someone has said that ours is an age where war is never declared, yet where war never ends. There is indeed war abroad in the world today, and the forces of materialism—of communism—press ever westward. They seek not merely dominion over more lands, but rather—sovereignty over the souls of men. They prepare the way with a fifth column of weakness and hopelessness to betray and crumple the city from within.

The men of our generation have gradually become aware that if the lamps of democracy are quenched elsewhere in the world we cannot isolate ourselves from universal darkness. We know that our Nation still has the sacred task of tending the vestal fire of freedom and it rests with us as it did with the men of Lincoln's time to determine if we shall nobly save, or meanly lose, the last, best hope of earth."

We have a star fixed in the firmament to guide us in the way that we must go. It is the star of peace, and it will shine out over all society only when the words of His Holiness Pope Pius XII are heeded in their fullness.

In clear and succinct fashion he has drawn the blueprint for the order and tranquillity that constitute together the only enduring peace.

His familiar words have well described the dignity and the rights of the human person; the intrinsic unity of society and the essential sacred family unit; the inherent dignity of work for the perfection of the person; the necessity of a complete rehabilitation of the juridical order; and the need for a state conception and practice founded on reasonable discipline, kindliness, and a responsible Christian spirit.

Our Holy Father has appealed for a vast legion of those handfuls of men who, bent on bringing back society to its center of gravity—the law of God, aspire to the service of the human person, and of his common life, ennobled by God.

If this holy crusade for the cleansing and renewal of society is to be victorious, heroism must be restored to its rightful place in the lives of men. The men of our day need the heroic spirit even more than did the men of the first century of our Lord.

During the past three decades the man on the street has been stripped of his armor of faith and hope by the disillusionment of disgruntled agnostics. Because it is man's nature to follow a star—too many of our generation have been led astray by the false star of communism—offering to the ordinary man a part in a large design which has been camouflaged to appear heroic. This has been the appeal of communism; and her totalitarian government has made use of the language of liberty to betray men into slavery.

Only the true star of Christian heroism will guide all men back to the paths of eternal freedom. The true Christian "can be a hero, indeed he must be a hero." No wonder that the tribute he pays to heroism is deep, understanding, and heartfelt. "It is the tribute of one hero to another, even though that tribute is the tribute that the Christian sinner gives to the sinless Christ."

The patience of Calvary is a constant reminder that we face in our time an adventure of incredible courage and that we have need of weapons of incredible strength as well as of a fighting heart to outlast the dull, relentless thud of the powers of darkness. The path of virtue is as perilous as the path of heroism.

Our century will indeed be the heroic age of man—the century of heroism—if we join together in sufficient numbers, a legion of handfuls of men to unite in this pledge, first phrased by a poet:

"I press God's lamp close to my breast;
Its splendor soon or late
Will pierce the gloom;".

Removal of Federal Rent Control

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Wednesday, June 15 (legislative day of Thursday, June 2), 1949

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Thwarting Home Rule," published in the Cleveland Plain Dealer of June 3, 1949. This editorial deals with the attempt on the part of the Expediter to thwart the action of local government in relieving communities from rent control and also the inhibition placed upon relief from rent control by reference to the governors of the States.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THWARTING HOME RULE

Congress wisely gave to the municipalities of the United States a substantial measure of home rule on the question whether rents should be decontrolled.

It provided for the removal of Federal regulation over rental property in any given municipality upon the passage of an appropriate ordinance by its city council and approval of the ordinance by the governor of the State.

This is a sound provision and, from the standpoint of reducing at least a little bit the

enormous centralization of governmental powers in Washington, a good one. A city council knows the housing situation in the community it represents. Its members are elected by, and are directly responsible to, the people of their community. Members of a council have to stand for reelection at 2-year intervals; Federal bureaucrats do not.

Regrettably, there have been a couple of developments here recently that are inimical to the home-rule provisions of the national rent-control law.

One of these, and by all odds the worst, was the appearance before the Bay Village Council of Karl Duldner, Cleveland area rent director, in the role of a lobbyist against the rent-decontrol ordinance on which the council had called a hearing. The only objection to the ordinance was that expressed by Duldner. And so the Bay Village Council, as it should have done, passed the legislation.

Duldner had no right to appear in Bay Village to lobby against municipal legislation. As area rent director he is paid by the taxpayers of the United States to administer a law enacted by Congress—not to peddle propaganda for the retention of his own powers. Duldner's appearance before the Bay Village Council symbolized one of the worst aspects of the Federal bureaucracy: its desire to perpetuate itself at any cost.

The other development in this matter that we regret was Governor Lausche's declaration that he would not approve rent-decontrol ordinances until he received reports from the rent advisory boards for the areas in which the decontrol action is taken. The Governor implied that he would depend as much, if not more, on the views of the advisory boards as on the judgment of the city councils.

Ordinances decontrolling rent have been passed by the Councils of Bay Village and Orange. It would be a specious contention to say that the Cleveland area rent advisory board, which, to the best of our knowledge, has held only one meeting since the present rent law was enacted, knows as much about the housing situation in Bay Village and Orange as the councils and administrations of those two municipalities do.

We believe Governor Lausche should be guided primarily by the judgment of the elected representatives of the people of a community, rather than by the judgment of a spasmodically functioning board which has no direct or official responsibility to the people. The Governor's responsibility to the legislative representatives of the people of Ohio is a good deal greater than that to a Federal bureau, such as the one Duldner represents, or to the Truman welfare-state program.

Milwaukee

REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. ZABLOCKI. Mr. Speaker, undoubtedly some of the Members have read the latest edition of Holiday magazine and to arrest possible misconception due to the article "Milwaukee" in this issue that I take this opportunity to address the House.

It was with interest that I have read the 26-page portfolio devoted to Wisconsin, which appeared in the July issue of Holiday magazine. I have enjoyed the extensive coverage given my State, as well as the colorful illustrations and the story describing the past and the present of the State of Wisconsin. However, Mr. Eli Waldron's article on Milwaukee, the city in which I was born and in which I have lived all my life, struck me as a strange combination of fact and fiction. Commendably outlining some historical detail, yet devoting much space to unduly overstressed farcical instances, Mr. Waldron not only fails to give a reasonable picture of present Milwaukee and its people, but succeeds in leaving the reader, who may depend on this article for his knowledge and understanding of Wisconsin's largest city, with a most certain misconception of the city and its people.

The most obvious and distracting departure from fact in Mr. Waldron's article is the writer's description of the nationality groups which compose Milwaukee's population. Dividing one-half of Milwaukee's population into Germania and Polonia, Mr. Waldron characterizes those of Polonia as wild, devout people—can these characteristics be imagined compatible?—black-haired, bright-eyed and fierce, mentioning as a noteworthy member of this group one individual who, unfortunately, neither brought credit to his ancestry, nor was, as some readers may suppose, an exemplary member of Polonia, indicative of the character of this group. One could easily gather from Mr. Waldron's article, should he not know any better, that the Poles arrived in Milwaukee during the early period of this century, settled on the South Side of the city, built few churches—which do not even merit a word of due praise from Mr. Waldron—began cooking sznycel wiedenski, dancing mazurka, and being of no great asset to the community. Their only merit, it would seem, was that, through their fervor, they brought a great relief from the turgid solemnity of the burghers. The article says nothing about the fact that from the time when the early Polish settlers came to Milwaukee in the middle of the nineteenth century, Polonia has materially contributed to the building and expansion of our city, has been taking an active part in its civic functions, and has produced many good, and few outstanding, citizens of our country. It is not for me to go into detail and enumerate their meritorious achievements, but I feel compelled to say that Mr. Waldron's article, aside from many serious omissions, has the tone and the flavor more becoming a barroom taleteller than a writer who, in the interest of his readers and that of the subjects he writes about, can be expected to produce a more accurate and just description than the one rendered in this particular article.

To the other nationality groups which comprise the other half of Milwaukee's population, Mr. Waldron devotes one whole sentence:

> The other half consists of every nationality there is, including a lone Eskimo who lives in a house made out of walrus hide underneath the Twenty-seventh Street viaduct.

Perhaps there was no room for more. It would seem to me, however, that if less accent was placed on the Gertie incident, on the gastromaniacs who, in Mr. Waldron's opinion, are everywhere in Milwaukee, or on the supposed similarity between the shape of a human stomach and that of our city, something could have been said about the fine cultural and educational history of the other nationality groups in Milwaukee, among whom are the Italians, Swedes, Norwegians, Bavarians, Irish, Croatians, and many others. Their rich lore, activities, and accomplishments, would truly be a much more interesting and worthy subject for a writer to explore.

In calling attention to this article I want to make it clear that Milwaukeans, although proud of their ethnic origins and ancestral customs, are nevertheless citizens remarkably without the stigma of hyphenated Americanism. Their over-all greatest virtue is working together as a cohesive unit toward good citizenship, with small-town hospitality and friendly, homespun philosophy, in coping with big city difficulties. And, I may add, they do this with admirable success.

It is most unfortunate that the excellent illustrations were accompanied by an article which will prove a great disappointment to many Holiday readers.

Congress and Economy

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. HORAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the Washington (D. C.) Evening Star on the need for economy in Government based upon a speech made on the floor of the House Tuesday afternoon by our colleague, Mr. MACK of Washington.

The editorial on Mr. MACK's speech follows:

CONGRESS AND ECONOMY

Representative MACK, Republican, of Washington, may not get very far with his novel proposal for a special economy session of Congress this fall, but the figures he cites on growth of the Government in the past 20 years justify his concern over continued free-spending tendencies.

In two decades, for example, the number of bureaus and commissions in the Federal establishment has increased from 300 to 1,818. The number of employees on the Federal pay roll has grown from 570,000 to 2,000,000. The cost of the pay roll has risen from about one billion to almost six billions a year. The tax revenues exacted from the citizens have soared from about four billions in 1930 to more than forty-four billions this year.

Mr. MACK points out that during these 20 years Congress has held 24 regular and special sessions, each of which has increased Government spending and most of which have burdened the people with new taxes. He thinks it is about time that Congress should hold a session devoted exclusively to the objective of reducing spending.

But Congress never seems to generate much enthusiasm for self-imposed special sessions.

UNIVERSITY OF MICHIGAN LIBRARIES

Its enthusiasm for economy is even less pronounced. The Washington Representative suggests that the proposed special session could well consider the Hoover Commission's proposals for Government reorganization. There are, as he says, opportunities in the reorganization field for the saving of up to $3,000,000,000 a year. The practical difficulty of doing anything very effective about reorganization in a special session is great, however. The session would have to be at least a 2-month affair, if the requirement for a 60-day period of consideration of any administration reorganization plan is to be met. And the Members would not relish the idea of staying in special session that long, just to meet a legal requirement of the reorganization law.

Anyway, there is no necessity for a special session on reorganization. The present regular session could take effective action, first, by reaching agreement on the Senate-and-House-passed legislation now deadlocked in conference, and, second, by postponing adjournment long enough to validate any reorganization plans submitted by the President. That would be an epochal economy move that would enhance the record of the Eighty-first Congress for all time.

Promotion of Full Employment

EXTENSION OF REMARKS
OF
HON. GEORGE D. O'BRIEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. O'BRIEN of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the text of a bill, H. R. 5010, which I introduced in the House of Representatives on June 6 and which was referred to the Committee on Public Works. It reads as follows:

A bill to authorize the expenditure of $5,000,000,000 through the Federal Works Agency to provide for needed public improvements and to promote full employment

Be it enacted, etc., That it is hereby declared to be the policy of the Congress that within the provisions of this authorization and through the organization of the Federal Works Agency measures be taken to restore full employment within the United States and to construct projects in cooperation with the local communities in order to provide needed public improvements.

SEC. 2. Work on all projects shall be paid for at the hourly rates of wages equal to those prevailing for similar work in private industry in the locality or to the union scale of wages obtained for such work in such locality.

SEC. 3. No worker shall be denied employment because of sex, race, color, religion, length of residence within a community, political opinion, or membership in any economic, political, or religious organization, excepting persons who are members of organizations advocating the overthrow of the United States Government by force or violence.

SEC. 4. The Administrator of the Federal Works Agency is hereby directed to distribute equitably between the States the various projects with a view especially to meeting the unemployment situations as they may exist.

SEC. 5. There are hereby authorized to be appropriated to the Federal Works Agency the sum of $5,000,000,000 for the purposes named.

Behind the Red Curtain in China

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two articles on conditions under the Communist Regime in North China, taken from the London Times of May 20 and 21, 1949.

Myths die slowly, especially when they have had behind them for more than three years the full support of powerful forces in our own Government, an effective score or two of proleftist writers and lecturers, and several supposedly neutral educational organizations, like the Committee for a Democratic Far Eastern Policy which the Attorney General recently disclosed is a Communist-front—after its deadly work of misleading the American people had been done.

The only way to dispel myth is by fact. Unfortunately it has not been easy to get the facts about communism in China. Never in the last 22 years have Communists in China been willing to allow foreign observers to travel freely and unescorted in areas under their control. There was plenty of bad in free China to keep the reporters busy. The Communists would not and will not let outsiders, unless favorably disposed to themselves, see what is going on in their hinterland. So our people had only the daily reports of the weaknesses in free China, little recognition of any strength there, and no information at all regarding Communist China with which to compare. Some of us who had long first-hand experience with Chinese communism—in my case, from 1927 to 1931, and again from 1936 to 1938—have tried our best to warn our people and our Government regarding the nature, the objectives, and the methods of communism in China and its leaders. But we have been voices crying in the wilderness. When one set of myths, for example, that the Communists were just agrarian reformers, could no longer be sustained, others were skillfully promoted to assure us that the Communists would not try to capture the big cities, could not organize the Chinese, would probably be Tito's—in any case would have to use westerners to run things for them—and so on and on. One being plugged vigorously nowadays is that we should give diplomatic recognition and economic help to the Communists in order to turn them from communism. In other words, the way to defeat communism is for America to give it the help it needs in order to succeed. That idea may seem a little difficult at first, but it will have plenty of support in the coming weeks, especially among the intelligentsia and the experts, so it may well be adopted as our policy. The big lie is the one easiest to put over.

It is impossible to predict whether we will wake up to the truth before it is too late to prevent the complete loss of China to Russia—and the loss of other parts of Asia which will certainly follow (although few will believe that yet). But one must continue to spread on the record the facts as they slowly leak out, and hope and pray that we will not get into war a second time in a decade because of failure to realize how imperative it is to our own security that China as the hub of east Asia be independent and on our side, not under the control of an aggressive foreign military dictatorship, violently hostile to everything we believe in and stand for.

The enclosed articles give illuminating glimpses of the Communist pattern of life at the outset. It invariably becomes sterner after the initial period of good behavior. How many will take the trouble to read and learn in time?

[From the London Times]

THE NEW REGIME IN CHINA

I—REPETITION OF THE BOLSHEVIST EXPERIMENT

(From a correspondent lately in north China)

In each of their revolutions and other attempts at reform during the present century, which have all been copied from the West, the Chinese have invariably been some 30 or more years behind the original. It is the same with the present experiment. The Chinese Communists would appear to have learnt nothing from the experiences of their Russian mentors and are starting off at exactly the same point as the Russians in 1917.

There is the same insistence on slovenly general appearance as the hallmark of the true proletarian (now called New Democrat). An ugly slate-blue uniform, padded for winter wear, is the garb of this new democracy. The people of Peking, who were formerly noted for their attention to their dress, now follow the new fashion and go about in dirty old cloths.

A second Kremlin

The first thing that was done when the trains started running again was to institute a single class; and in order to drive this point home, special care was taken to pull out the cushioned seats of the former first- and second-class carriages. Although the wealthy classes have long ago disappeared, one still sees plenty of luxurious cars on the streets. But they are now the property of the people, whose representatives are the only persons that can afford to be seen in them. The two large modern hotels have been taken over for the use of Communist officials and their official guests. Imitation might have gone farther and the Forbidden City might have been turned into a second Kremlin had the ancient palaces been fitted up with modern conveniences.

In speeches and writing there is endless advertisement of the fact that the fortunate citizens of Peking and Tientsin have at last been liberated and that everything now belongs to the people: The factories belong to the workers, the universities to the students, and the government to the people as a whole, for whose sole good everything is now done. In explaining the action of the authorities in closing down a newspaper that had attempted, mildly, to preserve its former independent attitude, the official Communist organ ends with the following unintentional sarcasm: "In order to deprive such counterrevolutionaries of the freedom of speech and writing, so as to protect the freedom of speech and press of the people, the authorities have ordered the closing of this paper."

Cultural offensive

Newspapers, magazines, radio, and cinemas have all been regimented. Most of the former newspapers have been suppressed. The

leading official organ, the People's Daily, contains nothing but propaganda articles, accounts of public meetings, speeches, and endless congratulatory addresses from the happy peasants and workers, but no news whatsoever of Peking, the rest of China, or of the outside world except Russia, and Tass agency telegrams. As a result, people have given up reading the papers, and if the official organ still has a large circulation that is because all public offices and similar bodies are forced to take it in while private persons buy it to display in some conspicuous place in their homes as proof of political orthodoxy.

American films and music are strictly banned. Only Soviet films may be shown, and the receipts of cinemas have fallen off badly as a result. The theaters, once the great attraction, especially for the less literate classes, now have to include propaganda pieces and plays of the new culture, so that their receipts, too, have fallen off. Worst hit have been the restaurants, for which Peking was famous all over China. Several have closed; others perforce remain open to avoid even greater loss by having to pay off their staff. As a result of all this there is no night life in Peking. The authorities considering this a slur on a modern city have tried to liven things up by allowing night dance halls to reopen—partly no doubt because these were banned by the Kuomintang authorities. But they are strictly new people's dance halls, where only tea is served and the charge cannot exceed about 1 shilling.

Although all fighting has ceased in north China for over 2 months, economic conditions not only show no signs of improvement but the standard of living has even further deteriorated. Inflation continues as before. In order to offset the consequent rise in prices the authorities have opened a municipal trading company with some 50 branches where necessities can be bought at publicly notified prices kept slightly below the general market price. This does not help much, because owing to the widespread stoppage in trade the workers' incomes are even lower than before.

Business of every kind is at a standstill and the shops are all empty. The main retail business of the city is conducted in the street markets, to which even the larger shops are now forced to send their goods if they want to do any business at all. Significant is the fact that many of the large rentier class, who formerly lived comfortably, if modestly, on their small savings, are now putting in an appearance at these markets and selling off some of their belongings.

Payment in kind

Now that Chinese—but not foreigners—are permitted to travel freely again inside Communist-controlled territory, many persons have been arriving in Peking and Tientsin from towns in the interior which have long been under Communist control. All tell the same tale of an initial short period with little change, then of the running down, and finally closing, of factories and small industries owing to the lack of raw material, excessive wage demands, and heavy taxation. Above all, there is the difficulty of food, because the peasants will only sell their produce against commodities. In some areas they are actually being encouraged to revert to the use of peanut and sesame oils for lighting purposes, instead of kerosene, ostensibly because the latter is called foreign oil in Chinese, and it is a sign of the old "colonial status" to have to use foreign products—though more probably because under the present economic policy the government is unable to supply them with kerosene.

The reduced standard of living and the difficult economic position are shown by the fact that millet has become the staple food in the north, even in the large cities. This is due to the shortage of flour caused by the stoppage of imports and by the ban on ECA assistance. The Tongshan miners, one of the most powerful labor groups in China, raised such an outcry about this that the Communist central committee agreed to barter some of its precious coal supplies for flour with which to pay the miners and to permit two special ships from Shanghai to carry on this exchange. Millet has, in fact, become the real currency in north China. The wages of workers, government employees, students, and university professors are all fixed at so many catties of millet a month. They can either take it in kind or convert it to people's notes at the market rate of the day. Moreover, in order to encourage deposits, these wages are entered in the bank's books at the value of certain goods—flour, corn meal, or cloth. The depositor makes his choice, and the sum deposited is then credited at the market rate of the flour, etc., and on withdrawal he is paid out at the then reigning market rate of the flour or other goods.

Nor have cultural matters been neglected. There are frequent meetings to which writers, dramatists, actors, and even musicians are summoned, when they are indoctrinated in the "new culture." The whole system of higher education is in process of being regimented. The former colleges and universities are being abolished and each one is being converted into a new specialist institution (politics, military, technical, etc.) as a branch of one single general people's revolutionary university.

II. REVIVED DOCTRINE OF SPLENDID ISOLATION

The people of Peeping, especially the poorer classes, had as usual placed great hopes in the change of regime. Great, then, was their disappointment and loud the grumbling when they found themselves, if anything, worse off than before. The city workers having heard how the land was being parceled out in small lots, were full of pleasurable expectations that the same would be done with the capital and stock of the large business concerns in the cities. The authorities quickly disillusioned them, explaining that the land was divided up, in order that it could be worked productively, but that if the same was done with capital of a big business, it would merely mean ruining it without creating fresh wealth.

In another case the workers in a Tientsin factory sent a deputation to the authorities to complain that they were worse off than formerly because they were getting only coarse millet instead of flour. They were told that, as they had now been liberated, everything belonged to the people, and the factory was therefore their own, so they had nothing to complain of. The deputation promptly replied that they would prefer to hand back the factory and get paid in flour again.

Unwanted foreigners

In general, the common people are by no means pleased with the turn of events. Only a small number have been really influenced by the propaganda uproar. Most of them only attend meetings and parades in order to avoid trouble with their labor bosses and the authorities. The shopkeepers and small-business men are very worried and full of forebodings. From what they have heard from other places they are only too well aware that the real thing has not started yet, and that it is still to come when the present military control is relinquished to the politicians.

As regards foreigners, the indications in Peiping, Tientsin, Mukden, and elsewhere are that the Communists are completely uninterested and do not want them, believing themselves quite capable of carrying on without their help. Nowhere have they tried to make contact with foreign consular authorities, while attempts by foreign chambers of commerce, banks, and correspondents have been cold shouldered. In speeches, newspapers, and posters there have been most violent attacks on the American imperialists, with Britain a close second. Recently an order was issued forbidding the use of foreign languages on signboards, shop signs, and on Chinese products, in order to eliminate the last traces of the old colonial status. Nevertheless, it is possible that they will suffer, if not welcome, foreign technicians and allow foreign-owned factories to be run by foreign experts—naturally under close government control.

An agrarian economy

Foreign merchants, anxiously watching the recent disconcerting developments in north China, tried to comfort themselves with the assurance that China could not do without foreign trade. This ignores the usual trend of revolutionary processes when the extremists or fanatics are the real driving force, at any rate in the early stages. Nor is it borne out by past history, when for centuries China got along quite well without foreign trade.

The doctrinaire extremists of the Communist Party might well be prepared to sacrifice everything to their theories—as has been done elsewhere—and by reverting to a purely agrarian economy and forcing the people over a long period to live at an even lower standard than today thus try to rebuild the country's economy without outside help. Recently a Communist newspaper commented with great pride that in the previous month trade with Shanghai had dropped by 99 percent.

Nevertheless, it is just in this matter that the theorists have been hoist with their own petard. One of their most successful pieces of propaganda has been the accusation that the Kuomintang government has always neglected the welfare of the masses whereas the Communist Party promises to raise their standard of living to the level of that in western countries. In explaining their failure to attain this standard at present, they say that the civil war is still going on and that not until they have obtained control over the whole country will they be able to fulfill the hopes of the people. They have, needless to say, their own 10-year plan, but the Chinese Communists have so far learnt by experience that they speak more cautiously of 30 years instead of the usual 5.

To raise the standard of living in China to the level of those in the west will require an enormous development of her present comparatively negligible mines, industries, and means of transportation. That, again, would only be possible by a vast expansion of foreign trade, whereby China could acquire the raw material and machinery needed to build up her industries. In the first flush of victory, Communist theorists may talk loudly about the iron curtain, about China being self-supporting, and about her "pulling herself up by her own braces." But the stark fact is that China today has not even the braces with which to raise herself. Her railways, mines, and heavy industries are still in a most primitive state of development. Nor does she possess, except in negligible quantities, the most elementary raw materials: Steel, oil, lumber, cotton, and rubber, to quote only the most vital.

Trade and theory

Her railway system not only must be enormously enlarged, but the complete renovation of most of the existing track, of rolling stock, and engines is a matter of urgent necessity. China has practically no shipbuilding facilities. The much-advertised boom in her merchant shipping since the end of the war has been due to lavish gifts of ships made to her by Britain and America, as also to the ban on foreign ships in inland waters and the coastal trade, to the detriment of her own exports. Even were a Communist government to make an exception and grant full trading facilities to their ideological friends, it would not help them much. Russia could spare little, and in any case

UNIVERSITY OF MICHIGAN LIBRARIES

herself would demand in return machinery and finished products which China could not supply.

As against these pressing and practical considerations, it must be remembered that the Communist rulers, even if they desired to do so, cannot tackle the economic problem solely from the economic point of view. They are strictly bound by their whole political doctrine. This question has been much discussed in their press, and also by certain professors and other political and economic experts. Claiming that the Marxist system is the only one suitable for a modern society, they argue that, until the Chinese people have been fully indoctrinated, free intercourse with the western capitalist democracies, foreign concerns, and missionaries would constitute not only a hindrance but even a danger to the development of their principles, and can therefore not be tolerated.

The general impression one gets of conditions in north China, after more than 2 months of Communist experiments, is that of a civilization rapidly running down and reverting to a kind of agricultural community in which certain doctrinaire theories which the Chinese Communist Party has been preaching for many years are being enforced according to rote, no matter what the consequences. It is beside the point to argue that, unless the population is satisfied, the Communist experiment cannot succeed. The Chinese, especially those of the north, have always been a very docile people and could not in any case overthrow the regime, even if they wanted to. It is possible that for economic reasons the Communist experiment may fail in the long run, but not until there has been a split in the party itself, leading possibly to more civil wars and similar upheavals.

For Some Time I Have Been Concerned Over the Personnel Situation in the Armed Forces—We Are Having Great Difficulty in Attracting and Retaining the Caliber of Personnel, Both Officer and Enlisted, on a Career Basis Which Is Essential to Our Fighting Forces

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. BOYKIN. Mr. Speaker, the words I have just spoken are from a letter written to your own good self—by the Commander in Chief of the United States Army, Navy, and the United States Air Force. I do not think a more businesslike proposal has ever been presented to Congress than the career compensation bill, H. R. 5007, which is now before us.

I am not talking as an expert on matters of pay. I am merely talking as a hard-headed businessman who thinks he has retained some of the sense that God gave him and who is now invoking the use of that sense in an endeavor to inculcate into government the same principles of business administration that he applies to his own personal affairs.

Now I do not know much about the Army or the Navy, but I do know about the Department of the Air Force and I certainly ought to know. I ought to know something about its good—and how it functions—and what it does—for I am constantly reminded about it every time that I look upon and have a visit with my own boy.

He, and the young men like him, believe in the destiny of the United States Air Force.

They believe that it is the greatest power in this world for world peace and national security that we must exercise to protect the birthright of this Nation.

He tells me that the Air Force—and in fact all of our armed services—are so geared up today that they require the best and most highly skilled personnel necessary to the defense of these United States.

This incentive pay bill, or the Career Compensation Act, as we are discussing it here today—is the most direct adaptation of good business administration applied to the United States Government that I have ever had the privilege of voting for.

It contemplates an increase in compensation, not alone for the Army, Navy, and the Air Force of these United States, but also for the Marine Corps, the Coast Guard, the Coast and Geodetic Survey, the Public Health Service, all Reserve components, the National Guard and the Air National Guard, the militia of the 48 States, the naval militia of the 48 States and the Army and Navy Reserve of the 48 States.

As one listened to the debate that took place on the floor 3 weeks ago he was given the impression that all of the money that was going to be appropriated was to go to the brigadier generals but, to my mind, those who suggested those thoughts were indulging themselves in the sheerest of demagoguery.

Now I made it my business before coming on the floor of this House today to ascertain just how much benefit would go to the enlisted men and the privates in the armed service forces as well as to just what percentage would go to all commissioned officers in the armed forces. I am authoritatively advised that of all the money to be appropriated under this bill, more than 60 percent will go to enlisted men in the ranks, about 2 percent to warrant and other enlisted officers and only some 38 percent to all officers from second lieutenants to generals.

Mr. Speaker, need I remind my colleagues that not since 1908—41 years ago—did this House attempt to enact a pay bill for the commissioned officer personnel of the armed services.

Oh, yes; we amended officers pay with respect to this or that provision—we gave them certain exemptions and deductions in their income tax, we allowed certain overseas pay—which we now take away—and maybe increased subsistence but I do not think as of this hour that anybody in the United States knows just what the pay of the officers in each grade of our armed services really is as fixed by the law.

Certainly somebody determined what they would receive last month and someone will determine what they will receive under the law for each grade in the coming month, but I say without successful contradiction that the ascertainments are a matter of administrative ruling and the opinion of those charged with administering the pay schedules.

That is because of one thing, and one thing only: This Congress has not faced the facts intrinsic in this case, and spelled out the pay rates by grades specifically, in the letter of the law.

Mr. Speaker, here at last we come to something realistic. Here at least we attempt to apply to government a business principle of pay scales for all men in the armed services.

The rates of pay under this splendid bill brought out by our able committee of the armed services under the guidance of the Honorable PAUL J. KILDAY and our own beloved Hon. CARL VINSON finds all pay scales fixed on the basis of the responsibility and the service which the individual recipient renders.

They apply to all—from the rawest recruit to the highest four-star general, or admiral in the Navy. The increases they will receive are predicated on their remaining in the armed services and giving to this country all the benefits which they acquired in the training received at governmental expense.

This career compensation bill is not altogether a raise in pay for all ranks and grades of service. In many cases flying officers, who as of today receive 50 percent of their base pay as flying hazard pay, are going to find the flying hazard pay cut to as little as 10 or 15 percent.

There is another wonderful provision for enlisted men. From time immemorial it has been the practice to allow subsistence and housing only to commissioned officers. Under this new career compensation bill any enlisted man who spends as little as 7 years in the service of his country will if he continues in the service receive the same subsistence and housing allowances as are now extended to commissioned officers.

I cannot in the time allotted address myself as fully and completely to this matter as I should like. But I warn my colleagues that we in this House are flying in the face of all authorized recommendations and wisdom and acting without rhyme or reason if we reject all consideration of the wonderful work that was done for us by that marvelous group of independent, studious, thoughtful business executives who constituted what we call the Hook Commission.

It was not the braid and brass of the Pentagon or the Navy Annex that recommended this legislation to Congress. It was men such as Mr. Charles Hook, chairman of the board, Armco Steel Corp., Chairman; Father John J. Cavanaugh, president, Notre Dame University; Mr. Keithe S. McHugh, vice president, American Telephone & Telegraph Co., and Mr. Lawrence H. Whiting, president, American Furniture Mart Building Co., and Whiting & Co.

I wish to emphasize that the members of this Commission are all civilians and that they pay high income and other taxes. These, one group of men who have recommended the legislation, would in no manner expect, as citizen taxpayers, private profit by its enactment.

Their interest is your interest and mine—a public interest in peace and security of our country and the welfare of our Nation's economy.

Mr. Speaker, in conclusion let me make reference to the letter addressed to your own good self by President Harry Truman, Commander in Chief of the Army, the Navy, and the United States Air Force:

THE WHITE HOUSE,
Washington, May 23, 1949.

Hon. SAM RAYBURN
The Speaker,
House of Representatives.

MY DEAR MR. SPEAKER: For some time I have been concerned over the personnel situation in the armed forces. We are having great difficulty in attracting and retaining the caliber of personnel, both officer and enlisted, on a career basis which is essential to our fighting forces.

The Career Compensation Act of 1949 now pending before the House of Representatives will, in my opinion, provide the necessary incentive to follow a career in the armed services.

I feel that this legislation is a most important part of our defense program, and that it will do much to strengthen our national security in this critical period. Consequently, it is my hope that the House will see fit to take favorable action on this legislation.

Sincerely yours,

HARRY S. TRUMAN.

Acting in prudence, wisdom, and with a view to governmental efficiency, this House cannot do less than pass this bill—and let us do so by a rousing vote, if not unanimously.

CARE's Book Program

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following bill which I have today introduced to provide a contribution to CARE for its book program in war-devastated countries. The contribution is to be in an amount equal to a fund which was created during the war out of wages earned by conscientious objectors, working on farms and in hospitals. Under orders of the Selective Service System, employers to whom conscientious objectors were assigned for work were required to pay regular wages, but the payments were made into the Treasury where they were kept in a special deposit until the end of hostilities.

On March 7, 1947, the amounts in the fund, totaling $1,247,018.47, were covered into the Treasury as miscellaneous receipts. Technically, therefore, the fund no longer exists. The Comptroller General has ruled that the payments received by the Treasury belonged to the United States—24 Decisions of the Comptroller General 75, August 7, 1944. However, the United States received these payments as the result of the work of the conscientious objectors and not from taxes. Accordingly, in connection with previous legislative efforts to appropriate the fund for relief purposes, the Treasury Department has indicated that it had no objection.

An informal poll was taken in 1945 among the men whose earnings created the fund. This poll indicated a preference that it be used for relief purposes.

In 1947, my colleague from New York, Hon. STERLING COLE, introduced a bill, H. R. 1938, authorizing a contribution to the International Children's Emergency Fund of the United Nations in an amount equal to the special deposit previously in the Treasury. This bill passed the House, but in the Senate it was dropped from the Unanimous Consent Calendar on the objection of a Senator who felt that sufficient funds had already been appropriated by the United States Government for the work of the Children's Fund.

The CARE book program was developed to replace scientific, technical, and professional books lost during the war years in Europe and Asia. Distribution of the funds among the countries will be on a percentage basis determined by the original library facilities and the loss suffered.

The list of books to be sent has been prepared by a committee headed by Dr. Luther Evans, Librarian of the Library of Congress, with the assistance of representatives of the American Library Association, the New York Public Library, and the Yale University Medical School.

It will be possible to deliver books abroad at their retail prices in the United States without any additional charge for delivery, shipping, insurance, or overhead. The program has the active support of the Library of Congress, the American Library Association, the United States National Committee for UNESCO, and a number of educational, scientific, and cultural organizations.

Each book will contain a book plate bearing the name of the donor or donors and indicating that it has been made available through the CARE book program. The plates in the books financed through the proposed legislation could carry as the name of the donor, "The American people," or some similar phrase.

Starvation of the mind can be as great an obstacle to sound recovery as undernutrition of the body. Especially do professionally trained persons hunger for information regarding developments in the last decade in their field. Nothing gives greater lift to discouraged and oppressed people than books that enable them to be transported to other times and places, to see their own condition in the perspective of history, to share in the noblest thoughts and emotions great souls have regarded during the development of man on this earth. Surely few gifts could bring greater benefit than that of good books.

The text of the bill is as follows:

A bill to authorize the contribution to Cooperative for American Remittances to Europe, Inc., of an amount equal to the moneys received by the Selective Service System for work performed by persons assigned to tasks of national importance under civilian direction pursuant to section 5 (g) of the Selective Training and Service Act of 1940, as amended

Be it enacted, etc., That the Department of State is hereby authorized and directed to make to Cooperative for American Remittances to Europe, Inc., 50 Broad Street, New York, N. Y., a United States nonprofit voluntary relief agency registered with and recommended by the Advisory Committee on Voluntary Foreign Aid for operations in Europe, for use by said agency in its book program, a contribution in the amount appropriated pursuant to the authorization hereinafter made. There is hereby authorized to be appropriated for such purpose an amount equal to the amount covered into the Treasury as miscellaneous receipts on March 7, 1947, from the special deposit account which had theretofore been maintained in the Treasury for moneys received by the Selective Service System from private employers for work performed by persons who were assigned to tasks of national importance under civilian direction pursuant to section 5 (g) of the Selective Training and Service Act of 1940, as amended.

Labor Situation in the Hawaiian Islands

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, June 15 (legislative day of Thursday, June 2), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter under date of May 27, 1949, which I have received from Mr. Earl B. Wilson, of the California & Hawaiian Sugar Refining Corp., in which he comments upon the strike situation now prevailing in Hawaii. I also ask to have printed my response, dated June 14, 1949, which I once again defend voluntary arbitration as the proper method of settling the dispute in Hawaii.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

CALIFORNIA & HAWAIIAN SUGAR REFINING CORP., LTD.,
San Francisco, May 27, 1949.

Hon. WAYNE MORSE,
United States Senate,
Washington, D. C.

DEAR SENATOR MORSE: I have read with interest the CONGRESSIONAL RECORD of May 16 and your comments regarding the labor situation in the Hawaiian Islands and, in particular, the current strike of longshoremen.

Inasmuch as you say that you know very little about the local situation in Hawaii, I am going to take the liberty of putting before you, in as concise a form as possible, a somewhat broader picture of labor relationships in the Hawaiian Islands than merely the strike of longshoremen. It is always difficult to appraise a general situation by considering only the factors that are incidental to one specific aspect.

UNIVERSITY OF MICHIGAN LIBRARIES

The present strike of longshoremen has been, on the surface, the result of a disagreement over wages.

The water-front workers have made a demand on the employers for an increase in wages of 32 cents an hour to bring the level to within 10 cents of the San Francisco rate. The present longshore wage in Hawaii is $1.40 an hour. The union has picked as a basis for a parity demand an isolated and temporary period of time at which the relationship between wages paid on the water front in Hawaii and in San Francisco was the most favorable from the point of view of Hawaiian workers. But going back over a period of many years, there has been no fixed differential. It has varied according to economic conditions and the resultant outcome of wage negotiations in the two areas. The plea is used by the union that the same cargo is handled in Honolulu, for instance, as in San Francisco and therefore there should be approximately equal wages paid. This is hardly a valid argument since cargo is handled in different ports all over the world at varying stevedore rates. Wages in each case are generally influenced by local conditions and not by the point of origin or discharge of the cargoes. I might add at this point that the Hawaiian longshoremen have regular employment with their respective employers and therefore receive sick leave, group insurance and other benefits typical of a stabilized industry which are not received by Pacific coast longshoremen.

The Hawaiian longshoremen in rejecting the employers' most recent offer of an increase of 12 cents an hour have maintained their initial demand of 32 cents an hour and have called for arbitration. Arbitration of the application and administration of an existing contract may be perfectly logical and proper. Arbitration of rates of pay during wage negotiations leaves the employer in the position of not being able to control his costs; eliminates free collective bargaining; and places in the hands of a third party, who has no responsibility for the operation of the business, the success or failure of the enterprise. A union is in a position to demand an exorbitant rate at the beginning since an arbitrator generally makes an award somewhere between the union's demand and the employer's offer.

The work of the longshoremen in loading ships is one of the costs incidental to the production and movement to market of Hawaiian sugar and, therefore, this issue is of concern to the sugar industry. The Hawaiian sugar industry is at present the highest wage-cost area contributing sugar to the United States market.

From the point of view of sugar yield per acre, it is probably the most efficient branch of the sugar industry in the world. Despite this efficiency, its present costs are excessive in relation to the costs of its competitors because of the much higher labor costs in Hawaii. The Hawaiian sugar industry represents a capital investment (on the basis of actual dollars spent—of about $175,000,000. The combined net earnings of all the sugar properties in the Hawaiian Islands in 1948 were only about $500,000.

In view of its efficiency in the production of sugar, why is Hawaii unable to show better earnings when the present price of sugar is substantially above the prewar levels?

During the recent war, it was impossible for the sugar mills to obtain replacements and new equipment. First, there was difficulty in obtaining such supplies on the mainland, and secondly and more seriously, shipping space had to be reserved for war supplies. As a result, the plantations and mills were in a sadly run-down state at the end of the war. Postwar delays in deliveries of orders for machinery, equipment and supplies, made it impossible for the plantations promptly to correct the situation. Then prices began to advance, with the result that the improvement and modernization programs have required much more cash than would have been needed had the prices of 1945 continued. At the same time, substantial advances in wages were granted in all branches of the Islands' industrial life.

Hawaiian sugar, when finally prepared for the consumer, must compete with that produced in other areas, both cane and beet. Field and mill wages comprise in the neighborhood of 50 percent of the cost of producing sugar. The Hawaiian Islands pay the highest wages of any sugar-producing area of the world. In addition to this, the plantations give year-round employment to practically all of their laboring forces. I have been in all the major areas producing cane and beet sugar for the American consumer and in no area have I seen living conditions as favorable for the worker as those that have existed for many years on the Hawaiian plantations. Many of the plantations, especially the larger ones, maintain hospitals, recreational centers, baseball fields, and in a few cases, swimming pools, for their workers and families.

The plantations (at the insistence of the unions) no longer furnish free housing to their employees, but the rentals and service charges are exceedingly low.

Wages paid to field workers in the different sugar-producing areas vary considerably. It can be said that the efficiency varies also, and so it is difficult to balance the results of a day's labor in one area as against another which, after all, to the employer is the most important factor. Some areas have mechanized more than others, which gives a better work return per man-day used.

However, sugar workers earn approximately the following for 8 hours of work in the various production areas supplying sugar to the United States:

In Cuba, an average of from $2.50 to $3. Some cultivating work is at a lower rate but harvesting is at a higher rate.

In Puerto Rico the average is about $2.35.

In Louisiana the range is about from $2.90 to $4.60 for a 9-hour day. The higher levels are for operators of mechanical harvesting machines. During and immediately after the war these producers frequently had to pay somewhat higher rates in competition with war industries.

In Florida, because of piece-work harvesting, it is not too easy to determine daily wages, but cultivating is paid for at 45 cents an hour. Harvesting ranges from $3.60 per day to slightly higher levels.

In the domestic sugar-beet areas the minimum wage determination requires not less than 60 cents per hour for nonharvesting and 65 cents per hour for harvesting work. This is what generally is being paid but in some areas, particularly California, where competition with vegetable growers is high, it is frequently necessary to pay 80 cents to $1 per hour for limited periods. Because of the broad expanse of country which includes the growing of beets, local conditions affect wages substantially, but the afore-mentioned figures are tops.

In all of the foregoing areas the work is much more seasonal than on the plantations in Hawaii. As I have already stated, in Hawaii the employment is year-round for almost all of the workers.

In the Philippines, production costs are not yet stabilized, but it is known that on some plantations field workers are paid the equivalent of $1 to $1.50 a day, United States currency.

In all areas, factory workers average slightly higher pay than field workers, and here again the Hawaiian worker has an advantage because of his longer season of employment, as well as higher wage.

In Hawaii the minimum hourly wage is 78.5 cents (except on two plantations where it is 73.5 cents) for both field and mill workers, but less than 20 percent of the workers are in the minimum-wage category. The average earnings for all plantation workers (not including office) below supervisory grade in 1948 were $8.20 per 8-hour day.

In spite of the fact that the Hawaiian sugar industry is already paying the highest wages, both hourly and annually, of any sugar-producing area in the world, the union currently is demanding increases of 10 to 16 cents an hour. The employers have offered to make the present wage scale, which was established when sugar was $126 a ton, equivalent to a market price for raw sugar of $112/114 a ton (which is slightly below the present market quotation of $116 a ton), and have suggested that wages then move up or down with the sugar price. This has been rejected by the union and it appears as though a plantation strike is imminent. It seems quite clear to most of us in the Hawaiian sugar business that the union heads are determined to push for higher wages in the islands regardless of ability to pay. This is in keeping with the political and economic beliefs of many of these top union figures. In other words, the sugar industry in the Hawaiian Islands is confronted with a choice of being slowly choked by gradually increased costs in the face of declining returns for sugar or entering a battle now to prevent any further increases in the hope that the probable declining price of sugar in the years ahead will not be sufficiently sharp to put the plantations out of business. There can be but one choice; further increases in costs have got to be prevented.

While I am on the subject, I should like to point out the economic strangulation of the Hawaiian Islands that is possible when union leaders wish to exert pressure. The same union group controls the bulk of the longshoremen and warehousemen on the Pacific coast, certain of the crews of ships going to the Hawaiian Islands, the longshoremen in the Hawaiian ports, the sugar plantation and mill workers, the pineapple workers, most of the public-transportation workers, and several other smaller groups. We hear constant talk of business monopolies but there is no group of employers in the United States having the economic power possessed by this group of union leaders, and this monopoly power is being administered by men many of whom differ basically with the economic principles upon which our country is founded.

I hope I have explained that the merits of the strike of longshoremen cannot be judged without considering the entire labor problem of the islands. If arbitration of wages in the strike of longshoremen should be agreed upon by employers, it would be but one step further for the unions to demand and obtain the arbitration of differences between employers and union in the sugar industry. Further increases in the costs of producing sugar will close many of the island's plantations with resulting unemployment and decrease in general business activity.

Arbitration is frequently referred to as action in the public interest and correctly so in many cases, but it must have a companion principle, namely that industry cannot yield its very survival to a third party.

I hope I am not giving you the impression that I am antilabor. I believe in unions. They can be factors for stability in business. I believe in high wages. This enables our people to be good customers for the things they produce. But if high wages in one area are carried too far, competition forces the elimination of the producers of such area and the production goes to a lower-wage area.

The large majority of the Hawaiian sugar plantations are rapidly being pushed to the

wall by the inordinate demands of labor leaders who, apparently, are seeking just this result regardless of the public welfare or the welfare of the workers.

This letter has become much longer than I had anticipated. I hope you have had the patience to wade through it. As it is an effort on my part to supplement with details the situation you touched on in the CONGRESSIONAL RECORD, I would deeply appreciate your having this letter also inserted in the RECORD.

Sincerely yours,

EARL B. WILSON.

JUNE 14, 1949.

Mr. EARL B. WILSON,
California & Hawaiian Sugar Refining Corp., San Francisco, Calif.

DEAR MR. WILSON: Thank you very much for your letter of May 27 containing your comments regarding the labor situation in the Hawaiian Islands, and particularly the current strike of longshoremen. I shall be very glad to insert your letter in the CONGRESSIONAL RECORD.

It seems to me, however, that your letter adds up to a strong case for submitting the dispute to arbitration. The only alternative is a test of economic strength, with the public in the last analysis paying the bill. You say if arbitration of wages in the strike of longshoremen should be agreed upon by employers, it would be but one step further for the unions to demand and obtain the arbitration of differences between employers and the union in the sugar industry.

Your observation causes me to ask the question, "Why not?" If the industry has a strong case, as you appear to think it has, the industry would not lose in arbitration case on the merits. It seems clear to me that basic in your philosophy, as set forth in your letter, is the view that the employers should be left perfectly free to decide for themselves what the wages, hours, and conditions of employment in the sugar industry should be.

Whether you are willing to recognize it or not, I think the fact is that free collective bargaining in the American economy is here to stay; and employers and unions who take the position that they will not accept voluntary arbitration as a reasonable way of breaking economic deadlocks are going to lose the sympathy of the public.

I am afraid you are laboring under the misapprehension that arbitration is a mediating or compromising procedure rather than a judicial process which functions on the basis of the evidence in the record presented in a case. If you have a good case, I don't think you should fear arbitration, if you are willing to ask such impartial person as Cyrus Ching, Director of the Federal Mediation and Conciliation Service, to appoint an arbitrator to hear your case.

With kind regards,
Sincerely yours.

The Truman-Byrd Controversy

EXTENSION OF REMARKS
OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Wednesday, June 15 (legislative day of Thursday, June 2), 1949

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a series of editorial comments on the Truman-Byrd controversy.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Cincinnati (Ohio) Times-Star]

NATION'S EDITORS DISCUSS TRUMAN-BYRD CONTROVERSY

The President's reported chance remark that "there are too many Byrds in Congress" was, if he said it, petty and uncalled for. Most people in this country wish there were more Byrds in Washington.

Senator HARRY BYRD is no crackpot penny pincher. He believes now, as he has for years, that the Federal Government is spending too much and that there is plenty of room for economy. He has fought for a cut in Government expenses under Roosevelt, and now under Truman, and he has the facts and figures to back up his arguments.

Harry Truman is, of course, annoyed with Senator BYRD for another reason. BYRD opposed the President's nomination of Mon C. Wallgren to the National Resources Board. He was right in that opposition, too, just as he is right in championing economy, for Wallgren is not the man for the post. In the feud that seems to be developing between the two Harrys, the Senator from Virginia, enjoying the advantage of sound convictions, stands on firmer ground.

[From the Charlotte (N. C.) Observer]

Mr. Truman says there are too many Byrds in Congress. * * * a spendthrift naturally does not like the bank accountant who sends his checks back marked "insufficient funds."

And it is natural that Mr. Truman does not like Senator BYRD, because the Virginian just last week made a masterful speech in the Senate showing where the Truman spendthrift policy is taking us.

The Byrds cramp the style of the spenders, and the spenders don't like it or them.

But if we continue on the present course, there will come a time when all of us will rue the day that those in authority did not listen to the Byrds and that we, the voters, did not make them listen, as we clearly could have done.

For our money there are * * * too few—far too few—BYRDS.

[From the Charleston (W. Va.) Daily Mail]

With a careful look at Mr. Truman's program and at the available resources for carrying it out, Senator BYRD conservatively estimates a $10,000,000,000 deficit by 1952. What is so alarming about Mr. Truman's reply is that he does not dispute Senator BYRD's figures or attempt to minimize them. He merely complains of too many BYRDS in Congress and generally of those men who lack the Truman capacity for large plans. It is a poor joke on a subject which is hardly a joking matter. When the prospect of a $10,000,000,000 deficit inspires nothing more than a pun it is useless to pretend that the national welfare is being seriously considered.

[From the Carlsbad (N. Mex.) Daily Argus]

Many good Democrats will dispute President Truman's assertion to a group of veterans that there are too many Byrds in Congress. As a matter of fact, Congress could use a few more Byrds, in our opinion.

HARRY F. BYRD is one of our most able Senators. He stands like a lighthouse in the fog against the administration's moves toward socialism, and he is our country's outstanding soldier in the never-ending war against senseless Government spending and waste.

[From the Walla Walla (Wash.) Union-Bulletin]

President Truman's comment to a group of veterans that "there are too many Byrds in Congress" is one of those remarks which will probably be around to haunt him for some time. Aside from the fact that Senator BYRD is a recognized leader of the upper branch of Congress, and a member of Truman's own party, it is clear that the Virginia Senator has done an extremely valuable service to his country over a period of years by his insistence that some brakes be placed on Federal spending.

[From the Henderson (N. C.) Daily-Dispatch]

Not only are there not too many Byrds in Congress, there are not half enough.

[From the Toledo (Ohio) Times]

A news dispatch informs us that President Truman told a group of veterans that there are "too many Byrds in Congress." He asked them to see that "Congressmen are elected who are able to see things in the terms of national interest, rather than local interest and make large plans, rather than small plans."

Well, there is only one Byrd in Congress, namely, the hard-working, economy-minded, prodder of Presidents, Senator HARRY F. BYRD, of Virginia. The President's meaning is clear. He resents any move to restrict Government spending. He dislikes any Member of Congress who works for economy.

What Congress needs is more Byrds, more Members who have his great knowledge of fiscal matters, who works in season and out to reduce Government expenditures, to liquidate, as rapidly as possible, the public debt, and to reform the Nation's tax structure.

Mr. Truman's remarks are an indication of his political philosophy and his bankruptcy of leadership. If there ever was a Senator who had the "national interest, rather than local interest" at heart, it is Mr. BYRD. And, if the President knew what he was talking about, he would realize that only a sound fiscal situation makes "large plans, rather than small plans" possible. Mr. BYRD is doing infinitely more to promote large plans than the President.

[From the Tampa (Fla.) Morning Tribune]

Our answer—and the answer of a large majority of American taxpayers—to that blast is that we need many more Byrds in Congress. It is unfortunate for the people that there are only a few of that species—the forthright Virginian himself and those who join with him in urging governmental economies.

[From the Bristol (Conn.) Press]

Our comment is that we would appreciate more men in Congress with the independence and honesty of Senator BYRD.

[From the Christian Science Monitor, Boston]

If Mr. Truman had made no play on words but had simply said that there were too many men in Congress who oppose him, much less would have been made of his remark. For few would be aroused by the further words attributed to him—a plea for the election of more Congressmen "able to see these things in terms of national interest rather than local interest, and to make large plans rather than small plans." But few also would see any bar to Senator BYRD in this recipe for representation.

His largest role has been as a watchdog of the Treasury—surely a service to the na-

UNIVERSITY OF MICHIGAN LIBRARIES

tional interest. His opposition to the appointment of the President's friend, Mon Wallgren, as Chairman of the National Security Resources Board seems to have nothing small about it. This action is the one that seems to have put the Senator in active disfavor at the White House.

It has also been suggested that the anti-BYRD remark was intended to throw Presidential support behind Democrats who are trying to break the Senator's hold on the party organization in Virginia. Cracks are reported in the State machine, and an anti-BYRD Democrat, F. Pickens Miller, a liberal with a fine reputation, is said to have a chance in the race for governor. Now it would be no new thing for the White House to lend aid to one party faction in a State contest. But it is usually done with jobs, not words.

[From the Los Angeles (Calif.) Times]

Speaking of Senator BYRD, the President's personal criticism of him shows a point of view not widely shared. Instead of being parochial-minded, as the President intimates, the Virginia Senator is one of the few who see legislation from a national rather than a local angle. Instead of the country being better off if there were fewer Byrds in Congress, we could use a few dozen more.

[From the Augusta (Ga.) Chronicle]

Judging by the President's recent remarks about Congressmen who don't agree with him, it would seem that he is advocating the leader type of government under which the leader calls the turn and Members of Congress meekly attach their rubber stamps.

If we might be permitted to say so, perhaps we need more and not less Byrds in Congress.

[From the Albuquerque (N. Mex.) Journal]

Presidential purges have usually failed, thus it is going to be a colossal job now to purge a man whose only sin has been that of striving for economy and efficiency in Government.

[From the Providence (R. I.) Evening Bulletin]

Mr. Truman's ill-considered remark to a veterans' group that there are too many Byrds in Congress points up the sad fact that there is not enough fiscal sense in the White House. For several years the name of BYRD has been synonymous with economy, just as the name of Truman has been synonymous with extravagance * * *

If we are to achieve saner legislative action in fiscal affairs, we shall need more rather than fewer Byrds in Congress. Now, unfortunately there is only one in name. But even Mr. Truman concedes there are more in spirit. May their numbers increase, however much they vex the President.

[From the Minneapolis (Minn.) Morning Tribune]

On Monday President Truman was quoted as saying there are "too many Byrds" in the Senate. But the fact is that there are not enough of them. By calling attention to the grave dangers which lurk in Government spending policies, Senator BYRD serves the national interest with courage and distinction.

The country needs more statesmen in Washington who are not afraid to speak the disagreeable truth about the need for economy in Government. There are not too many Byrds at all; there is only a surplus of those who fail to perceive the disastrous consequences to the whole Nation of unbridled Federal spending.

[From the Cleveland (Ohio) Plain Dealer]

Ordinarily the spectacle of a Democratic President openly declaring political warfare against a Democratic Senator would be merely amusing, at least to Republicans, or at most would be dismissed as a personal feud between two rival politicians.

But the issues and implications inherent in President Truman's remark that "there are too many Byrds—B-y-r-d-s—in the Congress," meaning Senator HARRY F. BYRD, of Virginia, are of such a nature that they are bound to have wide repercussions during the remainder of the President's term of office.

For BYRD is not an ordinary run-of-the-mine politician. As chairman of the joint committee on reduction of nonessential Federal expenditures, BYRD has become a symbol of economy in Washington. And as one of the most influential Members of Congress from below Mason and Dixon's line, he is a respected spokesman of the southern Democrats.

This newspaper cannot agree with the President that there are too many Byrds in the Congress. On the contrary, there are too few.

[From the Los Angeles (Calif.) Examiner]

If President Truman means to imply that national interest is not well served by statesmen of the integrity of Senator BYRD, he will find very few of the American people in agreement with him. * * *

The American people have great respect for statesmen who serve them with sincerity and integrity, and they serve their own best interests most ably by voting their confidence in such statesmen—as the people of Virginia have so often done in the case of Senator BYRD.

[From the Mobile (Ala.) Register]

Senator HARRY F. BYRD's recent remarks about the enormous cost of Federal Government have attracted wide notice and comment.

For example, Senator JAMES P. KEM, of Missouri, has called the attention of Congress to an editorial in the Cincinnati Enquirer commenting on a speech delivered by the senior Senator from Virginia the other day.

"The Virginia Democrat," said the Enquirer, "is a foremost authority on economy in Government, or the lack of it. His words have more than ordinary weight, therefore, because he knows what he is talking about."

The Enquirer went on to comment that "unless Congress calls a halt in the onrush of centralization and greater spending," the fiscal picture may be even blacker than he (Senator BYRD) painted it.

[From the Morgantown (W. Va.) Post]

President Truman should have thought twice before he blurted out that there "are too many Byrds in the Senate."

Even those who don't agree with Senator BYRD must concede that he is one of the most useful Members of the Senate, and that if he were not in the Senate, the danger of waste and extravagance would be much greater.

Almost single-handed, Senator BYRD for several years has kept a check on extravagance in the executive and administrative branches of the Government, and has saved the taxpayers many hundreds of millions of dollars.

If Mr. Truman, in his own group of advisers, had even one man who followed the Byrd attitude toward waste and extravagance, the President would be spared many of the embarrassments which his spending policies have produced.

[From the Athol (Mass.) News]

Senator BYRD is one of the most valuable Members of Congress. He has been supported by the Virginia electorate for a long time. Evidently, the Virginians approve of his ideas and principles. Should he continue to carry on for the people of Virginia, or should he yield to President Truman?

[From the New Haven (Conn.) Register]

With his usual unwarranted self-assurance President Truman has now indicated displeasure with the attitudes of Senator HARRY F. BYRD, of Virginia. In Mr. Truman's view there are "too many Byrds in Congress." But it is the opinion of most careful observers of the Washington scene that there are not enough men like BYRD in any of the branches of government.

Great numbers of Americans from all parts of the country consider him one of the most important "watchdog" legislators in Washington. Only President Truman seems to find Senator BYRD's devotion to efficiency and economy a burden.

[From the Lewiston (Maine) Sun]

Apparently President Truman—and this is entirely in character with his actions over the past 4 years—does not think that zeal for Government economy is in "the national interest." A passion for decreased Federal spending has been the outstanding accomplishment of Senator BYRD's lengthy career in the Senate. The Senator and the people of the Old Dominion, to go no farther, ought to resent the President's fling at one of the most competent Members of Congress.

[From the Hartford (Conn.) Courant]

A great many people will believe that there are too few, not too many, Byrds in Congress.

[From the Columbus (Ohio) Dispatch]

Surely, President Truman cannot really know what he is doing when he openly expresses a desire for the liquidation of such stalwart men as Senator BYRD. Virginia's Senator has been long in the forefront of those patriotic Americans who have battled ceaselessly—and effectively—to restrain the encroachments of Federal bureaucracy, Federal greed and Federal power into the lives of individual American citizens.

President Truman's rightful place is solidly behind the men in Congress, who like Senator BYRD, would protect not only the individual citizen of the Nation but the Nation itself from the dangers of over-federalization and uncurbed and dangerous extravagance.

[From the Ohio State Journal]

If other Members of Congress were anywhere near as economy-minded as Senator BYRD, the Government's financial outlook might be substantially different. The trouble is that he sees the total picture, with an eye on tomorrow as well as today, while too many of his colleagues are local in their views, yielding to pressure groups and quite willing to let tomorrow take care of itself. The plain truth is that despite the Truman dictum what Congress really needs is more Byrds. Instead of being too many, there are not enough.

[From the Utica (N. Y.) Daily Press]

In other words, Senator BYRD is one of the few able men in Congress who have consistently opposed extravagant Government spending. Being a Democrat this criticism causes more discomfort at the White House

UNIVERSITY OF MICHIGAN LIBRARIES

than would be the case if it came from Republicans. But Senator BYRD happens to be correct in his basic argument and a great many of his fellow Americans agree with him.

[From the Fort Wayne (Ind.) News-Sentinel]

The tiff between Mr. Truman and Senator BYRD, in which the White House sneeringly referred to "too many Byrds," should interest many Americans because it pits an economy-minded legislator against a spend-happy President.

Men of the caliber of Senator BYRD are all too rare. The Byrd smear which Mr. Truman tossed out in his interview with a group of American Veterans Committee members, is a greater tribute to an able Senator than a studied compliment would have been.

[From the Miami (Fla.) Herald]

When President Truman made his all-graced intemperate remark last week that there were "too many Byrds in Congress," he set the country to asking what had gotten under the President's skin.

Senator HARRY BYRD, of Virginia, a few days before had made a bitingly clear attack on the administration's economics, the policy of spending billions without thought or care of where the billions must come from. The Senator's speech might have passed without too much notice by people generally had Mr. Truman learned to put a seal upon his lips. Now people everywhere want to know just what the Senator from Virginia had to say about the Truman economics.

Senator BYRD has made Government economy a crusade for the people. He has not been able to make a dent on the Truman doctrine of spending all we have to rehabilitate the world, even though we go broke as a Nation in the doing.

The Virginian does not underestimate the gigantic task that he has taken on—trying to teach his fellows and the American people that we are dangerously close to the bottom of the dollar barrel * * *.

That's why Mr. Truman petulantly complains that there are too many Byrds in Congress. Too bad for the country there are not more.

[From the Denver (Colo.) News]

Mr. Truman, it seems, did not admire Senator BYRD's speech.

He probably was more favorably impressed by the remarks of Senator J. C. O'MAHONEY, of Wyoming, who had just warned of dire peril "If the Government starts trimming its spending too deeply or firing too many employees."

So it's likely that a chorus soon will be shouting that O'MAHONEY, the Liberal and Progressive, is the true prophet, and that nobody should listen to BYRD, the conservative and reactionary.

But what Congress really needs just now is more men like BYRD, of Virginia—more men who react against danger of national insolvency and dare to advocate conserving the Government's credit.

[From the West Palm Beach (Fla.) Times]

We feel that Senator BYRD performs a vital, as well as a valuable, service by his demands for economy. It is apparent to him that wasteful bureaus are being imposed on the people and he fearlessly says so. Who could do more?

[From the Fort Lauderdale (Fla.) News Sentinel]

Mr. Truman forgets that Senator BYRD was elected to the office he holds. He is responsible to the people of his State and to nobody else. If he chooses to disagree with the President, it is because he believes the people of his State also disagree with the President.

[From the Bridgeport (Conn.) Telegram]

There is only one BYRD in Congress and that is Senator HARRY F. BYRD, of Virginia, one of the ablest, most respected and most useful men in either branch. His crime in the President's eye is that he is working endlessly for economy, to prevent waste, to cut out needless Government expenditures, to put a ceiling on our bond issues and our extravagance and to try to restore something like fiscal sanity to save us all from bankruptcy and depression.

[From the Houston (Tex.) Post]

A man's outlook is conditioned by his environment and experience. From the perspective of the average taxpayer and businessman the Byrd situation in Congress may look quite different from the White House view.

[From the Denver (Colo.) Post]

If President Truman is contemplating a purge of Democratic Congressmen and Senators who are too economy-minded to go along with the administration's ambitious spending and tax-upping program, he may have a bigger task on his hands than he knows.

The President seems to be showing a dogged determination not to look at the road signs as he goes along, but he may find out that Members of Congress in general have been watching them with eagle eyes.

The Communist Threat to Hawaii

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 15 (legislative day of Thursday, June 2), 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Our Misguided Friend," published in the Honolulu Advertiser, of May 31, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR MISGUIDED FRIEND

The influential Washington Post sincerely is the friend of Hawaii. Whenever an occasion arises where it thinks it can aid the Islands, it does so. Yet the Post's very affection sometimes does mischief by prompting it to action based on second-hand information that does not accord with the facts.

This happened Monday when the Post editorially minimized the Communist threat to Hawaii. Communists are few in Hawaii, the Post said. It could have added, also, so are they few throughout the United States. Yet wherever they are they work tirelessly and constantly for the overthrow of American Government. It is leadership, not numbers, that create the Communist threat.

The Post fails to take into account the arrest of the San Francisco commander of the strike that had blockaded Hawaii, harassing and tormenting the people of these Islands, denying them all but the bare necessities of life. Harry Bridges is under Federal indictment charging that he lied about his affiliation with the Communists. Indicted with him are the militant leader of the blockade, Henry Schmidt, and J. R. Robertson, the man who attempted to make Hawaii's public schools a training ground for his union. This does not prove them to be Communists. It does show the pattern of leadership in the strikes that repeatedly torment Hawaii.

What the Post needs is a first-hand look at Hawaii by its own trusted representatives. If it would take this look, it would see that no matter how few Hawaii's Communists may be, they have a strong underground leadership here that is destroying the social and economic life of the Islands. It would see, too, that it is the unmasking of this leadership and the guidance of its misled followers back into the paths of loyal Americanism that is Hawaii's problem.

Our advice to the Washington Post is to look at Hawaii with its own eyes, not through the rosy glasses of an informant.

Hawaii's life is at stake. It is no time for sophistry.

Disastrous Results of "Free" Medical and Hospital Care in New Zealand

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include an article from the Winnipeg Free Press of June 7, 1949. The advocates of Government supported and controlled medical service in this country are eloquent in their presentation of the alleged advantages it will bring; they seldom see, or at least they do not report, the grave disadvantages that will follow. Therefore, it is important for us to look at a country like New Zealand where the system has been tried for 10 years under most favorable circumstances. Clearly the bad results outweigh the good.

MEDICAL POLICY IN NEW ZEALAND

(By Dr. A. Hollenberg)

Free drugs on prescription is a curse rather than a benefit in the New Zealand medical policy. Many visits to doctors' offices are for nothing more than minor incidents requiring aspirin or a similar popular remedy like a laxative. Instead of going to buy this, the patient sees a doctor, gets a prescription which costs the state 7/6 ($1.50) and goes to the drug store, where he gets it free.

These visits for trivial matter so fill up the general practitioner's time that he cannot examine and much less treat the ones who really require his attention.

SICKNESS BENEFITS

Sickness benefits require certificates and each certificate each week means a visit to the general practitioner and another $1.50 cost to the state. Free health services and free medicine have bankrupted New Zealand medicine by throwing upon it a burden of useless work which costs the nation a large part of its income and which fails in its main purpose of healing the sick.

The specialist in New Zealand medicine is unduly penalized by this system, both because of the public hospitals being free for his services and because private hospitals are

so few and ill-equipped for modern work. It is true that he may charge his own fee for his services in his office or in private hospitals but fewer and fewer people can afford to pay him.

The public hospitals are not open to private patients—they are all for free patients. So he must either work for the state on a salary or depend upon work in a private nursing home or hospital.

There is great discontent among the specialists and those whose family roots are not too firmly planted are moving out to other countries. There is no inducement for young physicians to become specialists because they see that there is no future for them under the existing scheme.

It is sad to realize how ill-considered social change, with the best of intentions, has wrecked a sound system of medical care and substituted for it a frustration both to those that give and those that receive the services.

The hospitals are also free. If one goes to a public hospital, there are no fees to pay; if one goes to a private hospital or nursing home he pays the regular charges of that institution and receives in return a small daily allowance ($1.80) from the Government.

The effect of "free" public hospitals has caused an enormous increase in their utilization. In the public hospitals a patient may have to wait a few weeks to a few months for a bed, unless it is an emergency. The private hospital beds are few in number and are somewhat more easy to obtain because they are not entirely free and because the physician or surgeon must be paid for his attention.

In the latter case, the patient may claim 7/6 ($1.50) for every visit made to him by the attending physician from the central authority. New Zealand has 10 beds per 1,000 population, almost double what we have in Manitoba. "Free" hospitals mean greater occupancy and less easy access of a patient in need to a hospital bed.

Nursing services are equally hard to get. Special nurses are rarely seen. There is generally a scarcity of nurses just as we have here and there is a great effort on the part of the government to improve this situation by paying the student nurses a liberal stipend during training.

FEW IN NUMBER

Technical staff for X-ray work and laboratory services are also few in number. Personnel, as well as beds, are the bottle-neck of hospital services.

With "free" medical and hospital services, utilization has so increased that with present numbers of doctors, nurses, technicians, and hospital beds, there is great difficulty for those who are really sick to obtain the necessary attention either at home, in the doctor's office, or in the hospital.

In New Zealand, the government has sold something which it cannot deliver and by so doing has wrecked for several years to come a system of medical care which was second to none in the world.

Address by Alex Hillman at Commencement Exercises of Pacific University

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, June 13 (legislative day of Thursday, June 2), 1949

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered at the commencement exercises of Pacific University by Mr. Alex Hillman, outstanding publisher and authority on international relations.

I have been informed by the Government Printing Office that the manuscript will make approximately 2⅔ pages of RECORD, at a cost of $200.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, members of the faculty, graduating class of 1949, ladies and gentlemen, it is a great honor to be called upon to meet and speak with you today at the centennial celebration of our Pacific University, and the convocation of the graduating class. My gratitude is matched only by my humility. I am uncomfortably conscious of the high qualities which you have a right to expect from a speaker on this most important occasion.

Having been invited in early February to speak to you in late May, I promptly put the assignment aside and did nothing about it. Now this is something that you as students who have completed four university years, would know nothing whatsoever about. But there is an art which most of us cultivate in later years—the exacting art of putting off jobs until the last moment, then cramming grimly just before the dreaded deadline. This art reaches its greatest height in the spring, when climate and nature conspire to lay us low. I mention this because I realize it is something totally foreign to your own experiences and habits.

But I was brought up sharp by a telegram a few weeks ago from Dr. Giersbach. The programs for the convocation, he apprised me, were in the hands of the printer, and would I be good enough to wire a title for my address. So, looking neither right nor left, I decided that I would attempt to compart the world which I faced as a young man coming out of college in 1920, with the one which you young people face, coming out of college on the threshold of 1950. That explains how I arrived at the title of this talk today, "Two Worlds, 1920–50."

Only after committing myself to this ambitious theme did I realize how much I had bitten off. To do this thesis justice, one would have to rehearse a crowded half century of history and analyze revolutionary changes, physical and spiritual, affecting the very heart of man's destiny on this planet. Since I do not have the power to undertake anything so grandiose, and you do not have the time at this important moment in your lives, I must content myself with a rapid and cursory treatment of the subject.

What a different world my generation confronted after the First World War. America had emerged victorious and was entering the main stream of what we now call the Atlantic civilization. It was generally recognized that her military and economic prowess had made our country one of the great powers of the world. Proudly and confidently, we entered into a period of leadership of the Western World. England and America—the two great Anglo-Saxon civilizations—had proved their vitality. They were ready to lead mankind forward in economic, cultural, and spiritual endeavor, according to the best traditions of Anglo-American hegemony.

The military victory merely confirmed our deep inner conviction that we had the right to show the world the way. We had a robust self-confidence which the rest of the world, by and large, acknowledged as well-founded.

For democracy had vindicated itself. We had demonstrated that the loose, slow, lumbering, and sometimes inefficient democratic systems could defeat the bureaucratized German and Austrian autocracies, reducing their towering walls to rubble. What seemed most significant on both sides of the struggle—in the camp of the victors and of the defeated Central Powers alike—was the fact that the democratic governments had survived, while the autocracies had perished through military defeat and popular revolutions.

Russia fought on the side of the Allies in that First World War as an absolute autocracy, but it proved unable to mobilize its human and material resources. Having suffered crushing defeat by the Germans, it crumbled even before the war's end. The Romanoff dynasty and its medieval ruling class went down in a revolutionary storm, which, in turn, was tamed by the Bolsheviks. At the time, for all our misgivings, it seemed a development in the right direction.

Turkey, allied with the Central Powers, of course, shared their defeat. But a new reform regime was installed under Kemal Pasha. Though far from democratic by our standards, this new Government certainly seemed a long step in our direction for a people which had endured through the centuries a cruel, semioriental despotism.

All the evidence thus pointed to the triumph of democracy. One ideology seemed destined to prevail—that of a liberal government and free enterprise. Not only the Anglo-American powers but the continental nations seemed to be entering an era of relative peace, quiet, and constructive effort.

Of course, here and there we saw signs of international political tension. Italy, discontented with its spoils under the Versailles Treaty, seized Fiume from Yugoslavia. Poland grabbed a chunk of Ukrainian and White Russian soil from chaotic Russia. The Japanese made aggressive demands on China.

But these episodes seemed easily contained and caused no major world tremors. Even the early excesses of the Russian Revolution caused only momentary shivers. After the abortive Allied attempt to overthrow the Bolshevik rulers, the general feeling was that the revolutionists, once done with their birth pangs, would adjust themselve to the family of nations. The new rulers, it was taken for granted, would soon be wearing striped trousers and sitting at the table of normal diplomacy.

Nobody bothered too much with the fundamental Marxian ideology, or was too concerned with the Communist philosophy of class struggle and the eventual decay of all capitalist society. These were discounted as the mind play of intellectuals. The practical men of the Kremlin, it was assumed, eventually would take hold and in the long run they would be little different from the practical men in Downing Street or on Capitol Hill.

And indeed, as one follows the tortuous changes in Soviet Russian policy, one finds as many periods of Communist collaboration with western capitalism as periods in which they have openly fought our way of life. That, in fact, has been one of the problems faced by students of communism in action. When were the Communists being in earnest—when they insisted that all capitalism must be forthwith liquidated, or when, speaking from the other side of their mouths, they insisted that the two systems could live side by side?

In any case, the world scene in the twenties was fairly calm. As for the American scent, it was wholly serene. With the exception of a considerable price depression in 1921, the basic picture was good and promised to grow consistently better. On the economic side, we were constantly expanding, with standards of living for workers and standards of prosperity for employers constantly rising. We could honestly assure ourselves that the new economic era—as it was called at the time—had really dawned. Capitalism and democracy, those healthy and

inseparable twins, seemed to dominate the world scene.

We of my generation thus could face the future with complacent confidence that our world was a good world and self-evidently an enduring one; that we could fashion a good life for ourselves; that there was no insuperable challenge to us or to the world with which we were pleasantly in tune.

Yes, the era of the twenties offered immense promise. Our political and economic mores seemed to be meeting the essential requirements of a civilization in equilibrium. The American contribution to the techniques of production and distribution was the wonder of the world. Everybody seemed to be getting more out of life and work all the time.

And in matters political, the same thing held true. In a population that is basically satisfied, there are no cruel strains and stresses, no obvious complaints by minorities that they are being oppressed by the dominant majority. Examine the twenties and you will find very little literature of protest. Examine the programs of the major political parties, and you will find that no really fundamental issues agitated our people. The differences were only in degree, not in kind.

Here was an epoch without threatening tensions—and therefore, an epoch made to order for the processes of democracy. After all, democracy is not merely a political system. It is an expression of a certain spiritual climate, the political mechanism of a free culture. It can work most effectively when the strains and stresses within that culture are not irreconcilable. As a political system, it is geared to reason rather than to emotion, to mediation rather than to conflict.

All of these essential conditions existed in the twenties and we had every reason to believe that our democracy was not only working, but also gradually extending both in depth in our own country and in width all over the world. We believed in our civilization. In the perspective of time, it is amazing to look back on the confidence and inner tranquility with which the average intelligent American was fortified in viewing the world of the twenties.

Of course, here and there a prophet cried out in warning, but we were hardly in a mood to hear him. There were a few, a very few, who sensed that our failure to join the League of Nations boded ill. There were others who realized that all our financial schemes for exacting reparations from Germans were weakening the foundations on which the German Social Democrats hoped to build a sound democracy; they noted in alarm the deterioration of the young student body and professional groups in that country because of poverty and unemployment. But not many recognized that in such a climate, the new-born German democracy could not flourish. Only in retrospect was it realized how much trouble the world might have been spared if the democratic elements in the defeated countries had been aided and nurtured.

In general, there were too few people who could discern the seeds of a future cataclysm in the economic decline of Europe. Those who did see it caused hardly a ripple on the surface of prevailing smugness.

In our country, not many observers recognized the looming economic dangers. While technological progress of the big industries was providing the urban communities an ever higher level of living conditions, the gains were not properly filtering down to our farm population; unless this disbalance were cured, we would soon have a peasant class growing the raw materials for world consumption but increasingly unable to buy back the products of the cities. Increased production was not being fairly apportioned among labor, capital, and farmers.

In any free, spirited world, there are problems. That, of course, is the nature of life. What mattered, however, was that we lived in the basic conviction that all such problems could be solved once they were attacked with good will, patience, and fairness through democratic processes. What could be more natural, therefore, than the fact that young people, graduating from the colleges of America, should be armed with faith in their future? The world around them seemed stable and the prizes of the good life within every man's reach if only he adhered to the basic Christian virtues and social decencies.

I trust that in describing this period of the twenties, I do not sound too much like a nostalgic middle-aged man looking back on the landscape of his youth. But if this brief attempt to recapture the spirit of that period is not as objective as it might be, it is still true in its basic outlines. And it provides a startling contrast to the period you must deal with as we approach the fifties.

Suddenly, in 1929, from a cloud no bigger than a man's hand, so small that the most intelligent observers failed to see it and to prepare for it, came the storm of an unprecedented economic depression. It engulfed not only America, but the entire world. And it brought in its train consequences greater than anyone could foresee.

Almost half of our working population was unemployed. Bread lines appeared in the large American cities. Local relief machinery proved too meager to care for the victims of the sudden catastrophe. Financial markets, wheat markets, commodity markets, were swept by panic. The savings of a nation's lifetime were destroyed overnight.

The holocaust, of course, was not limited to our shores. It had begun, in fact, in other countries years earlier, and now it worked its havoc throughout the world. In a few short years, the values we had built in generations crumbled all around us and seemed marked for utter destruction.

And the disaster was not confined to the economic domain. Everywhere it raised the dread question whether free democracy, free economy, could work at all; whether we were doomed each 10 or 15 years to strike bottom in an economic cycle, making life unbearable and threatening to annihilate our concepts of freedom in every sphere. More terrifying than the physical suffering was this creeping bankruptcy of faith in our way of life, in our insights and traditions. The underlying pattern of our existence began to come apart.

It would be difficult to exaggerate the political, economic, and especially the moral effect of the thirties on our present-day world. Perhaps we are still too close to that phenomenon to evaluate it properly. But of this, we may be sure, the fevers of the thirties have left indelible marks on our psychology, and that there is as yet no convincing sign that these marks can or will be fully eradicated.

Because we started from a firmer base, with more fat on our bones, America actually has felt the impact less than Europe. On the other side of the Atlantic, the repercussions were truly cataclysmic. Two of the great centers of western civilization, Italy and Germany, saw the emergence of two wicked, maniacal figures, who became symbolic for their time. For, unfortunately, the philosophy of despair of Musselini and Hitler, expressed in violence and bravado, found disciples in all other countries.

But these were only the most obvious symptoms of a disease that went to the very marrow of our world. Mass unemployment and mass starvation caused the mass questioning of all accepted values. Old institutions which had commanded the allegiance of people for centuries began to collapse. A fear psychosis was generated probably without match in modern times. Fear has been the predominant note in men's minds and in their conduct ever since.

The era of the twenties captured popular imagination in the search for abundance economically and the good life spiritually. But the era of the thirties and the war-torn forties brought instead a search for security—no matter how low the level, no matter how high the price. Millions everywhere were prepared to bargain away any human and spiritual values in return for animal security. And there is little doubt that this dark and essentially defeatist mood will persist in the fifties.

In its simplest and most understandable form, we see the frantic drive for security in the policies of trade unions. Fearful of unemployment, they tend to insist on job monopolies in their particular fields—so much so that it has now, for instance, become more difficult to gain admission to a bricklayers' union than to get elected to Congress. Deep in the psychology of the craft union is the memory of the thirties, when 75 percent of its members were jobless.

Wage earners, however, are not the only ones under the powerful influence of the fear psychosis. Talk to the American financier, banker, industrialist, merchant. They will tell you that never again will they borrow so much or lend so much; never again will they hazard what they have in order to make more. The spirit of bold risk-taking, the adventuresome plunge into the unknown, do survive. But they are more restrained and circumspect. In American economy, youthful zest has tended to give way to middle-aged caution.

We must face up to the truth that the dominant economic and social characteristics of the forties are related to a search for safety rather than the former search for enlarged horizons. In America this shift in emphasis has weakened the pioneer ingredients in our social make-up. Security has taken precedence over adventure as the leitmotif of existence. We want so desperately to protect what we have that we hesitate to reach out for more.

Under these conditions, a society cannot expand and indeed, seems fated to contract. Government is growing ever bigger, and in that measure, individual initiative and independence are being constricted. The State, called upon unavoidably to protect submerged groups, is compelled to extend its dominion over all groups.

I do not criticize this turn of the wheel of history, this determination of underprivileged segments of our people to look to the government as the Great White Father. I am only trying to describe it. Happily in our country, we have not yet surrendered basic democratic processes to this obsession with security. Perhaps it will be our role and our great good fortune to demonstrate that we can employ the State to shield all submarginal groups without sacrificing our freedom in the process.

To do this, we shall have to muster more political ingenuity than most of the European nations have been able to muster. Even before the war, a substantial part of the old continent gave up its freedom to pay for a pledge of security—only to learn the hard way that they were paying for a great illusion. Their demagogues have succeeded in stealing the people's freedom without providing the economic safety they promised. They have succeeded in impoverishing the rich, but not in enriching the poor, or even in guaranteeing the absolute minimum of food, clothes, and shelter. Rarely in human history has a trade been made for so many traditional values in return for values not yet accrued and probably never to accrue. Never before, to paraphrase Mr. Churchill, has so much been sacrificed for so little.

Since the end of the war, that exchange of freedom for security has been stepped up.

UNIVERSITY OF MICHIGAN LIBRARIES

The fact is that a large part of the human family has already sacrificed the political and spiritual benefits of five centuries of the Protestant revolution which brought with it free press, freedom of thought, and free political institutions. The soul, the conscience, the dignity of the individual, have been surrendered to the keeping of omnipotent States, with economic security as the supposed quid pro quo. The sinister principle that the end justifies any means, has overtaken whole governments and whole peoples.

In its extreme form, this defeat of the human spirit is the totalitarian Communist state, in which the human being is reduced to a cipher, and in which an abstraction—society—becomes the only valid entity. That philosophy, armed to the teeth, has already conquered half of Europe, and is at this very moment, sweeping over Asia. It has its intellectual and political fifth columns in every other country, our own United States, not excepted.

The most alarming fact is that a great many otherwise intelligent people, raised in a tradition of individualism and freedom, people who logically should be the stoutest defenders of our system of life, forsake us for the chimeras of the totalitarian promise. They deny the mainsprings of our whole history and in effect, become internal enemies.

In our universities, in our professions, even in business and finance, there are those who would destroy the essence of our way of life and substitute some version of the totalitarian machine. What is the reason? Is it a hunger for power? Is it an impulse to escape the challenge of a difficult period?

Whatever the answer may be, we must concede that here and everywhere there is a dangerous decline in faith among people who should take the lead in bolstering that faith. In their defeatism, they concentrate on the injustices around them without realizing that more and worse injustices are implicit in the system they would impose upon us.

It seems to me that the fundamental problems of our time are economic and political only in a secondary sense—in the same way that the symptoms of a disease are secondary. The true essence of our trouble is spiritual. You young people who are about to take up the burdens of maturity, must deal with a serious, basic problem—the failure of our culture.

If the downhill trend is to be arrested, we must first of all restore belief in the world that we have created, in the set of values we have inherited. We must once again insist on freedom at any cost, on the dignity of man under any circumstances.

It is not true that the danger stems from economic conditions. Actually our world has done a monumental job on the material level. In America, we have attained for the overwhelming mass of people standards of living undreamed of in all human history. Even the least privileged segments of our population enjoy material advantages that are the envy of Communist nations.

No; the danger is to be found, I am convinced, in a deterioration of spiritual fiber. We have failed increasingly in our devotion to a culture which makes possible and places the highest value on free conscience, free speech and thought, free political institutions, and free economic techniques. These are the fundamentals; everything else is trimming. If we compromise them, we give up everything. If we consent to bargaining them away to the highest demagogic bidder, we shall be lost beyond recovery.

I am not underrating the importance of economics. But we have been so intent on making our material position more tenable—on enlarging our so-called security—that we seem increasingly willing to throw away the fruits of 500 years of progress in the human and spiritual domain—the victories of five centuries of struggle—for freedom.

There has never been a time when we had more need or pride in our culture. Instead of apologizing for our way of life, as has become so fashionable, we must learn to glorify it. Admitting its shortcomings—perfection, when all is said and done, is beyond mortal compass—we must cease to make light of its attainments and potentials. We must renew and fortify our allegiance to the basic design of a free society.

In the great duel for the mind of man now under way, the totalitarians have the offensive. They hawk their spurious wares in loud voices, with unlimited vigor. Perhaps this is not unnatural. They are on the aggressive with a world to win, whereas we, who have only a world to defend, are forced into the defensive positions.

It is precisely this advantage of initiative we should resolve to capture. Truth is on our side; experience is on our side. We are doing a better job for our people, no matter how it is measured, than any of the wretched, half-starved, police-ridden countries behind the iron curtain. Our populace is still free and vital.

Once we accept the challenge of these times in a consciousness of our right and our advantages, we can bring color and verve and adventure to the defense of our world, and that will turn it before long into an offensive against the economic destroyers—against the spiritual vandals.

Our world will triumph only if we believe in it deeply, to the exclusion of compromises and surrenders. Only then will we be in a position to mobilize the enthusiasm for the great struggle now under way in every country, and in every individual mind, between freedom and slavery—between the concept of man as an inert thing and the certainty of man as an inviolate creature of God.

We have only just emerged from a great war. I know that many of you graduates took part in that conflict. Once again, as in 1917–18, we proved that the loose, easy-going democracy based on individual dignity can win through. Our productive genius, our technological miracles, astounded the world. Not only did we provide the arsenal for democracy—we provided democratic armies as strong as anything the world has ever witnessed. Most significantly, the individual American has shown in action a courage, a tenacity, and a capacity for heroism and self-sacrifice without match in man's career on this earth.

We have in large measure been cheated out of the fruits of our victories on both the diplomatic and the spiritual sides. By reason of a series of political blunders, we now face a ruthless opponent who stands astride the Eurasian continent from the River Elbe to the brink of the Pacific, an opponent who even now is pushing his dominion over the teeming populations of China and the rest of Asia.

Distressing as this situation may be, we cannot afford tears and regrets, but must deal with the existing reality. We dare not become disheartened by the magnitude of its challenge. And we can again be victorious. We possess both the human and the material resources for this purpose, provided only that we can back them up with spiritual resources to match.

The struggle will not be resolved in a day or a year. It is likely to be the background for the major portion of your active lives, as you now step forward to reinforce us of the older generation and then take our places right down the line. But it will probably be resolved in your lifetime, and therefore it is very much your problem.

Its issue will not be determined only in the great arena of international affairs and the smaller arena of our national scene. The duel between two ways of life, two clashing philosophies of good and evil, will be settled in the smallest communities and in the final analysis in your immediate and intimate circle of activities. Its weapons will not be merely dollars and explosives. These will be worthless unless we are fortified with the weapons of deeply cherished ideals.

It is not exactly an optimistic picture I have drawn. The temptation on occasions like this is to pretty up the vista with a Pollyanna brush. But I am convinced that our youth can "take" the truth and take it straight. That is why I have chosen to draw the contrast between the world of 1920 and that of 1950 without too much retouching.

Unquestionably, you young people emerging today from the shelter of your college years, will find a world that is tougher, less resilient, on the whole more hazardous than the one I faced as a graduate three decades back. Your temptations to follow false gods and betray old ideals will be more numerous and stronger than those with which we wrestled.

But if I know anything of the temper of American boys and girls—especially out here in the pioneer West—you will accept the more difficult conditions as a test of the best that is in you. The very size of the problems will lift your spirits—will imbue you with the feeling of a good fight to be fought, fought cleanly, and won. It holds the guaranty that you will find in yourselves reserves of energy and wisdom and daring that otherwise might have remained dormant.

We who have been close to the events of the years when you were in your formative stage, cannot promise you an easy road. But we can promise you an inspiring road and endless opportunities to prove the real quality of the American mettle. Naturally we would be easier in our conscience if we could usher you into a period more peaceful and placid. But every period has its own compensations.

The American conception of the good life does not rest on any class or group or section. It does not even rest on the Nation or on society as a whole. It is geared first of all, to the individual—his opportunities, his freedom to make the most of these, and his spiritual health. Which is another way of saying, that it rests on you. You cannot play false to yourself without playing false to your neighbors, your time and, in the final upshot, to a world in which America is the last outpost of civilized democratic values.

That world needs the energy, the devotion and the faith with which you who are graduating today have been armed by your home, your religious mentors, your teachers. I have no doubt you will use them boldly and well.

Since I have a son of my own, I permit myself to speak for your elders, whether in this hall or elsewhere. They look upon you with pride and with confident hope. In their name, I welcome you to the ranks of active participants in the life of this period. Whether it will be a time of decline or a time of renewed upsurge will depend primarily on you.

We have learned the hard way, as you will learn in due time, that life is noble and thrilling, even when it is hardest; and sometimes, especially when it is hardest. Whether you reach the particular goal of your private dream, you will discover, is less important than the gallantry and zest you bring to the journey. The more you put into life—in terms of courage and high idealism—the more you get out of it.

Rarely in our history has there been more vital and exhilarating work to be done, never more need for the leadership you can provide.

God bless you!

Stassen's Star Rises

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by the astute political writer of the Washington Star:

STASSEN STRENGTHENS HAND AS PENNSYLVANIA CITIZEN

(By Gould Lincoln)

Pennsylvania in 1952 may have a first-flight candidate for the Republican presidential nomination—Harold E. Stassen, president of the University of Pennsylvania. Mr. Stassen, former Governor of Minnesota, has become a resident of the Keystone State and soon will qualify as a voter there. Much will depend on the attitude of the Republican leaders toward Mr. Stassen when it comes time for picking the State's big delegation to the Republican National Convention, now 3 years in the future.

Senator EDWARD MARTIN, of Pennsylvania in 1948 was Pennsylvania's favorite-son candidate for the GOP nomination. At a crucial moment Senator MARTIN withdrew his candidacy and urged the Pennsylvania delegates to vote for Governor Dewey, of New York. Working in alliance with former Senator Joe Grundy—who has been a great factor in Pennsylvania politics for more than a quarter century—Senator MARTIN, despite the opposition of Governor Duff and Joseph Pew, who had no use for Governor Dewey, was able to throw 41 of the State's 73 delegates to the New Yorker. It was this strategic move that clinched the Dewey nomination.

DUFF BID FOR SENATE SEEN

The Pennsylvania Republicans' particular job in the next year is to name their candidates for Governor and Senator. Governor Duff, under the State law, is ineligible for reelection. A Pennsylvania Governor cannot succeed himself. Governor Duff, according to reports, would like to make a bid for the Senate. It has been a kind of unwritten law that Pennsylvania should have Senators from both ends of the State, east and west. Senator MARTIN and Governor Duff both come from western Pennsylvania. It also remains to be seen whether the bitterness of last year's fight has been eleminated and whether Senator MARTIN and Mr. Grundy would go along with a Duff senatorial nomination. With Governor Duff in the Senate, however, Mr. Stassen might have a strong supporter, for the Governor last year would have been glad to take Mr. Stassen for a presidential nominee—or Senator VANDENBERG, of Michigan. It is always possible that Governor Duff, as Senator, may have presidential aspirations himself.

Jay Cooke, a strong Stassen man, is a candidate for the gubernatorial nomination. It is pretty well understood that Colonel Cooke wants the governorship, with its vast patronage, so that he may be able to influence the selection of a Pennsylvania delegation to the Republican National Convention favorable to the nomination of Mr. Stassen for President. Colonel Cooke has been prominent in Republican politics for years and in 1940 was the party's senatorial nominee against former Senator Guffey, and he made a good run, although he lost in that Roosevelt year.

President Stassen has been mentioned as a possible candidate for governor himself, and if he could be nominated and elected he would, of course, be in an ideal position to become Pennsylvania's candidate for a presidential nomination 2 years later. There seems, however, to be too much against such a program. Mr. Stassen knows practically nothing about Pennsylvania's problems and about the State government; nor could he acquire that information in the short time before next year's campaign. If he were a gubernatorial nominee, Colonel Cooke might try for the Senate. That is mere speculation. Mr. Stassen himself has made no move whatever looking to such a program.

STASSEN EAR TO GROUND

By all accounts, Mr. Stassen is making good as president of the university. This is not surprising, for Mr. Stassen has made good at every job he has tackled in his 43 years—as Governor of Minnesota (an office to which he was elected three times), as a captain in the Navy during the war, and as a United States delegate to the United Nations when the charter of that organization was drafted. In fact, he is doing himself no harm in Pennsylvania, but a great deal of good in his administration of the affairs of the university.

There is no doubt in the minds of persons who know Mr. Stassen that he has political aspirations, however; that he has his ear close to the ground; and if he could get the backing of Pennsylvania's big delegation to the 1952 national convention, he would be in a strategic position, particularly as he would undoubtedly have support from Minnesota and other Midwest States. His campaign for the presidential nomination last year made him many supporters throughout the country.

Memorial Day Address by Rev. John S. Streng

EXTENSION OF REMARKS
OF
HON. KENNETH S. WHERRY
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 15 (legislative day of Thursday, June 2), 1949

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD a Memorial Day address delivered by Rev. John F. Streng, pastor of St. John's Lutheran Church, Beatrice, Nebr., before the American Legion post at Fairbury, Nebr., on May 30, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow Americans, it is with sincere humility that I publicly acknowledge my utter unworthiness to speak upon this occasion. Surrounded by a gallant group of present and ex-military service personnel, it would be presumption, bordering on sacrilege, were I to attempt to extol their career or detract from their noble deeds. They stormed the bloody beachheads in dozens of operations; they manned heroically the naval task forces defending the seven seas; they shuddered amid flak and fire as their planes screamed toward its target; they suffered the privations and human indignities of concentration camps and prisoner-of-war stockades; they saw their buddies fall at their side, and remember the horrible scene of red-hot human blood gushing from fatal wounds, staining a few inches of devastated no-man's land. They stood in silent requiem as they watched their comrades lowered into the bivouac of the dead.

Should we, who remained in the sheltered security of the homeland be given the honor to speak on this Memorial Day? God forbid, that we desecrate this moment with vain repetitions of pious platitudes. This is a hallowed hour in our Nation's glorious history. Let me, therefore, speak earnestly and seriously.

In the hush of this sacred moment let us forget personal aims and ambitions, and concentrate upon the tremendous sacrifice in human blood shed to preserve our way of life. Let us dedicate these moments to a solemn review of the three fundamental R's that will perpetuate a nobly conceived patriotic Americanism. I speak not of readin', 'riting, and 'rithmetic; this is no time for facetiousness.

I submit to you three R's which must of necessity burn themselves deeply into our hearts this day, namely, I. Retrospect, II. Repentance, III. Rededication.

I

Civilizations world without end have always dedicated memorial days and documents to God and man. From the altar of stone, erected by a grateful Hebrew Nation on the banks of the Jordan River, to the Tomb of the Unknown Soldier on the banks of the Potomac River, peoples have given expression of their gratitude to God and fellow men who saved them from impending doom. On this day, a grateful nation pauses again to thank Almighty God, and pay tribute to heroes proved in liberating strife, who more than self their country loved and mercy more than life. Lest we forget, it is our solemn duty to speak briefly in retrospect on the significance of this globe-encircling observance.

Thinking citizens may well carefully ponder historic proclamations made by national heroes and leaders, who, under God's guidance so nobly shaped our Nation's destiny since the days of the founding fathers. American fathers and mothers may well gather their loved ones in the family living room and solemnly discuss the fundamental principles of our country. This is the day when gold-star service flags should be reverently removed from above parlor portraits of deceased heroes, and hung again in front-room windows. And every passerby might at least remove his hat in respect and heartfelt gratitude. This is the day when criticizing rabble rousers, armchair patriots, conscientious objectors, and draft dodgers should visit a gold-star mother, burying her furrowed brow in tears, yet inwardly assured and proud that her son sacrificed his last ounce of blood and devotion that this country, under God, might not perish. Such painful experience might awaken a patriotism that is more than skin deep.

Carved into the gleaming white marble canopy of the Tomb of the Unknown Soldier is this simple tribute: "Here rests in honored glory an American soldier known but to God." This shrine is the national symbol for countless rows of white crosses carefully guarded in vast American cemeteries on foreign soil; a symbol for the unknown resting places for thousands bedded in the cradle of the deep; a symbol of those lost in action without benefit of identification. We join, in reverent spirit, the innumerable caravan of crowned champions that has marched from glory unto glory. This day, their massed chorus of victory, mingled with the cadence of agony and admonition, reaches us from the far corners of the world to impress upon us that eternal vigilance is the price of liberty. In grim reality their unconquered spirits hover over us, disturbing our conscience with the merciless question: "American countrymen, did we, or did we not die in vain?"

UNIVERSITY OF MICHIGAN LIBRARIES

II

Well, did they? What is the meaning of this day and its memorials? Where is the public which but 4 years ago shouted that they would never forget what these heroes have done? I say we have desperate need of repentance and self-examination. There are too many that say: "Why spoil this day's fun, frolic, and festivity, with a farfetched, uncalled-for admonition to repentance? What do I need to repent of? I am an American citizen. I stand on my rights." Here lies the dread cancer of our times: a complacent callousness, an unprecedented ignorance and willful disregard for America's fundamental right to greatness. As a Christian citizen, I submit that the only way in which America can retain her God-given greatness, is to return unconditionally to an appreciation of the eternal principles of God and the fundamental concept of our accepted democratic Government.

The Holy Bible, which our pioneers cherished, has become a forgotten book; the Constitution of the United States has become an unknown document. We have forgotten the blood-bought history of our Nation. Today America has a date with destiny. And speaking of dates how many citizens can recall what really happened in 1776, 1812, 1863, 1898, 1918, 1945. The public is saturated with obscene, pessimistic literature, while copies of the Declaration of Independence lie undisturbed on library shelves. People revel in moronic radio and movie propaganda, while genuinely disturbed statesmen speak to deaf ears. Patriotism has apparently been wrapped up and shelved; even the Stars and Stripes have gone into hiding in many a store and home. American youth croons every modern juke-jive from memory, but cannot sing even the first stanza of our national anthem. Civilians glibly prate about a Third World War that would wreck civilization. They cannot conceive an America burned to the ground and sold into slavery. The people are afraid to think for themselves.

Let us frankly admit that we have contributed nothing to our Nation's glorious past. It would, therefore, seem far better to cease our boasting and bragging. We ought to call a halt to hilarious centennial celebrations and give some serious thought to the design of world history during the next 5 years. That may be all the time we have left on this globe.

It is an insult to our deceased heroes to speak of world peace while we permit American security to disintegrate and greed invades every community of our free country. The Jeremiahs of lamentation are always ready to take over our Government. Is there no moral and spiritual fiber left among the common people to unite and shatter the monopolistic world-empire dreams of foreign and domestic Quislings, who never slumber or sleep? Every military cemetery and every lone grave on which flutters our American flag is an indictment upon us that we too are guilty of death if we fail the heroes who sleep beneath the hallowed sod.

The Bible states: "Unto whom much is given of him much will be required." So abundantly has God lavished His goodness and mercy upon America that we take everything for granted without even giving thanks. We do not want to be reminded that what we have inherited constantly presents its bill to us and calls for payment in full. What the citizen refuses to sacrifice in taxes, tolerance, and talents he must pay with precious blood of his children to preserve peace. Strength that does not serve God and man becomes stagnant. We either pay the price of making democracy available to all who desire it, or its springs will dry up here at home. We either export Christianity and Christian democracy to the uttermost ends of the world, or both will become a sounding brass and tinkling cymbal. No American can ride the "gravy train" without paying the fare.

We boast of life, liberty, and the pursuit of happiness, but we refuse to shoulder individual responsibility. Liberty is not license to do as we please; free speech does not mean malicious slander; a free press does not permit libel; and a free religion is no pass to Paradise. We must repent of our sins and selfishness and ask God to have mercy upon us. We need to apologize to yesterday's heroes and take stock of our brand of Americanism.

We need to pause this day in shame before our weather-beaten, unkempt, almost illegible, warped rolls of honor, tottering in a thousand city squares. There's something radically wrong with a patriotism that will not even pause in its mad rush to make another dollar, while some overseas hero's casket is lowered into its final resting place in the local cemetery. It is a scathing indictment upon any community to pay so little heed to committal services of our war dead. I submit that it is our solemn duty to close every business firm and toll every church bell during the hour when such services are held. And if someone objects that they might be losing money, then I say that these young men lost their lives. If they had not fought for us, we wouldn't have a business left to open.

III

No government can save the people. The people are the government. To that end we must rededicate our life to the service of our country. We cannot tolerate compromises or substitutions for liberty. We must restore and retain a United States, for in union there is strength. Let us denounce and destroy that vicious philosophy which segregates groups of citizens under a fictitious name, such as labor, capital, industry, religion, and then wantonly restricts their rights. That is the diabolic principle known as divide and conquer, so successfully used in devastated Europe. We can keep America's coat of arms unblemished only when we stand shoulder to shoulder. The average citizen is not, by nature, given to prejudice and hatred. Only when he is lulled to sleep by subtle propaganda, or roused to false hysteria, does he act like an animal.

Since God is Creator and Preserver of mankind, let us worship Him, and dedicate our life to a spiritual righteousness that exalteth a nation. Since church and state are separate powers under our Constitution, let them live peaceably side by side, each laboring constructively in their respective sphere of responsibility. Since American education is designed to develop good citizenship, let that be a required course of instruction in every public and private school of this land. Since the church is the bulwark of a Christian people, let us respect and restore her leadership in every community.

In my humble and honest opinion, we are faced with unconditional surrender either to God and country or chaos, either to Christianity or totalitarianism, either to democracy or dictatorship. We shall either be loyal American citizens or sell out as traitors! Will we have to make room at Arlington for another Unknown Soldier? Not the atomic bomb but the atoning power of God will decide America's future. Let there be no doubt about the eternal supremacy and sovereignty of Almighty God in shaping the destiny of any nation. We must learn to decipher the handwriting on the wall of the earth. It may be much later than we think.

On VE-day, 1945, Gen. Dwight Eisenhower, broadcasting from the suddenly silenced European theater of operations, said:

"As we celebrate victory in Europe let us remind ourselves that common problems of the immediate and distant future can best be solved in the same conceptions of cooperation and devotion of the cause of human freedom. Let us have no part in the profitless quarrels in which other men will inevitably engage. This we shall remember—and in doing so we shall be revering each honored grave, and be sending comfort to the loved ones of comrades who could not live to see this day."

On VJ-day, 1945, Gen. Douglas MacArthur told a waiting world from an American battleship anchored in Tokyo bay:

"We have had our last chance! If we do not now devise some great and more equitable system, Armageddon will be at our door. The problem basically is theological and involves a spiritual recrudescence and improvement of human character. It must be of the spirit if we are to save the flesh."

I submit, that when military leaders, hardened by war's grime and bloodshed, steeled obliviously against false sympathy and sentimentality, will unreservedly and unashamedly proclaim that divine mercy is the only remaining hope of civilization, civilians ought to stop and do some serious thinking.

We cannot deliberately insult God and invite His wrath upon us without realizing the consequences. For a warring world is headed toward global tyranny unless we recognize the hand of God and the citizen keeps watch. Do we ever stop to imagine what tyranny would really mean? It includes complete destruction of our form of government, annihilation of church and school, dissolution of community life, and disintegration of the home. In our continued daily free use of the American silver dollar we need soberly to ponder its inscription, "In God we trust." We face the choice of living under God or underground. Modern weapons defying both description and destruction prove that peace cannot be preserved by brute force. No government is wise enough to know tomorrow's answers. For decades to come we face more or less permanent duty on the world's ramparts of freedom.

"Let us then raise a standard to which the wise and honest can repair; the rest is in the hands of God," said an American statesman. On this day let us humbly yet confidently confess our American creed in public:

"I believe in the United States of America as a Government of the people, by the people, for the people; whose just powers are derived from the consent of the governed; a democracy in a republic; a sovereign Nation of many States; a perfect Union; one and inseparable; established upon those principles of freedom, equality, justice, and humanity, for which American patriots sacrificed their lives and fortunes. I, therefore, believe, that it is my duty to my country, to love it; to support its Constitution; to obey its laws; to respect its flag; and to defend it against all enemies."

This has been the motto of the American Legion, the Veterans of Foreign Wars, and kindred permanent protective peacetime military organizations. The citizens must uphold their high standards and undergird their ambitious program over against sinister influences parading under many assumed names. As we return from this service of honor to the tranquility of our homes let us remember that "greater love hath no man than that he lay down his life for his brethren."

Let us pause in spirit at yonder military cemeteries. Snow-white crosses cover the ground like morning dew. All is quiet on the western front for there sleeps the flower of American youth. The stars and stripes flutter leisurely in the crisp air. Not a sound except for the silent sentinel keeping vigil on sacred soil. Yet One other walks there among the crosses. He lifts His holy voice in benevolent benediction: "My peace I give unto you. Well done, good and faithful servants." So shall they rest in peace.

Address of Hon. Edward Martin, of Pennsylvania

EXTENSION OF REMARKS
OF

HON. JOHN C. KUNKEL

OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. KUNKEL. Mr. Speaker, under permission to extend my remarks, I include the fine address delivered by Senator EDWARD MARTIN, of Pennsylvania, at the commencement exercises of the Annville High School, on Wednesday, May 25, 1949.

Annville has one of the finest high schools in the country. As Senator MARTIN points out, Annville is made up of "hard-working, God-loving, and law-abiding Americans." Annville is also the seat of Lebanon Valley College, one of the outstanding smaller colleges in the United States.

I am sure the young men and women of the Annville High School, now entering on their careers, will be a force for progress and Americanism wherever their paths may lead them.

ADDRESS BY HON. EDWARD MARTIN, OF PENNSYLVANIA

It is a real pleasure to be with you tonight for I admire this fine community, made up of hard-working, law-abiding, and God-loving Americans. It is also a welcome opportunity to speak to a high-school class.

Disraeli once said that "the youth of a nation are the trustees of posterity." There has never been a time in the history of America when its progress depends as much upon the determination, the aggressiveness, the inspiration, and the courage of our young men and young women as it does right now.

Therefore, for a few moments tonight I want to discuss with you the importance of the work you will soon be called upon to undertake in your communities and in your government. For it will be only a short time until you young men and women will be in the drivers' seats. You will operate our farms, our mills, our plants, our mines. You will have the responsibility for our Government, our schools, and our churches.

In the beginning I would like to impress upon you the fact that in the United States the measure of success you achieve depends upon your own effort. You all want to succeed. First you must determine what you want to do. Your purpose must be right and just. Then give all of your energy to attain your desires and you will succeed.

It makes no difference whether you are a farmer, a professional man, a businessman, a laborer, or a housewife. Whatever calling you follow if you do the best job you know how and do something to improve the lot of your fellow man, you are a success.

Whatever may be your choice I hope everyone of you will decide that one of your real objectives in life will be to save for America all the God-given rights that our fathers fought to secure.

The Government of the United States was founded to give freedom of religion, freedom of speech, freedom of the press, the right of peaceable assembly, and freedom to work at the job of our choice.

The Declaration of Independence, the greatest human rights document of all times, pronounced:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness."

Please note it is the pursuit of happiness that is listed among the sacred rights of mankind. Nothing is guaranteed. No government on earth has ever succeeded in giving happiness.

Then we find this important sentence:

"That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed."

Our founding fathers, in these expressions, were thinking of individual liberty. They realized that governments were often tyrannical, and that they denied life, liberty, and the pursuit of happiness.

The first article of the Bill of Rights, which is the first amendment to the Constitution, provides:

"Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances."

It does not set up regulations, or bureaus, or commissions to put these freedoms into effect. They were made part of the fundamental law to prevent an all powerful government from taking their liberties away from the people.

Our Constitution restricts the power of government. It is not only a great document setting forth human right, but also protects property rights. The right to possess property is one of the greatest human rights of all history. It creates incentive and the desire to advance to greater progress and prosperity.

When the founding fathers enumerated the objectives and purposes of our Republic they were guided by principles which would provide a sound foundation of national strength and security.

In language of biblical simplicity they listed the paramount determination of the people "to form a more perfect Union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity."

None of these objectives can be achieved by the mere spending of money by the Government, even though the spending is measured in billions.

None of these purposes can be reached under the dictatorship of a government that controls the lives of the people by restricting their liberties.

We cannot have a more perfect Union if we encourage sectionalism, grasping always for selfish advantage at the expense of the whole country.

We cannot establish justice unless we cleanse our hearts of intolerance, prejudice, and hatred.

We cannot have domestic tranquillity unless we are united in patriotic purpose—not divided into groups constantly at war with each other.

We cannot strengthen the national defense without building our spiritual resources as well as our material and military might.

We cannot promote the general welfare if we abandon self-reliance, hard work and thrift and expect the Government to do things for us that we should be better able to do for ourselves.

Therefore, I offer this word of warning and advice. Do not be attracted by gaudy promises and glowing pictures of a care-free future without effort or sacrifice.

If you do you will be disappointed and disillusioned. Your hope of success in life will be shattered.

Whether or not our Government is to be a healthy Republic depends upon the interest taken by its citizens.

Our churches, which are the bulwark of our freedom, will be strong or weak, depending upon the interest and the support of the people.

Everything in America depends upon a militant and intelligent people. Our institutions will be just as strong as the zeal of the people makes them.

Unfortunately, we have witnessed in the last two decades a change in the whole thinking of millions of our people. They have been misled into believing that hard work and thrift are outmoded virtues. They have been taught that Government is the source of everything that is needed to make life comfortable and secure.

No more dangerous theory has ever threatened our national existence, or the happiness of our people.

There is now a tendency among teachers, columnists, editors, some schools, and the Government itself to have everyone conform to a pattern.

This is not American. It is not in accordance with God's laws.

In all history every demagog who has sought to enlarge and perpetuate selfish power has posed as a friend and benefactor of the people—and has pretended, for selfish motives, to be the protector of every minority group.

They promise to give something to the people but with each so-called gift they take away from the individual some precious God-given liberty.

Too many of our people have accepted the idea that governments, local, State and national, have inexhaustible sources of revenue. They seem to think that money spent by the Government does not cost the individual citizen anything.

The result has been a mad scramble for new and higher taxes all over the country in order to provide funds for bigger Government spending. There is nothing mysterious about raising taxes. They come from the pockets of those who work. Taxes are taken from wages, salaries, and income and not from accumulated wealth.

I cannot emphasize too strongly the fact that you young people should be more deeply concerned than any other group about the cost of Government, taxes, and the national debt. Remember that out of your earnings you will have to pay the bulk of the taxes and the tremendous debt that you had no part in creating.

To my mind the rapid increase in the cost of Government, the mounting taxes and the staggering national debt reveal one of the most shocking stories in American history.

I don't want to burden you with too many figures but I would like to show how government in our country is becoming too costly and too much centralized.

In 15 years the number of Federal employees has increased from a little over 600,000 to more than 2,200,000. In the same period the number of bureaus and commissions have been increased from 400 to over 1800.

In 1930 the cost of operating the Federal Government was less than $4,000,000,000. Today it is more than $42,000,000,000 a year.

In 1940, only 9 years ago, tax collections for all levels of government were $14,000,000. In 1948, last year, that figure had skyrocketed to above $55,000,000,000.

Spending by the Federal Government alone is now greater than all the money spent for food by all the people of all the 48 States.

Let us now consider the debt—and this is one of the most distressing things now confronting America as far as young people are concerned. So many people want to postpone the day of paying debts. We must realize that our debts must be paid if we are to remain free. Our colonial fathers faced facts without fear. We must have the same courage.

In 1930 the Federal debt was $16,000,000,000. In 1940 it had climbed to nearly $43,000,000,000. Today we owe approximately $252,-

UNIVERSITY OF MICHIGAN LIBRARIES

000,000,000—the greatest debt of all history. Each of us owes $1800.

In other words, the Federal Government owes $15 for every $1 it owed 19 years ago.

Let us look at the debt from another angle.

In 1930 the total debt of all levels of Government, plus the private debt, was 44 percent of the national wealth at that time.

Today the same public and private debt has shot up to almost 71 percent of the present national wealth.

Obviously, at the rate we are going it will not be long before the debt of our country will be greater than our national wealth. Then we are bankrupt. Our freedoms are gone.

Yet in spite of these cold, stark, ugly facts, new spending proposals have been recommended that would add many billions to the present tax burden if put into full operation.

What does all this mean?

It means, first of all, that unless we stop this spending we will soon find ourselves at the end of the road we have been traveling—the road to bankruptcy.

All the elements of American greatness will be destroyed. A socialistic pattern of government dictatorship will seize control. The freedom of the individual will be lost. The free enterprise system will be wiped out.

The youth of America will be robbed of a chance to get ahead. The American way of life will be lost.

This threat of disaster is not something that may worry us in the distant future. It hangs over our heads at this very moment. It has been brought about by excessive governmental expenses.

As an example, 15,000,000 Americans now receive checks from the Federal Government. This amounts to billions. It is paid by the people of our country. In addition, another 4,000,000 receive checks from the local and State governments.

Not only is the cost dangerous, but grants from the higher levels of government to the lower levels of government carry with them controls which are destroying the local levels of government. For example, here in Annville, your schools should teach the things your own fine people prescribe. They should be controlled here at home, not from Harrisburg or Washington. That is home rule. It is freedom to govern ourselves.

The picture I have been painting is not pleasant. Perhaps it should not be brought up at commencement time, but I have so much faith in the young people of our country that I am willing to commit our cause to them. It is your Government, and upon your action will depend our future.

The founding fathers, in order to have liberty, pledged their lives, their fortunes, and their sacred honor. I believe the present generation has the same courage.

I believe that you will agree with Benjamin Franklin when he said:

"Those who would give up essential liberty to purchase a little temporary safety deserve neither liberty nor safety."

And with Daniel Webster when he said:

"God grants liberty only to those that love it and are always ready to guard and defend it."

Victory is challenging, electrifying, and dynamic when it represents something that is right. It may be in business, in athletics, in politics, or on the battlefield. It is the result of faith, preparation, and hard work.

It is like Grant's firm conviction when he said: "We will fight it out on this line if it takes all summer."

Or Dewey's confident words, "You may fire when ready, Gridley."

Or Washington's humble prayer at Valley Forge.

America was not made through conformity to a pattern. America was made by rugged individuals who wanted to carve out their own destiny. That individualism gave us our teachers, farmers, statesmen, craftsmen, soldiers, and preachers. It gave us victory in the struggle for freedom.

Again I am very much complimented by this invitation to speak to this class and your community.

In the long lifetime that God's goodness has granted me I have seen prosperous times in America and I have seen times of economic decline and hardship.

Twice in a little more than a generation I have seen the Republic mobilize the flower of our youth and all its material resources in defense of American freedom and the preservation of our homes and our free institutions.

Out of the lessons learned in my varied experience as a soldier in three wars, as a public official, as a lawyer, and a businessman I would like to suggest to each of you, briefly and humbly, some principles for your guidance.

Cherish within your heart and mind loyal and devout adherence to American ideals and principles. These ideals and principles should be your constant goal.

2. Respect and support your church. A republic cannot live without the church, and a dictatorship cannot live if a strong and militant church exists. There should be tolerance in religion, but everyone should strongly support his church.

3. We should all support and respect the law. If everyone would obey our laws, what a wonderful country we would have. If we would all obey the Ten Commandments and the Golden Rule, our country would be ideal.

4. In order to become better citizens and to make better communities you should assist in public-spirited movements. This will develop care and relief for the unfortunate and handicapped.

5. Let us all take an active interest in the government of our local communities, our counties, our State, and the Nation. A free republic cannot exist where there is indifference and neglect by the electorate. The French writer, Bertrand de Jouvenel, was so correct when he said:

"A society of sheep must in time beget a government of wolves."

6. Let us keep uppermost in our minds that America has no more precious assets than freedom and opportuuity. So long as these blessings are preserved and maintained the youth of our land will go forward to new heights of achievement for America and the world.

7. Let us all practice the fundamentals of good citizenship—work, thrift, self-reliance, fair play, tolerance, respect for the rights of others, and the love of God.

Upon this framework, upon the firm foundation of eternal truth set forth in the Holy Bible and the ideals enunciated in our Declaration of Independence and the Constitution of the United States, every American can help build a better life, a better community, and a better country.

If we live in righteousness and walk humbly in the fear of the Lord, we can then make a better world, where peace will rest eternally.

Rural Housing

EXTENSION OF REMARKS

OF

HON. ROBERT E. JONES, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. JONES of Alabama. Mr. Speaker, early in the session I introduced H. R. 1376, a rural housing bill, which has been adopted as title 4 of H. R. 4009 and cited as the Housing Act of 1949. Senator SPARKMAN, of Alabama, is the coauthor of the same rural housing bill, which has been passed by the Senate as title 4 of S. 1070. I have long been aware of the urgent need, and the necessity for the Federal Government to afford to farm people the same opportunities under the law in acquiring housing that has been, and is available to urban areas. The provisions of title 4 of the rural housing bill are the products of long study and evaluation of all the economic opportunities such a program would present.

For decades there has been a growing realization of the importance of adequate housing to the health and to the social and material well-being of people and a recognition that the public interest requires special ways and means of enabling large population groups to gain access to better living quarters. For the most part, however, inadequate housing has been associated in the public mind with cities. Little thought has been given to the rural situation. Yet the fact is that rural-farm dwellings in general are inferior to those of urban families, and the homes of hired farm workers are even less adequate than those of farm operators.

In view of the fact that housing improvements are more urgently needed on the farms than in the cities and that the picture is much worse in the South than anywhere else, the South has a tremendous stake in the farm housing provisions of the pending housing bill, H. R. 4009.

What are our southern farm homes like? What do they offer in the way of safe, healthful, and convenient living conditions?

One-fourth of them are in need of major repairs, according to special census studies made in 1947. Because of rotting floors, sagging roofs, weak walls, or poor foundations, they are considered hazards to health and safety. Many of the houses have such leaky roofs that it is impossible for the family to place the beds where rain will not fall on them. Proper heating is almost impossible in winter.

Eighty-one percent of the farm homes in the South still do not have running water. The tremendous burden of lifting and carrying water is part of the daily chores on the typical farm—and a contributing factor to many chronic physical conditions. Only one farm home in five has a kitchen sink with drain, although this is the one convenience most universally desired by homemakers.

While 70 percent of the southern city dwellers now have private bath and flush toilet, only 10 percent of the neighbors in rural areas live in houses so equipped.

We hear a great deal about overcrowding and doubling up in the cities and towns. Actually, conditions are worse on farms. The 1947 survey showed 15 percent of southern farm dwellings overcrowded, compared with 9 percent of the city homes.

One of the most encouraging trends of the last few years has been the rapid spread of rural electrification. Yet only 44.5 percent of the rural homes in the

South had electric lights in 1947, as compared with 60 percent of the farmers in the United States as a whole.

Summarizing the contrast between urban and rural housing, 69 percent of the city homes in the South have all the usual modern facilities—lights, running water, bath and flush toilet—while only 9.8 percent of the farm houses are as well provided.

Many reasons can be given for the unsatisfactory conditions in rural areas, but most poor housing can be related directly or indirectly to lack of income. When money is limited, the necessities of food, clothes, and emergency medical care leave little cash for even the most urgent needs of the house. A large proportion of our farmers never have the financial resources to build new homes or modernize their old ones and install the conveniences that will lighten their work, safeguard their health, and make farm life more attractive to their children.

Census figures show clearly that the farmer of moderate income seldom can afford the home improvements we usually consider essential to American living standards. Of the one and a half million farmers in the Nation whose products were worth from $1,000 to $2,500 in 1945, only 21 percent had running water and only about 30 percent had a kitchen sink with drain. But of the 378,000 farmers whose 1945 output was valued at $6,000 to $10,000, more than half had installed running water systems in their homes, and 70 percent had sinks with drain.

The housing bill, H. R. 4009, provides a practical method by which thousands of our lower-income farmers may undertake the improvements long overdue. Long-term direct Government loans at moderate interest rates would be available for farm owners who do not have the financial ability to provide decent houses for their own families or for their tenants and sharecroppers and are not able to get credit for this purpose from usual credit sources on reasonable terms and over long enough payment periods. The loans would also cover other essential farm buildings—a very wise provision because with adequate barns and poultry sheds and dairy buildings the farm earnings can be increased.

The bill also recognizes that there are many farmers with both a housing problem and a farming problem. They have not been able to get their land into the full production of which it is capable. Hence their earnings are low. Many southern farmers unfortunately are in this position. The program would assist them to put into effect plans for farm improvement or enlargement or better practices so that their incomes could be increased year by year. During this period of developing a more profitable business if the farmer could not meet his housing-loan payments in full while caring for his family's needs, he would receive partial credits for the amounts he could not pay. The farm-development period would be limited to 10 years and the credit he would receive could not exceed the year's interest payment and half of the annual principal installment due each year through the tenth year. This would benefit a considerable group of farmers on potentially adequate farms who could become much more successful if given help with their special requirements. Some need to enlarge their productive acreage, or clear and level more land. Others need to convert to another type of agriculture in order to make full use of their land and labor. In some cases better irrigation or drainage will open the way to better production. We have already recognized many times the benefits that would accrue to the Nation from such agricultural improvements, and have created farm programs to help make them possible. Aiding the family farmer to improve his work through a loan program tied in with rural housing is simply a new application of principles which we have already adopted.

The bill would also provide a small amount for grants or combinations of loans and grants to remedy some of the basic health hazards existing on poor farms which hold no possibilities of becoming productive units. It is not intended that permanent homes will be developed on these submarginal tracts, thus tying families to their unfavorable situation indefinitely. Grants would be made only to aid these low-income families to make temporary improvements essential to decent, healthful living—to obtain clean-water supplies, repair leaking roofs and sagging porches, screen windows and doors against disease-bearing flies and insects—or, in other words, to correct conditions which we often overlook in our rural areas at the same time we hear heated discussion and condemnation of unhealthful city slums.

Another section of the bill would authorize research in better design and construction of farm homes and buildings and reducing costs. This subject has not received the attention it deserves. Too often the farmhouse is copied from the city house, with little thought to the particular needs of rural life. All farmers, whether or not they need financial assistance, would receive the benefits of this research. In addition, building plans and specifications and technical advice on farm houses and buildings would be available to all farmers who request them.

I call particular attention to the farm housing provisions of this bill because I believe it is not generally realized how important this matter is. I have heard the bill described as a city bill, one that would benefit only the urban areas of our country. It is true that the urban redevelopment and public housing features of the bill are of primary importance to nonfarm areas. But the farm housing title—title IV—covers the urgent need for better housing on the farm. It is an integral part of the measure. It makes the Housing Act of 1949 an act which will serve the welfare of all Americans, no matter where they may live, and it is therefore doubly important that we address ourselves to giving strength and happiness to the most valuable and sound political segment of our Nation, and the time for positive action is now.

Alaska Statehood

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the University Daily Kansan of March 19, 1949, written by Leonard Snyder:

STATEHOOD FOR ALASKA

Statehood for Alaska was approved this month by the Territories Subcommittee of the House Public Lands Committee. The disclosure of the North Atlantic security pact has given new emphasis to the question of statehood for Alaska since it is a strategic necessity to American defense. It is time for statehood action now.

Recently the Territory's biggest boom has been in military construction. Uncle Sam has been pouring millions of dollars into the land which is only 52 miles across the Bering Straits from Russia.

Statehood is indispensable for the progress and development of the land. A populated, thriving, strong Alaska is a necessary northern and western rampart. Ernest Gruening, the Territorial Governor, said "that objective has not been, cannot be, and will not be achieved under Territoriality."

With an area twice the size of Texas, Alaska has abundant resources and a climate and physical condition which compares with the Fenno-Scandic countries. Yet there are only 90,000 Alaskans as compared to 13,000,000 persons in Fenno-Scandinavia.

Governor Gruening has well stated that the failure in Alaska arises from the lack of continuity among the remote rulers of her destinies and the circumstances inevitably surrounding far-away control. He added that Alaska suffers from and is throttled by every variety of absenteeism: Absentee industry control, absentee labor control, absentee Government control. Less than 2 percent of the land is home-owned. Is there any wonder why this rich country needs roads, health centers, people, lower living costs, and even a Territorial police force?

The population will not grow by mass migration, but only through development of commercial, industrial, and agricultural wealth. Her potential assets are vast. She has some 80,000,000,000 feet of virgin forests, abundant waterpower, cheap transportation by inland waterways, and great untapped oil and coal reserves are known to exist. Commercial quantities of other important minerals are also present.

Alaska has been the scene of spectacular economic exploitation, especially in fur, fish, and gold. But despite all this, the country remains our last great frontier with no evidence of compact, intensive growth. Yet only 870 miles of Canadian land lies between Alaska and the United States.

The handful of laws that Congress has enacted since 1867 are totally inadequate to develop this rich country. Since she became a Territory—a period of colonialism longer than that of all but five of our States—Alaska has been a victim of gross discriminations.

Congress has turned a deaf ear to the Territory's voteless Delegates for more than a quarter of a century. Only as a State with the rights, privileges, and power thereof, can Alaska really develop. Alaska needs to be a part of the United States, and the United States needs Alaska—now.

LEONARD SNYDER.

UNIVERSITY OF MICHIGAN LIBRARIES

Old Folks in Big Increase

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an article by Herbert A. Kenny, entitled "Old Folks in Big Increase," which appeared in the Boston Sunday Post, Boston, Mass., June 12, 1949:

OLD FOLKS IN BIG INCREASE—OVER 11,000,000 NOW OF 65 OR MORE AND MANY OF THEM ARE SADLY NEGLECTED

(By Herbert A. Kenny)

The United States is becoming a nation of old people—and most of them are being neglected, or, at least, denied adequate care or a suitable place in our industrial society.

There are now more than 11,000,000 persons 65 years of age or over in the country and the number is increasing at a rate five times that of the general population growth.

The problem of providing adequate care for this ever-increasing segment of our population, particularly those in it who are public dependents, is one of the gravest social problems of our times, according to John J. Griffin, supervisor of old-age assistance for the city of Somerville, a nationally recognized authority on the problems of old-age assistance, and a consultant for the National Conference of Catholic Charities.

PROBLEM OF AGE

What makes the problem worse is the public apathy toward it; public ignorance of it, Mr. Griffin says. While the general public is pretty much aware of such social problems as alcoholism, juvenile delinquency, and the inadequacies of our educational system, few are aware of the intense problem of the aged and its tragic implications.

In 1900 there were 3,000,000 persons in the United States 65 years or over. In 1930 the number had doubled. Ter years later there was another increase of 3,000,000. The increase of 35 percent in the number of persons over 65 years of age occurred while the population was increasing only 7 percent.

Our social economy, Mr. Griffin points out, is badly in need of orientation. Men who are able and willing to work should not be shunted into oblivion at 65 and made economically useless. Their experience should be put to good use. If they must retire, they should not be allowed to rust away or simply vegetate in a vacuum. They should have recreation geared to their health conditions; work that they can encompass.

"In a simpler economy," Mr. Griffin declared recently in a lecture before a college class, "when the home and the farm were the traditional centers of trade, work, and social life, the elders succeeded in maintaining an acknowledged usefulness. Their authority was respected and their accumulated knowledge and wisdom were cherished. But the ascendancy of property values over intrinsic human worth, the high-pressuring processes of the impersonal factory system, the introduction of machinery into agriculture, the vanishing of domestic services, the frenzied pace and ruthless selfishness of city life, the worship of athletics, and the cult of Hollywood placing a premium on youthful activity and charm, all have combined to lessen the place, the prestige, and the participation of both the senescent and the actually aged."

FOUR MILLION HELPLESS

Of the 11,000,000 persons over 65 in this country, approximately 43 percent only are considered nondependent by virtue of possessing invested funds or income derived from employment. While approximately 1,800,000, or less than 20 percent, receive pensions of some sort, 4,000,000, or a little less than 40 percent, are regarded as dependent upon some kind of assistance.

Of the pension group, more than 1,200,000 are receiving old-age and survivors insurance, with primary benefits averaging less than $25 monthly. Of those receiving assistance, about 2,800,000 receive old-age assistance, with an average monthly grant of somewhat more than $36. The Social Security Board has estimated that 1,600,000 aged persons are dependent on relatives, friends, and churches.

Of the 11,000,000 persons over 65, only 2 percent, roughly, about 210,000, are now receiving institutional care. Of these 140,000 are in Government-controlled homes, and 70,000 in private institutions. The homes, of course, are not designed to take care of many persons. For example, there are 235 homes maintained by Catholic charities throughout the country with 25,000 residents, an average of less than 100 persons per home.

With few exceptions all the homes for the aged are overcrowded, understaffed, and in poor condition. All have waiting lists.

Curiously, Mr. Griffin pointed out in an interview, our society has made tremendous medical advances. The life expectancy of Americans increases every year. The life expectancy of the average American has increased 16 years since the turn of the century.

ARE LIVING LONGER

"While medical science is boosting the life expectancy above 65," Mr. Griffin points out, "the Government and business are insisting that persons retire at that age." When a person reaches the age of 65, he, today, has a life expectancy of 13 years more. Further, there is good reason to believe that many persons in the homes for the aged will outlive their expectancy as calculated by actuarial tables.

The problems of the aged are intensified when it comes to the problems of the aged who are sick and invalided. The science of the medical care of the aged is a developing one. It is called geriatrics. Geriatrics is defined as that branch of medicine which deals with the care of the aged. Mr. Griffin recently published Classified Bibliography on Geriatrics and the Care of the Aged, a source book of more than 1,200 references which now enjoys an international reputation. It is the first such in the field and indicates just how virgin this field is.

Geriatrics lacks the glamor of many of the other fields of medicine. Younger patients are aided in their fight against disease or injury by a great will to live, a desire to get back into action. This is usually lacking in older people; they haven't the spirit, the enthusiasm of youth. There is a great deal of satisfaction for a physician to restore a child to sound health and see him go forth to conquer the world. But a physician working his heart out to save the life of a woman 87 from one ailment or another, Mr. Griffin points out, faces the realization that she is going to die in 1, 2, or 3 years anyway of something else.

Above all else, Mr. Griffin says, old folks must have recognition, affection, and personal attention. Those are the essential human cravings, Mr. Griffin declares, and are even more exaggerated in elderly persons; particularly in our present-day society which is shunting old people to one side.

NEED TO BE BUSY

They should be given work to do, encouraged in hobbies, brought into family activities, given financial independence. Mr. Griffin pointed out that there is a great reservoir of talent, ability, and manpower among the aged in this country. During the war, it was used in great part. Now younger persons are being given the work. He cited the case of Grandma Moses, recently honored by the Women's Press Club, who took up oil painting at 76 and won an international reputation.

"In the Post the other morning," he said, "was a more homely instance; an arthritic man who took up violin playing at the age of 80 and now entertains his family and friends and plays for group dances."

"Such recreation must be provided for the old people," Mr. Griffin continued. "There is a desperate need in our society for lay groups and organizations such as the Grey Ladies of the Red Cross, who will devote their time solely to visiting the aged and infirm, providing companionship and recreation for them.

"There is a particular need for visiting housekeeper services on a grand scale to relieve the infirm aged who naturally desire to live in their own homes.

"The old neighborly spirit is rare in this day of urban industrialism and the widespread employment of women," he pointed out.

"Unfortunately," he said, "a large number of children in these days manifest no solicitude for their aged parents. While children may not be able to assist financially, they should at least visit or write their parents and show interest in them.

"Most of all are needed thousands of volunteers to help our aged, to visit them in institutions, write them, read to them, take them for motor rides, be consistently good to them."

CAN HELP SELVES

Psychiatrists have pointed out, Mr. Griffin declared, that the aged tend to break down mentally when they become aware that they are without a future. Their faculties deteriorate quickly and they become a greater care than before. Aided in time, they cannot only take care of themselves but can contribute greatly to the country and its culture. Neglected and they become a greater burden.

"Their care is one of the greatest social problems in the United States," Mr. Griffin said, "and it is everyone's responsibility."

Bulwark of Free Men

EXTENSION OF REMARKS
OF
HON. E. H. HEDRICK
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1949

Mr. HEDRICK. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an article written by Mr. John M. Hamric, of Charleston, W. Va., entitled "Bulwark of Free Men":

BULWARK OF FREE MEN

The best guaranty of a world of free men today is the House of Representatives of the United States. Not the President, the Senate, nor the Supreme Court, important as these are in popular government. The present House, composed of 435 men and women elected as provided in the Constitution for terms of 2 years, insure a constant barometer of the moods, tempers, desires, and needs of the American people. The framers of our Government were aware of the dangers of

static rule; therefore, the House of Representatives was created as the vehicle by which the people might meet the inevitable changes of the times. It is the greatest legislative body in the world. Through it, the people of this Nation air their pleasures and displeasures, but compose their differences in laws and provisions tending to promote the general welfare. In so doing they give evidence to the world that men may govern themselves and remain forever free. Members of this body are just what their titles imply, representative. Each of them represent the voters who elect them. They are the best cross-section gage available of the mass moods, manners, and actions of the American people. In expression they sometimes appear unwieldy, sometimes willful, sometimes supremely compassionate, sometimes portentious, but always interpretative of the will of the people—powerful, creative, protective. So long as there is a House of Representatives of the United States of America the hopes of free men need not die. Membership in this body of public servants is an honor and opportunity for highest service to mankind. Election to the Speakership of the House is to attain the highest in positions of Government. Because of its inceptive and creative work, the House is not so readily thought of as the Presidency of the Senate; however, only a moment's reflection is needed to call to mind that it is the most important branch of our Government and closer to the homes and firesides than all the balance of Government combined.

Arizona's Water Bid Unsound Business

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1949

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Mirror for May 14, 1949:

ARIZONA'S WATER BID UNSOUND BUSINESS

Arizona is wrong by a country mile in seeking Colorado River water for the central Arizona irrigation project.

Arizona is so aware of the weakness of her claims that the State opposes submission of the case to the Supreme Court.

Arizona wants Congress to pass on the controversy. They know that vote-trading deals impossible in the Supreme Court are possible in Congress.

There is scant merit in the Arizona case, no matter whether you judge it on a basis of comparative benefits to the most United States citizens, or as an isolated project.

The central Arizona project is economically insane.

At most, it would benefit 260,000 acres of land, a 400-square-mile area that wouldn't make a patch on the seat of southern California's pants.

The project would cost $400,000,000 for irrigation, of roughly $750,000,000 total dam cost. That figures to $1,750 an acre. Past reclamation experience shows that $300 an acre for irrigation is the outside limit of reasonable cost.

But Arizona wants to make the hydroelectric power unit at the proposed dam absorb the whole $400,000,000 irrigation cost, although it would take two-thirds of the power generated there to lift the project's water to project levels.

Additionally, the central Arizona project is not truly a reclamation project to bring new land into production with irrigation. It would simply bring water at incredible expense to land already put in cultivation by land speculators who overestimated their water resources.

It sets up the wholly indefensible principle that any speculator tripped by his own bad judgment can expect the United States Government to bail him out with a $1,750 per acre subsidy. A prospector could just as logically expect Uncle Sam to fill his glory hole with gold if his mine didn't pan out.

Not more than 150,000 people would derive any benefit from the central Arizona project. From a dollars-and-cents standpoint, the plan is idiotic.

It is simply a bald-faced, $400,000,000 attempt to make the United States taxpayer pay to benefit a handful of Arizona landowners at the expense of 5,000,000 other citizens of the Southwest who have a prior and better claim to the water involved.

Hysteria Should Not Grip Country in Search for Communists

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by John Griffin, which appeared in the Boston Sunday Post, Boston, Mass., June 12, 1949:

HYSTERIA SHOULD NOT GRIP COUNTRY IN SEARCH FOR COMMUNISTS—ABSURD TO CALL B. U. PRESIDENT A FELLOW TRAVELER—ONLY CREATES CONFUSION, PLAYS INTO REDS' HANDS

(By John Griffin)

The extent to which communism has become a factor in American life, either through actual operation of Communist work or through the threat it offers, can be appreciated nowadays by even a quick glance at the headlines.

It has reached the point where about half the front page headlines in the newspapers are concerned with Communist activities of one sort or another. Last Friday, as a typical example, the front page of the New York Times carried 11 stories. Of that number, four were about Communist activities and two were about Russia and the Paris Conference. The previous day 9 out of the 13 front page stories dealt with communism.

The same ratio seems to prevail in most of the big newspapers, for they are only reporting the news, and the news is about communism in one way or another. There is the trial of the Communists in New York, the Hiss trial, the congressional committee hearings on the Atomic Energy Commission, the naming of prominent educators and movie people as fellow travelers, and any number of other stories.

JUST PLAIN HYSTERIA

There doesn't seem to be any sense to much of the publicity, as unjustified accusations are flying around. The result of the disclosure of names in the espionage trial of Judith Coplon is to place a stigma on prominent people without any evidence to justify the charges.

The absurdity was most marked in the case of President Daniel L. Marsh, of Boston University, whose name was among the FBI records as possibly a fellow traveler. As far as anyone can judge, his name was sent in to the FBI and recorded without investigation.

If the FBI accepts and makes a record of every name that is given by anyone, then nobody in the United States is protected against abuse. What is there to prevent a person sending the name of someone he doesn't like into the FBI as a possible Communist?

If the information is accepted and a record is made, it might come out at some subsequent trial, and no matter what sort of denials are made, it will be almost impossible to clear the name.

This is just plain hysteria and can hardly be justified. Maybe some Hollywood personages are Communists or fellow travelers; some have definitely been revealed as such. But there is no evidence to show that others who were on the lists revealed in the Coplon trial are in any way connected with communism.

The practice can do a great deal of harm; in fact, it would seem to be playing right down the alley of the Communists. They deal in confusion, and the more confusion and hysteria there is, the better they like it.

DIFFICULT JUDICIAL DECISION

In the Coplon case there was no effort by any Government official to bring out the names, but the defense demanded the records be produced. Although there was a possibility that it would force the Government to reveal secrets involving national security, the judge balanced the requirements of American justice against those of national security and ruled in favor of justice.

It was a difficult decision, and a right one, but it resulted in the disclosure of names of people who have had no chance to fight back and clear themselves. This must be the substantial justice that the legal philosophers talk about, in which individuals may be hurt but society, as a whole, is served.

Maybe the same reasoning can apply to all the various investigations undertaken by congressional committees. A great many individuals have been besmirched and have not had a chance to clear their names, but a lot of valuable information for the fight against communism has been brought out.

This was emphatically shown during the past week when a group of famous educators urged barring Communists from the teaching profession. The group included General Eisenhower, President Conant of Harvard, and others of high standing in the educational field.

"The whole spirit of free American education will be subverted unless teachers are free to think for themselves," the group said. "It is because members of the Communst party are required to surrender this right, as a consequence of becoming part of a movement characterized by conspiracy and calculated deceit, that they should be excluded from employment as teachers."

NEED MORE ORDERLY WAY

It wasn't so many months ago that a lot of important educators were refusing to make any such statements and insisted that complete freedom be given to all teachers to do as they pleased. This is an acceptance of the way the public looks upon teachers and communism.

So progress has been made in combatting Communist activities in this country. It may be that the only way of continuing that progress is to swing wildly as the congressional committees have been doing in the hope of knocking down some important Communists, even though a lot of innocent bystanders get hurt.

But it would seem as if there ought to be a more orderly way that would be not only more just but also more effective, a system in which rumor would not be enough to justify the broadcast of names. Certainly the record of the FBI indicates that it knows what the score is at all times, and when names are brought out, as in the Coplon trial, the whole story should be told.

UNIVERSITY OF MICHIGAN LIBRARIES

It should not be left with the simple fact that names were sent to the FBI; the results of the investigation should be revealed. Perhaps the FBI placed no credence in the reports, but that is not brought out one way or the other. Unless it is done, there can be only confusion, which is the goal of Communist activity.

Housing Bill

EXTENSION OF REMARKS
OF
HON. CHRISTIAN A. HERTER
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1949

Mr. HERTER. Mr. Speaker, on June 8, the Honorable ADOLPH J. SABATH, chairman of the House Committee on Rules, inserted in the RECORD a letter from the Director of the Bureau of the Budget, Mr. Pace, which was in response to a letter which Mr. SABATH had sent at the request of the Rules Committee. Mr. SABATH omitted the letter which the committee sent Mr. Pace, and I am therefore inserting it at this point in my remarks:

DIRECTOR, BUREAU OF THE BUDGET,
Washington, D. C.

DEAR SIR: The Committee on Rules now has before it H. R. 4009, a bill to establish a national housing objective, etc. We can find no evidence in the record that this bill has been approved by the Bureau of the Budget, and would welcome your advice thereon in general, and in particular with respect to the following matters:

1. Title I, section 103 (b) permits the Administrator to make capital grants under certain conditions for certain slum-clearance projects in an amount not to exceed $800,000,000 during the next 5 years. The last sentence of that subsection reads as follows: "The faith of the United States is solemnly pledged to the payment of all capital grants contracted for under this title, and there are hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, the amounts necessary to provide for such payments."

Question. Does not this subsection in effect constitute an actual appropriation for future years which cannot be reviewed in any way by the proper appropriating committees of the House and Senate?

2. Title II, section 205 (a) provides for subsidies to approved low-cost rental-housing projects in increased amounts during the first 4 years, and thereafter in amounts not to exceed $480,000,000 per annum for a period of 40 years. These contracts, which might total over $16,000,000,000 in the next 44 years can be pledged as revenue for the payment of interest and amortization on the obligations of local housing authorities and thereby become a binding obligation year by year upon the United States Government through the instrumentality of this legislation and without further action by the appropriating committees of the House and Senate.

Question. Do you favor making a binding commitment of this kind for outright grants without any possibility of review in the next 44 years?

3. With respect to the construction of low-rental public housing under title II of this act, it would appear that the limit provided for in the bill is approximately one million units. Assuming that each unit contained 5 rooms constructed at the normal maximum of $1,750 per room, the total capital cost of these projects would come to $8,750,000,000. However, if the Federal commitment for subsidies of $400,000,000 a year for 40 years were capitalized, the Federal Government could have available to it $11,300,000,000 for the same purpose ($11,300,000,000 borrowed at 2 percent and amortized at 2½ percent per year would be completely paid up in 40 years by spending $400,000,000 a year). In other words, if the Federal Government today borrowed $11,300,000,000 and constructed all of the housing units contemplated under this title of the bill, and then gave those units away free of charge to the local housing authorities, it would still be ahead some $2,500,000,000.

Question. Is it in accord with the President's program that Federal subsidies for low-rent housing should exceed by a considerable margin the entire construction costs of such housing?

Most sincerely yours.

Mr. Speaker, a careful reading of the answer from the Bureau of the Budget makes it clear that the points raised in the letter from the committee have not been met.

With respect to our first question, Mr. Pace states that while section 103 (b) of title I constitutes a firm commitment of the Federal Government, he then states two paragraphs later that—

> Payment of these grants could be made only on the basis of specific annual appropriations, hence only after review by the Appropriations Committees.

While he is technically correct in this statement, the only action that the Appropriations Committees could take in view of commitments made would be to appropriate enough to cover the contracts already made. The Appropriations Committees, as I see it, could not in any way reduce this amount because of the firm commitment which Mr. Pace admits.

In answer to the second question in the above letter, Mr. Pace states, and I quote:

> Second, a binding commitment is clearly necessary if we are to achieve the objective of assuring construction and operation of low-rent housing at minimum cost.

Here again the Administrator could bind the United States Government up to the maximum provided for in the bill and the Appropriations Committees could have no power of review with respect to the amounts that would have to be appropriated to meet these commitments.

Mr. Pace's reply with respect to the third question is even more difficult to understand. He states:

> Thus, as indicated above, the basic premise of your question "that Federal subsidies for low-rent housing would exceed by a considerable margin the entire construction costs of such housing" is in error.

He then makes a guess that the total amounts required over the life of the program would be only nine or ten billion dollars, rather than the $16,000,000,000 which is the maximum provided for in the bill. This, it seems to me, is a rather naive argument. Any Member of Congress in trying to ascertain the commitment which the Federal Government is assuming under any piece of legislation must obviously take the maximum figure which is set forth in the legislation and which the Congress can be committed to by an administrative officer, rather than guess as to what might be required.

Furthermore, in making these computations, Mr. Pace makes certain assumptions which do not seem warranted by the language of the legislation itself. The law covering the method of determining Federal contributions and the limits set on such contributions appears on page 66 of the report of the Banking and Currency Committee which accompanied H. R. 4009. While the language used is obscure, to say the least, I interpret the last sentence of section 10 (b), as modified by the last sentence of section 10 (c), to authorize Federal contributions which, if capitalized, would exceed considerably the construction costs of the projects. To sustain my interpretation, I am quoting section 10 (b) as amended under H. R. 4009, as well as section 10 (c) as likewise so amended.

> SEC. 10 (b). Annual contributions shall be strictly limited to the amounts and periods necessary, in the determination of the Authority, to assure the low-rent character of the housing projects involved. Toward this end the Authority may prescribe regulations fixing the maximum contributions available under different circumstances, giving consideration to cost, location, size, rent-paying ability of prospective tenants, or other factors bearing upon the amounts and periods of assistance needed to achieve and maintain low rentals. Such regulations may provide for rates of contributions based upon development, acquisition, or administration cost, number of dwelling units, number of persons housed, or other appropriate facts: *Provided*, That the fixed contribution payable annually under any contract shall in no case exceed a sum equal to the annual yield, at the applicable going Federal rate plus 1 percent, upon the development or acquisition cost of the low-rent housing or slum-clearance project involved.
>
> SEC. 10 (c). Every contract for annual contributions shall provide that whenever in any year the receipts of a public-housing agency in connection with a low-rent-housing project exceed its expenditures (including debt service, administration, maintenance, establishment of reserves, and other costs and charges), an amount equal to such excess shall be applied, or set aside for application, to purposes which, in the determination of the Authority, will effect a reduction in the amount of subsequent annual contributions. In no case shall any contract for annual contributions be made for a period exceeding 60 years: *Provided*, That in the case of projects initiated after March 1, 1949, contracts for annual contributions shall not be made for a period exceeding 40 years from the date the first annual contribution for the project is paid: *And provided further*, That in the case of such projects or any other projects with respect to which the contracts for annual contributions (including contracts which amend or supersede contracts previously made) provide for annual contributions for a period not exceeding 40 years from the date the first annual contribution for the project is paid, the fixed contribution may exceed the amount provided in the first proviso of subsection (b) of this section by 1 percent of development or acquisition cost.

If I am correct in my reading of the above language, any project undertaken after March 1, 1949, could receive a maximum annual contribution, limited to 40 years, from the Federal Government equal to the applicable yield at the going Federal rate—elsewhere defined as 2½

percent—plus 1 percent, plus an additional 1 percent under the last section of 10 (c), upon the development or acquisition cost. This would make a 4½-percent total upon development cost. The latter cost must necessarily be in excess of construction costs, and the 4½ percent Federal contribution paid over a 40-year period would clearly be in excess of the amount required to amortize and service the capital construction costs of these projects. Mr. Pace's statement, "In other words, the maximum cost under the proposed program could not exceed the actual cost which would be involved in direct construction" would seem to me to be in direct variation with the language of the bill.

Small Business Is Entitled to Compensation for Collecting Income Taxes for the Federal Government

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1949

Mr. McDONOUGH. Mr. Speaker, as a result of the increased income-tax rate which became effective during the recent war, and the introduction of the pay-roll deduction plan whereby private employers were legislated into the position of collectors of income tax for the Government without recompense, an enormous burden was placed upon the businessmen of the United States which has resulted in extra cost to them for the time spent by their employees in keeping the records of this tax collection, and in many cases has necessitated the hiring of one or more additional employees for this purpose.

Small business has been penalized most by the requirement that it act as the agent of the Government without compensation for its services in the collection of these taxes. Elaborate and individual records are required and full reports must be submitted to each employee and to the Government. Since penalties, including fine and imprisonment, can be imposed on the employer if records are not properly maintained, many small-business men find the cost of keeping such records exceeds the actual tax payments.

Certainly employers are entitled to relief from the added expense which they must incur and are entitled to be paid for services rendered to the Government in the collection of withholding taxes, and this should be a matter for the consideration of Congress.

The following editorial by Mr. J. B. Sebrell, of Los Angeles, Calif., makes a timely survey of the tax-collecting problems of small business:

WHY 9 OUT OF 10 FIRMS FAIL

Do 9 out of 10 business firms fail because our teachers, our legislators, our Government employees, or bureaucrats lack practical education? Our great Nation today has 10,000,000 Government employees. There are 10,000,000 who belong to labor unions. There are 4,000,000 small-business men who employ 75 percent of the workers of America.

Have you ever heard a teacher, a Government employee, or a legislator raise his voice or his hand to help small business? Labor unions get all kinds of help. In the past, and today, many workers are being driven into unions against their wishes. Workers now get unemployment insurance, old-age benefits, disability benefits, health insurance, workmen's compensation, and numerous other benefits. Farmers get loans on farms, equipment, crop subsidies, payment for not planting crops, etc. The Government pays agricultural agents to show them how to farm, and in many instances they receive free seeds to plant.

Banks receive assistance in the form of loans and guaranteed deposits. Insurance companies receive help in many forms, including guaranteed loans, etc. Railroads, oil companies, air lines, aircraft manufacturers, etc., also receive their due share of aid.

The blind, the needy, orphans, etc., all receive their rightful share of help. Now we are spending billions, going far afield, to feed and help the entire world.

Does small business receive any help? No.

What are our teachers, our legislators, and Government bureaucrats advocating to help the small-business man? Absolutely nothing. What they do advocate tends to bankrupt him and make his lot more difficult. They tax him out of all proportion to his ability to pay. The poor "sucker" pays, pays, and pays. He pays even when he is losing his last dollar going broke. He pays in proportion to his earnings at least 10 times as much as the farmer or employee. He must pay:

1. City license.
2. Workmen's compensation.
3. County taxes.
4. Excise taxes.
5. Income taxes.
6. And 101 other taxes.

If he loses $25,000 one year * * * that's just too bad. The next year if he makes $25,000 you'd think the poor devil was even. But no. What he lost is ignored. He must pay roughly $11,000 in Federal income taxes alone on the $25,000 he made. Now comes the most vicious tax, the most unfair tax of all—the tax that has bankrupted millions of businessmen—the social security, old age, and unemployment tax.

On social security, unemployment, and old age taxes, the employee pays 2 percent of his earnings, while the employer pays 4 percent on each employee's earnings, providing he employs 8 or more, or 3.7 percent if 8 or less are employed. A small restaurant owner that I know employs 18 people. This poor man is earning only $25 a week in profits. His business is getting worse every day. His waitresses earn, with tips, approximately $100 a week. Yet this restaurant owner must pay 36 times as much toward these taxes as do his individual employees. All of his employees earn more than he does. If he goes bankrupt or becomes incapacitated he is not even eligible for any benefits.

But that's not all. A businessman must keep the most involved and accurate time card and employment records, withholding taxes and income, both State and Federal. Without pay he collects taxes for the State, city, and Federal Governments. At the end of the year, he must report to each employee, and to the State and Federal Government what each employee has earned. This responsibility for record keeping is very vicious. You are fined and threatened with prison, jail, and other penalties if your records are not properly kept. The average man is so frightened and perplexed that he takes the lines of least resistance and hires an extra bookkeeper at terrific expense, and then an auditor to make certain that the books will pass Government inspection.

The average cost of keeping these records is two to three times the cost of paying them. So in addition to being taxed out of all proportion to his ability to pay he is further taxed by having to pay two to three times as much to keep records and collect the taxes for the Government.

Address by Secretary of Commerce

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an address by Secretary of Commerce Charles Sawyer, at the seventy-eighth annual general meeting of the Canadian Manufacturers Association, St. Andrews-by-the-Sea, New Brunswick, Canada, June 8, 1949:

CANADIAN-AMERICAN COOPERATION

Last week I visited Toronto where I participated in the opening of the Canadian International Trade Fair. I was deeply impressed by the wide range of products displayed at the fair. I was impressed by the skill and imagination with which you Canadians have organized the fair and introduced this technique of trade promotion to the Western Hemisphere. What impressed me most, however, was the spirit of friendly cooperation between Canadians and Americans. Naturally we wish that we had been the first to stage an international fair in the Western Hemisphere; but we are deeply grateful to you for taking the initiative, because we know that what benefits you will benefit us, just as our prosperity means prosperity for you.

The tradition of cooperation between Canada and the United States is deep-rooted. No two countries in the world have maintained a more cordial and beneficial relationship. Our unfortified border, reaching from sea to sea across the North American Continent, is the symbol of our friendship and understanding.

Our cooperation during the war was a dramatic demonstration of our ability to work together without friction. This wartime cooperation, however, was the result of a long history of mutual confidence and open consultation. For many years we have worked out our common problems by means of incredibly simple institutional methods.

The oldest of the institutions we have set up for working out our common problems is the International Joint Commission, which was established in 1911. This Commission is composed of only six members, three Canadians and three Americans. In the nearly 40 years of its existence this Commission has worked in such harmony that on only one occasion did the group vote on strictly national lines, and on that occasion the matter under discussion was a matter of procedure, not of substance. The International Joint Commission was set up to consider all disputes concerning the rights and interests of the two countries along our common frontier. In practice the Commission has been concerned chiefly with the use of the boundary waterways. Other agencies which have been established for the consideration of our common problems are the Permanent International Commission for the conciliation of disputes, the Boundary Commission, and three commissions concerned with problems relating to the fishing industry on both

UNIVERSITY OF MICHIGAN LIBRARIES

coasts and in the Great Lakes. One of the most successful cooperative efforts between the two countries was the building of the highway to Alaska. This great highway provides the only means of transportation by land between our northern Territory and the continental United States; and at the same time it makes possible exploration and development of vast natural resources in your own Northwest. It is an excellent example of the way we can work together toward the full development of our economic potentialities.

The Alaska Highway was built during the war when cooperation between Canada and the United States covered nearly every phase of our economic activities. All of us have heard a great deal about the Hyde Park Agreement, which is often cited as the formal basis of our wartime cooperation. Like our other arrangements for working out our common problems, the Hyde Park Agreement was extremely simple. On April 20, 1941, Prime Minister King called upon President Roosevelt at his Hyde Park home. The two men agreed that "as a general principle * * * in mobilizing the resources of this continent each country should provide the other with the defense articles which it is best able to produce, and, above all, produce quickly, and that production programs should be coordinated to this end." Throughout the war this simple declaration stood as a symbol of the interdependence of our two great countries in welding our defense against a common enemy. The people of both countries understood that by working together and by calling upon the assistance of other nations of the Western Hemisphere they could provide an "arsenal of democracy" which would be the greatest resource of the free nations of the world in fighting the war.

Canada had been at war for more than 2 years when the United States entered the war. At the end of 1941 Canadian industry was geared to full wartime production, and we in the United States found that we could place contracts in Canada immediately for some of our most urgently needed supplies. Throughout the war we worked as a team, each of us assuming the tasks best suited to our economies.

In March of this year Canada and the United States established jointly an Industrial Mobilization Planning Committee by means of which we can plan together for achieving the maximum use of our resources in the event of war or serious emergency.

In war and in peace we have worked together and we have given each other advance notice of important changes in our policies. Our cordial relations are based on many things. We draw our political and social ideals from the rich heritage of the democratic tradition of western Europe. We live together on a great continent which has been unusually blessed with an abundance of natural resources and a temperate climate. Most important of all we both believe in utilizing the resources of this continent efficiently so as to produce the greatest possible benefits to our own people and—through commercial interchange with other nations—to benefit the other nations of the world. We both believe in dynamic growth; and we believe that the best way to achieve this growth is to free the energies of our people through the operations of private business. We believe also in doing rather than talking. We are pragmatists. We are more impressed by actions than we are by words.

There stands before us a great challenge. It is the challenge of a work to be done—a specific work that will make us stronger as nations, better off as individual people, and more prosperous as businessmen. I refer to the building of the St. Lawrence seaway.

Among the resources with which the people of Canada and the United States have been blessed, none is more impressive than the great system of waterways along our common border. As the early explorers pushed their way through the Great Lakes, looking in vain for a northwest passage to the Indies through the North American continent, they could not foresee that these Great Lakes would some day become the busiest waterway in the world. Neither could they foresee that two great nations would some day sit down together to plan the completion of a deep-water passage 2,300 miles long from Newfoundland to Minnesota and western Ontario.

For more than three centuries people have been thinking about a passage from the Great Lakes to the sea. Early in the seventeenth century King Louis XIII, of France, sent engineers to the New World to build a system of canals 2 feet deep to bypass the Rapids of Lachine. Some work was done, but the canals were not completed. In the first half of the nineteenth century a system of canals and locks was built by Canada with the aid of England. By 1847 a small American schooner sailed through this channel from the port of Chicago to Liverpool with a cargo of wheat. Ten years later a small British ship traveled from Liverpool to Chicago.

In the last 100 years, most of the work to create a passage from the Great Lakes to the sea has been done by Canada. At the turn of the century Canada had built a modern system of canals and locks between Montreal and Thousand Islands that would accommodate ships drawing up to 14 feet of water. In spite of its limitations, this canal system has been immensely useful. Last year alone over 7,000,000 tons of freight were shipped through the St. Lawrence canals. Some shipping companies have built small ships designed specifically to travel between Europe and the Great Lakes, using the present system.

Canada's greatest contribution to the building of a deep-water system of transportation from the Great Lakes to the sea was the construction of the Welland Canal, which was completed in 1932. This canal, built to bypass Niagara Falls, contains 8 locks, 80 feet wide, 30 feet deep, and each over 800 feet long.

Although most of the work to open up the Great Lakes system to ocean traffic has been done by Canada, the United States has made a contribution. In 1943 we built the MacArthur Lock at Sault Ste. Marie, Mich., to facilitate the heavy wartime movement of iron ore through the Great Lakes. When the St. Lawrence seaway is built the MacArthur Lock will be a vital link in a chain of locks and canals that will carry ocean-going ships from Montreal to Duluth. The United States has also worked with Canada to improve the channels in the Thousand Island section in the first 68 miles of the St. Lawrence River below Lake Ontario.

The Government of Canada and the Executive branch of the Government of the United States have been sponsoring the St. Lawrence project for many years. The latest proposal was the agreement reached on March 19, 1941. According to its terms, the United States will deepen the connecting channels in the Great Lakes and will perform most of the work on the 46-mile stretch of the St. Lawrence between Chimney Point and St. Regis, N. Y. The project involves the construction of a control dam at Iroquois Point for the purpose of maintaining the level of Lake Ontario and the construction of the Long Sault Dam near Massena, N. Y., with the necessary canals and locks to provide a navigation channel around these structures. The project also includes installation of a power development at Barnhard Island which will provide more than 12,000,000,000 kilowatt-hours of electrical power per year to be shared equally between Canadians and Americans within a 300-mile radius of the dam. Below the International Rapids section Canada will construct canals and locks to provide a 27-foot channel from St. Regis, N. Y., to Montreal. This work will include the deepening of the channel in Lake St. Francis, and the improvement of the existing Soulanges Canal. Canada will also build a new Lachine canal between Lake St. Louis and Montreal.

The total cost of the remaining work on the seaway and power project has been estimated as slightly more than $800,000,000, at current costs. Of this amount, Canada will furnish approximately $229,000,000 and the United States approximately $573,000,000. The chief reason for the difference in the contributions of the two countries is that Canada has already constructed the Welland Canal—an important part of the seaway system—at a cost of $132,000,000, and at a time when construction costs were far below what they are at present.

Costs of constructing the seaway and power project will be met through the sale of the power facilities and by toll charges on freight and passengers. The power facilities could be sold immediately upon completion at a price fully covering the share of the project cost assignable to power. It is estimated that the costs assignable to navigation can be liquidated in well under 50 years through the charging of tolls, on which a separate agreement is to be negotiated.

So much for the basic facts about the project on which the Governments of Canada and the United States have been in essential agreement for many years. Working together we can open up our continent to the sea lanes of the world. We can provide a great new source of cheap power in an area vitally in need of more electric energy. To the practical mind of a businessman a simple question presents itself. What is stopping us? Many people have asked this question. Presidents of the United States have been supporting the seaway for 30 years. Leading statesmen of both parties in the United States have repeatedly urged Congress to support the seaway. President Truman has recommended ratification of the Seaway Agreement in six separate messages to Congress. The people of Canada know that the seaway is strongly supported by the Executive Branch of the United States Government. They also know that this support is not enough. The consent of Congress is required to any proposal that involves the appropriation of money. As a representative of the Executive Branch of the United States Government, I cannot give you any definite assurance that the seaway project will be ratified by Congress at this session. I believe, however, that the chances for ratification have greatly improved. Why?

First, there is a new realization in our country of the interdependence of the United States and the rest of the world, and in particular, a new realization of the importance of our economic ties with Canada. The United States has not been a trading nation in the sense that Canada and the United Kingdom are trading nations. We supply most of the raw materials we need from within our own borders; and we sell most of our products to our own people. In this respect there is a difference between the Canadian and the American economies. Canada depends upon foreign trade to a greater extent than the United States. In 1948 Canada's imports were equivalent to about 21 percent of her national income and her exports to about 24 percent. In the United States, on the other hand, exports were equal to 5 percent of national income and imports to about 3 percent. Despite this difference, however, trade with other countries is vitally important to the United States. We are relatively self-sufficient; but other countries supply certain materials that are critically important to American industry and to the American standard of living. Among these materials are the minerals and lumber products

UNIVERSITY OF MICHIGAN LIBRARIES

of Canada; the sugar of Cuba; the hemp, copra, and natural rubber from the Far East; the petroleum, the copper, tin, lead, zinc, iron ore, and other minerals from South America; and the manganese and chrome from various parts of the world. Some of these and other materials I have not mentioned cannot be produced in the United States at all. Without them we could not maintain our production of the American goods that are in such heavy demand throughout the world today.

For more than 60 years our heavy industries have fed upon the seemingly limitless riches of the great Mesabi Range. The tremendous iron deposits in northern Minnesota have been one of our most impressive natural resources. We are now facing the hard fact that the Mesabi Range will not last forever. Most authorities are agreed that, at the present rate of consumption, the high-grade deposits in the Mesabi will approach exhaustion within 20 years. This does not mean that the United States will be left without iron ore when the Mesabi Range is dug out. Around the Mesabi Range there are billions of tons of taconite which can be used for the production of iron. Yet these taconite ores contain only about half the iron content of the ores now being used. To prepare such ores for the blast furnace, it will be necessary to crush them as fine as talcum powder, then form the iron-bearing particles into cakes or sinters. This process can be used if better ore is not available—but it is costly.

Fortunately, high-grade iron ores are now being discovered, developed, and mined in other parts of the world. The Bethlehem Steel Co., for instance, now uses iron ore that is shipped from Chile through the Panama Canal and up the Atlantic coast to Sparrows Point, Md. This ore, which travels a distance of nearly 5,000 miles, can be laid down at Sparrows Point at a lower cost than our own Mesabi ores—a striking example of the economy of water transportation. It is dramatic proof, too, of the economic value of the Panama Canal. Various American companies are now exploring iron-ore deposits in Venezuela and Brazil. In western Africa there are deposits of iron which will yield close to 70 pounds of iron for every 100 pounds of ore.

More important to us than all of these sources of iron ore, however, are the deposits that have been discovered in recent years in Labrador and Quebec, and which are being explored through the joint efforts of the Hollinger Consolidated Gold Mines, Ltd., of Canada, and the M. A. Hanna Co., of Cleveland, Ohio. Already engineers have proved the availability of more than 300,000,000 tons of unusually rich ore in the area. This ore is at least as rich and possibly richer than the ores in our own Mesabi Range. It is close to the surface so that it can be easily mined. No one knows the full extent of this vast deposit. The exploration of this ore deposit is a thrilling example of joint enterprise between Canadian and American businessmen. The technical skills of both countries are being merged to develop a vital resource as a guaranty against the future.

As our own high-grade iron ores are depleted, Canadian ores become more important to American industry; and as we become more interested in the great Quebec-Labrador venture, we become more interested in the St. Lawrence seaway. It is estimated that at least 30,000,000 tons of ore a year could be brought through the proposed seaway. In 10 to 20 years this amount of ore may be of tremendous importance to the American steel industries in the Great Lakes area. In time of war it would be a great advantage to both Canada and the United States to have a source of ore that is not vulnerable to the hazards of transportation in the Atlantic.

The development of Canadian iron ore would mean more than a new source of supply for the American steel industry. It would mean better business between Canada and the United States. Trade between Canada and the United States in 1948 was well over $3,000,000,000. This trade is the largest exchange of goods between any two countries in the world today. Unfortunately, the United States has not been buying as much from Canada as Canada has bought from the United States. We know that Canadians are concerned about this imbalance in our trade. I assure you that we are equally desirous of achieving a balanced trade with Canada at the present high levels. The importation of Canadian iron ore into the United States is not an immediate or complete solution to the balance of payments problem. In the long run, however, the sale of iron ore to the United States will provide Canada with more dollar credits and will thus help to solve the problem.

We Americans face the fact that our iron-ore deposits are shrinking. We are beginning to realize that our deposits of petroleum will not last forever. It is clear that we are consuming oil in steadily increasing quantities, and newly discovered fields in the United States may not prove adequate to meet this expanding consumption. Fortunately, the new fields in Alberta appear to be very rich, possibly as rich as our own fields in west Texas. We cannot predict with any certainty what this new discovery will mean to the economic relationships between Canada and the United States. For one thing, it may mean that Canada will no longer have to worry about a deficit in her balance of payments with the United States. We cannot foresee the changes that may be made in the continental patterns of oil transportation and distribution. Probably new pipe lines will be built from Alberta to the head of the Lakes and to the west coast. It is possible that oil from Alberta will be shipped through the Great Lakes and the St. Lawrence seaway to eastern Canada and to the east coast of the United States. In coming years the demand for oil in Canada and the United States may exceed the available continental supplies. If that should happen, substantial imports from overseas sources will be needed. As we begin to import more oil from overseas, the St. Lawrence seaway will become increasingly important as a carrier of this traffic.

The importance of the seaway in the transportation of iron ore and petroleum is a relatively new reason for pushing ahead with this project. The older reasons which have been advanced by far-sighted Canadians and Americans for over half a century are as convincing as ever. The seaway will give both countries a new coast line. The factories in the great inland industrial centers of both countries will virtually have tidewater sites. Grain will move from the elevators at the head of Lake Superior directly into the Atlantic without transshipment at Port Colborne and Buffalo. Coal—one of the raw materials the United States can contribute to the industrial development of Canada—will move downriver to Montreal. Canadian woodpulp, lumber, and newsprint will come upriver and be unloaded directly on the docks of our Midwestern cities. Coffee, sugar, and other foodstuffs will move by water to the heart of the continent. All of these uses for the seaway we can prophesy with confidence. No one knows how many other uses will develop as the businessmen of both countries learn to make use of cheap water transportation. New resources, like inventions, have a way of outstripping the dreams of the men who discover them.

If the St. Lawrence Seaway project brought only the economies of water transportation to the people of our inland States and provinces, it would provide an immense economic gain. It will bring more than cheap transportation, however; it will mean more and cheaper power for the people of Canada and the United States. The Long Sault Dam at Massena will produce almost as much electric power as is now produced by all the dams constructed by the Tennessee Valley Authority. This power will be available to Ontario, to New York State, and to parts of New England. All three areas are now suffering from shortages of power.

It is difficult to overestimate the importance of electric power in a modern industrial society. The dams built by Canada and by the United States before the war were among the strongest weapons of the allies. The power generated on the Saguenay, in the Tennessee Valley, and in the far West produced the aluminum to build 100,000 planes a year; this power also helped produce the atomic bomb. In modern civilization, there is a direct relationship between a country's ability to produce energy and its total economic strength.

Every year the reasons for completing the St. Lawrence Seaway become more convincing. Each year the special objections to the project seem more trivial. In a free economy new developments of the magnitude of the Seaway always cause dislocations. Our two Nations will produce more and cheaper goods with the Seaway than without it. The standard of living for the people of both countries will go up. In the long run our businessmen will be more prosperous.

By working together to make this exciting project a reality, we shall take a long step forward in realizing our rich and common heritage on the North American continent. To the rest of the world Canada and the United States present the world's most dynamic center of economic energy. On this continent we have put to full use the amazing technological achievements of the twentieth century. We each emerged from the war stronger than we entered it—partly because we were protected by two oceans and by the armies and navies of our allies from the direct devastation of war, partly because of the inherent strength of our political, social and economic institutions.

It may be well to ask ourselves: What do we propose to do with our strength? Before we undertake to discuss its use, I might refer to the need for its preservation. I have stated frequently to my fellow citizens of the United States my great concern that the strength of our American institutions be preserved and that the strength of our economy also be preserved. And I say to you that in my opinion it is equally important to preserve the strength of the Canadian economy. Our interests are so closely related and in many ways so interdependent that we should be equally zealous to see that your strength and your substance are not sapped or dissipated.

We present to the world today the most outstanding example of the successful operation of what is sometimes referred to as the capitalist system. When I say capitalist system I do not describe a way of life under which a few people enjoy privileges at the expense of the many. I am naming a way of life under which more people of every age and group live a finer, more comfortable, and happier life than any group of similar size has enjoyed throughout the world's history. It behooves us to preserve this way of life for ourselves and our children. It is well for us to preserve it also for the benefit of other nations who share its blessings and as a deterrent to those who would destroy it. The way of life which I describe is identical in Canada and the United States. We are preserving the same thing in each country. This common effort, and in some aspects this joint effort, is worth all of the prayerful consideration and realistic thinking which we can give to it.

We can, however, do more than preserve this way of life; we can in many ways share it with others. President Truman in his inaugural address pointed out that vast areas of the world contain resources which need to be developed by the application of technology. He suggested that we of the United States make available to peace-loving peoples the benefits of our store of technical knowledge. He thus stated an ideal to which I am sure any citizen of Canada will subscribe. In this connection, however, he used language which is of interest to you as businessmen. He stated that in the promotion of this program "we should foster capital investment in areas needing development."

I have undertaken to demonstrate the vast possibilities which lie before us in developing other areas of the world and raising the standards of living of other peoples, if American businessmen carry their techniques and their money around the world. I have stated that neither our ideas nor our capital will be forced upon any other peoples—that the first condition of this program is that other countries should welcome us. I hope that you agree as businessmen with my feeling that a great future lies ahead of the businessmen of this North American Continent, if other peoples indicate that they want our help. I hope that you agree with me in this matter, and I hope that we undertake to develop this program the businessmen of Canada will approve of what we are doing and feel inclined to join with us in this effort.

May I say to you that any technical information which we develop in the Department of Commerce in connection with this program will be made as equally and freely available to you as to the businessmen of the United States. This program in many of its aspects furnishes an answer to trade problems which now afflict us, but it furnishes also an answer to the question as to how we can use our strength for the betterment of others. It is a thrilling prospect—it deserves consideration by businessmen of both of our great countries.

Proposed Basing-Point Legislation

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Wednesday, June 15 (legislative day of Thursday, June 2), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Rankin Peck, president of the National Congress of Petroleum Retailers, relative to the basing-point legislation now being considered by the Congress.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NATIONAL CONGRESS OF
PETROLEUM RETAILERS,
Washington, D. C., June 13, 1949.

Hon. ESTES KEFAUVER,
United States Senate,
Washington, D. C.

DEAR SENATOR KEFAUVER: The bill S. 1008 dealing with the basing-point problem is now being considered by the House Judiciary Committee. We have considered carefully the effect of the bill and are strongly for the amendments written into the bill upon your suggestion when it was being considered on the floor of the Senate.

The following is an analysis of the probable effect of the deletion of the so-called Kefauver amendments from S. 1008 on small business and competition. This analysis was prepared by Attorney Cyrus B. Austin who has been associated with Cadwalader, Wickersham & Taft, 14 Wall Street, New York City. While thus associated, Mr. Austin represented numerous small business interests, namely the interests of some 276,000 petroleum retailers in the case of *Federal Trade Commission v. Standard Oil Company of Indiana.*

Unless some adequate refutation is presented of the analysis advanced by Mr. Austion, it will be clear to all that the passage of the S. 1008 without the Kefauver amendments will have ruinous effects on small business. Senator KEFAUVER made that plain when he offered his amendments on the floor of the Senate.

Section 3 (b) of the present bill is the same or substantially the same as section 3 (b) of the amended bill (S. 236) introduced in the Senate by Senator JOHNSON of Colorado on February 17, 1949, after the extended hearings held by his Committee on Interstate and Foreign Commerce. Mr. Austin addressed a letter to Senator JOHNSON on February 28, 1949, setting forth the dangerous consequences that would result from section 3 (b) if enacted. The following quotation is from Mr. Austin's letter and is made part of this letter:

"The purpose of this letter is to call your attention to what I believe to be certain serious defects in this bill and particularly to one proposed amendment which would tend to promote rather than to hinder the growth of monopoly and injury to competition and free enterprise. It is believed that this bill is the result of over-concentration upon the problems of manufacturers selling their goods in interstate commerce under the policies of the Federal Trade Commission recently upheld by the courts, without giving sufficient consideration to the interests of the hundreds of thousands of independent retailers and other small businessmen who make their living from buying and reselling the goods of these manufacturers in local markets.

"Attention is called primarily to section 3 (b) of the bill amending section 2 (b) of the Clayton Act, and to the first proviso of the amendment to that section which reads as follows: '*Provided*, That a seller "may establish that his price or prices, practice or practices, are lawful" by showing that his lower price or the furnishing of services or facilities to any purchaser or purchasers was made in good faith to meet the price of competitor or the services or facilities furnished by such competitor.'

"The words inclosed in double quotation marks are new and would make a showing by a seller that his lower price (or services or facilities) were given to meet the price (or services or facilities) of one of his competitors a complete and absolute justification for discrimination between purchasers regardless of the effect upon competition between the purchasers.

"This bill, in making a seller's meeting of his own competition an absolute defense regardless of the effect of his price discrimination upon competition between the purchasers of his goods, returns to the provisions of old section 2 of the Clayton Act, a step which will hardly be taken if consideration is given to the history of that section and the reasons which impelled Congress to enact the Robinson-Patman amendments of 1936. Old section 2 provided 'that nothing herein contained shall prevent * * * discrimination in price in the same or different communities made in good faith to meet competition.' The same proviso was inserted in the Senate Robinson-Patman bill in 1936, but was stricken out in conference and the House version adopted. It was the opinion of the conferees that the old proviso was one of the principal obstacles to the enforcement of old section 2 (CONGRESSIONAL RECORD, June 8, 1936, p. 9410). Senator Logan, in explaining the Robinson-Patman bill in the Senate (CONGRESSIONAL RECORD, March 3, 1936, p. 3228) said:

" 'As pointed out in the report of the Judiciary Committee, the weakness of section 2 of the Clayton Act is in that it places no limit upon differentials permissible on account of differences in quantity and in that it permits discriminations to meet competition and thereby tends to substitute the remedy of retaliation for that of law which results in destructive consequences to the main purposes of the bill.'

"Federal Trade Commissioner Robert E. Freer, in reviewing the history of section 2 of the Clayton Act in an address before the New York State Bar Association on January 23, 1946, stated:

" 'The country became convinced by 1936 that section 2 of the Clayton Act had two fatal loopholes. As judicially interpreted, it placed no limit upon differentials permissible on account of difference in quantity; it was understood to permit all discriminatory price differences made to meet competition, thus in effect licensing oppressive retaliation.'

"When Congress passed the Robinson-Patman Act it was concerned with the growth of chain stores and the use of the mass buying power of these large chains to obtain price concessions from sellers greatly in excess of the concessions and allowances granted to their smaller independent competitors. The Federal Trade Commission had made an exhaustive investigation of the chain-store problem at the direction of Congress. Its report contained comprehensive analyses of special discounts and allowances made by hundreds of manufacturers of grocery, drug, and tobacco products and demonstrated the much greater frequency of special offers to chains and larger accounts than to independent distributors. It was shown that many manufacturers granted greater discounts to the large retail chains than were granted to wholesalers.

"Under old section 2 of the Clayton Act, and under the present bill if enacted, a large buyer, merely by finding two or more sellers of like goods willing to grant to him the same preferential price, could obtain an unearned competitive advantage over his smaller competitors with impunity. Under this bill the preferential prices need not even be identical to meet the test of good faith. A large grocery chain, for example, might be given, and might use to its competitive advantage, preferential discounts from various competing sellers of flour, sugar, canned goods and other products, not offered to independent grocers, and neither the sellers nor the chain would be subject to prosecution even though the ability of the independent grocers to compete with the chain were seriously threatened by such price concessions.

"During the debate on the Robinson-Patman bill in the House pending final passage, the chairman of the House conferees stated, in explanation of the present proviso of section 2 (b) (CONGRESSIONAL RECORD, June 15, 1936, p. 9560):

" 'This procedural provision cannot be construed as a carte blanche exemption to violate the bill so long as a competitor can be shown to have violated it first, nor so long as that competition cannot be met without the use of oppressive discriminations in violation of the obvious intent of the bill.

" '* * * If this proviso were construed to permit the showing of a competing offer as an obsolute bar to liability for discrimination, then it would nullify the act entirely at the very inception of its enforcement; for in nearly every case mass buyers receive similar discriminations from competing sellers of the same product.'

"The present bill ignores the history of the Robinson-Patman Act and in effect restores the proviso of old section 2 of the Clayton Act which was for many years found by the Federal Trade Commission to be practically unenforceable. It would result in making a discrimination in price, unlawful when engaged in by one seller, lawful when in by two or more even though its injurious effect is thereby heightened.

"A good example of the injurious price discrimination which would result if the meeting of competitive offers by a seller were made a complete defense is shown by the record in the Standard Oil case in which the Commission's order is under review (and has since been affirmed) by the United States court of appeals in Chicago. Standard Oil Co. sells its regular brands of gasoline to some 350 to 400 retail service stations in Detroit. One of these retailers (engaged in selling many other products besides gasoline) expanded its business and established a chain of four large service stations located in various parts of the city. After the volume of this retailer had reached more than 2,000,000 gallons annually it demanded that Standard sell to it as a jobber at a differential of 1½ cents a gallon below the price charged the other retail dealers with whom it was directly competing. It cited an offer from another oil company to grant it an equally low price, and threatened to withdraw its business from Standard unless its demand was complied with. Standard for a time granted this chain retailer a ½-cent price differential, and thereafter permitted it to buy at the jobber differential of 1½ cents a gallon. This retailer thereupon used its price advantage to cut prices, and increased its volume to more than 4,000,000 gallons a year, this additional gallonage, of course being taken away from its competitors. These facts and the resulting competitive injury to hundreds of independent service-station operators were not disputed. Standard Oil Co., however, claimed that its discrimination was justified because its lower price to the chain retailer was made in good faith to meet competition and it would otherwise have lost that business. This case squarely presented to the court the construction of the present proviso of section 2 (b) of the Clayton Act.

"(The court has since decided that the present proviso of sec. 2 (b) does not make a seller's meeting of his own competition an absolute justification for a discrimination in price which injures competition between purchasers.)

"Making meeting competition a defense is not necessary to enable a seller to absorb freight in order to compete in a distant market with a competitor whose plant is located closer to the customer. This is taken care of by the definition of 'price' included in the bill and by the amendment of the 'due allowance' clause in section 2 (a). If those portions of the bill are enacted, a manufacturer in New York will be able to sell in or near Chicago at the same delivered price at which he sells in New York, absorbing all the freight; or he may add all or any part of the freight from New York to Chicago to his New York price, as the competitive situation may require. He will not be discriminating in price if he absorbs all the freight, and if he absorbs a part or none of the freight he will be able to justify the difference in his delivered prices by the difference in transportation costs. He will have no need to show that his price in Chicago is made to meet competition. It is only in a case where the seller not only absorbs all the freight but in addition grants an outright discriminatory price that he will run afoul of the act and wish to fall back upon the claim that he is meeting a competitor's price. It is submitted that it is seldom economically justifiable for a manufacturer to charge the more distant of two competing customers a lower delivered price than he charges the customer nearer his factory. If he loses a customer as a result of unlawful discrimination by a competitor he will have a cause against the competitor for triple damages. If his competitor is not discriminating in price then the situation is the normal one of price competition between two sellers and his remedy is to meet his competitor's price without unlawful discrimination.

"The ultimate question presented concededly involves a balancing of interests. Is the protection of an interstate seller against the occasional loss of a customer of greater importance than the protection of perhaps hundreds of small-business men against competitive injury which may result in the loss of their entire businesses? Is constructive competition to be sacrificed to permit destructive retaliation? It is submitted that in our system of free competitive enterprise the question answers itself.

"It is suggested that the first proviso of section 2 (b) as contained in section 3 (b) of the amended bill be changed to read as follows: '*Provided*, That in any such hearing or judicial proceeding the person charged with such violation may show that the seller's lower price or the furnishing of services or facilities to any purchaser or purchasers was made in good faith to meet the price of a competitor or the services or facilities furnished by a competitor, and such proof if made shall be considered together with evidence of the effect of the discrimination in determining as an issue of fact whether the discrimination was justified.'

"The effect of this language would be that even where the Commission (or the plaintiff) has proved that the discrimination will probably result in injury to competition, and where the seller has not established any of the affirmative justifications available under section 2 (a), proof that his lower price was made in good faith to meet the equally low price of a competitor would be sufficient to raise an issue of fact as to justification. This would permit the Commission or the court to balance the seller's interest in meeting his own competition against the injury to the competitive interests of others resulting from the discrimination. It is submitted that this is the maximum effect that should be given to 'meeting competition in good faith' as a justification for injurious price discriminations.'

I am in complete agreement with the views of Mr. Austin as expressed above. This is shown by the telegram that I have this day dispatched to Hon. Tom Clark, Attorney General of the United States, which I quote as follows:

"It has been reported in the press that the Department of Justice has urged the deletion of the so-called Kefauver amendments from the O'Mahoney basing-point bill (S. 1008). If this is done, the decision of the circuit court of appeals in the case of *Standard Oil Co. of Indiana* v. *Federal Trade Commission* will be nullified. That decision was one of the greatest victories ever won by small business. Specifically it provided that large suppliers cannot justify their action in granting big discounts to their favored large buyers, enabling these large buyers to put their small competitors out of business, merely by holding that such discriminations are made in 'good faith.'

"Recently, the Department of Justice won a major victory against the Great Atlantic & Pacific Tea Co. affirmed a few short weeks ago in the circuit court of appeals. One of the practices in which the Great A & P Tea Co. was involved was exactly the same as that which was condemned by the court in the Standard Oil of Indiana case. The Great A & P Co. received big discounts from its suppliers which enabled it to put its smaller retail competition out of business. Since the suppliers were probably competing in 'good faith' in securing A & P's business, the practice would be placed beyond the reach of the Robinson-Patman Act if the Kefauver amendments were removed. What this boils down to is that you have proceeded against the Great A & P Tea Co. for pursuing the same practice which you now urge Congress to legalize. Which is the position of the Department of Justice? Are you in favor of protecting small business as your A & P case would indicate or are you in favor of throwing small business to the wolves of predatory price discriminators as your urging of the deletion of the Kefauver amendments would indicate?

"I would appreciate your immediate answer to this vital question.

"RANKIN PECK,
"President, National Congress of Petroleum Retailers."

I contend it is obvious that there is much excitement in business circles over the Supreme Court's basing-point decision. It is obvious, too, that additional fat was put on this fire by the decision of the United States circuit court of appeals in the Standard Oil case. What is almost equally apparent is the confusion that seems to prevail over the problem (so simple in its fundamentals) as to what the long- and short-range effects of these decisions might be. In the present confusion it seems those fundamentals are largely obscured; but they must be dusted off, kept in sight, and never forgotten—if free enterprise is to continue to be a way of life in this country.

One of those fundamentals is the well-known tendency of financial power (or any other human power, for that matter) to enhance itself in something quite like a geometrical ratio of its size. Our Federal Government is distinguished by an unwavering recognition of this fact—as is shown by its long record of what has always been called antimonopolistic legislation. This tag, "antimonopolistic," is not too appropriate. It has been subject to a type of degradation that has resulted in its becoming almost synonymous with "antibig business." This, undoubtedly, is an unfortunate thing for nothing could be more self-evident than these two facts: (1) Bigness of accomplishment is not possible without a corresponding bigness of the accomplisher. (2) "Bigness" of accomplishment by American business is, today, the one great hope for an impoverished human society.

So we are faced with two problems, irreconcilable only on the surface. "Bigness" in business is not, in itself, separable from the "bigness" of America. In fact, it is the parent of our country's "bigness." Yet, "bigness" always tends to devour "littleness." At the same time "littleness" in business is just as necessary for the continuation of America's "bigness" as it is necessary for the race to have children in order to perpetuate itself. We are not, as a race, in the habit of destroying our own offspring. Business has not yet reached that state of enlightenment except as is represented by its submission to the conscience of our Federal Government. That Federal conscience has been manifest for a long time in the record of our so-called antimonopolistic legislation.

The intent of our Federal Congress, over the years, has been as right as rain, with reference to this problem. This intent shows its form in the very family tree of antimonopolistic legislation. First came the Sherman Act, then the Clayton Act, then the now controversial Robinson-Patman Act. Each was more or less a hesitant step, never taken without the utmost circumspection—nearly always subject to the criticism that it was almost "too little, too late." Little business in this country cannot pat itself on the back as being the recipient of hasty or ill-advised support from Congress. Yet, to Con-

UNIVERSITY OF MICHIGAN LIBRARIES

gress it can (and does, I think) give thanks for being in America's big picture at all.

Now to drop down to the present obvious confusion that is raging on a level too low to warrant hope that any good will come of it unless the sights are raised. Much of this confusion stems from two divergent views of what "good faith" means as a term that appears in the Robinson-Patman law, as has been pointed out above. Big business thinks "good faith" means one thing; little business thinks it means something quite different. As to which, if either, might be right is not so important as is the question as to what Congress meant when it wrote that term into Federal law.

Now we have the spectacle, by no means a novel one, wherein violators of the Robinson-Patman law profess surprise at finding themselves held in violation by our highest courts. There is a certain naïveté about this situation that quite belies complete innocence. It is a type of naïveté, so clever (if that is what it is) as actually to be confusing in quite a big way. The naïveté consists in the theory, advanced by big business, as to what the words "good faith" added to the meaning of the remaining language of the law that permitted a competitor to meet lower prices. Now, it must be obvious that if those words were without meaning, they would never have been used by Congress. If meaningful, on the other hand, they can have but one large meaning which is: Lower prices can always be met by a competitor provided that this action does not violate the spirit of the law in which the words "good faith" were used for a specific purpose. The spirit of the Robinson-Patman law is the absolute necessity for prohibiting price discrimination by those possessing financal power. That was recognized then, as now, as the most potent tool of monopoly. The United States court of appeals (as would any good lawyer on the proper side) understood this specific meaning of "good faith" as written into the statute.

"Good faith," written into a law, is not a matter of private conscience separable from any relation to the law in which it is used. On the contrary, it must always be related to the body and intent of that law as expressed, generally speaking, in its title or caption which, in turn, is intended to express its general purpose or function.

It is perfectly clear that the Senate had a complete grasp of the large principles involved, when it so promptly adopted the Kefauver amendments to the O'Mahoney bill. That was one of the most reassuring things I have seen happen during all the prevalent confusion and bickering. Its meaning is so clear to any unbiased lawyer. That one action should serve to resolve the whole present unholy confusion that has arisen simply because of two recent far-sighted decisions by our highest courts. If the Congress will stick to its guns, the action of keeping in the law the Kefauver amendments could go down in the history of this country as something that operated to prevent big business from committing race suicide by destroying its offspring, little business.

The unanimous opinion of the Seventh United States Circuit Court of Appeals in the case of *Standard Oil Co.* v. *Federal Trade Commission*, Docket 4389, rendered on March 13, 1949, did for the Robinson-Patman law what would have inured to the tremendous benefit of this country had it been done long ago. We now, by virtue of this high court decision, have a seasoned, tested law, clarified and finally settled as to all possible ramifications of meaning, harming no one but holding out great hope and promise of benefit to the whole of America's free enterprise. We are for the Robinson-Patman law without further tampering.

Sincerely yours,

RANKIN PECK, *President,*
National Congress of Petroleum Retailers.

CVA Legislation and Columbia River Development

EXTENSION OF REMARKS
OF

HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1949

Mr. MITCHELL. Mr. Speaker, preliminary hearings have been held by the Committee on Public Works and the Committee on Public Lands of the House relative to existing plans for the development of the Columbia River Basin. In view of the fact that hearings on CVA legislation, which I sponsor, have been scheduled by the Committee on Public Works, it may be of interest to the Members to know more about the relationship between these two sets of hearings. I include with these remarks a copy of a letter sent by me to the chairman of the Committee on Public Lands and testimony which I presented to the Committee on Public Works.

HOUSE OF REPRESENTATIVES,
Washington, D. C., June 10, 1949.

Hon. J. HARDIN PETERSON,
Chairman, Public Lands Committee,
House Office Building,
Washington, D. C.

DEAR PETE: It is my understanding that a subcommittee of the House Public Lands Committee is now holding hearings on the reclamation aspects of Columbia River Basin development.

You have publicly stated that the purpose of these hearings is to acquire background information on reclamation progress in the Columbia Basin and not to make extended inquiry into the matters covered by pending Columbia Valley legislation.

The interest of the Public Lands Committee in the important work of Columbia Basin development is greatly appreciated. However, as a sponsor of CVA legislation, I respectfully direct the committee's attention to the fact that opponents of this legislation, both within and without the Government, are utilizing the present plans of the Bureau of Reclamation and the Corps of Engineers, and their so-called agreement on the Columbia, as a means of mobilizing opposition to the proposed CVA. Back in March I called to President Truman's attention the manner in which Northwest hearings of the Corps of Engineers on the so-called "308" report were used as a sounding board against CVA. Subsequently the House Public Works Committee, to which the CVA bills have been referred, was persuaded to call a "quickie" hearing on the "308" report, despite the fact that the report was not officially before the committee. Considerable one-sided testimony was presented by witnesses which directly or by implication was intended to place the proposed CVA legislation in a distincly unfavorable light.

It is my earnest hope that the present hearing before your subcommittee will not constitute another "quickie" hearing for opponents of CVA. Hearings on CVA and other Columbia Valley legislation were begun several weeks ago in the Senate Public Works Committee and will be shortly resumed. The House Public Works Committee has advised me that it will hear Government witnesses on CVA commencing June 20.

Because of the one-sided nature of the testimony presented to the House Public Works Committee in its hearings of May 20, I presented to that committee a statement outlining my reasons why the present reports of the Bureau of Reclamation and Corps of Engineers should not be considered independently of the pending CVA legislation. Accordingly, I would appreciate having the same privilege extended to me by your subcommittee.

May I assure you again of my appreciation for the committee's interest and the fine work it has done.

Sincerely yours,

HUGH B. MITCHELL.

STATEMENT BY HON. HUGH B. MITCHELL, OF WASHINGTON, BEFORE THE HOUSE COMMITTEE ON PUBLIC WORKS

Gentlemen of the committee, it is my understanding that testimony is being presented today on the Columbia River review report, the so-called "308" report, of the Corps of Engineers in the Department of the Army.

According to the information I have received from Maj. Gen. Lewis A. Pick, Chief of Engineers, copies of the detailed basic report of the division engineer were transmitted to the Governors of the Columbia Basin States and to the heads of the Federal agencies involved, and subsequently the Board of Engineers for Rivers and Harbors reviewed these findings and recommendations in the form of a separate report. The latter report, together with a report of the Chief of Engineers to the Secretary of the Army, have been submitted in turn to the Governors of the Columbia Basin States and to the Secretary of the Interior, prior to transmission to the Congress.

Whether the committee is officially in receipt of these various reports by the Corps of Engineers, I do not know at this moment. However, since the committee has decided to hear witnesses on the Columbia Basin development program as viewed by the Corps of Engineers, and because of my long-standing and active interest in these problems, I have requested the privilege of appearing before the committee.

My purpose today, Mr. Chairman, is to ask that the "308" report be considered in the broader perspective of the Columbia Valley Administration bills which have been referred to this committee. Although I appreciate that the committee intends to hold hearings on the CVA bills at another time, in my judgment there are at least three reasons why the Corps of Engineers "308" report should not be considered in isolation.

The first reason is that the Columbia Valley Administration bills which I sponsor embody the Administration's considered recommendations for development of the Columbia Basin, and these recommendations have been made the subject of a special message by the President to Congress (H. Doc. 156).

The second reason is that the local hearings and discussions on the Division Engineer's "308" report, whether so intended or not, have provided a sounding board for one-sided criticism and opposition to the proposed CVA. I may add further that there is implicit in the "308" report, particularly as modified by agreement with the Bureau of Reclamation, the argument that the CVA is unnecessary, despite the President's urgent message for prompt action in CVA.

The third reason is my frankly stated belief that the program proposed by the Corps of Engineers for the Columbia River and its tributaries, whatever our individual judgment as to its scope or adequacy, requires a Columbia Valley Administration for its successful execution.

In amplification of the first point, I wish to submit for the record a copy of a letter I have written to Chairman WHITTINGTON, of the House Committee on Public Works, and his reply, indicating the present status of the CVA bills.

APRIL 29, 1949.

Hon. WILL M. WHITTINGTON,
Chairman, Public Works Committee,
House Office Building,
Washington, D. C.

DEAR MR. WHITTINGTON: The Columbia Valley Administration bills, H. R. 4286 and H. R. 4287, which have been referred to your committee, were introduced in accord with the President's special message to Congress (H. Doc. 158) urging the early enactment of such legislation.

It is my hope that the preliminary work of referring these bills to the various executive departments for comment can be undertaken immediately and that the necessary preparation for hearings in this session can be made.

CVA legislation is a matter of vital importance to the development of the Pacific Northwest and to the Nation's welfare. The people of the region are actively interested, and I know they would be extremely gratified if hearings would be expeditiously arranged.

Sincerely yours,

HUGH B. MITCHELL.

APRIL 30, 1949.

Hon. HUGH B. MITCHELL,
House of Representatives,
Washington, D. C.

DEAR COLLEAGUE: This will acknowledge receipt of your letter of April 29, relative to the Columbia Valley Administration bills, H. R. 4286 and H. R. 4287.

I am pleased to advise you that today I have requested reports from Interior Department, Army, Agriculture, Commerce, and Budget Bureau on these two bills.

Sincerely yours,

WILL M. WHITTINGTON,
Chairman, Committee on Public Works.

In amplification of the second point, regarding the manner in which the "308" report has been utilized to attack the proposed CVA, I submit for the record a copy of the following letter dated March 28, which I addressed to President Truman:

MARCH 28, 1949.

The PRESIDENT,
The White House.

DEAR MR. PRESIDENT: Many people in the Pacific Northwest are looking forward with great interest to the CVA legislative recommendations which you have requested from several of the executive departments.

Inasmuch as you have clearly set forth the administration policy in support of CVA, I respectfully call to your attention the fact that the Army Corps of Engineers in the Pacific Northwest is continuing its thinly veiled attacks upon this policy.

At the time local hearings were held by the Corps of Engineers on its so-called "308" plan for Columbia River development, testimony in favor of CVA was ruled inadmissible, which afforded opposing witnesses an opportunity to attack CVA.

In an AP dispatch from Pocatello, Idaho, dated March 24, Col. T. P. Weaver, division engineer, was reported as saying "the 308 report had been coordinated with other Federal agencies and all of the report objectives can be accomplished through existing agencies." Colonel Weaver was further quoted as saying, "the people interested in development of the area must get behind this plan."

An earlier AP dispatch from Spokane, dated January 13, quoted Colonel Weaver thus: "No grandiose new scheme of administration is required for the development of Columbia basin resources."

It appears to me that the Corps of Engineers is stepping outside the bounds of propriety and jurisdiction in permitting policy declarations which are antagonistic to the CVA program you have announced.

Sincerely yours,

HUGH B. MITCHELL.

The President, in reply to my letter, stated that such opposition to CVA could be expected and expressed his confidence that ultimately the job would be done as it should be.

It is appropriate here to recall the warning served by the Honorable Leslie A. Miller, former Governor of Wyoming, and chairman of the Task Force Committee on Natural Resources for the Hoover Commission. In an article in the Saturday Evening Post of May 14, 1949, recounting the waste of public moneys and inefficiencies resulting from present administrative arrangements for river-basin development, Governor Miller scored the Pick-Sloan plan for the Missouri Valley and continued:

"I will go a step further and predict that, unless firm steps are taken, President Truman will have trouble in bringing about his proposed Columbia Valley Authority plan. Both Engineers and Reclamation have staked out claims on this area. I have seen the 14 volumes of plans that the Engineers have prepared for Columbia River development; the documents weight 41 pounds and make a stack more than a foot and a half high. Unless the President can be effectively tough—and the Engineers have sabotaged the wishes of Presidents many times in the past—another Pick-Sloan deal may result for the Columbia Valley."

This brings me to an amplification of the third point, the relationship between the program proposed in the "308" report and the means of its execution. Two basic concepts underlying the "308" report, as I understand them, are in conflict. One concept is sound; namely, the comprehensive development of the Columbia River Basin as a unit. The other concept is highly questionable; namely, that the existing agencies as presently constituted can carry out this program most efficiently.

The rich and varied resources of the basin that must be conserved and developed, the many lines of endeavor that must be pursued, the separate and sometimes conflicting interests that must be adjusted—these manifold requirements can be satisfied only by the formulation of a comprehensive plan and a unified administration.

We now have several comprehensive plans for the Columbia Basin, one by the Corps of Engineers and one by the Bureau of Reclamation, but we still lack the unified administration. The plain truth of the matter is that the felt and recognized need for comprehensive unified development has outrun existing administrative arrangements. The Columbia Valley Administration simply would bring the Government up to date on Columbia River development by establishing for the program an administrative organization adequate to carry it out.

Thoughtful persons are coming to understand more and more that the TVA, under the auspices of a Democratic Congress and administration, pioneered a vast new experiment in democracy; that the results have been good; and that the principle of administration so created is no longer an experiment, but an established and continuing method of democratic government for the development of natural resources. The TVA, in other words, is here to stay, and the sooner we apply its lessons to the other great river basins of the country, the healthier and more prosperous will be the internal economy of the country.

For some time it has been recognized and accepted that a dam constructed to serve multiple purposes, such as power, flood control, navigation, and water supply, is far more economical and efficient than several dams, each devoted to a single purpose. Likewise, due regard to the protection of, say, fishery resources in dam building is far more economical, far wiser policy, than subsequent attempts to replenish fishing stocks that have been impaired or destroyed.

And what is true of structures that pertain to the controlled storage and release of water is the more true of the region's resources taken in their entirety. How we cut our forests, how we till the soil, make a difference to the work of the river. Devastating floods and chronic shortages of electric power have brought to our people a sharp realization that there is much to be done on the Columbia, and to be done in an intelligent and coordinated way.

The advantages of comprehensive multiple purpose development seem simple and obvious, but it is surprising how many years it took the agencies of Government to recognize them. The assumption of responsibility by the Federal Government over water resources has evolved slowly through the years. Each agency pursuing a specialized service found inevitably that it must broaden its eid of activity or do less than an adequate job.

Today the Bureau of Reclamation in the Department of Interior and the Corps of Engineers in the Department of the Army both talk in terms of comprehensive river basin planning. These two Departments of the Federal Government have each prepared reports calling for a broad development program on the Columbia and its tributaries.

The mere fact that there are two plans, each varying in detail or emphasis, by itself implies the need for appraisal and integration by an agency possessed of the requisite jurisdiction and authority. But even assuming that the two plans are made into one, and that their component parts adequately cover the complex phases of river-basin development, there is still the big gap between the plan and its execution.

Under present administrative arrangements, the execution of such a program necessarily implies the cooperation of a host of individual agencies still pursuing specialized but related and more or less overlapping lines of activity. There are good and sufficient reasons for believing that the limited cooperation among existing primary agencies renders hopeless the unified administration of the Columbia River Basin.

The general public is not often aware how intense can be the conflicts among various governmental agencies. But those of us who follow closely the operation of Federal agencies and their field divisions know that there is more wish than fact in the cooperation of key agencies as presently set up. Such agencies, vertically organized, with their lines of jurisdiction running back to some remote central office in Washington, D. C., cannot effectively carry out a program which must take the Columbia Basin as a unit for resource development.

The various interested agencies, in an attempt to meet the evident need for unified regional administration, and possibly to forestall a CVA, have set up so-called interagency and even interdepartmental committees. Useful as these committees are for the airing of views and the interchange of information, the loyalties of their component members stay with the agencies represented. The interagency committee is a forum for discussion, not an instrument for unified resource administration. The necessarily limited role of the interagency committee has been emphasized by the President in his CVA message and by the Hoover Commission in the findings of its task force committee on natural resources.

It is possibly more than mere coincidence that 3 days after the CVA bills were introduced into the House of Representatives, the Corps of Engineers and the Bureau of Reclamation reached an agreement purporting to iron out their differences regarding Columbia River development. The two agencies, in the words of General Pick, "have agreed to a definition of spheres of predominant interest and, insofar as consistent with directives of Congress, will recognize the pri-

UNIVERSITY OF MICHIGAN LIBRARIES

mary responsibility of each agency in the designated area and will consult and reach agreement on responsibilities for work in such areas at the outset of investigations and studies for future projects."

This agreement does not guarantee, of course, that agreements will in fact be reached where spheres of predominant interest are not clearly delineated, nor will it solve the difficult problems posed by scheduling, design and day-to-day operation of great multipurpose dams. Other related resource programs are not within the jurisdiction of these agencies nor necessarily within the province of their agreement. Furthermore, even if these agencies are now disposed to cooperate more and compete less in related activities, the mechanical difficulties still remain of presenting numerous department and agency budgets to Congress in a manner that would convey a clear, balanced, and comprehensive picture of long-range regional needs. Where each agency or department is responsible only for its piece of the program, responsibility for the development of the whole region is still diffused or divided. Where each agency or department is concerned about its own particular interest, the best interests of the region as a whole are not necessarily assured.

The CVA would not eliminate the need and desirability of agency cooperation; rather, it would establish an administrative pattern which makes such cooperation meaningful and effective. The CVA would have responsibilities broadly defined by law and subject to continuing congressional approval. It would be the guiding instrument for the work of the agencies, public and private, and it would retain existing agency functions wherever they prove desirable to a coordinated program of resource development.

Significantly, the Commissioner of Reclamation, in outlining the agreement of April 11 with the Corps of Engineers, has stated:

"Nothing in the coordinated plans or agreement conflicts with or forecloses the later adoption by the Congress of any other method of administration such as a Columbia Valley Administration or the establishment of any other vehicle or operation conceived on the theory of taking over the existent facilities or those that might be authorized prior to the creation of such vehicle."

This position was earlier affirmed in a joint press release on April 19 by the Departments of the Army and Interior which stated:

The agreement provides the basis for further Federal development of the region's water resources efficiently and in consonance with the views and needs of the people of the region. In this respect it provides an inventory and framework which would be extremely valuable to the proposed Columbia Valley Administration recommended by the President.

Subsequently, in reviewing the report of the Bureau of Reclamation as revised by agreement with the Corps of Engineers, Secretary of Interior Krug stated very succinctly that this report was not to be taken as a satisfactory substitute for the proposed Columbia Valley Administration. Secretary Krug's memorandum of May 6 to Commissioner Straus contains the following:

"I find that your report, and that of the Army, reflecting as they do the terms of my agreement with the Secretary of the Army of April 11, 1949, represent substantial progress in meeting the requirements prescribed by the President for perfecting a fully coordinated and comprehensive plan for the development of the resources of the Pacific Northwest. Despite the excellence of these reports, I do not believe, however, that they present as effective a plan for accomplishing and administering a comprehensive program of resource development as that proposed by the President in his recommendation for the establishment of a Columbia Valley Administration. This recommendation has my wholehearted approval and support.

"Accordingly, my approval of your report is not to be construed as implying that it is a satisfactory substitute for a Columbia Valley Administration. These reports do provide, however, a statement of projects and related resource development programs which, as they are authorized and carried out, will facilitate the work of a Columbia Valley Administration."

It is one thing, Mr. Chairman, to consider the recent agreement of the Corps of Engineers and the Bureau of Reclamation as progress in greater cooperative effort for the development of the Columbia Basin, and I am prepared to take agencies at their word in recognizing the possible contributions of this effort to a Columbia Valley Administration. It is quite another thing, however, to cite this agreement as a satisfactory alternative to CVA, and to employ it as a technique of opposition to the CVA recommended by the administration. However well-intentioned may be the heads of the respective agencies, some officials in the lower echelons and a variety of outside interests take a different view of the matter.

We have at this hearing a number of witnesses, including the Governor of my State, who have consistently opposed CVA and who have publicized this opposition constantly by asserting that existing agencies were doing in a satisfactory way all there was to be done in the Columbia Basin. These assertions fly in the face of known facts and disregard completely the factual findings of the Hoover Commission. Although the Governor of Washington happens to be in the opposing party, the criticism of his position that I make is not a partisan matter. Congressman WALT HORAN, a Republican colleague, has well said: "To those who have smugly insisted that the existing Federal agencies were doing a good enough job and that no need existed for a program of comprehensive river development, the findings of the (Hoover) Commission's task force are more devastating than any statements I might make."

The Governor of Washington, in his opening message to the newly assembled State Legislature, had made a pledge "to examine, critically, any proposed Federal legislation which would subject our power and irrigation resources to further national control." Yet, a few hours after the President's announcement, late in January, calling upon the executive agencies to draft new CVA legislation, the Governor expressed his unqualified and, I may say, uncritical opposition. The Governors of Oregon and Idaho also made immediate protest, despite the fact that the new CVA legislation was not yet in the making.

Subsequently, aides of the President accompanied me to the Northwest to confer with interested persons and groups on positive legislative recommendations, and later a spokesman for the governor complained that he had not been consulted. It was exceedingly regretful to me that the Governor had seen fit to make his opposition to CVA automatic and unqualified and smacking of party considerations. To allay any possible misinterpretation of the Governor's opposition and to invite a reconsideration of his views I sent him the following message:

"GOV. ARTHUR B. LANGLIE,

"State Capitol, Olympia, Wash.:

"Press reports quote you as opposing the creation of a Columbia Valley Authority and claiming overwhelming sentiment in Pacific Northwest is for development through existing agencies. Your position is unrealistic and without any solid basis in fact. Furthermore your position is identical with that taken by P. L. Smith, high-bracket lobbyist for private power companies. Impartial observers as well as the great majority of citizens in the region recognize and accept need for more efficient and greatly enlarged program of Columbia River development through CVA. Our people are not indifferent to continued threat of floods, to acute power shortages which are causing loss of new jobs and pay rolls, to need for comprehensive and unified program of resource development. I sincerely hope you will not allow narrow partisan considerations make you continue to withhold support of CVA legislation. By supporting CVA you will have an excellent opportunity to show the hidebound conservatives of the Republican Party that you stand for progress in the Pacific Northwest. Will you take the opportunity?

"HUGH B. MITCHELL,
Member of Congress."

In fairness to the Governor, I include his reply, which is relevant in this testimony because it relates his CVA opposition to the "308" report of the Corps of Engineers and the work of the Bureau of Reclamation:

"Hon. HUGH B. MITCHELL,

"House Office Building, Washington, D. C.:

"Contents of wire carefully noted and all implications considered. Apparently I am being correctly quoted and continue to stand on my right and obligation to protect the interest of this State. Believe we have a solid basis for our convictions and are realistic in our efforts to resist any authority that will take from our State and our people direct representation in proportion to the development that is within our State.

"We recognize the urgent need for rapid development of Columbia River resources and as stated before the United States Army Engineers' hearing held at Seattle, February 1, in which we gave general approval to the "308" report, we realize our State and region is dependent on power and land development and believe the United States Army Engineers and the Bureau of Reclamation must coordinate their efforts and bring to completion dams already authorized and with it subsidy of power profits for development of irrigation.

"We hold no brief for private power interest and take issue with your comparisons. We accept the thinking of the majority of citizens that we need a greatly enlarged program of Columbia River development and assure you it is the method in which which we arrive at the development and administration of authority that we are concerned with. Certainly H. R. 427 recently introduced, which is the only CVA legislation introduced so far, does not meet the requirements or insure any of the objectives above referred to.

"Your support of legislation that will bring State participation and regional administration to Columbia River resources will hasten development and minimize misunderstandings. I hope you will avail yourself of this opportunity.

"ARTHUR B. LANGLIE,
"Governor, State of Washington."

Frankly, it is extremely difficult to determine where the Governor of Washington stands in relation to Columbia River development. Although we are naturally pleased to have the governor appear in the Nation's capital in support of greater appropriations for Northwest projects, an AP dispatch in the Seattle Post Intelligencer of April 6, headed "Langlie Backs Private Power" quotes the governor in saying:

"All we do now is lie on our back and scream for money from the Federal Government. It is high time to stop that and take a hand in the development ourselves."

Later, the governor sent me, as a member of the Washington delegation, the following telegram calling for funds for Chief Joseph Dam:

"Hon. HUGH B. MITCHELL,

"House of Representatives,
"Washington, D. C.:

"Our attention has been called to an apparent long-time understanding, scheduling

construction of Chief Joseph Dam next following McNary. For years Northwest development plans have provided for virtually simultaneous construction McNary and Chief Joseph (Foster Creek) Dams, but our people deferred in favor of McNary 2 years ago on assurance from lower river interests that Chief Joseph would be launched the following year. It is demoralizing to have these projects taken from logical and planned sequence. The economy of our State and the entire Northwest depends upon rapid completion of authorized dams. Chief Joseph should have been given substantial appropriations last year. I strongly urge full suggested appropriation of $21,375,000 be made available for this project.

"ARTHUR B. LANGLIE,
"Governor of Washington.

A citizen of my district, struck by the obvious inconsistency in the Governor's position, commented in a letter to a local radio station:

"On April 27, just 22 days after the Spokane address of the Governor, where he vowed to stop crying for Federal funds, we were appalled to find the Governor, flat on his back, screaming (by wire) for $21,375,000 to push operations on Chief Joseph Dam construction."

To round out the story, I should include my own reply to the Governor's wire:

"GOV. ARTHUR B. LANGLIE,
"Olympia, Wash.:

"Reurtel when we obtained authorization of Foster Creek in the Seventy-ninth Congress in 1946, I contemplated the appropriation of construction funds in 1947. Instead, legislative action in the Eightieth Congress was practically limited to the change of name from Foster Creek to Chief Joseph.

"Inability of Federal agencies to agree on a schedule is a part of the general failure under the present divided authority and planning, which would be corrected if responsibility was correctly placed in a unified Columbia Valley Administration proposed in H. R. 4286.

"In meantime, I have and will continue to urge the full appropriation for Foster Creek Chief Joseph Dam."

I have gone into these matters at great length, Mr. Chairman, because it is important to gain perspective of the other testimony being submitted here today. In my concern for the welfare of the Pacific Northwest, with its wealth of undeveloped resources and its prospects for a great future, I am determined to see that the legislative goal we seek, as proposed by the Administration, is not thwarted by one-sided criticism and devious attacks.

Housing

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1949

Mr. MARTIN of Iowa. Mr. Speaker, with the prospect of immediate consideration of the housing bill, H. R. 4009, I know you will be interested in a letter I have received today from one of my close personal friends as follows:

At this time when a vast housing bill to put the Government in the housing business is being proposed I am running into difficulty in getting one little FHA house started. Early this spring I thought in order to do my part to help relieve the housing shortage I would build a few little FHA houses this summer, starting with one, then maybe build two at a time, and then more if possible. Two months ago I sent to the Prudential Life Insurance office at Cedar Rapids complete plans and other FHA papers for them to get approved so I could get started building housing. This would have been a conventional well-built home. Two months ago I bought the lot and had the house staked out on it. There has been nothing done since. At first I was told that the FHA officials had not been paid for a few months and for that reason they were not working and that my approval would be held up until they went back to work. I understand that a few weeks ago they were paid and had gone back to work and that my project would be taken up in its proper order. I do hope I hear from them in the next couple of days so we can at least get the first house started this summer.

However the thing that I am thinking is that the present administration is not much interested in getting private enterprise to build homes that will be needed in the next few years. They would rather have the Government go into a vast socialistic housing project and personally I think they have gone as far on this as they should go. I hope that my own experience will give you some idea as to the direction things are drifting unless a definite change in this policy is made.

The writer of the above letter is a lifelong Democrat.

Fight Socialism

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including a letter received from a constituent who realizes the dangers of socialism to the American way of life. Every citizen should recognize the threat to their liberties which lurk in the regimentation that must surely follow in the wake of socialism:

RACINE, WIS., *June 7, 1949.*
HON. LAWRENCE H. SMITH,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN SMITH: Fight socialism. Fight socialism. Fight socialism.

I think the actions and thinking of our President and many of the leaders of our country are appalling, disgusting, and an insult to the intelligence of the American people. Washington is infested with rotten politics, dishonesty, and selfishness, and it is time something or someone got a hold there for a good house-cleaning job, but I know it isn't that easy. Congressman SMITH, what can we do?

The socialistic trend that our President is directing will be the downfall of our people and country if not stopped. I worked in Washington during the war with two different groups. The one agency was a typical example of all of our Government agencies overrun with waste, inefficiency, people who try so hard how to figure ways to get out of work, red, white, and blue tape, and it is the people's money that is being wasted foolishly. It was sickening, and more than I could stomach.

Socialism kills the very soul of men. Hard work for righteousness and truth gives an inner feeling that no amount of money can buy. The very ambition of people will be torn out of their bodies if we continue this socialistic trend. What can we do about it?

I disagree, and sincerely so, with the President's ideas toward higher taxes, socialism, bleeding business, constant spending.

These shorts at the movies and mailing of circulars to buy bonds, buy bonds, are ironical and idiotic because what right does the Government have to tell the people to buy bonds so they can continue to waste, waste, waste, and spend more money. The spending of money by our administration is unbelievable. Don't misunderstand me. I believe, and wholeheartedly so, in saving for that rainy day which comes to all of us, but I don't see any sense in saving by bonds so the money can be spent foolishly by our Government.

Aren't there enough honest men left in the District of Columbia with guts and determination to fight rotten politics, to fight for honesty and justice and for the betterment of our people? Can't we clean house down there and make a good job of it?

The President keeps screaming higher taxes, higher taxes. What is happening to the very handsome sum of taxes from cosmetics, handbags, luggage, furs, and other items which was put on during the war and the war is now over?

I disagree with the way and attitude of bleeding business. If it wasn't for the fact that many, many men had courage, faith, and determination to work, work, and work to build a company no matter how big and small and invest all their money in the company, if it wasn't for many of those men where would all the work come from? If a man invests his money, takes a risk with his money, he is entitled to a reward. I believe in working toward a goal, a right goal and getting exactly out of it what you put into it.

Every time a person picks up the paper the headlines tell us of Communists who are heading up various responsible positions. Can't a law be passed whereby all Communists be shipped back to Russia? They are hurting our country, they are bringing destruction to our people and warping or trying to warp people's minds, and with people of that caliber roaming our country, the President of the United States dastardly remarks—red herring.

Congressman SMITH, what a sorry state of affairs we are in and I write you and take up your time only because I as one individual want to help in my small way. I agree with much of your thinking and many of your comments and I as one Wisconsinite am glad and proud to have you at Washington.

Good health to you and keep fighting for the right and may God give you strength, courage, and determination to keep fighting the adverse forces in the District of Columbia.

Respectfully yours,
FLORIS M. BARTA.

Private Utilities in Washington Help Finance Anti-CVA Groups

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1949

Mr. MITCHELL. Mr. Speaker, private power companies are a substantial source of finances for organizations actively opposing CVA. The following tabulation,

UNIVERSITY OF MICHIGAN LIBRARIES

made April 15, 1949, is a partial list of contributions by Washington utility companies to three such organizations. The tabulation is partial because all companies have not filed detailed reports for all years and because only the Washington Water Power Co. has filed at this time its detailed report for 1948. The information contained herein has been compiled from reports submitted in accordance with the law to the Department of Public Utilities of the State of Washington. These reports are available for public inspection in Olympia, Wash.

Contributions to Pacific Northwest Development Association

1945:	
Mountain States Power Co	$1,100
Washington Water Power Co	4,100
Pacific Power & Light Co	5,900
Total	9,100
1946: Washington Water Power Co.	750
1947:	
Washington Water Power Co	1,750
Pudget Sound Power & Light Co.	3,250
Pacific Power & Light Co	1,760
Total	6,760
1948: Washington Water Power Co.	2,000
Total 1945–48	18,610

Contributions to Washington State Reclamation Association

1945:	
Pacific Power & Light Co	$500
Washington Water Power Co	2,400
Total	2,900
1946: Pacific Power & Light Co	500
1947:	
Pacific Power & Light Co	1,000
Puget Sound Power & Light Co	1,500
Washington Water Power Co	2,000
Total	4,500
1948: Washington Water Power Co	3,002
Total, 1945–48	10,902

Contributions to Idaho State Reclamation Association

1945: Washington Water Power Co	$1,750
1947: Washington Water Power Co	1,000
Total	2,750

Four Years After Roosevelt

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include a speech by Mr. J. Ray Files, delivered before the Democratic Luncheon Club of Los Angeles, Calif.

Mr. Files is a leading member of the bar, a man of very great attainments, a scholar and an orator. For the past 25 years the Democratic Party in California has looked to him for inspiration and guidance.

I believe that the speech that Mr. Files made 4 years after the death of Franklin D. Roosevelt will be of interest to the Members.

FOUR YEARS AFTER ROOSEVELT

Four years ago today Franklin D. Roosevelt left us. His passing shook the Nation to its very foundation. This is a little late for a eulogy; it is too early for us to read the verdict of history. We are still too close to the man. Memories are too fresh; feelings—feelings of affection and of hate—have not yet subsided. Only time can temper the emotions and measure the value of a life, about which beat the storms of passion for thirteen critical years. Those of us who knew him best and loved him most, are quite willing to leave his good name and his final appraisal to the verdict of history. After all, it is not what we say, but what he did, that will determine his stature for the future.

Certainly the galaxy of a half dozen men, to whom we give top billing in American history, are not dependent for their positions of eminence, upon either the fulsome praise or the intemperate slanders of their contemporaries. When I used to teach American history, I felt like taking such characters as Washington and Jefferson and Lincoln off the pedestals where they had been consigned, dusting them off, and reintroducing them to my classes. All of them were as much the victims of their friends as of their foes. It is even harder to destroy a myth than it is to brand a falsehood. The vaporings of "Bill" Herndon, Lincoln's old law partner, did more to cast a shadow over the character of Lincoln than the assaults of his enemies. Dear old Parson Weems, with his cherry tree story and all the other fantastic tales of young Washington, almost transformed a rugged, red-blooded, two-fisted man, into a lily-white legend to every American boy for 150 years.

The Roosevelt generation covers the period from 1910 to 1945. His climb to the top was not easy. I wish first to speak of his courage. He was a fifth cousin of a very popular President of the same name. His wife was a niece of the same President. When Franklin Roosevelt was married, it meant something that a popular Republican President, gave away the bride. Roosevelt came from a family of wealth; he lived in a silk-stocking district, that was overwhelmingly Republican. Yet, with that background and with that atmosphere, he chose to be a Democrat. As a Democrat, he ran for the State senate in 1912, where no Democrat had ever been known to succeed—and was elected. A United States Senator was about to be selected by the joint ballot of the legislature. The legislature had a Tammany-controlled Democratic majority. Roosevelt refused to support blue-eyed Billy Sheehan, the Tammany candidate. Neither would he bolt to the Republican candidate. He stood his ground in what was supposed to be a negligible minority, deadlocked the balloting, and dictated the election of a Democratic liberal.

In 1912, organization Democrats everywhere were backing Champ Clark for the Democratic nomination for President. Clark had a clear majority in the Baltimore Convention on 14 consecutive ballots. Roosevelt broke again with the New York organization by supporting the hopeless candidacy of Woodrow Wilson. Wilson was nominated and elected, but politically, again Roosevelt was through in New York.

In 1920, when the country turned on its better instincts and went isolationist, with Woodrow Wilson stricken, the Democratic Party was again a hopeless and muddled minority. Politicians again finished the career of Roosevelt by nominating him for Vice President. He accepted the challenge and made a whirlwind campaign for the League of Nations.

A year later he became a polio victim. It appeared that a dread disease would accomplish what designing politicians could not. But in 1928, his sorely pressed party, in the desperate hope that New York State might be carried by Al Smith over Hoover for the Presidency, drafted the convalescent but reluctant Roosevelt from the pools of Warm Springs, Ga., to make the race for Governor. It was a Republican landslide that year in which Hoover carried New York State over the popular Al Smith, but Roosevelt was elected Governor by 25,000 votes. Two years later he was reelected by 725,000, and from that day he was marked for the Presidency.

In every campaign Roosevelt ever waged, it seemed that everyone was against him but the people. All the support he ever had from the press was negligible. Professional politicians looked askance at him. You don't have to tax your memories too much to recall what was said about him right here in California during the primary campaign of 1932; they said that he was a man of wealth, who could not understand the problems of the man in the street; they said he was a cripple and could not live out a term in the White House; and the fabulous statement was made that he was tarred with Tammany and a tool of Wall Street. But they never uttered that fantastic charge again.

Not since Lincoln had a President faced such a distressing national condition. He inherited a state of economic collapse. Banks were closed; trade was paralyzed; confidence was shattered; commerce destroyed. But the country was electrified with the Roosevelt declaration that there was nothing to fear but fear itself. In rapid succession came guaranty of bank deposits, the Security Exchange law, the Agricultural Act and the Home Owners Loan Corporation. Both bankers and depositers got more sleep during the first 4 years under Roosevelt than they had during the preceding 10. Peddling of worthless securities was stopped dead in its tracks. Homes were rescued, farms were saved and faith and hope were restored in the hearts of millions of people who had seen nothing before them but the blackness of despair.

And yet, as danger began to disappear, when our feet began to touch bottom, a doubtful courage repossessed the timid souls of those who had called loudest for help. In three short years they had found lusty lungs, and appealed in concert for the defeat of the man upon whom they once called in a chorus of craven fear. The patient was throwing its crutches at the doctor. But the people were not fooled. In 1936, Roosevelt carried every State but two, carried California by 930,000 votes.

Of course, by 1940 tangible grievances had accumulated. Ninety percent of the press was still hostile. Big business was apoplectic in its hatred. The third-term issue was distorted out of all proportion to its importance. But the President was reelected by an electoral vote of 432 to 99.

The campaigns of 1940 and 1944 dealt directly with problems of the war. As we look back in retrospect, as unworthy as the opposition was, as incredibly stupid as was the attack, it seems almost a miracle that the President was not unhorsed. It required all the calm judgment of a Washington, all the intelligent understanding of a Jefferson, all the courage of a Jackson, and all the patience of a Lincoln to survive. In 1940, with isolationists in the saddle, the central theme of the opposition was that Roosevelt was a "war monger." In 1944, the same opposition, without regard for consistency, hurled the reckless charge that Roosevelt had done nothing to prepare the Nation for a war that was inevitable. Just as the future historian must do, so should we go back to the record.

1. Of course we were not prepared for war. No democracy was ever prepared for war. But because of Roosevelt alone, we were fifty times better prepared for that war than any in which this country ever engaged.

2. In 1939 Roosevelt asked Congress for the paltry sum of $5,000,000 to improve the defenses of Guam. Fifteen Republicans in the House voted for it and 138 against.

3. Two months before war broke in Europe, he asked Congress to appropriate money for 6,000 airplanes. Five Republicans in the House voted for it and 122 against.

4. Later the President asked Congress to build up to a program of 50,000 planes a year. This was after Hitler had overrun Europe. Mr. Dewey retorted that this was preposterous. Before we won the war we went to 110,000 planes a year.

5. Ten weeks after Poland was blitzed, the President called a special session of Congress and asked for a repeal of the iniquitous arms embargo. Only 20 Republicans in the House voted for it and 140 against. The German Bund, the Communists and the isolationists were moving in for the kill. A resolution was offered for the impeachment of the President. There was still a chance of isolating the war. The President declared that "these perilous days demand cooperation between us without trace of partisanship." He thereupon appointed two distinguished Republicans to his Cabinet—Henry L. Stimson, Secretary of War, and Frank Knox, Secretary of the Navy. The Republican National Chairman promptly answered in stinging tones: "Nothing can be more disastrous to the Nation than an adjournment of politics"—and he promptly read Stimson and Knox out of the Republican Party.

6. The clouds grew darker. After France had fallen and the continent of Europe was under Hitler's heel, Roosevelt asked that an army of a million men be conscripted and trained. Fifty-two Republicans in the House voted for selective service and 112 against it.

7. But the worst was yet to come. After that army had trained for a year, and only 4 months before Pearl Harbor, a bill was offered to disband it. It chills our very imagination to think of the tragic consequences of such action. It came within a single vote of carrying. One hundred and thirty-three Republicans in the House voted to send the Army home, only 21 opposed it.

8. Then came lend-lease—a measure that alone enabled Britain and Russia to hold the Nazis from overrunning the world before we could prepare. Twenty-four Republicans voted for lend-lease and 135 against it. Mr. Dewey bitterly denounced the measure. This is what he said: "Lend-lease would be a grave blow not only to national unity, but to all free government everywhere." Why? He didn't tell us. He couldn't tell us. He didn't know.

So this is the record of the President who did nothing to prepare for the war that was inevitable. We have had five war Presidents. I am confident that history will record that Franklin D. Roosevelt was the most successful of them all. Lincoln was dogged by a recalcitrant Congress and a hostile press. He too was working his heart out to save the Nation, but in that war, command of the Army of the Potomac changed seven times in 2 years without winning a battle. In the late war, Marshall and Eisenhower and Bradley and Patton and Nimetz and MacArthur and Halsey and Arnold, didn't just happen along. They are the historic evidence of Roosevelt's genius.

I have an abiding faith that history will give an equally favorable verdict as to Roosevelt's domestic program. He believed in democracy as implicitly as did Jefferson. But there were two things that annoyed him and with which he was impatient.

First, he was intolerant with the disposition of courts to invade the field of legislation. He believed that legislation belonged to the legislative branch of government. In this field he lost a battle, but he won a war. Other Presidents had found the same problem just as perplexing. Jefferson, in effect, temporarily suspended the Supreme Court for 14 months. Jackson defied it. Lincoln ignored it—he disregarded a writ of habeas corpus that was issued by the Chief Justice. Theodore Roosevelt admonished the Court, and proposed a recall of judicial decisions. Franklin Roosevelt, alone, tried to reform the Court. Yet, none of these chapters has impaired the integrity of any of the divisions of government.

Second, Roosevelt challenged an overstrict construction of the Constitution. This was a weapon Tories had employed for more than a century. In this he was eternally right. It was the liberal forces of America that gave us the Constitution. It has been the liberal forces that kept it alive. You can track the Tory back through the pages of history, to the convention itself. His argument now was his argument then. He opposed ratification. He fought Marshall's liberal interpretation. He savagely attacked Jefferson for consitutional invasion when Louisiana was purchased and the territory of the country doubled. He fought the building of the Panama Canal. He accused Lincoln of criminal disregard for constitutional limitations. The Tory then as the Tory now, stood for the status quo. Precious little has been added to our Constitution by written amendments, but the scope of constitutional extension has come to include a thousand things never dreamed of by the men who wrote that immortal document. But for that fact—but for liberals in government—our Constitution would have become decadent a hundred years ago. But for the liberal interpretation it has been given, to meet the changing needs of an advancing age, we would not have a constitution left for Tories to talk about. Cupidity and stupidity yield grudgingly. Just as the Bourbons defied the deluge; just as Nero fiddled while Rome burned; so the forces of reaction always have set their faces against every progressive step the country has taken. The agility of the devil in quoting scripture is tame compared with a Tory presenting a constitutional argument.

The Constitution was not built in a day. It never has been, and until it shall cease to be the law of the land, it never shall be a finished product. It was never intended as a strait-jacket. It was never given to us to thwart progress. And the day it shall fail to respond to any national emergency that may confront us, that day will its usefulness be at an end and its glory shall have departed. A check upon haste it will always be. An instrument to stifle the fulfillment of the responsibilities of a new age, never.

Anyone may honestly differ with Roosevelt's philosophy of government. But the Constitution must never be a barrier to beat back progress. If national need shall point the way, the fundamental law of the land will allow the remedy.

For instance, when Roosevelt faced the chaos of 1933, he had the vision to see and the courage to admit the existence of certain facts to which so many well-meaning people preferred to remain blind. He knew that the distress and disorder that confronted him were only symptoms of the real infirmities from which we suffered. He knew that merely filling empty stomachs would only postpone revolution. He knew that a cancerous cause must be removed, and he set himself to that task. He was not an enemy of capital. He knew that capital has never been in peril except from its own excesses. He believed that neither the President, nor Congress, nor the Supreme Court, nor even the Constitution can protect capital unless capital is willing to recognize the paramount claims of human rights. When these rights are made secure, capital will always be safe. In that sense, he was the best friend that capital ever had. But he preached the gospel of correlative responsibility. He held that wealth could not be allowed to pyramid indefinitely while millions starved. Most of all, he was not willing to fold his hands in smug complacency or in helpless submission and say that the Constitution barred relief. Roosevelt pioneered the field. Social problems? Some of us didn't know what they were. Most of us didn't recognize them when we saw stark tragedy entering a million homes. We were accustomed to carry in the blue book the name of the man who, all too often, had money he didn't earn and didn't deserve. When we saw men and women, through no fault of their own, come to tragic old age in poverty and fear, we said: "Over the hill to the poor house—how much will it cost?" These are not words of communism—but they are facts that make Communists. It was Roosevelt that gave us the "four freedoms." But what is more important, it was he who declared them to be a responsibility of government. It was Roosevelt that found the Lost Chord in government; it was he that restored to us the spirit of the Constitution. "The letter of the law killeth, but the spirit maketh alive."

Congress Should Finish Job Before Quitting for Summer

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Buffalo Evening News of June 6, 1949:

CONGRESS SHOULD FINISH JOB BEFORE QUITTING FOR SUMMER

(By Thomas L. Stokes)

WASHINGTON, June 6.—Members of Congress are talking about how soon they should close up shop here, call it a year's work, and go back home, despite all that remains to be done, and needs to be done. It is perhaps highly impertinent and utterly disrespectful to ask the question a perplexed layman once propounded in a letter to the newspapers here in a similar situation, to wit: "We pay them by the year, why don't they work by the year?"

Yes, we pay them by the year and very nicely—straight salary of $12,500, plus a tax-free expense account of $2500, with all sorts of perquisites that mount up—such as travel allowance, free postal service, an adequate allowance for telegrams, free medical care for themselves and their families, and such. For clerk hire, they are allowed $16,300 a year. They get their checks every month, whether they are here on the job or back home or somewhere else.

Their office building is air-cooled and so is the Capitol Building. Thousands and thousands of other people, both in Government and in business here, work the year around with the usual 2- to 4-week vacation, many of them without air-cooling in the summer. It is not unbearable.

President Truman and Democrats who control this Congress were elected on a platform with certain commitments, and the President himself spelled out the party's proposed legislative program in his successful campaign. He submitted it to Congress in January. He has asked repeatedly that Congress act upon measures embodying his program. He has announced that he will remain in Washington until Congress does its job.

Is it asking too much of Congress that it do its job?

UNIVERSITY OF MICHIGAN LIBRARIES

While it is perhaps not possible to get final action on every major measure in the President's legislative program, it is possible to get quite a number of them enacted in the next several weeks and months.

During most of the years of the Roosevelt administration, including the war period, Congress sat almost all year around, and nobody seemed to suffer from it particularly. If a Congressman can't stand the gaff, then he shouldn't ask his people to send him here in the first place. Once having appealed for their votes and having pledged himself to do the job required and having been elected, it is certainly his responsibility to do his job.

What all the talk of going home is about may be explained by a very simple fact. This is that the best strategy of opposition is delay, and opponents of the President's program are playing that strategy now to the limit. Both in and out of Congress, they are promoting the back-home-for-Congress campaign. That is the real story. No one should be fooled.

The argument is that Congress should quit in the next 2 months or so and come back next year to finish its work. Those who advance it know full well that next year is an election year, in which not a great deal is usually accomplished because of attention on the primary elections and the regular election in November and the political maneuvering that encourages. Members who are up for reelection, which includes all House Members and a third of the Senate, have a valid excuse to get back home.

The flimsiness of the argument about waiting until next session is illustrated by what happened in the Eightieth Republican Congress. Republicans put over their social-welfare program until the second session. Nothing whatever was done, for the postponement played right into the hands of the delaying strategy. The party's failure to enact a social-welfare program contributed a great deal to its defeat.

This is the time for action, and the Democratic Party can't escape that fact.

We Have Nothing To Fear Except Fear Itself

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following article by Marquis Childs which appeared in the Washington Post of June 10, 1949:

WASHINGTON CALLING
(By Marquis Childs)
AMERICANS AT WORK

Because news that makes the headlines is almost always bad news, the latest figures on Americans at work were played up in such a way as to show a new postwar peak in unemployment. If you read far enough, you find that employment has also risen in May to a total of 58,694,000, which was slightly higher than a year ago when no one was haunted by the specter of deflation that now hangs over Washington.

That old saying about lies, damned lies and statistics is something to remember at the present moment. Certainly the figures on employment released by the Census Bureau are checked and rechecked. But nevertheless, putting one set of figures alongside another set of figures can lead to some strange results that have not too much to do with what is really occurring.

Since mental attitudes have a lot do do with the ups and downs of business activity, the interpretation of the figures becomes pretty important. Consider, as an example, what is likely to happen when the employment statistics for the current month are released some time in early July.

The total unemployed reported for May was 3,289,000. The Government experts who follow this box score from day to day believe that the total for June will be close to four million, although for various reasons they will not go on the record with such a prediction. That four million figure will produce scare headlines far beyond any real justification in the business picture, according to these same analysts.

What happened last June, when the country was still in the full tide of inflation, throws light on the true picture. From May of 1948 to June of 1948 what the experts call the total labor force increased by about three million, to a total of 63,479,000. At the same time in that period of peak prosperity the number of unemployed increased from 1,761,000 to 2,184,000.

The reason for these changes is obvious. Toward the end of May and all through June a lot of young people come out of high schools and colleges and start looking for either temporary or permanent jobs. Housewives decide to make a little extra money in the nearby canning factory or by picking cherries in neighboring orchards.

The census taker going around to check up on the families making up the sample on which the statistics are based, lists all these people as part of the "labor force." And those who don't get jobs are recorded as unemployed.

This June the number of young people and housewives seeking jobs is likely to be larger than a year ago. Consequently, also, the number recorded as "unemployed" will be larger. But in terms of breadwinners actually looking for work and not finding it and needing it for support of their families, the picture will not be nearly as dark as the 4,000,000 total would indicate.

In July several million Americans will be recorded as having jobs but not at work. In this classification will be those on paid vacations, and the number of American wage earners now entitled to holidays with pay is astonishingly large. The figure will also include workers laid off but told to report back for work on a definite day.

To lump all these with the unemployed would be to add even darker clouds to a picture already artificially darkened. And on the extreme left and the extreme right are those who want to do just that.

Certain Communist-dominated unions, conspicuously the United Electrical Workers, attack the official employment figures, trying in every way possible to show that they should be far higher. That is the basic strategy of communism in this country—to show that America is sinking into a depression. Gloomy figures or gloomy interpretations are propagandized by communism around the world.

At the other end of the political scale are ultrareactionary Republicans who see in a depression a chance to discredit President Truman and all his works and come to power themselves. There are times when Republican strategy in this respect looks very much like the Communist tactics.

For this country to fall into a depression psychosis with 60,000,000 people at work would be worse than nonsensical. It would be insane folly. In my opinion the Census Bureau should recast its figures to make them more nearly in accord with facts. There's no point in helping those who want to bring about the calamity of a depression.

Republicans Are Challenged

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, I am including a copy of a letter received from Mr. Alfred Kohlberg, of New York, a Republican, addressed to the chairman of the Republican Party of New York State, our colleague, Hon. WILLIAM L. PFEIFFER. It is a challenge to every member of our party:

JUNE 7, 1949.

Hon. WILLIAM L. PFEIFFER,
Chairman, New York State Republican Committee, New York, N. Y.

MY DEAR MR. PFEIFFER: I am honored to receive from you an invitation to attend the dinner at the Waldorf on June 14 at $100 per plate.

Although a lifelong member and contributor to the Republican Party since I cast my first vote for William Howard Taft in 1908, I regret to advise you that I am not going to take advantage of your kind invitation.

My reason is that I feel the Republican Party has failed in its duty to the Republic.

I have always thought that the Republican Party should offer more to the electorate than promises of better administration. There has been much criticism of the Republican Party for failure to properly criticize the New Deal on domestic issues. Because domestic issues, the New Deal, the welfare state, and creeping socialism are now being argued in the party, I shall limit my criticism to the party's position on foreign policy.

For 5 years we have "me-tooed" Democratic betrayal of America's traditional foreign policies; of American principles; of America's wartime pledges; and of the cause of freedom everywhere in the world. Our record is such that Prime Minister Nehru recently told an American reporter that India wondered whether she dared line up with the United States of America.

In June 1944 I wrote the Republican National Chairman that there was evidence that President Roosevelt was engaged in betraying China and Poland to the Soviet Union. The Republican Party refused to raise the issue. Instead, John Foster Dulles conferred with Secretary Hull and Candidate Dewey approved the meaningless statement of bipartisan support for a secret and unstated foreign policy to be determined by the Democratic fourth-term candidate. The excuse that we Republicans should not weaken the hand of our President abroad was spurious. Republican objection to the slightest hint at appeasement would have strengthened his hand.

Immediately after his fourth election, President Roosevelt went to Yalta without Republican advisers. The election had been won, so he didn't need us in his business any longer. There he sold out the Kurile Islands, half of Korea, the rest of Poland, all eastern Europe and agreed to repatriate by force nearly a million Soviet citizens who had fled the slavery of the Red dictatorship.

Our 150-year record of haven for political exiles was broken by one of the bloodiest forced movements of men, women, and children in all history. The Republicans took it all lying down, and a Republican Senate confirmed the treaties that turned over Hungary and the Balkans. Hundreds of thousands of German and Austrian POW's captured by us were turned over to the Russians as forced laborers, contrary to all rules

of civilized warfare. We Republicans apparently approved.

Likewise, at Yalta the veto deal was made and a hamstrung UN was arranged to replace the real UN set-up in Washington January 1, 1942, which won the war and in which the United States held the balance of power. The Republicans in the Senate approved this monstrosity.

Also, at Yalta the open-door policy in China was completely sold out. The Russians were given Manchuria and Mongolia, and it is believed that there are still secret clauses in which we recognized Russia's special interest in China. How otherwise explain our continuing betrayal of that country to the Reds?

On November 20, 1941, in a formal "draft" proposal, the Japanese agreed to move no farther south in Asia and to withdraw from Indochina. In a formal "draft" agreement in reply on November 26, 1941, Secretary Hull demanded that they withdraw from both Indochina and China. On December 7, 1941, the Japanese refused these terms in a formal note handed Secretary Hull almost at the moment that the bombs fell on Pearl Harbor.

Thus, we went to war for the preservation of an independent China. If it was not essential to our security, President Roosevelt sacrificed 350,000 young American lives frivolously. If it was essential to our security then, as I believe it was, it still is now. Where does the Republican Party stand on this issue of our security in the Pacific Ocean and the security of Alaska and our west coast?

The Democratic administration has sold out the three Baltic Republics, our allies and fellow members of the United Nations. The Republican Party has made no effective protest.

The Democratic administration sold out the free government of King Peter of Yugoslavia to the Communist Tito. Last year we gave Peter's gold to Tito. The Republicans made no effective protest.

At Chapultepec we signed a pact providing for consultation with 21 other nations in case of threat. Such consultation had been specifically refused by President Monroe when he proclaimed his Doctrine in 1823. Against this emasculation of the Monroe Doctrine, the Republicans have not protested.

Now the administration proposes a 20-year alliance with certain western European nations. Maybe this will prove an alliance of real force though without quid pro quo; maybe only a paper pact at ruinous cost to us. The future will tell. What is not questionable is that it is a violation of our 150-year policy of no permanent European alliances as recommended by President George Washington in his Farewell Address. The Republican Party in Congress is preparing to vote confirmation of this 20-year alliance, without forcing the administration to reveal the facts that either justify, or do not justify, this reversal of policy.

For 3½ years the Democratic administration has stumbled from one foreign emergency to another, with no discernible policy. The least informed American today recognizes that the greatest military victory in our history has been turned into defeat; that the man who signed the Stalin-Hitler pact of 1939, and the Stalin-Masuoka pact of 1941 is the only victor.

Furthermore, we know our diplomatic defeat is due to traitors in advisory positions; that the secret testimony of Igor Gouzenko named a man close to the Secretary of State as head of the A-bomb spies; yet we acquiesce in concealing this treachery from the American people.

Today four close personal friends of Alger Hiss sit as our representatives to Vishinsky in Paris. Senate Republicans confirmed their appointments. They are Secretary Acheson, Assistant Secretary Rusk, Ambassador Jessup, and John Foster Dulles.

Because there is nowhere else to go, I shall have to remain a Republican. I cannot, however, support the present timid leadership of the party, subservient as it is to Democratic initiative in foreign affairs.

I am ashamed of my party because—

1. It has been too callous to protest the turning over of hundreds of millions of human beings to the Red secret police and the Red slave-labor camps; because

2. It has been too timid to protest the betrayal of our Polish, Latvian, Lithuanian, Estonian, Yugoslav, and Chinese allies; because

3. It has been too ill-informed to protest the destruction of tens of billions of dollars of American military equipment in Europe, in the Pacific, and in India—the very arms that we will now have to manufacture all over again for the Atlantic alliance; and

4. Too inert to realize that there will be no peace on earth until the Red dictatorship in the Kremlin is overthrown, and its 650,000,000 unwilling slaves are freed.

Aren't you ashamed, too?

Sincerely,

ALFRED KOHLBERG.

Medical Education in United States

EXTENSION OF REMARKS

OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. TAURIELLO. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by George E. Sokolsky that appeared in the Buffalo Evening News of June 6, 1949:

GEORGE E. SOKOLSKY SAYS SERIES OF EVENTS HANDICAPS MEDICAL EDUCATION IN UNITED STATES

NEW YORK, June 6.—The standards for medical education and for hospitalization are set by the private medical schools, the voluntary hospitals, and the organizations of physicians and surgeons in their various specialties. There was a time when there were various grades of medical schools, from the diploma-mill type which taught nothing to what is today regarded as a Grade A school. Practically speaking, all medical schools are today grade A, but there are too few of them and, therefore, there are not enough seats for those who aspire to this calling.

Modern medical training goes back to the Flexner Report of 1910, which laid the new basis that is now standard for the entire country. To support these fine standards, gifts amounting to $250,000,000 were made by the Carnegie, Rockefeller, and other foundations and individuals to medical education.

Phenomenal progress has been halted by a series of events, the first of which was the depression, which resulted in the medical schools losing one-third of their income from endowments, and a sharp, almost catastrophic, cessation of giving.

Then came the war, which took so many men out of medical life into the armed forces that an inadequate number remained for training as junior medical teachers. But worse than that was accelerated education, the speed-up in learning which, while saving time, left the student inadequately trained. Also, pressure was put upon the schools to accept more students than they could care for.

The figures on the cost of medical education are taken from an address by Dr. Alan Gregg, director for the medical sciences of the Rockefeller Foundation: The current annual operating expenses of all 78 medical schools totaled approximately $51,000,000 with an enrollment of twenty-two-thousand-odd students. The offsetting income to sustain these expenses under the following headings was: From tuition, $12,800,000, or approximately 24 percent; from endowments, $7,000,000, or 14 percent; from other private sources $13,700,000, or 27 percent; and finally, from the taxpayers in the form of State aid, $17,500,000, or 35 percent. These figures, when broken down to a per-student basis, indicate an average tuition of $550 against an average cost of $2,000 a student per year.

Two dangers lurk in these figures: One is that medical schools will be forced to lower their standards, increase their tuition, or close down; the other is that an increasing number of those schools will be taken over by the State. At present, there are 34 publicly supported schools and 44 privately endowed institutions. Practically all the outstanding medical schools, those with the greatest reputations, are the privately endowed schools, which set the standards of all medical institutions. It is already clear that the financial weakness of the privately endowed schools is producing an unwholesome condition in the entire medical field. Hoover's remarks on this subject are pertinent:

"A determined effort should be made to bring adequate financial support to the medical colleges; such support is essential to augment their capacity for training an increasing number of highly qualified doctors and thus raise the national health standards."

Soviet Attitude Toward the Jews

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following article which appeared in the New York Herald Tribune on June 12, 1949:

SOVIET ATTITUDES TOWARD THE JEWS—CURIOUS RECORD OF RUSSIAN SHIFTS ON SEMITISM SHOWN IN MR. ARONSON'S STUDY

(By Heptisax)

In July 1918, Izvestia published a report to the council of the people's commissars, attributed to Lenin, in which anti-Semitism was equated with counter revolution and was vigorously denounced. "The pogromists and those who promote pogrom agitation," it read, "must be put outside the law." So they were; and so they continue to be on paper. In the only comment on anti-Semitism that Stalin is known to have made, he told an interviewer in January 1931, that: "Communists cannot be anything but outspoken enemies of anti-Semitism. We fight anti-Semitism by the strongest methods in the Soviet Union." This was not then published but was quoted for the first and last time by Molotov in 1937. Although Zionism has been rigidly banned in Soviet Russia for 30 years, as one of the many forbidden movements that divide loyalty and promote race consciousness, the Stalin regime surprised the world 2 years ago by changing its attitude toward the Jewish-Arab struggle in Palestine. It became a patron of Israel's nationhood; and, while it embarrassed the

UNIVERSITY OF MICHIGAN LIBRARIES

British, not only permitted but fostered big-scale Jewish emigration to Palestine from the captive Balkan states.

For these several reasons the Stalinists in this country profess to think the Jewish community here is exceedingly ungrateful for assembling and publishing much material to show that the Kremlin's policy, both at home and in the victim states, is definitely anti-Semitic. But the louder they protest, the more material appears and the more thoroughly the charges are documented. The latest to appear, compiled by Mr. Gregor Aronson and translated by Dr. (Rabbi) Benjamin Schultz, executive director of the American Jewish League Against Communism, is a 49-page booklet entitled "Soviet Russia and the Jews," from which the quotations above have been taken. It is a very tightly condensed record, because the English translation is half the length of the Yiddish original, of the disabilities which bolshevism imposed upon the essentially bourgeois Jewish community; then of the Kremlin's cold indifference to the fate of the Jews (described as "Asemitism") from the time of the Hitler-Stalin entente in 1939 to the end of the war; and then of the slow but sure development of an official anti-Semitism, which broke surface last September 21, with a very long article in Pravda by none other than Ilya Ehrenberg. To any non-Jewish reader all this will be very new; so the psychology of this Kremlin policy, which is rapidly costing the Stalin dictatorship whatever Jewish good will the diplomatic support of Israel had earned it, and then some, will be perplexing.

I think that there is a clue to this psychological mystery, however, in a Stalin pronouncement of long ago which Mr. Aronson partly quotes, partly paraphrases. It seems that in 1913 the relatively obscure Josef Stalin produced an opus entitled "Marxism and the National Question," in which he said that "Jewry is 'a mystical, incomprehensible, unrealistic' phenomenon"; and that "the Jews are not a people but are destined for assimilation." This would, of course, mean spiritual assimilation, as well as physical—through intermarriage. It would be the concern of a man, who had the desirability of this fixed in his mind when he came to power, to destroy every organization or institution which would remind a person of Jewish origin that he had a different background from others and thus give him an interest in things Jewish. This would begin with the practice of religion, the use of a different language, whether Hebrew or Yiddish, the publication of Jewish papers and circulation of Jewish books and proceed to the suppression of charitable, social, and cultural societies, the maintenance of Jewish theaters, and so on indefinitely. What Mr. Aronson's material shows is that, from the time that Stalin really started throwing his weight around in 1928, down to the Nazi invasion in 1940, there was such a piecemeal, but nearly complete, elimination from the Russian picture of everything that would remind a Jew that he was a Jew. As a feature of the collectivization of agriculture, the Jewish farm communities in the Crimea and the Ukraine, into which $20,000,000 of American money had gone to provide a new life for the bourgeois Jews "declassed" and pauperized by the revolution, were liquidated and the dismal Birobidjan swindle in far away eastern Siberia was substituted for them.

Warming up to the grand purges in 1934, Stalin began liquidating a long list of Jews prominent in government, the arts and sciences. In 1938 the most prominent of the Jewish Communists who had survived the purge trials, Dimanstein, "Stalin's eye," went the way of the rest; and "Emes," the last publication devoted to Jewish affairs, was closed down. The organization set up to promote the Birobidjan colony was dissolved.

And so it went on until the Nazis rolled over White Russia and the Ukraine, systematically butchering the Jews whom Moscow failed to evacuate. About the number evacuated and the great number left to their fate, the Soviet government has published few figures and on this subject has permitted almost no comment. Mr. Aronson has collected every scrap of information on this subject, and has come up with the conclusion that more than half of the Jews in Russia, the Baltic States, eastern Poland, Besserabia—the Greater Russia of 1940—were exterminated by the Nazis, or went into Siberian slave camps from the newly acquired territories before Hitler struck, because they were unassimable.

At any rate, the Nazis did succeed in reviving, in the territories which they overran, the ancient pogromism of the natives; so that, when those who had escaped the Nazi butchers returned to claim their properties, they ran into a vicious anti-Semitism which the Soviet officialdom has not brought under control. That is at the lowest level, however; and what is of liveliest interest in this country now is the intellectual pogrom, the attacks in the official press on the rootless cosmopolites, who are said to draw their inspiration from New York and Tel Aviv. This must be directed from the highest level.

Much has lately appeared in print along this line. Mr. Aronson's booklet would justify itself if it did no more than tell the story of the Jewish anti-Fascist committee, organized after Hitler struck, with Stalin's approval, by the Polish socialist refugees Erlich and Alter, but under the direct patronage of Beria, head of the secret police. It was scarcely started when other Jewish participants were greatly discouraged by the disappearance of these worthies. As everyone suspected, they had been shot long before Stalin assured Wendell Willkie that no harm would come to them. The organization, formed to win Jewish sympathy for Russia, had to be taken over by Jewish police agents. It produced a Yiddish paper, Einigkeit, in 1942 which since the war has had nothing to say about, to, or for Jews. Nevertheless, the committee is dead, Einigkeit was suppressed this past January and in March it was reported that the last of the Jewish police agents who directed this front, which somehow took on a Jewish character, indicating that even the reddest Jews had not been spiritually assimilated, had been liquidated.

Now what does it all mean? During the past 9 months, the anti-Semitic heat has been turned on at just about the speed at which Israel's prospects improved. Doesn't this suggest that, among the supposedly assimilated Jewish intellectuals in Russia, an interest in Israel has been stimulated which has thoroughly irritated and disgusted the exalted promoter of Jewish assimilation?

Low-Rent Public Housing

EXTENSION OF REMARKS
OF
HON. JAMES J. MURPHY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1949

Mr. MURPHY. Mr. Speaker, we will soon take up legislation to provide for Federal assistance to low-rent public-housing projects initiated by local agencies.

The need for low-rent housing projects is very widespread in the Nation and quite evident in almost every community. There is not a city in which there are not areas which have been deteriorating for years, some almost uninhabitable. Yet, year after year, little is done to reclaim such residential localities and to restore them to the revenue-producing sections they were in the beginning.

We have spent enormous sums of public money through correction and welfare agencies for the so-called redemption of human beings existing in dilapidated dwellings, while expending nothing to remove a traceable cause of deliquency and crime—inadequate and improper housing in crowded areas.

In reflecting on the cost of crime and human degradation arising from impoverished homes, or slum environment, it is hard to believe that Federal aid to low-rent public housing is being characterized as communism by some well-meaning citizens. Such a characterization is an unintentional reflection on democratic government for it indicates that the American system prohibits correction of evil at its root, while communism has no such restrictions. I believe that our American system affords the means for the elimination of social evils by maintaining the dignity of the individual whose well-being is essential to such dignity.

Can it be that every time an attempt is made by the Government to improve the general welfare, socialism or communism receive the compliments of the opposition by the assertion that every beneficial project belongs in the radical category. Such accusations have been made many times in the past against improvements that are now common place and taken for granted.

The approval by religious organizations of various denominations and by veterans organizations of Federal low-rent housing aid is in itself a refutation of contentions that this legislation is a radical departure from the American viewpoint that places first emphasis upon the family and the home that holds it together.

It is reliably reported by the social and religious groups that present intolerable housing conditions have increased separations and divorces because so many young couples have been compelled to double-up with their in-laws, thus creating the frictions that end in the courts and destroy the family.

My district, which includes Staten Island and lower west Manhattan, needs low-rent public housing.

The Staten Island section contains no slums in the generally accepted sense, but there are run-down areas, that should be replaced, and a necessity exists for increased housing units at modest rentals. In lower Manhattan both clearance and low-cost housing projects are needed.

At present there are no low-rent public housing projects on Staten Island. The three projects now being built by the city housing authority will rent at $16.39 per room while I have had reports that one project may go as high as $20 per room.

On the other hand, other parts of the city are now being provided with projects to rent as low as $8.60 a room, such as that in Gowanus section of Brooklyn.

So great is the demand for housing that there were 5,100 applications reported for the 600 apartments soon to be made available at the South Beach, Staten Island, city housing project, despite the fact that this is not a low-rent unit.

After supporting legislation authorizing low-rent housing and appropriating Federal Government funds for the purpose, I intend to see that both the Staten Island and lower Manhattan sections of my district receive the proper share of low-rent housing projects. As a Representative in Congress I propose to be watchful that the housing functions of the Federal Government will be administered in accord with the objectives and policies established in Congress and to maintain an official interest in the selection of sites and every other activity leading toward better low-rent housing through Federal help.

In connection with low-rent housing, the Staten Island Advance editorially states the case very aptly in the following excerpt from the issue of April 26, 1949:

Any additional public housing—and it seems likely there will be with Federal and State funds—should be pointed at replacing old and run-down areas. That should be the purpose of public housing, to improve the community, to end or prevent slums. Present construction of public housing is only evading the issue—the poorer areas are still there.

Vacant land construction of Government housing hurts taxpayers in several ways. The run-down areas become worse and worse until the tax revenues from them are negligible. Meanwhile, the Government is using up land that should be encouraged for development by private interests because of the tax revenues that would be gained. To top it all, run-down areas usually have all utilities and services, while they have to be brought in for vacant land development, at taxpayers' expense.

It is to be hoped, too, that these newest projects will really be in the low-rent classification for low-income families. That's the way public housing started out, but it has gone far afield. By low-rent projects we mean those for $9 or $10 a room, not $16 to $18, as in the three projects now under construction.

Public housing designed as replacement for poorer areas and as low-rent apartments would go a long way toward helping improve certain sections of the borough.

Mr. Speaker, although I agree generally with this editorial excerpt, I believe that well-located vacant land, preferably that taken over by the city for taxes, should also be considered for low-rent housing to avoid the overcongestion which has been too often the principal cause of deterioration.

Alcoholic Beverage Advertising

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1949

Mr. HARRISON. Mr. Speaker, in accordance with the request of the signers, and under unanimous consent to extend my remarks in the Appendix, I include the following petition of citizens of McGaheysville, Va.:

To Our Senators and Representatives in Congress:

We respectfully request that you use your influence and vote for the passage of a bill to prohibit the transportation of alcoholic beverage advertising in interstate commerce and the broadcasting of alcoholic beverage advertising over the radio. The most pernicious effect of this advertising is the constant invitation and enticement to drink. The American people spent $9,640,000,000 for alcoholic beverages in 1947 as compared with $7,770,000,000 in 1945. During the same period there was a corresponding increase each year in crime, juvenile delinquency, broken homes, deaths and injuries due to intoxicated drivers, in the number of alcoholics and also of habitual or heavy drinkers. There is every reason why this waste of money and of human values should not be increased but rather greatly decreased.

Mrs. John Hopkins, Mrs. Sallie Miller, Mrs. G. D. Hensley, Mrs. John Coffman, Mrs. C. V. Funkhouser, Mrs. T. A. Berry, Mrs. C. H. Oliver, Mrs. M. P. Hinsee, Miss Louise Melone, Mrs. A. L. Hammer, Mrs. Christine Leap, Mrs. Lida Armstrong, Mrs. Becky Butler, Mrs. Gladys Bowman, Pearl Almond, Christina Yancey, Lorena Libo, Ruby Almond, Mrs. Ruth Brown, Mrs. Bob McInturff, Mrs. C. C. Rush, Mrs. A. B. Sam, Mrs. Ben Ralston, Mrs. J. F. Dennett, Ruth Leap, Mrs. Brook Bonty.

A Job for Both Parties

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1949

Mr. YATES. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I include the following editorial from the Christian Science Monitor for June 8, 1949, entitled "A Job for Both Parties":

A JOB FOR BOTH PARTIES

HOOVER REFORMS—I

The vast project to give the American people an efficient administration of their Federal Government was initiated by Congress as a nonpartisan enterprise, was carried on by the Hoover Commission on that basis and should be put into effect by both parties in that spirit.

Somebody on the Republican National Committee has taken excerpts from perfectly proper speeches by Mr. Hoover and inserted them in radio records as answers to questions by Republican Congressmen. By this misleading device they make it appear that the former President is joining the Congressmen in harsh denunciation of a spendthrift Democratic administration.

The Republican National Committee should apologize and recall these records—and quickly. The Democrats are asking for equal time on the radio to reply. In special cases this may be justified, but we should judge that the Republicans have lost more than they gained by this blunder, and that it would be better now to wipe the slate clean and keep the Hoover reforms clear of party bickering.

It will be almost impossible to get these reforms adopted—much less carried out—without genuine nonpartisan support. If they win, there will be plenty of credit for both parties. And if the voters get really interested, promotion of the Hoover reforms may become good politics in the most practical sense.

For the sake of effective government as well as for savings, the American people should emphatically warn politicians who would mess up this opportunity with petty partisanship. If they will take a bit of time to look at the antiquated machinery the Hoover Commission has exposed, and to note a few of the improvements offered, they will put politics in its place.

The Commission in its concluding report summarizes its work under such heads as these: Executive Authority and Accountability; Sharpening the Tools of Management; Wastes of Overlapping and Duplication; Red Tape; Decentralization Under Centralized Control; Reorganization by Major Purpose. It has found, for instance, such waste as the red tape which makes the paper work involved in half the annual purchase orders cost as much as the articles bought. It has found that the Government has records stored in valuable space six times as great as the Pentagon Building. It has found that at no point is there a complete picture of fiscal affairs. It has found a laxity which permits a clerical error adding $30,000,000 to the budget to go unnoticed.

The basic purpose of the Hoover reforms is to reshape Federal administration so that it will have something of the order and efficiency any successful business is forced to develop. Their general approach is to set up direct lines of authority and responsibility. Even a little study of the Commission's work will persuade most citizens that these reforms cannot only save money but, by giving democracy more effective instruments, have a large part in saving free government itself.

This newspaper considers them so important that it will run a series of numbered editorials, of which this is the first, designed to explain and support the major sections of the project.

Our Greatest Asset: Youth

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following article written by A. N. Spanel, chairman of the International Latex Corp., of Playtex Park, Dover, Del.:

OUR GREATEST ASSET: YOUTH

(By A. N. Spanel, chairman, International Latex Corp.)

This month an event of incalculable national importance is taking place—an event that will have a profound effect on every community, every city, every State, every business and profession in our country. Specifically, a million three hundred thousand young men and women will be graduating from the high schools of America, and over 300,000 more will be graduating from 1,238 universities and colleges. Significantly, a hundred and fifty thousand of these college graduates will be men, over 70 percent of whom are veterans of World War II.

Here is the wealth of a nation in its richest form. Here they are—young men and women trained to think and eager for work. They are the richest asset this country possesses

UNIVERSITY OF MICHIGAN LIBRARIES

and the poorest prospect for the rabble rouser.

These new graduates have the youth, the energy, the mentality, and ambition to make useful, productive places for themselves in the system under which they were raised and trained, a system in which they place their faith. All they want is the chance to make their contribution of skills and knowledge to the free society in which they grew up.

It is therefore of utmost importance to our Nation and way of life that they be given the job opportunities they deserve. We know all too well what job scarcity did to thousands of our best-trained young minds during the last depression. They became victims of many spurious doctrines that promised just about everything this side of heaven. Disillusioned and frustrated young people who walk the streets jobless in the richest Nation on earth don't find themselves glorifying the Bill of Rights, the Constitution, or our free-enterprise system. A nation courts disaster when its young people beging to examine, with bitterness and contempt and a sense of foregone defeat, its entire economic structure in the hope of changing it, often to suit the proddings or urgings of the agitator who has an ideological ax to grind.

In terms of personal need and the needs of our Nation, employment now is of first priority. America cannot again afford the frustration, the bitterness, and the hopelessness that great numbers of young people experienced during the thirties. In such an atmosphere, the fear of disaster flourishes.

Fortunately for all of us, we are not now anywhere near a steep or critical depression. On the contrary, there are indications that American business is settling down to something like a peacetime level. A summary of the published reports of the profits of 300 companies for the first quarter of this year reveals that their net profits are 9 percent above last year's corresponding period. Admittedly, this picture does not reflect business as a whole, yet with a measure of vision and drive on the part of American business and professional people, job opportunities now for these new graduates of our high schools and colleges can be provided, and without governmental assistance. In the end, these very businesses and professions will profit immeasurably from the fresh thoughts and energy our young people will bring to them.

Right now, every individual employer, every member of the skilled professions, and every business and industrial organization in America has the opportunity to exert influence to help provide employment for the youth of America, the Nation's greatest asset. This kind of effort in a democracy pays dividends, not merely for years, but for generations.

The Federal Budget Crisis: What It Means to You

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. HARRISON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Richmond Times-Dispatch, Richmond, Va., of June 13, 1949:

"THE FEDERAL BUDGET CRISIS: WHAT IT MEANS TO YOU

"Our national strength is not, however, simply a matter of weapons and trained men. Even more important are our economic growth and continued prosperity. Our economy is the center of a world economy. The hope of economic revival throughout the world depends in large measure upon the prosperity of the United States. If our production and purchasing power are badly impaired, if the buying and selling and investing that we do in other parts of the world are cut off, other nations will be plunged into chaos and despair."—President Truman at Little Rock, Ark., June 11.

Attempts of the economy bloc to curtail Federal expenditures in order to balance the budget have been futile. Every suggestion is met with indignant protests. Every Member of our National Legislature pays lip service to economy, but though the spirit be willing, the flesh is weak.

The same is true of the people themselves. It is not unusual for Senators and Congressmen to receive letters protesting against Federal extravagance, and some days later letters from the same person or organization vigorously protesting against a cut in projects affecting their particular State or locality. Meantime the Federal budget has been getting bigger by the minute.

Not only are there "not enough Byrds" in Congress; there are not enough articulate Byrds among the rank and file of the people. Congress is most sensitive to public opinion, but public opinion insisting upon economy is still in the minority, not organized.

In his January budget message President Truman reckoned revenues at $41,000,000,000—an estimate obviously based on his delusion that "inflation" would continue, that income and taxable profits would be higher than ever It was a grievous mistake. The congressional Joint Committee on Internal Revenue Taxation now estimates total revenue for fiscal 1950 as $38,900,000,000, or $2,000,000,000 less than the President's guess. It may drop lower than that.

The President's message asked expenditures of $41,900,000,000, which would have meant a $900,000,000 deficit. But Mr. Truman's estimate of expenditures was far too low. According to Senator BYRD, the total expenditures now listed will exceed $44,000,000,000, which would mean a deficit of $5,000,000,000.

Obviously, there are only three ways to meet the dilemma:

1. Increase taxes, as proposed by Mr. Truman; but increase in taxes would have a decidedly depressing effect at time when business is on the downgrade.

2. Add the deficit to our national debt, which now stands at the phenomenal figure of $252,000,000,000. But deficit financing (a course we have pursued for 17 out of the last 19 years) can lead only to disaster. We cannot have monetary stability without fiscal stability. Not only does the world look to us as the richest Nation, able to maintain that stability, but we have been preaching economy-in-government to foreign nations, and telling them to put their fiscal houses in order as the first prerequisite of postwar economic rehabilitation. Let us sweep in front of our own door first. Not to set a salutary example would seriously impair confidence of the western nations in our ability to act as a balance wheel, a stabilizer in the economic machinery of what's left to them of free enterprise. Uncurbed deficit financing inevitably leads to the ultimate break-down of Government credit, to inflation, and to eventual repudiation in one form or another. The very prospect of this alternative being chosen by Congress would choke up long-term capital commitments, which would lead to unemployment and further Government spending to make work. Deficit financing is therefore the worst sort of poison. We must shun it as though it were the devil himself, or, to use a common phrase figuratively as well as literally, there'll be hell to pay.

3. We can pursue the only sensible course, the same course which a private business caught on the horns of the same dilemma, would pursue. We can cut down on expenditures.

This can be done in only two ways:

(a) Eliminate waste, along the lines proposed by the Hoover Commission.

(b) Educate the people of the Nation to the utter necessity confronting them, namely, that they, as States and localities, as economic groups, and ultimately as individuals, must expect the Government to do less for them than it has in the past. The Committee on Public Debt Policy, in an enlightening volume, Our National Debt—Its History and Its Meaning Today, stresses this need of public education in sound Government policies. Congress is most sensitive to what is known as "the climate" of public opinion. Too many of its Members are still ensorceled with the New Deal superstition that "a public debt is a debt we owe to ourselves" and a good thing in that money spent by the Government goes "back into the pockets of business." That fallacy can be the death of democracy.

The average citizen must be made to see that our entire program for international reconstruction for the revival of trade, for the preservation of freedom and the defeat of communism hinges on our fiscal policies.

As Harold G. Moulton of the Brookings Institution put it, in his analysis of The New Philosophy of the Public Debt (published during the war year of 1943)—if we take the easiest way, if we do not balance the budget during the (still precarious) postwar days, "the foundation stone of international reconstruction will rest on quicksand."

The "world is too much with us," fiscally speaking. We are not isolated. A worldwide deterioration of trade occasioned by a deep depression in this country, whether this year or next, or the year after that, would produce chaos outside the iron curtain.

That is what the men in the Kremlin are banking on. They know we are our own worst enemies.

Every American citizen, by voicing his recognition of the seriousness of this crisis, by writing his Congressman, by threatening reprisals at the polls, must become a minuteman in this fight to preserve our fiscal integrity—by the only means in which that can be accomplished: A cut in Federal spending deep enough to bring expenditures to the minimum level of anticipated revenues.

Graduating Address by the Secretary of the Navy, the Honorable Francis P. Matthews, With Remarks by Admiral J. L. Holloway

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, it is my distinct pleasure to include herewith an address by the recently appointed distinguished Secretary of the Navy to the one hundred and ninth graduating class of the United States Naval Academy.

Secretary Matthews was introduced by my close personal friend, Admiral J. L.

Holloway. So thought-provoking, timely, and appropriate were Admiral Holloway's remarks, I include them therewith:

REMARKS OF REAR ADM. J. L. HOLLOWAY, JR., UNITED STATES NAVY, SUPERINTENDENT, UNITED STATES NAVAL ACADEMY, IN INTRODUCING THE GRADUATION SPEAKER, THE HONORABLE FRANCIS P. MATTHEWS, SECRETARY OF THE NAVY, FRIDAY, JUNE 3, 1949

Ladies and gentlemen, I bid you welcome. We have been blessed with sunny skies this June week. I know we all are grateful for the fairest of fair weather.

To the class of 1949, my congratulations. As Superintendent of the Naval Academy I would leave you one thought at the threshhold of your careers. This school, and the United States Navy are the media of service, richly endowed with the noblest traditions of devotion and self-sacrifice, through which we transmit the loyalty we give our country with all our minds and hearts. The 4 years here are a way of life creative of that ultimate standard of professional enthusiasm and keenness which is the very essence of spirited and confident leadership at the junior officer and subaltern level. Such leadership is the only foundation upon which tactical and battle effectiveness can rest, one you must achieve successfully as the first step of your career, and without which, over the long pull, even the most profound strategical direction and skillful logistic planning and implementation cannot prevail. Cherish this standard humbly as an obligation and responsibility.

And now, our speaker of the day. Devoted to the moral, spiritual and material welfare of our people, our distinguished chief stands, a great citizen, before our country. Ladies and gentlemen, I have the honor to present the Secretary of the Navy, the Honorable Francis P. Matthews.

ADDRESS BY FRANCIS P. MATTHEWS, SECRETARY OF THE NAVY, AT GRADUATION EXERCISES, UNITED STATES NAVAL ACADEMY, ANNAPOLIS, MD., FRIDAY, JUNE 3, 1949

The privilege of speaking to you, the members of the one hundred and ninth graduating class of the United States Naval Academy, is an experience, the memory of which I shall always cherish. Its value to me individually could not possibly be overestimated. The opportunity which it affords at this, the very threshold of my service as Secretary of the Navy, to think out loud, as it were, with you graduates, with the officers and enlisted personnel of the Navy, and with all my countrymen, is a particularly fortunate development for me.

I congratulate all of you on the achievements which your graduation represents. Your parents, your families, and your friends are here today and they are justly proud of your distinction. The Navy is very proud of you and I know you are proud of it. May God let you prove worthy, particularly of your parents' faith in you. Above all be true to yourselves, and you cannot be false to your parents, to the Navy, to your country, or to God.

This occasion, and the significant meaning which it holds for you young men, has for me an equally vital importance. Today, you become commissioned officers in the Naval Establishment of our country, confronted with the grave obligations which such rank entails. I joined this great partnership with you when I qualified as the civilian head of the Navy Department, with all the solemn responsibilities which occupancy of that exalted position involves.

The traditions of civilian leadership of the Navy during the war and since have been justly great. Two of these leaders, Secretaries Frank Knox and James Forrestal, may truly be said to have given their lives in the defense of our country. The complete integrity and the outstanding qualities of Secretary Johnson who succeeded Mr. Forrestal and of Secretary of the Navy John L. Sullivan, whom I succeeded, are known to all Americans.

As you and I assume our new duties practically together I would like to consider myself an extracurricular member of your class. That idea may or may not be appropriate, according to the consideration directed toward it from different viewpoints. However, I trust that the suggestion that I become honorary anchor man of the class of 1949 will not be utterly unwelcome to you.

Of course, let me hasten to admit, there is a material difference in the circumstances under which we embark upon our respective naval careers together.

You gentlemen are being commissioned after 4 years of highly technical training and very special education for the particular duties to which you are to be assigned. No such good fortune has favored me. I enter the ranks of the Navy with little prior training or preparation to guide me in the sphere of service in which I have been placed. Need I say that I feel a wistful regret because of the advantage in that respect which you young gentlemen enjoy? However, I will make every possible effort to bring to my task the same determination and loyalty to the Navy that our country expects from each one of you 790 graduates.

You all appreciate, I am sure, that in the difference which prevails between us in the measure of our preparation for our approaching tasks, there is an element of national strength to be noted, and a lesson in governmental philosophy to be learned by all of us. It involves a fundamental and fortifying phase of our idea of government as it relates to the Military Establishment. The circumstances of your commissioning and of my appointment in our respective categories emphasize the wise national policy which in the United States has always entrusted military operations to specially educated and technically trained personnel, and reserved its top administrative authority to civilian direction.

That arrangement reveals, in reassuring reality, the fact that the people of the United States never have wanted, and do not now want, a professionally militaristic Nation. It emphasizes democracy's determination to keep a firm check on the military.

The experiences of those governments which history records as basing their foundation and continued existence on military might and power has always been a challenging warning that under such a system it is hopeless to seek the "life, liberty, and pursuit of happiness" which is the natural craving of mankind, and which has ever been the most cherished desire of every true American heart.

That is why, thus far in our national life, the proportions of our Military Establishment have been jealously restricted to the minimum size and numbers that, in the opinion of Congress and the President, would provide only the measure of national security currently indispensable. The wisdom of that policy as the Nation's guide, notwithstanding the vigorous criticism to which it has been periodically subjected, it seems to me, is amply established by the triumphant victory which has terminated every war which we have been compelled to fight.

Those wars in the past were successfully prosecuted without the necessity of maintaining large armies and large navies in peacetime. They were fought and won in large part by men who came voluntarily and directly, with very limited preservice preparation, from the homes and family firesides which are America itself. Those men were not regarded by themselves, or by those who remained at home, as aggressors. They did not seek to be conquerors. They fought as defenders of their homeland and its precious ideals. In victory, they became the saviors of that "life, liberty, and the pursuit of happiness" without which, in our very souls, we Americans have always known no human existence is worthy of man's essential dignity.

Civilian control of the Military Establishment has always been conceded to be of such basic importance that Congress has imposed it upon governmental administration by statutory enactment. Today it applies equally in the Army, the Navy, and the Air Force. It was that provision, embodied in the law by act of Congress in response to the will of the people, which justified the President, as our Commander in Chief and at this critical time, in appointing me, a civilian, as Secretary of the Navy.

The situation is not entirely without precedent. Similar situations have existed in the past, and, in spite of that fact, the Navy's growth and progress has continued to advance to the lofty pinnacle it now occupies as the greatest and most powerful naval establishment the world has ever seen.

We intend to keep it so and we intend that it shall take full advantage of every technological development and invention in the years to come. We intend that you gentlemen shall have every means at your disposal to transfer into terms of effective sea power the lessons and techniques you have learned here at the very fountainhead of naval science and knowledge.

I have no illusions about the hard task that lies ahead for all of us in the Navy. I am accustomed to hard work and discipline and I know that you are, so I am confident that together we will forge ahead. I am confident that within a reasonable time, by hard work, the intense application of a fairly well-trained mind, and by taking advantage of the good will and loyal cooperation of all those in the naval service, whatever technical deficiencies I now have will be overcome. I think that I can properly assure you, on this occasion which marks the beginning of our mutual association, that during my term of office, and for the duration of your service, we both will justify in some measure the confidence expressed in us by our President and Commander in Chief.

We Americans are straightforward, thinking people. We seldom attempt to fool ourselves. With wise discretion, we are accustomed always to look the brutal facts of any menacing situation squarely in the face.

That is a redeeming quality, and its unfaltering exemplification throughout our relatively brief history has served the Nation well.

There is woeful need for our accustomed straightforward thinking in this particular period of this present generation.

In the evolution of our national life, we have seen the founding fathers' original concept of our governmental charter modified from time to time in greater or less degree in response to the forces resulting from the impact of the climactic crises encountered in the national emergencies of peace and war.

The greatness of America in the past has been built largely on the fearlessness of Americans to change, on their readiness to improvise and modify and evolve new techniques to make our economy more productive and our way of life more abundant. Whenever the circumstances of our national life have required it, we have never recoiled from making necessary changes in our political, social, and economic institutions.

Twenty-one times the States have ratified amendments to the Federal Constitution. Twenty-one times, therefore, have the fundamental provisions of our Federal Constitution been altered in some greater or smaller measure. Those alterations have embraced such matters as the bill of rights, the popular election of United States Senators, the right of universal suffrage, the adoption and repeal of prohibition, the adoption of the Federal income tax, and the abolition of

UNIVERSITY OF MICHIGAN LIBRARIES

slavery. All these changes are now features in our form of government not provided for in the Constitution as originally written.

Modifications also have transpired in the field of fundamental national policy. We know the benefits and the strength of the two-party system of government as it exists in the United States, but we have witnessed the two parties establish a bipartisan foreign policy, and have seen their action vindicated by the highly beneficial results thereby attained for us and for the world.

You and I have seen our national economy loaded with new and almost insupportable burdens in recent years. We could not escape the knowledge of how relations between individuals are being readjusted in our national society. War debts and the cost of more satisfactory and equitable social security for the average citizen promise to tax our financial resources as they have never been strained before.

These demands, and the anxieties which they inspire, are not the only causes for apprehension that we have to face. Fundamental differences in ideologies have appeared in the world, drastically affecting the relation of society to the individual. Western Christian civilization, whose spiritual concepts have permeated every phase and feature of our national structure, is in head-on collision with the materialistic apocalypse of Karl Marx.

In that conflict is embodied the gravest challenge that has yet menaced America. For 125 years this Nation faced no serious threat to its safety from any foreign force. In 1914, the security we had enjoyed from Washington's day by reason of our geographical position and the protection previously afforded by our ocean-bounded shore lines, was rudely shattered. From that day to this, we have seen our geographical isolation grow less and less, until we realize that through the fruits of man's inventive genius, the problems, the rivalries, and the threats of the Old World ideologies, are closer to us Americans and to all sections of our country than ever before.

We can no longer rely on the former safety factor of wide oceans and great distances to retard an enemy's attack in case of war. Vigilance in anticipating the peril of impending attack and readiness to act promptly in the face of danger have become more vitally essential than ever to national security. Times have changed, and it is undeniable that we cannot hope again to win victory in war without being adequately prepared for war in time of peace. As a consequence, another fundamental change is being effected in national policy.

The peacetime Military Establishment has had to be greatly enlarged, thoroughly reorganized, and modernized in its management and direction. Much has been done to increase the size and effectiveness of the Army, the Navy, and the Air Force. Much also has been accomplished in reorganizing and coordinating the three departments of the Army, the Navy, and the Air Force.

A great deal remains to be done to achieve the complete team unity of our armed forces which the requirements of total defense against total war demand. The Navy intends to cooperate in every way as a member of the new national defense team to hasten the achievement of the goal embodied in the National Security Act of 1947, which represented the lessons learned by all services during World War II and the best thought of the military and civilian leaders of all the armed services.

Congress is now seeking ways and means to strengthen the National Military Establishment, of which our Navy is an essential part. We cannot tell exactly what changes will be made by the present Congress but we can be confident that they will reflect the combined views and efforts of many patriotic leaders on the all-important subject of national defense.

We can be equally confident that the new legislation will not alter fundamentally the traditional concept of naval power nor the fundamental necessity for American superiority on the seven seas. Your Navy as the traditional exponent of America's determination to uphold the freedom of the seas, can look forward to a future as brilliant and inspiring as its great and historic past.

This is not the time for indecision or defeatism in any segment of our population or in any branch of the armed services. This is not a time for the display of weakness, but for the mustering of strength.

I believe the legislation in prospect will materially strengthen the power and authority of the Secretary of Defense and, I think, very properly so. I believe that this legislation, through integration, fuller cooperation and more effective disposition and use of the military forces at the command of the American people will make America stronger, more united, and better prepared to meet any challenge to our way of life than it has ever been before.

I know I bespeak your thoughts and your devotion to this land of ours when, pledging myself to the full support of the National Military Establishment, I pledge your loyalty and mine to our beloved country. The true measure of whatever we do today and in the days to come is in service to the United States of America.

I am sure that I speak for all of you officers as well as for myself when I say that not one of us in the Navy is serving our country for personal advantage or for the sake of personal glory. Such an attitude would not be in keeping with our oaths of office, nor would it emulate the unselfish and edifying examples of those valiant officers and Secretaries of the Navy who have preceded us in peace and war.

Besides, most of you are old enough in experience to know as well as I do that the best way to get worth-while things done is utterly to forget to worry about who is going to get credit for what is achieved, or what honor its attainment may bring to someone. May I dare to say, after such brief service association with you, we are Navy men, all of us, it is true, but, by the blessing of God, we are Americans first. With a consciousness of what that implies, we shall serve America as Navy men should serve her, strong in the conviction that our country could ask nothing greater from us.

If ever there has been a time in our history that called for complete and unselfish unity of purpose and action this is it. The slogan for all Americans today and from this day forward must be: One for all and all for one.

Let me pause here to offer a few additional thoughts to you graduates. As I said in the beginning, it is my judgment that you are entering on your naval careers especially well prepared for the arduous duties you will face. In partaking of the educational training of the United States Naval Academy, you have enjoyed advantages bestowed upon a very small portion of America's young men. There is no more excellent educational institution on the face of the earth.

May I then respectfully remind you that when you came to Annapolis, you acquired a privilege that many other youths of your generation would have given of their very heart's blood to possess. For each one of you who is here, there are 10 other boys who today pensively observe your happiness and success, and longingly contemplate what might have been if their application had been a first choice for appointment to Annapolis.

The fact that you are here, and some other young man because of that fact is denied this rare distinction, imposes a very special and sacred obligation upon each one of you. It has cost your country much to bring you to this period in your life's course. You are entering the Navy's official family at a crucial time for your country and for the Navy. They both need your loyalty and your devotion. They need your unselfish service. Show heartfelt gratitude to your beloved country which made it possible for the Navy to educate and train you for her official ranks. Be true to your vocation as a Navy man. Be true to the highest ideals of an American.

In conclusion, may I offer to this audience and to America this profession of purpose:

The Navy has become for me the highest obligation in life. I pay reverent tribute to her sublime service to our country in peace and in war. Without the Navy in our past, America could not possibly be what she is today, the unquestioned leader of the world. With a faith that is unshakable, I firmly believe that in God's providence, America is a land of destiny, and that she will continue to lead the world toward the ultimate goal wherein the injunctions of God's natural law will endow each human being with opportunity to enjoy that "life, liberty, and the pursuit of happiness" which is our most precious heritage as Americans.

To fulfill that destiny in this present troubled world, I realize as you should do, that America must remain strong, so strong in her civilian-controlled military power that no other nation will dare challenge her preeminent position.

The greatness of America reposes in the God-given gift of our natural resources and in the unity, industry, and integrity of our people. The security and perpetuity of that greatness depends upon the coordinated power and loyalty of our Army, our Navy, and our Air Force, working together to accomplish the efficient and economical discharge of their high responsibilities to the Nation in time of peace and in time of war.

As Secretary of the Navy and in the presence of this Naval Academy Class of 1949, I would like to dedicate myself, the Chief of Naval Operations, and all the men and women of the entire Naval Establishment to the sacred purposes of maintaining our Navy ever ready to uphold its important position in the defense of our country. May no act of ours cause the power or the usefulness or the might of our Navy to be impaired or the brilliant flow of its prestige to become dim.

May we all, pursuing this appointed course together, deservedly find fair winds and good sailing.

Back Post-Office Employees

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. MULTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the New York World-Telegram of June 9:

BACK POST-OFFICE EMPLOYEES

Congress would be unfair to some 375,000 faithful post-office workers if it ended its current session without acting on their cost-of-living and other requests which are, briefly:

Salary increase of $650 a year for all postal employees.

Vacation of 26 days and 15 days sick leave. This is what other Federal employees get now, whereas postal employees are allowed only a present 15 days vacation and 10 days sick leave.

Service in the armed forces in World War II to be credited as time employed in the post office for promotion in automatic pay grades.

Past-service credits in longevity grades for older workers.

Retirement at a full annuity after 30 years of service, with minimum age 55.

The above are what seem reasonable equalizations urged upon congressional committees by the more than 18,000 members of the Joint Conference of Affiliated Postal Employees (AFL) in Greater New York and vicinity, through their legislative representative, Jerome J. Strauber.

These postal employees, remember, have no strike weapon. For fair treatment in the matter of wage and living standards, they have to rely solely on Congress and pressure of public opinion.

Amid rounds of industrial wage boosts the public should be in no mood to see post-office workers forced to take extra jobs to eke out insufficient incomes the Post Office Department is against raising unless it gets bigger revenues.

Nothing compels Congress to neglect postal personnel while handing out pay increases for other Federal employee groups.

Nor has Congress ever yet declared the post office must be self-supporting, no matter how its own employees may suffer.

The danger is that Congress may stall along on these postal workers' requests until it can suddenly pretend it's too late.

To prevent that, it's up to the public to do some prompt and pointed prodding. Letters and telegrams to Congressmen are still delivered—often with marked effect.

Van Zandt Fights Another War

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1949

Mr. GAVIN. Mr. Speaker, from the Herald-News, of Passaic, N. J., comes a most interesting editorial concerning my colleague from Pennsylvania, JAMES E. VAN ZANDT.

The editorial comes from the pen of Lt. A. G. McMahon, USNR, who served under Captain Van Zandt in the Pacific area during World War II. The editorial is as follows:

VAN ZANDT FIGHTS ANOTHER WAR

Representative JAMES E. VAN ZANDT has made serious charges involving the ethics of President Truman and Defense Secretary Louis Johnson. Briefly, Congressman VAN ZANDT thinks there is something fishy about the great haste to stock the Air Force with B-36's, manufactured by Consolidated-Vultee.

It is more than a coincidence, Mr. VAN ZANDT thinks, that Secretary Johnson was a director and counsel of Consolidated-Vultee until shortly before he was named to succeed the late James B. Forrestal. Furthermore, Mr. VAN ZANDT wonders if the fact that Floyd Odlum, head of Consolidated-Vultee, helped Mr. Johnson raise an amount estimated in some quarters as a staggering $6,500,000 for Mr. Truman's 1948 campaign, is responsible for the enthusiasm for the B-36's.

Among the facts are cancellations of big contracts with other aircraft companies and the diversion of the moneys to B-36's. Curtiss-Wright, of Caldwell, lost an $80,000,000 contract for F-87 all-weather fighters in one maneuver.

Mr. VAN ZANDT, a Navy man, to be sure, says the Navy has a jet fighter capable of knocking down the B-36. A radio commentator suggested that Mr. VAN ZANDT is eyeing a promotion from captain to rear admiral in the Naval Reserve and will be rewarded if the Navy makes headway in this B-36 fight.

It could be. Could be, too, that Mr. VAN ZANDT, a Pennsylvania Republican, knows whereof he speaks. While he is probably ambitious as a legislator and as a naval officer, it is a matter of record that he was a fighting, fearless, and capable officer.

Mr. VAN ZANDT was a chief signalman in World War I. He resigned from Congress to enter the Navy in World War II. He was with the Seventh Fleet amphibious forces, the LST arm, right from the start to the finish. He can talk about bombing at Milne Bay and Buna, in the early days, until Balikpapan, Borneo, the final action of the war.

He didn't smoke, he didn't drink, and from sun-up to midnight he toiled, sometimes training new forces fresh from the States, sometimes leading convoys to D-day landings. More than one civilian, turned sailor by necessity, remarked that he'd rather be under VAN ZANDT in battle than an Annapolis professional.

In the last stages of the war, Congressman VAN ZANDT went up from lieutenant commander to commander. After the war he got his captain's four stripes. And the Navy could do a lot worse than make him a rear admiral, even if it fails to make Mr. Johnson a bit Navy-conscious.

Teacher's Day

EXTENSION OF REMARKS
OF
HON. THOMAS J. O'BRIEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1949

Mr. O'BRIEN of Illinois. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include the following article on Teacher's Day by Rabbi A. M. Hershberg, president, Federated Rabbinical Colleges of Chachmey Lublin:

TEACHER'S DAY

(By Rabbi A. M. Hershberg)

The purpose of this article is to set forth the idea of a national day dedicated to education in general and educators in particular.

The teacher has played a very important, if not the most important, role in both leading the way and smoothing the path of the young American Republic. Our leaders in the early days of our country understood, immediately, that despotism and slavishness thrived among a people who were ignorant and behind in their development. They realized that education—and education for the masses—was vital if democracy and freedom were to survive and grow in the United States. As early as 1647, the colony of Massachusetts adopted a statute providing for free elementary and secondary schools.

As if to prove the analysis of the American leaders, Berkeley, a royal Governor of Virginia during the colonial period, opinionated: "I thank God that there are no free schools or press in Virginia, and I hope that there will not be any during the next hundred years, because mass education has always resulted in rebellion and in freethinking."

Governor Berkeley knew whereof he spoke as far as the English domination was concerned. He was afraid that free schools would awaken the American masses to a resistance against British tyranny. That is why he called the results of mass education rebellion and freethinking, and these did help to overthrow the English rule in the Colonies.

With the end of the British hold upon them, America began to consider education in its broadest terms. In simple language, it took this form: Free education for all must be the cornerstone of the newly established democracy, for democracy for all is dependent upon a system of free education which will develop all of its people to an appreciation of the truly democratic way of life.

A further development was the principle of compulsory education, laws providing for it being adopted by each of the 48 States without exception, stating that parents must send their children to elementary and secondary schools between the ages of 6 and 17. The statutes, adopted first in Massachusetts and New York and then in the other States, also regulated child labor, forbidding parents to send their minor children to work as indiscriminately as previously.

The modern American educational system costs us billions of dollars. Thousands of cities and towns receive special funds earmarked for the support of their schools which are open to all regardless of race, religion, or political faith.

The teacher occupies an immensely important position in developing the coming generation and in directing him onto the path of thought, freedom, democracy, and morality.

The great American educator, John Dewey, said: "What the best and wisest parent wants for his own child, that must the community want for all its children. Any other ideal for our schools is narrow and unlovely; acted upon it destroys our democracy."

The teaching profession is complex and intricate and the teacher's problems are manifold and keep pouring and streaming in upon him daily in new shapes and forms. The teacher must be a psychologist, health director, supervisor, and a friend of the student. And it must be recognized that the teacher has a more complicated job than parents. Whereas the latter deal with the mind and body of their single child or few children, the teacher deals with a multitude of youngsters that come from different social and economic environments. He must regard each one as a single, separate entity of a different composition. The teacher is, therefore, without question, in a position where he can exercise great influence upon the individuals with whom he comes in contact in a student-teacher relationship.

And yet, the teacher's salary and reward cannot be compared with the much larger incomes of those who engage in business and industrial fields. It cannot even compete with skilled labor. Yet we must admit that it is a highly specialized occupation and requires constant learning and studying. It is an endless progression toward greater and higher achievements in the development of the American people. The events of tomorrow are shaped and decided in the classrooms of today.

When one pauses for a moment in the busy American scene—leans back—and reflects on these vital functions of the teacher in the life of the American people, his task of developing the character of generations and his constant, everyday responsibility of imparting knowledge and guidance, it is indeed strange that in this land of ours, which regards education so highly and so vitally, never has there been put forth the request that the President of the United States, by official proclamation, to bring the vividness they deserve to the values of edu-

UNIVERSITY OF MICHIGAN LIBRARIES

cators and education, set aside one day each year in honor of teachers.

The results of such a day would be evidenced in—

1. The increase in prestige of education in general and teachers in particular. And who will say that this is not important?

2. More thinking in terms of education itself, instead of in terms of the professions that can be reached and the income that can be derived by means of education—an emphasis sadly and tragically ignored too often.

3. The building and cementing of wide bonds of attention and affection between the students and their teachers.

4. The participation of children, parents, and teachers in this day and thus their moving closer to each other, their joint consultation on mutual and individual problems and therefore, the enrichment of our life and a possible decrease in juvenile delinquency.

Teacher's Day, in my opinion, could be celebrated in the following ways:

1. Meetings and assemblies at which could be discussed education in general.

2. Gifts be brought to the teachers, by their students, young and old.

3. Dramatizations and talks on the meaning of education, via the radio, and articles and pictures in the press.

Education is the guaranty that a people will not come under the sway of tyranny. When a people are enslaved, they begin, immediately, to burn books, as in Germany. As Americans we must be intensely interested that our country should continue in the forefront of those nations which give their citizens ample opportunities for education and development. If we are to succeed in this objective, we must have able and enthusiastic pedagogues and that, in turn, can be aided by the support and respect given to them by all of us, adults and youth alike. In ancient Rome, an empire based on force, the educator was a slave; in the United State, a nation built upon justice and freedom, the teacher should be the true pathfinder of the people. This should be a fundamental of all nations formed on principles similar to those on which our country is founded.

There is another point to be considered. The teacher has come in for his share of blame for the wave of juvenile offenses, for 14-year-old Roy Adams, of Chicago, who smothered little 8-year-old Nancy Schuler, for Betty Jane Kroeger, of Eminence, Mo., 17 years old, who was found guilty of murdering her father and for too many others that occur every day.

These items reflect a trend, not in a few parents or single families, but in mankind. To counteract that, we must find the right kind of inoculation. It must be strong and effective and it can begin in the classroom.

A respect for the teacher must be instituted.

We have Mother's Day when children bring gifts to their mother and a Father's Day to remember the breadwinner of the family. Not that they are or should be forgotten and neglected all year around. Far from it. Nor is it being done. But the fact that a special day is set aside to honor the mother and the father brings a light to bear on their true value and lifts them to a position where they receive greater and better appreciation.

A great man once said: "Wars and battles are not won on the battlefield, but in the schools." The Talmud teaches us that we are to honor our teachers in the same measure as we honor our fathers and mothers because the teacher that imparts wisdom to the student is as a parent.

If 1 day in the year were to be set aside as a Teacher's Day, it would mean that the United States endorses the respect and honor due to the teachers of our Nation in whose care we entrust the physical, mental, and spiritual well-being of our children—and through them—all mankind.

When the teacher is elevated to his proper position in social space, then his words will carry more weight and he will become not only an example of an educated individual, himself, but one who represents the finest in the intellectual and spiritual world.

There is an enormous gap between the theorizing, the talking and writing about education and its practical application and execution. Experts may speak and write volumes and discover and recommend new systems, but unless they enlist the wholehearted cooperation of the teachers, the theories will remain theories, the new systems will remain dreams.

The education of our children does not only mean the preparation for a life in the future, the life of tomorrow. It is the life of today and every day, just as it comes along that the teacher faces.

The social, moral, religious, and intellectual aspect of the world are largely determined in the classroom. To win the cooperation and mutual respect of teacher and pupil, the teachers must be lifted to a much higher level economically and socially. A teacher's day would serve just such a purpose. The mere fact that attention would be centered on teachers would make the parents and children launch upon a campaign of thoughtfulness and admiration. Each teacher would be discussed, their subjects of instruction criticized and evaluated. There would be an understanding association of all concerned. The teacher, then, would be respected in the classroom and in the home.

Education is a continuous process of growth and evolution and life. Let us start right now and become part of that growing organism.

Remember that children live in the same world, breathe the same air, and often think the same thoughts as adults do, and may, therefore, be subject to identical actions and reactions. Let us realize, as we view the growing juvenile delinquency, that it is a product of our own day and age and of our own creation. It is for us to resolve, instead, to devote our creative powers to building a better environment for our children and ourselves.

Teacher's Day would, in this way, accomplish much. The occasion would become a fountain from which, each year, clear and clean water would pour, which would refresh and stimulate the world around it.

Reds and Education

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I should like to include a very timely editorial which appeared in the Worcester Telegram of June 10, 1949.

The editorial follows:

REDS AND EDUCATION

The organized teaching profession of the country is still wrestling with the problem of combating communism without sacrificing the traditional principles of freedom of opinion that form the basis of American democracy. The National Educational Association has just adopted two statements of policy on this controversial subject by its endorsement of the report of its Educational Policies Commission.

The commission says that school children should be taught about the theories and the practices of communism, but they should not be taught by Communists. In fact, the right of Communists to teach in the schools is denied. And that involves a point that needs to be better understood.

The commission explains it in this way: "The whole spirit of free American education will be subverted unless teachers are free to think for themselves. It is because members of the Communist Party are required to surrender this right, as a consequence of becoming part of a movement characterized by conspiracy and calculated deceit, that they should be excluded as teachers."

It is a good thing to have the teaching profession make it plain to the public that our educational policy does not aim to regulate the thinking of the profession. It is equally important to have it made plain that membership in the Communist Party involves control of the thinking and the action of the individual members.

If that Communist control can be legally demonstrated, we have a basis for charging that Communist members are subject to direction by a foreign government which they hold superior to the loyalty they owe to America. This legal demonstration has been so often lost sight of that a popular impression prevails that anybody can be considered a Communist who happens to hold opinions that differ from the accepted views of the majority of the public.

If the NEA commission carries out its proposal for teaching communism, the first step will naturally be to distinguish between socialism in Britain and socialism in Russia. There are many well-meaning Americans who can't tell the difference.

The British have democratic self-government. The Russians, throughout history, have always lived under autocratic authority. So we get a fundamental definition of communism. It is socialism in a police state. We may question the wisdom of British socialism. But we cannot tolerate the doctrine of the modern police state, whether it is in Russia or in Spain or in Latin America.

If the National Education Association can make these distinctions clear to the school children of the country, we may hope to clear up some of the confusion that muddled much of our popular opinion.

The Keystone Dam

EXTENSION OF REMARKS

OF

HON. TOM STEED

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. STEED. Mr. Speaker, under leave to extend my remarks, I desire to call attention of the Congress to an editorial on the Keystone Dam project on the Arkansas River in Oklahoma, published in the Oklahoma City Times on June 8, 1949, which follows:

ONE MAN'S LONELY FIGHT

Jo Ferguson, editor of the Pawnee Chief, has no connection with the mythical power trust, which is the favorite whipping boy for the proponents of TVA, MVA, AVA, and the other big dam projects. He has done a lot of work on his own time, fighting the proposed Keystone Dam which the Army engineers want to build in his area, and he recently made a trip to Washington in this effort.

As mentioned in a recent Saturday Evening Post article, the Army engineers have unlimited amounts of the taxpayers' money to spend, partially in propaganda. The program, as it now stands, comes to about $57,000,000,000 for the Nation, and a powerful lobby is always at work in Washington.

In his paper, the Pawnee Chief, the other day, he tells what will happen to his community if the Keystone Dam is built. Here is his impressive indictment:

"It will flood 30,000 acres of our best farm land.

"Drive thousands of farm people from their homes.

"Destroy all the town of Keystone and part of Cleveland, all of Prue and Osage, and part of Mannford. Flood Boston pool.

"Require rerouting of more than 20 major pipe lines that cross the Pawnee County part of the proposed reservoir. (To get away from the watershed into the reservoir the pipe lines probably would be placed below the dam, taking them entirely out of Pawnee County. Pawnee County collects thousands of dollars in taxes from these lines each year.)

"Inundate or isolate 416 producing wells from which the Johnson Oil Refining Co. is taking oil. Flood over 600 miles of pipe line that serve these wells.

"Back water up Cedar Creek to the Johnson refinery, making necessary the building of a dike, destroying the recently installed $200,000 water-cooling system, probably driving this industry from the county.

"Flood and force the rerouting of highways 64, 99, 33, and all county roads in the reservoir area.

"Flood the approaches to the Arkansas River bridge at Cleveland.

"Require the Frisco to reroute its line from the dam site to Hallett—moving most of it from Pawnee County—and the M. K. & T. from Hallett to Hominy and from Sand Springs to Osage.

"Reduce the taxable wealth of Pawnee County about one-third."

In a previous editorial Mr. Ferguson gave the result of a survey which showed that 40 percent of all the livestock received by the Tulsa stockyards are now grown in the area to be flooded. In view of this fact it is hard to figure out why many Tulsa businessmen want this dam, but perhaps they know their own business best.

In addition to the above damage, there will be even greater damage to the Arkansas Valley above the reservoir, by deltation which may extend to Ponca City or beyond, judging from experience.

No wonder Mr. Ferguson opposes the dam.

No Place for Communists

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. HARRISON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of June 9, 1949:

NO PLACE FOR COMMUNISTS

It is hard to conceive of a group more dedicated to the cause of academic freedom than the commission which has just issued a report on "American Education and International Tensions." The sound principles laid down by this distinguished group of educators will be rejected, of course, by Communists who seek to misuse traditional academic freedom for propagandistic purposes. But the prestige of the commission and the manifest objectivity of its findings enhance the importance of this valuable policy guide on the problem of communism in education.

The commission was commendably direct and unequivocal in disposing of the much-debated question of the right of schools and colleges to have Communists on their faculties. It declared bluntly that Communists should not be permitted to teach. It reached this conclusion because it was convinced that members of the Communist Party subscribe to doctrines that are totally inconsistent with academic freedom as Americans know it. These doctrines require party members to submit to a discipline that tolerates no deviation from the Marxist line of thought. There is no room for independent thinking under such a system. As Dr. Raymond B. Allen, president of the University of Washington (who was not a commission member), commented several months ago in defending dismissal of several Communist professors, a Communist is "incompetent to teach the truth." In short, a Communist cannot be a good teacher and a good teacher cannot be a Communist.

But has communism any place in the schools? The commission, which included such men as General Eisenhower, president of Columbia University, and Dr. James B. Conant, president of Harvard, answered this question with equal candor and common sense. It believes that academic freedom does require the teaching—as distinguished from the preaching—of communism. Here, again, objectivity is essential. And this is another reason why Communists should be excluded from the faculty. It is asking too much of a Communist to expect him to be objective about the conspiracy of which he is a part. Students should be taught to know what communism, fascism, and other ideologies are—for this knowledge should become one of the bulwarks of a free society.

One other recommendation was of a type that did not make headlines, but it was an important one, nonetheless. The commission urged that the schools, in order to be properly objective, do not overlook the teaching of Americanism, either. There is no better way of combating communism than by instructing children in the American way of life. If this should mean a return to the emphasis that once was placed on American history, civics, and related subjects, so much the better. The schools will have an unbalanced program if they fail to stress the value of the American heritage, while teaching about other ways of life.

Dairying Difficulties in South America

EXTENSION OF REMARKS

OF

HON. THURMAN C. CROOK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. CROOK. Mr. Speaker, last February Mr. and Mrs. Orville Sherman, a prosperous young farm couple living southeast of Goshen, Third District, Ind., sold their farming equipment and goods at auction and left for Venezuela, South America, to assist dispossessed European immigrants who were arriving in that land.

These European people who had lost all, except their faith and hope in adjusting themselves in their new homes, are now gaining a new lease on life under the supervisorship of an esteemed Indiana couple that was willing to make heavy sacrifice and dedicate their efforts to a humanitarian cause. We are pleased to have such citizens obsessed with a burning desire to do their part in building for an established brotherhood of man throughout the world.

So, Mr. Speaker, under unanimous consent to have my remarks printed in the Appendix of the RECORD, I include the following letter from Mr. and Mrs. Sherman that was so graciously printed in the June 10 edition of the Farmer's Exchange, of which W. E. Yeater, of New Paris, Ind., is the editor.

DAIRYING DIFFICULTIES IN SOUTH AMERICA

EL TROMPILLO, ESTADO CARABOBO,
Venezuela, South America, May 31, 1949.

To Our Many Friends Who Were So Kind to Us Before We Left and Since:

We have put off writing this letter because we wanted to wait until the cattle started coming from the States. Wednesday, May 25, the first plane load of 11 head of cattle landed here in Venezuela. We were thrilled to have these cattle come because it will mean so much to the people here, for immigrants as well as natives. We do not minimize the value of the cattle given, but we know the spirit in which they were given is deeper than that and the most important is the fact that there are people in the world who still believe that there is a better way for peace than the one the whole world has taken, which was war. Not one of you in your wildest dreams could ever imagine the misery and suffering that this last war has caused. Until you meet individuals like we have, who saw their wives led to a gas chamber and killed and who himself was standing in line when the prisoners were liberated. This story is repeated time and again. And individuals who have lived in concentration camps for two or more years and have been people die like flies from starvation.

We have been directing the remodeling of an old sugar refinery into a dairy barn. Here we expect to keep 50 head of dairy cattle in this barn for milk production. The average cow down here gives 2 quarts of milk a day if she is fed. Some children never get a taste of milk and over 50 percent of the milk used in Venezuela is dried milk shipped from the States.

We are building a trench silo inside the barn 50 by 12 by 12 feet and expect to fill it with corn silage during the rainy season. We hope this silage will carry our cows over during the dry season when there is no pasture. There is no feed storage of any kind, no hay of any kind to feed cows during dry season. By the end of the dry season, the cows are walking skeletons and you know that they can't produce under that condition. On the way to Maracay the other day, we saw a cow lying along the side of the road that was dying from starvation and buzzards waiting for it to draw its last breath. The natives just don't know how to care for cows and the immigrants haven't a thing to start with.

They burn all the vegetation off of the land and it is depleting the humus in the soil very rapidly. We hope to teach them that they should plow the vegetation under instead of burning it. There is a lot of very good soil down here but they have very little knowledge as to how it should be farmed. Farm machinery is very expensive and the average man cannot afford to own it.

Yesterday, Orville brought to our room the largest grasshopper that I've ever seen. We measured him and his body alone was a good 5½ inches long. (We are considering using them for pack animals.)

Contrary to the belief of many tourists, who never get much farther than Caracas, Venezuela is a land of many poor people, especially in the interior where they do many

UNIVERSITY OF MICHIGAN LIBRARIES

things very primitive. The women make corn into meal, using the same method as in Biblical times by placing it in a large log standing upright that has been hollowed out at one end to a depth of about 18 inches and using another pole about 3 feet long and 4 inches in diameter to pound the corn into meal. In contrast, working in the field next to this mud hut, a government-owned caterpillar D6, with 78 horsepower on the drawbar, is pulling a large 12-disk plow. The people live in mud huts (mud put in between bamboo poles) with thatched roofs and dirt floors. Most of the children run naked until they are 6 years old. Many of the mothers make a little hole in the dirt floor of their hut and sit the baby in it as soon as they are old enough to sit up. The dogs, chickens, and pigs come in and rub around them. When the baby gets sleepy, it just lays its head over on the floor. Many of the babies are sick and nearly all have several different kinds of intestinal worms.

Women carry most of their loads on top of their heads and many have to carry water at least a half mile. They carry as much as a 5-gallon can of water on top of their heads and a baby in their arms. (Maybe we wouldn't be so clean if we had to carry all of the water we used in such a primitive way.) We do appreciate good, pure water as never before as we must boil all the water we use. (I never knew we could possibly use so much water every day.)

Regardless of all this, you can't help liking these native people. They have a very good sense of humor, they laugh and smile very easily. We especially like the little children with their black curly hair and black eyes. I will admit they do move a little slower than we do in northern Indiana but you don't have a tropical sun to work under. When you really learn to know them, they are not much different than anyone else.

The immigrant people are very nice people, like you and I, contrary to many stories we have been told about them. You can't imagine what a terrible thing it is to be a people without a country and not wanted. The native people resent them very much as the immigrants are more ambitious and cleaner and are taking business away from them. The natives are making it harder all the time for the immigrants to get a new start in life. You don't have to be here long until you are assured of the fact that immigration can help this country a great deal. We have found that speaking Spanish is a must. There is only one person here who can speak English besides we four. We have been studying Spanish ever since we arrived here. The natives speak very poor Spanish and after we learn Spanish we have to learn their language which is making it very difficult.

It is very hot here during the day but most of the time it cools off enough evenings and we can get our rest for which we are very thankful. We hear you had a heat wave and that it got up to 97 degrees. If it didn't get that hot here during the day, it would be very unusual. If it gets down to 70 degrees by early morning, the natives wear their coats. The other day when I set a chair out in the sun to dry some clothes, it blistered the paint. The rainy season is starting with it raining nearly every day. We are told that it is unusually late and we have been taking advantage of it in getting some of our work done. We must shake our clothes out each morning before putting them on as small lizards and insects crawl in them during the night. We have a lizard that insists on living in our room through the week. We have chased him out several times but he comes right back. (We didn't kill him as they eat insects and bugs and goodness knows there are plenty here.) He is about 10 inches long and a pretty green. I don't mind him as long as he doesn't crawl in bed with me.

We are very happy that we can be of some service to these people. It has been heartbreaking sometimes to hear our friends' stories and to see the living conditions. We realize it is a big job and there is lots to do. We have deeply appreciated the support and interest of all of our friends before we left and since we have been here.

Sincerely,

ORVILLE and LOIS SHERMAN.

Victors' Justice—The Nuremberg Trials Are a National Disgrace and We Should Repent

---

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, at this point in the RECORD, I am including a review of Montgomery Belgion's book Victors' Justice, by Mr. J. M. Lalley. The Nuremberg trials are so repugnant to the Anglo-Saxon principles of justice that we must forever be ashamed of that page in our history. Now, Dictator Stalin has us where he wants us in the event we go to war with Russia. The Nuremberg farce represents a revenge policy at its worst.

The review follows:

VICTORS' JUSTICE

(By Montgomery Belgion—reviewed by J. M. Lalley)

In the pattern of justice established at Nuremberg, Mr. Montgomery Belgion perceives one of the crises in the spiritual history of Western mankind. It was, he tells us, a fateful turning away from the legal tradition that has been the glory of the English genius and its greatest contribution to civilization. At Nuremberg the representatives of Great Britain and the United States abandoned the notion that the true end of justice is the protection of innocence rather than the punishment of guilt. The single purpose for which the international military tribunal was established was to exact retribution for crimes, defined as such after the event; and at the trials both the law and the rules of evidence were improvised to suit that purpose. Prosecutors, judges, and executioners stood for identical interests, and the verdicts were in every sense predetermined. The tribunal itself had no other authority than the physical power of the victors to inflict what penalties they pleased for whatever actions they might declare to be deserving of punishment. The usages evolved among Christian nations were thus repudiated, and the powers that had professed themselves champions of Christian principles reverted, as their adversaries had previously done, to the practices of pagan antiquity. Thanks to the precedents set in Nuremberg, and in Manila, Tokyo and elsewhere, it seems certain that the sequel to every war of the future that ends decisively must be the slaughter, under some mockery of judicial forms, of the leaders of the defeated side and the enslavement of the rest. The sum, then, of Mr. Belgion's brilliant and remorseless analysis is that the material victors of the recent war were, according to a rule well attested by history, conquered morally by the vanquished, and one of the principal accomplishments of the recent crusade against Nazidom has been to universalize the totalitarian mind and its apotheosis of power.

Mr. Belgion is not primarily concerned with the personal fates, any more than with the personal characters, of those who were sent to the scaffold or to prison by the military tribunals in Germany, the Philippines, and Japan. It appears to be part of his thesis that condemnation of defeated generals and politicians by drumhead courts martial, or even by proscription after the practice of Marius and Sulla or the French Revolutionary Tribunal under the Law of Prairial, would have been preferable to a legal process which has served to bring the forms of justice into contempt. As a historian has observed, it is one thing to tolerate injustice, another to enthrone it. Mr. Belgion challenges first of all the charter of the Nuremberg tribunal itself, showing that it had no sanction in international law; the powers which it claimed could have been conferred upon it only by some supranational authority, and no such authority existed. Nor could the tribunal claim to represent the organized conscience of the world outside the orbit of German influence, for although 17 nations had concurred in its establishment, the judges represented only the four most powerful of Germany's enemies. But even assuming the validity of the jurisdiction claimed in the charter and the propriety of the ex post facto principle upon which the crimes were defined and the indictments drawn, the difficulty remains that the very accusations were such as could have been brought against those who sat in the seats of judgment.

The principal charge against the leaders of the Nazi Party and of the German military was that of conspiracy to destroy the peace of the world; this was supported by evidence of an intention to wage wars of aggression in violation of existing treaties. But, as Mr. Belgion shows us, the definition of war crime under this title would apply to the Russian invasions of Finland, Latvia, Lithuania and Estonia, and also to the contemplated dispatch in 1940 of French and British reenforcements to the Finnish armies then resisting Russia; it would apply to the British and American occupations of Iceland, to the Anglo-American invasion of French North Africa, and to the Russian seizure of Manchuria in 1945. Thus to accept the validity of the indictment is to admit that, had the Nazis been victorious, they would have been legally justified in prosecuting and punishing the Russian, British, and American war leaders.

So, too, with the other charges arising out of the definitions of war crimes and "crimes against humanity." The Russians had certainly been guilty in Poland, the Ukraine and the Baltic States, of mass deportations upon an even greater scale than was attempted anywhere by the Germans; the advance of the Russian armies had invariably been accompanied by wholesale killings and rapings and by systematic pillage; indeed such crimes were being repeated in the Russian zone of Germany while the Nuremberg trials were in progress. Looting was also practiced upon a considerable scale by the British and American soldiery in Germany. A very large proportion of the prisoners of war taken by the Russians have disappeared without trace; but at Yalta Messrs. Roosevelt and Churchill agreed that prisoners of war should be kept at forced labor after the cessation of hostilities, and this enslavement of war prisoners was actually in effect in Great Britain and France throughout the trials. The uprooting and evictions of whole populations at the cost of incalculable suffering were taking place in Czechoslovakia, Hungary, and East Prussia with the encouragement or complacent approval of the powers which at Nuremberg were trying the Nazis for similar crimes. The nadir of cynicism, perhaps, was to include among the barbarities charged to the Nuremberg defendants the slaughter of several thousand Polish prisoners at Katyn in the Soviet Union, although the burden of evidence uncovered by Polish

and neutral observers indicated that the Katyn massacres were actually the work of Russian executors obeying orders of the Kremlin, and had occurred long before the German invasion of Russia.

Mr. Belgion also manages to show that among the British and Americans brutal treatment and even torture of prisoners of war and other capitives were not unknown. Julius Streicher, for example, was obliged by Americans to kiss the feet of Negro soldiers, to swallow spittle, and was offered urine when he asked for water; surely it is hard to conceive that Streicher himself could have devised or imagined much worse indignities than these for the Jews. The expatriate American poet, Ezra Pound, who had supported the cause of Mussolini, was kept, after his surrender, in solitary confinement in a stockade with a concrete floor without furniture or bedding, exposed by day to the Italian sun and by night to the ceaseless glare of searchlights. Physical tortures and the seizure of hostages were employed by the British soldiery to extract confessions from persons suspected of Nazi affiliations, and such confessions were admitted as evidence by the tribunals even when repudiated by the defendants. The deliberate destruction of living standards in countries occupied by the German armies, included among the crimes of the defendants at Nuremberg, has its analogies in the dismantling of German industries and the levying of grandiose reparations; and the crime of wantonly destroying villages like Lidice and cities like Belgrade and Warsaw had counterparts in the saturation bombings of Hamburg and other German cities and in the experimental bombardments of Hiroshima and Nagasaki. The murder of political opponents is not unheard of in countries under Soviet domination, and the persecution of political adversaries, also included in the catalog of crimes, is not totally unknown in either Great Britain or the United States. Even genocide, meaning the proscription of whole categories of persons, has parallels in the practices of the victorious powers, as for example the liquidation of landowners, clerics, and bourgeois intellectuals by the Russians in Poland, and in the denazification programs in the American and British zones of Germany.

Thus, point by point, Mr. Belgion demolishes the whole elaborate case established by Mr. Justice Jackson and his collaborators. And as he does so, it becomes clear that the moral difference between ourselves and the Nazis is at best one of degree rather than of kind. The same indeed may be said about the differences between us and our recent allies in the cause of freedom, the Communist Russians. It is perhaps not too far a cry from the juridical principles fashioned at Nuremberg to those recently invoked in Budapest at the trial of the Prince Primate of Hungary or in Sofia at the trials of the Bulgarian evangelical pastors. For in the conduct of all these cases the fundamental criminality of the accused lay in their identification with what had proved the weaker side. Thus justice has become precisely what Thrasymachus, the antagonist of Socrates in the opening debate of the Republic, asserted it to be, that is, the interest of the stronger. The question, then, is not whether the sins of the Nazis credit out for vengeance; assuredly they did, but as much, Mr. Belgion reminds us, might be said about the sins of certain victims of lynch law in the United States. The real question is whether the spirit of justice can survive after the forms of justice have been debauched. Mr. Belgion, I think, has proved that it cannot.

And yet the distance still separating our world and the totalitarian world is to be measured, almost exactly, by the fact that 1 year after the Nuremberg trials a publisher could be found in England for such a study as Mr. Belgion's, and that one has now been found in the United States. We have here at least proof that it is still possible to appeal from the passions and intoxications of power to the court of conscience and to the sober second judgment upon which the hope of justice must finally depend. But, alas, in time of war, revolution, and general calamity, the force of conscience and the devotion to justice grow progressively weaker.

The Crisis in Sino-American Relations

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. MANSFIELD. Mr. Speaker, I am inserting in the RECORD, under unanimous consent, a speech delivered by Prof. Russell Fifield, of the University of Michigan, on the crisis in Sino-American relations. Professor Fifield is one of the country's outstanding authorities on the Far East, and I commend his remarks to the thoughtful consideration of the Congress:

THE CRISIS IN SINO-AMERICAN RELATIONS

Fifty years ago Secretary of State John Hay asserted that "The storm center of the world had gradually shifted to China. Whoever understands that mighty empire * * * has a key to politics for the next 500 years." The success of the Chinese Communists under the leadership of Mao Tse-tung over the Kuomintang forces of Chiang Kai-shek is changing not only the political economy of China but also the balance of world power. Winston Churchill even declared in his Boston address on March 31, 1949, that "The worst disaster since our victory has been the collapse of China under Communist attack and intrigue." The rise of Communist China may be the most significant development in the Far East since the fall of the Japanese Empire.

American foreign policy in the Far East has stressed two cardinal principles—the open door in China and the territorial integrity and administrative entity of that country. At no time, however, have these principles been completely observed in China. Even Secretary of State John Hay became interested in a Chinese coaling station. The Lansing-Ishii notes in 1917 could be interpreted as a definite challenge to the cardinal principles of American foreign policy in the Far East.

The Nine-Power Treaty of 1922 placed the concepts of the open door and the integrity of China on a multilateral treaty basis for all the leading Pacific powers except the Soviet Union. The United States was a leader in the formation of the Nine-Power Treaty but was not prepared to use force to carry out its terms. The Stimson Doctrine in 1932 of nonrecognition of Japanese aggression in Manchuria proved ineffective in preventing the new order in east Asia and the coprosperity sphere. Nevertheless the United States refused to sanction Japanese violation of the open door and the integrity of China. The famous memorandum of Secretary of State Cordell Hull to Japan on November 26, 1941, emphasized the fundamental principles of American foreign policy in the Far East. Japanese violation of the open door and territorial integrity of China constituted one of the underlying reasons for the outbreak of the Pacific war and led eventually to the termination of the new order in greater east Asia.

After the end of the Second World War the United States made a sincere effort in the Marshall mission to end the Chinese civil war and to create a unified, democratic, friendly China that would stand as a bastion of peace in eastern Asia. The Marshall mission was one of the most unique efforts in history. Involving an armistice in a large battle zone, a number of truce teams each consisting of a ranking American, Communist, and Kuomintang officer to enforce the armistice in respective areas, and a key committee of three, Gen. George C. Marshall, Gen. Chou En-lai, and Gen. Chang Chun, to negotiate a settlement of the conflict on the top level, The Marshall mission would have succeeded if both Kuomintang and Communist parties had been willing to compromise. The Chinese themselves torpedoed the mission but Marshall was criticized by the Communists for giving too much aid to Chiang Kai-shek and by the Kuomintang for giving not sufficient help to the government in Nanking.

The failure of the Marshall mission followed by the gradual economic and military collapse of the Kuomintang created a situation that has worked to the advantage of the Communists of China. Despite some two billion dollars of American aid since VJ-day, the government of Chiang Kai-shek lost control of the country. If the Chinese Communists become puppets of Moscow, the United States may well have lost the Pacific war as far as the principles of the open door and the territorial integrity of China.

Although a partial eclipse of American and Western influence in China may be imminent, a complete withdrawal of the United States and the Western Powers from that country is doubtful. At least some degree of trade can be expected regardless of the nature of the Chinese national regime. It is significant that the Honorable Arthur Morse, chief manager of the Honk Kong and Shanghai Banking Corp., reported to his stockholders on March 5, 1949, that "The fierce flames now enveloping the political and economic structure of China are potentially more ominous for foreign traders than anything that has occurred since they established themselves on Chinese soil. In my view all those engaged in foreign trade in China must be prepared to face an entirely new situation during the coming years, and to adjust their ideas and their actions to conditions without any guiding precedent. However, I do not expect foreign and Chinese merchants experienced in trading on the China coast to pack up in despair. The clamorous needs of China for imported consumer goods as well as for capital goods from abroad and the overriding necessity for exchanging exports for imports cannot easily be denied."

American and foreign missionary interests, moreover, are likely to remain in China for some time. At the end of 1948 more than half of the estimated 7,408 American private citizens residing in the country were missionaries. Most of these people have no intention of leaving China unless it becomes absolutely necessary. The educational and medical services of the missionaries are badly needed in the country devastated by foreign invasion and civil war. The financial support given the missionary institutions in China by citizens in Western nations is a factor no Chinese regime can overlook. The trend toward the establishment of native Chinese churches will serve to maintain contacts with the West.

American citizens leaving China will consist largely of certain official personnel of the United States and of Americans employed in a number of capacities by the Chiang Kai-shek regime. The American Embassy and consulates will probably remain in China but the activities of the United States Information Service in the country may be curtailed and the work of the cultural attaché restricted. The Joint United States Military

UNIVERSITY OF MICHIGAN LIBRARIES

Advisory Group whose function was to provide guidance and schooling for the Chinese armed services has already left the country. The only American uniform in China is likely to be worn by the military attachés at the American Embassy.

In the foreign policy of the United States toward a Chinese Communist Government, the determining factor is likely to be the relations' 'p between the Kremlin and the Chinese Communists. The best the United States can expect in the near future from the Chinese Communists is neutrality in the cold war between the East and West. The worst Americans can expect is the emergence of a Communist China ruled by fanatics obedient to the orders of the master in the Kremlin. The watchful waiting of the United States provides a flexibility that can be utilized to considerable advantage by American diplomats. At the same time the Soviet Union may seek to pursue a similar policy depending upon the degree of loyalty of Mao Tse-tung and his followers to Stalin.

The exact relationship between the Chinese Communists and the Politburo in Moscow is a subject of considerable controversy in the outside world. A subcommittee of the Committee on Foreign Affairs of the House of Representatives in a report entitled "Communism in China" asserts at the very beginning that "Chinese communism is regular communism. Its doctrines follow those of Lenin and Stalin. Its leaders are Moscow trained. Its policies and actions, its strategy and tactics, are Communist. The Chinese Communists have followed faithfully every zigzag of the Kremlin's line for a generation." Mao Tse-tung himself wrote in his New Democracy in 1940: "It is becoming exceedingly clear now that * * * any holding back from alliance with the one socialist country in the world (U. S. S. R.) is bound to lead down to the policy of alliance with the imperialists, with imperialism. * * * As the struggle between the socialist country and the imperialist countries is becoming sharper and sharper, it becomes absolutely necessary that China makes her choice between the two camps. * * * In short, there can be no neutral position but either a revolutionary or a counter-revolutionary position."

No one can deny that the Chinese Communists have echoed the ideas of Moscow even to the extent of denouncing Marshal Tito's heresy and criticizing the Indonesian Republicans. In March 1949, the Chinese Communists declared that in the event of a world war they would march forward hand in hand with the Soviet Union. In April they denounced the North Atlantic Pact and pledged loyalty to the Soviet Union if war came as a consequence of the treaty. The record truly indicates a close relationship between the Kremlin and the Chinese Communists. But if the Chinese Communist regime becomes the national government of China, will the record then remain the same? Responsibility has often changed the pledges of political aspirants. An American missionary in Honan has recently quoted a Communist officer as saying: "When the kettle belonged to Chiang Kai-shek we tried to destroy it, but now that it is ours we want to preserve it and use it."

Some evidence already exists that the Chinese Communists may not be subservient to the Soviet Union once they gain control of China. At the present time the backbone of Chinese communism is agrarian reform based on the cardinal principle of a wider ownership of land. In a country where industrialization is still in its early stages the support of the peasants is a prime consideration for any government. It is noteworthy that the Kuomintang regime failed largely because the peasants withheld their support. The current policy of the Chinese Communists is somewhat similar to the new economic policy of the Soviet Union in 1921 and the present heresy of Marshal Tito, of Yugoslavia. As yet Mao Tse-tung has made no genuine effort to collectivize the peasant holdings of China in line with the development of collective farms in Russia. The Chinese Communists in their present land program of wider ownership, however, may not succeed in increasing the productivity of the land. Basic in the economic future of China is an increase in agricultural productivity, an objective that will not be reached by a mere change in land ownership but by the application of modern methods of scientific farming.

If Mao Tse-tung pursues a policy similar to Marshal Tito and if the Kremlin is as rigid in its requirements to the faithful in Asia as in Europe, the Chinese Communists may join Tito in the band of heretics. Stalin himself has reportedly asserted that the Chinese Communists are like radishes, red, on the outside and white on the inside. It is possible, however, that Mao Tse-tung's present program is only a temporary expedient and that the Chinese Communists eventually will try to turn the country into an oriental version of the Soviet Union. In his New Democracy Mao Tse-tung believed that China would move from feudalism to capitalist democracy and then to socialism. He indicated that the two-stage revolution could be molded into a continuous process in many respects although an intervening period of modified capitalist democracy would be necessary between the old feudalism and the new socialism. The three people's principles of the new China, according to Mao, are Alliance With the Soviet, Alliance With the Communists, and Alliance With the Workers and Peasants. Mao does not believe that the new China can be created in a few days that will shake the world but rather in a long period of time he does not attempt to delimit.

The establishment of socialism in China involving a system of collective farms and the expansion and transformation of industry would represent a social upheaval that would require the most powerful police state on earth operating over a period of many years. Even the use of tractors instead of hoes in the Chinese agricultural landscape would be revolutionary. In 1947 the Yellow River was again diverted north of the Shantung Peninsula from its previous channel of 1938 to 1947 south of the peninsula. In the former "flooded areas" an opportunity was presented for an experiment in modern agricultural methods utilizing tractors given by UNRRA. The returning peasants, however, were determined to restore the old ways of farming and they bitterly criticized the use of tractors. On the industrial side, socialism would not directly affect more than some 10 percent of the people, considering the present scale of industrialization in China. However, the increased industrialization of the country, a rapid growth of the proletariat in the cities, and the socialization of industry would be objectives of the Chinese Communists. In a meeting of the Central Executive Committee of the party in March 1949, it was agreed that more emphasis should be placed in the future on the role of the urban workers in Chinese communism. Until late 1948 the Chinese Communists held very few cities of importance, with the exception of Harbin in Manchuria. The final conquest of Manchuria and North China placed much of the industrial potential of the country in Chinese Communist hands.

Only a completely unified Chinese Communist Party could make much progress in transforming China into a socialist state. At present the party has two wings: One which is conservative, led by Mao Tse-tung; and the other, which is radical, led by Li Li-san. Both Mao Tse-tung and Li Li-san were born in Hunan; both were early converts to communism; both are members of the central executive committee of the party. Mao Tse-tung has based his communism on the support of the peasants seeking aid from a class of people making up 80 percent of the population. Li Li-san has shown more interest in the possibilities of using the small urban proletariat of China as the basis of the socialist revolution. In the rivalry between the two men in the 1920's Mao emerged victorious as the leader of Chinese communism, and Li left for Russia, where he studied at the Lenin Institute. While Li was in Russia, Mao Tse-tung, Chou En-lai, and Chu Teh kept alive the Communist movement in China and directed the long march from Kiangsi to Shensi in 1934 and 1935. Toward the end of the recent war Li Li-san returned to the Chinese scene with the invading Soviet troops in Manchuria and soon became adviser to Chinese Communist Gen. Lin Piao in that area. The appearance of Li in the potential industrial heart of China is not without significance in Soviet politics. Possibly the Kremlin has more faith in Li than Mao. The latter has never been in Russia, although a number of his close advisers, like Chou En-lai and Gen. Chu Teh have studied in the Soviet Union. On the other hand, Li Li-san is undoubtedly a devout follower of the present teachings of Moscow. He is even reported to have significantly asserted in the summer of 1948 that "Some of our comrades have been in error. * * * We cannot tolerate a Tito in Asia." The struggle for power within the Chinese Communist Party is certain to have ramifications in world politics. Under certain conditions this struggle might work to the advantage of the United States.

The victory of the Chinese Communists is largely due to their own efforts, a factor not without significance in the formation of their future foreign policy. Neither the Russian Army nor Soviet loans nor Russian technical advice is primarily responsible. Beyond making the contents of the Japanese arsenals in Manchuria open to the Chinese Communists, the Russians have probably not substantially aided the Chinese Communists. In the case of eastern Europe the Russian Army was responsible for the establishment of a number of puppet regimes loyal to Moscow. In China no similar dependence upon the Kremlin accounts for the victory of Chinese communism. The Chinese themselves are placing Mao in power, not the bayonets of Russian troops. Moreover, the Soviet Union has been officially correct in its relations with the Kuomintang regime. The Soviet Ambassador was the only leading diplomat from a major power to follow the government of former Premier Sun Fo to Canton. Even in March 1949, when the fortunes of the Kuomintang were at a low ebb, the Soviets sent a mission to Tihwa to negotiate an agreement with Kuomintang representatives regarding the economic development of Sinkiang. These facts would seem to indicate that the Kremlin is not at all certain of the subservience of Mao. Since the Chinese Communists are probably coming to power under their own sails, it is quite possible that they may observe a more independent policy in world politics.

It would be difficult, furthermore, to expect Chinese communism over a period of years to merge its entity into that of Russian communism. The Chinese are not tied to the Soviet Union by the common bonds of Slavdom. Their historic background, their cultural heritage, and their philosophy of life are different. Foreigners have never been able to absorb the Chinese—rather the Chinese have assimilated their conquerors. The rise of Chinese nationalism, still in its early development, will be a strong deterrent against any government, even a native regime, that is subject to the orders of a foreign power. The greatest contribution of Chiang Kai-shek to the development of China was the termination of the "unequal treaties" between China and the West. The criticism leveled against the Generalissimo

because of limited American support after the recent war will be leveled with even greater intensity against any Communist regime in China that becomes a puppet of Moscow. It is possible in the near future that foreigner in the minds of the Chinese will not mean Englishman, Japanese, or American, but Russian, a development that may be a political boomerang to Moscow. Paul S. Reinsch, American minister to China from 1913–19, once asked the Russian minister in Peking whether he thought the Chinese considered the Russians half-Asiatic and therefore brothers. The reply was "No, they count us with you and with the other Europeans, as a scourge and pestilence."

Once a Communist government is established in China, the nationalism of the new regime may be severely tested by the Soviet role in Manchuria. Chinese nationalism has always been most intense in areas where the people have come in closest contact with foreigners. It is true that up to the present time the Chinese Communists have chosen to stress the American military intervention in the Chinese Civil War behind Chiang Kai-shek, calling him the running dog of American imperialism, and to ignore the Soviet role in Manchuria as a result of the Yalta agreement of February 11, 1945, the Sino-Soviet pact signed the following August 14, and the Soviet occupation of that strategic area. But it is one matter for a faction struggling for power to pursue such a policy, it is another matter for that faction once it assumes power and has responsibility to continue such a policy. A Chinese Communist Government would see the Americans holding no bases, stationing no troops, and running no railroads in China. On the other hand, the government would see the Soviet Union entrenched in the naval base of Port Arthur and the commercial port of Dairen for 30 years, the Chinese eastern and south Manchurian railways jointly run with the Russian Government for the same duration, and the industrial plants of Manchuria stripped since the war by fellow Communists from the Soviet Union. Chinese nationalists may not be pleased to note the Soviet activity in Sinkiang and the possible efforts to lead Inner Mongolia toward the puppet state of the people's republic in Outer Mongolia. Chinese Communists will also observe northern Korea, adjacent to Manchuria, in the hands of a regime of Korean Communists who are puppets of Moscow. Nationalism in China is eventually certain to resist Soviet expansion all along the Russo-Chinese boundary from Sinkiang through Mongolia and Manchuria to Korea.

Finally the reconstruction of China devastated by the Japanese invasion and the civil war cannot be brought about entirely by the Chinese themselves. Foreign aid in terms of technological skill and ample capital will be essential. China needs to develop her industry as one of the answers to the ever-growing population. The transportation system of the country, especially the railroads, must be reconstructed and expanded to meet the economic needs of the present and the future. The agricultural foundations of the nation must be improved by modern technology. Power projects like a Yangtze Valley Authority must eventually come. The Communists may bring peace and order to the vast country but they will not be able to develop it along modern lines without foreign aid. From where will this help come? For many years the Soviet Union will be so busy developing its own vast territory that little aid can be expected from that source. Great Britain, once the leading power of the world in the great Yangtze valley in China, is no longer able to play a great role in the economic development of the Far East. Only the United States has the capital and skill available at the present time to assist in the reconstruction of China. Political conditions, however, will determine the future American role in that country. If the Chinese Communists can bring about a stable government in China and if they do not become mere puppets of Moscow, the fundamental relations between China and the United States may not be radically altered. If, on the other hand, the Chinese Communists turn their backs on the West and hitch their wagon to the Soviet Star, then the traditional friendship between China and the United States will be destroyed.

American foreign policy toward China is now at the most crucial stage in the history of Sino-American relations. Realizing that Soviet power for this generation will be based west of the Urals and that western Europe is presently greater in power potential than eastern Asia, the United States has chosen to expend billions in the Marshall plan in Europe and the North Atlantic alliance. Aid to Chiang Kai-shek, although not insignificant, has not compared with that allotted to western Europe. At the same time Russian power is not yet primarily Asiatic and China does not possess the power potential of western Europe. If worst comes to worst, the United States can afford to withdraw for a generation to the latter of islands rimming the coast of eastern Asia—Japan the Ryukus, and the Philippines. Here American sea and air power is presently supreme. General Douglas MacArthur in a recent statement to a British correspondent talked along these lines when he said:

"Our defensive dispositions against Asiatic aggression used to be based on the west coast of the American continent. * * * The Pacific was looked upon as the avenue of possible enemy approach. Now the Pacific has become an Agio-Saxon lake and our line of defense runs through the chain of islands fringing the coast of Asia. It starts from the Philippines and continues through the Ryukyu Archipelago, which includes its main bastion, Okinawa. Then it bends back though Japan and the Aleutian Island chain to Alaska. Though the advance of the Red Armies in China places them on the flank of that position, this does not alter the fact that our only possible adversary on the Asiatic continent does not possess an industrial base near enough to supply an amphibious attacking force."

The present American foreign policy of watchful waiting in China is dependent upon events in that country. After all is said and done, the Chinese themselves must solve their own problem. Neither the United States nor the Soviet Union can long afford to determine the foreign policy of the new China. All that America can hope is the emergence of a friendly China, serving as a bastion of peace in eastern Asia.

OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1949

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Indianapolis News of June 13, 1949:

DODGING THE ISSUE

In an attempt to defend his fantastic farm plan, Secretary of Agriculture Charles F. Brannan stooped to the political device of impugning the motives of its critics.

The Secretary may have felt that politics, instead of reason, was the order of the day, since he made his rebuttal at a party powwow Monday in Des Moines. But it is probable that he erred, for a good many in his Corn Belt audience are strongly opposed to the plan. They know that it is unworkable, and it is doubtful if they relished being told that their opposition is dictated by unworthy motives, rather than common sense.

Opponents of the plan, the Secretary contended, fear the farmer will get more than what they deem his fair share of the national income.

That is demagoguery of the first order, for as the Secretary knows full well, agriculture organizations such as the Farm Bureau are opposed to the plan, yet no one would accuse the bureau of ignoring the best interests of the farmer.

Mr. Brannan made no attempt to come to grips with the real issues: That his plan would almost automatically entail Government-administered farm prices and farm income, with Government control of all land and livestock production; that it would cost untold billions; that this expense to taxpayers would be far more likely to precipitate or feed a depression than to help stabilize farm markets; that its administrative requirements alone would further regiment the farmer and increase the Nation's already top-heavy bureaucracy; that the farmer would be made dependent upon annual appropriations from the Federal Treasury—in effect placing his income on a hand-out basis.

These are the valid criticisms of Mr. Brannan's program, made repeatedly by farm groups and urban citizens alike. Until he answers those satisfactorily, no one will place much credence in his effort to hide the real issues.

Career Compensation Act of 1949—Family Allowances

EXTENSION OF REMARKS
OF
HON. JOHN R. WALSH
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1949

Mr. WALSH. Mr. Speaker, when the original pay bill was recommitted for further study, the committee accepted the recommittal as a directive to protect the family allowances of wives and children of enlisted personnel for the duration of their current enlistments. We have gone even further, as I will explain in a few moments.

Mr. Speaker, I believe I should first attempt to explain the difference between temporary wartime family allowances payable under the Servicemen's Dependents Allowance Act and other allowances to which enlisted personnel are entitled.

The Servicemen's Dependents Allowance Act was passed in 1942 when we began inducting large numbers of men with families. It was a most necessary piece of legislation. Should we go to war again, and I pray we will never need to so do, it will undoubtedly be necessary to reestablish the payment of family allowances. That act was passed because the Congress and the American people felt that there was a moral obligation to provide a man and his family with sufficient funds on which to live while the breadwinner was serving his country. These

UNIVERSITY OF MICHIGAN LIBRARIES

men were drafted. They did not select the Army or the Navy as a career and, in fact, they had little choice in the matter. The Servicemen's Dependents Allowance Act states as follows:

The dependent or dependents of any enlisted man * * * shall be entitled to receive a monthly family allowance for any period during which such enlisted man is in the active military or naval service of the United States on or after June 1, 1942, (1) during the existence of any war declared by Congress and the 6 months immediately following the termination of any such war or (2) during a period of enlistment or reenlistment contracted by such enlisted man prior to July 1, 1946.

We of the Armed Services Committee feel that the war is over. We feel that our armed services are now manned by volunteers for all intents and purposes, with the exception of the few draftees in the services. Insofar as draftees are concerned, we are not drafting men with dependents. On the other hand, we recognize that enlisted men who enlisted prior to July 1, 1946, entered into a contract for the payment of family allowances until the end of their enlistments.

These allowances are paid to the dependents of enlisted men. The enlisted man has $22 of his pay deducted and the Government contributes the rest. Under existing law, he can bring in brothers and sisters and mothers and fathers, and the Government pays the bill. These are the family-allowance benefits we have heard so much about. They have no connection whatsoever with subsistence allowances to which enlisted men are entitled, nor do they have any connection whatsoever with quarters allowances to which enlisted men are entitled, except that no enlisted man can draw both family allowances and quarters allowances at the same time. And if an enlisted man occupies Government quarters and is receiving family allowances, he must pay rent for those quarters. This is existing law.

Now, there was much discussion on the floor when the original bill was presented to the House with respect to a moral contract on the part of the Government to continue family allowances for wives and children. I believe, in retrospect, that the Members of the House who were concerned about family allowances were correct in wishing to protect those allowances for wives and children for the duration of current enlistments. Perhaps our original proposal of terminating these allowances at the end of 6 months was a little drastic for these people. Therefore, I, for one, am happy to concur in the proposed changes that we have made with respect to family allowances.

I do not wish to be misunderstood in this matter. I believe we should protect family allowances for wives and children, or for a man whose sole dependent is a parent who receives most of his or her support from that individual. And that is what we have done. But I do not believe in continuing the principle of temporary wartime family allowances in a peacetime Army. I believe any system that pays a man according to the number of dependents he may have violates all traditions of American individualism. I am opposed to such a method in time of peace and believe that it is justified only in time of war. In other words, I do not favor baby derbys. I do not believe a man's compensation should be dependent upon the size of his family or the size of his parent's family. I believe the American system is to pay a man according to his worth. I believe the armed services should pay a man according to his responsibilities, according to his rank and according to his ability. And, therefore, the sooner we can eliminate family allowances the better off we all will be, including the man who is receiving those allowances. I know that is like telling a child that candy is not good for him, but, nevertheless, I am convinced that a system which compensates a man according to the number of dependents he can claim is without merit and should not be continued. And I might say that every enlisted man who appeared before the committee was of the same opinion. I do not believe that the armed services should be a substitute for relief agencies. I do not believe the armed services should be called upon to act in the place of welfare boards, and too often in the past this has been true.

However, assuming there is a moral contract for those who are already in the services, and that we do not want to take away family allowances for wives and children, but, at the same time, recognizing the fact that no pay bill is possible if we pyramid increased pay on top of family allowances, we have arrived at what we feel is a fair and equitable decision. We have provided that—

First. Persons who enlisted or reenlisted prior to July 1, 1946, will continue to be eligible to draw their present pay and family allowances until the end of their enlistments.

Second. Persons who enlisted or reenlisted after July 1, 1946, will be eligible to draw their present pay and family allowances until the last day of the sixth month following the date of the bill is enacted.

Third. Married men who enlisted or reenlisted prior to the date the bill is enacted but after July 1, 1946, will continue to be eligible to draw their present pay and family allowances for their wives and children until July 1, 1952, or the expiration of their enlistments, whichever is earlier.

Fourth. Enlisted persons who do not have dependent wives and children, but who do have parents dependent upon them for chief support, will continue to be eligible to draw their present pay and family allowances until the end of their enlistments of July 1, 1952, whichever is earlier.

Fifth. Enlisted persons will not be eligible to claim brothers and sisters as dependents after the last day of the sixth month following the date the bill is enacted.

Sixth. Persons whose enlistment terminates in the period between the date of enactment and October 1, both dates inclusive, and who reenlist within 1 month of such termination will be eligible to draw present pay and family allowances until the expiration of their new enlistment, or until July 1, 1952, whichever is earlier, subject to the same limitations on dependents as are applicable to persons who enlist or reenlist prior to the date the bill is enacted.

Seventh. No person who enters into an original enlistment after the bill is enacted will be eligible to draw family allowances. (This should not be confused with quarters allowances which are increased for qualified enlisted personnel.)

Eighth. This is important. As soon as the total compensation to which an enlisted man may be entitled under the new bill exceeds the total compensation he is presently receiving, he will automatically qualify for the higher pay and allowances.

Ninth. Any enlisted man who suffers a reduction in total compensation upon the elimination of any or all of his family-allowance benefits, from that which he was receiving prior to enactment of the bill, may upon application be discharged from the service.

What I have just stated to you will be found in the report, but I believe that every Member should be aware of what we have done with respect to family allowances. And that is why I have repeated what is before you in the report.

Mr. Speaker, I believe this to be a satisfactory solution to the problem of family allowances. It is costly to be sure, and as a result of a continuation of certain classes of family allowances, it has been necessary to reduce the pay of all but the two lowest enlisted grades. In other words, the majority must suffer in order to aid the minority, but, nevertheless, the reduction for enlisted personnel is slight in individual cases insofar as the pay increase is concerned.

Now, Mr. Speaker, let me state for the benefit of the House that many persons will be entitled to the new pay and quarters allowances in lieu of their present family allowances because the new pay and quarters allowances will exceed their present compensation, including family allowances. Do not overlook the fact that we have increased the quarters allowances for qualified enlisted personnel from $37.50 per month to $67.50 per month and, in addition, have increased basic pay considerably. Therefore, many persons, as in the previous bill, will qualify for the new increased pay in lieu of their present pay and family allowances. This solution has been carefully analyzed and cannot be changed without affecting the cost of this bill materially. I commend it to you completely and without reservation.

Attitude of Coal Miners Toward Production Problems

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1949

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts of

remarks made by Mr. Thomas Kennedy, vice president of the United Mine Workers of America, at a meeting of the Coal Mines Committee of the International Labor Organization on Thursday, April 21, 1949:

Mr. KENNEDY (United States workers delegate). On behalf of the United States workers delegates, I join with the United States Government and employers delegates in welcoming the coal mines committee to the United States and to Pittsburgh. There are approximately 180,000 coal miners employed in the State of Pennsylvania. Of these 80,000 are employed in the anthracite mines and the remainder in the bituminous mines. The coal mining industry in the United States is really composed of two industries, as problems of the anthracite coal-mining industry are quite different from those in the bituminous coal-mining industry.

Workers in the coal-mining industry of the United States always have been organized into their labor unions on an industrial basis. Since 1890 American mine workers have been organized in the United Mine Workers of America, the country's oldest industrial union. All workers employed in and around the coal mines, no matter what their craft, are organized into the United Mine Workers of America.

The attitude of coal miners in the United States with respect to production problems of their industry is different from that of workers in some other countries. American coal miners, through their union, always have supported technological improvements and the mechanization of the coal industry. In adhering to this policy, the United Mine Workers of America believe they are advancing their own interests looking toward the improvement of work standards.

The Under Secretary of Labor has referred to the fact that 680,000,000 tons of coal had been produced in 1947. Recent estimates indicate that coal requirements in 1949 will be approximately 550,000,000 tons—130,000,000 tons less than were required in 1947. This means that there probably will be a surplus production of coal in 1949 which will present an economic problem for both workers and employers. I see no reason why hours of work shall not be fixed accordingly to adjust to decreased consumption demands.

During the war, the coal miners of America adjusted hours upward to as much as 10 hours a day 7 days a week to meet the needs of the armed forces. This was done by agreement between the United Mine Workers of America and the coal operators. By the same token, hours of work should now be reduced to stabilize the economy of the industry and employment in accordance with decreased consumption demands.

Now I would like to touch on the new departure the United Mine Workers of America have made in regard to social-security measures covering old-age pensions, disability, disease, and rehabilitation.

Pension programs providing $100 a month to coal miners 60 years of age who have worked 20 years in the industry are in force in both the anthracite and bituminous industries. These programs, as well as the other welfare programs for American coal miners, are administered by the United Mine Workers of America welfare and retirement fund, in behalf of 400,000 bituminous coal miners, and by the anthracite health and welfare fund, in behalf of 80,000 anthracite miners.

It is the policy of the United Mine Workers of America that the cost of these programs should be paid by the employers as a charge against the cost of production of coal and that the workers should not be required to contribute.

In the American coal industry, by agreement between the coal operators and the union, a levy of 20 cents a ton is made for the welfare funds. These welfare funds are administered by two boards of trustees, one for the bituminous fund and one for the anthracite fund.

In connection with the anthracite health and welfare fund, of which I am the chairman of the board of trustees, we have carried out a special project for the treatment of anthracosilicosis. Investigation by the United States Public Health Service has shown that in the anthracite industry 25 percent of the workers are afflicted with this disease, known as miners' asthma. A research project, concerned with the treatment and possible cure of this disease is now being carried on by the Jefferson Medical College and Hospital with funds provided by the anthracite health and welfare fund.

In conclusion, I want to say that I cannot agree with the statement that has been made here by the Polish Government delegate concerning the work of the international labor organization. Workers in the United States believe that the ILO is doing useful work in connection with the coal industries of various countries. While American coal miners cannot agree with workers in all other countries on certain policy matters, such as nationalization of the coal mines—to which American miners are opposed—we feel, nevertheless, that there are certain fundamental problems which exist in all countries. It is only by international meetings such as this one that there may be an exchange of ideas looking toward solution of these problems.

The Philippine Flag a Monument of American Democracy

EXTENSION OF REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. STEFAN. Mr. Speaker, under permission to extend my remarks, I include the following article by Maximiano Marmito Villareal:

The Philippine flag stands as monument of American democracy. Today the expanding activities of the Philippine foreign affairs so the flag follows, and there also stand the monument of American democracy. In every Filipino heart there stand symbol of monument of gratitude for the democratic tutelage by America in the past until the young country reached the point of nationhood.

The description in Esperanto and the English languages are reprinted from the American Esperanto magazine, an organ of the Esperanto Association of North America, published at 114 West Sixteenth Street, New York, N. Y. Two copies of the original manuscript are deposited in the Acquisition Division, Congressional Library, Washington, D. C. The author received formal certificate or diploma of acknowledgment from the Librarian of Congress in 1940.

EN ESPERANTO

La filipina standardo enhavas du striojn.
La supra strio estas blua; la suba, ruga.
La rugo signifas forton kaj kuragon.
La bluo signifas idealojn kaj justecon.
Apud la stango trovigas aparta triangula spaco.
Tiu spaco estas blanka.
En la centro estas ora suno, havanta ok radiojn.
La suno signifas liberecon, aŭ la naskigon de nova nacio.
La ok radioj aludas al la ok provincoj, en kiuj ribelado kontraŭ Hispanujo komencigis.
Tiuj provincoj estis: Manila, Bulakan, Pampanga, Neuva Ecija, Morong, Laguna, Batangas, kaj Cavite.
La blanka triangulo signifas egalecon kaj fratecon.
En ciu angulo de la triangulo trovigas ora stelo.
La tri steloj aludas al la insulo Luzon, la Visaya-insularo, kaj la insulo Mindanao.
Kelkfoje oni nomas la filipinan standardon "Filino de la Revolucio," car tiu flago ekestigis dum la filipina revolucio.
La 12-a de Junio, 1898, estis la dato, kiam tiu nacia standardo estis oficiale akceptata kaj rajtigata de la filipina Kongreso.
Inter ciuj standardoj de sendependaj landoj, tiu de Cekoslovakujo plej similas tiun de lo filipina insularo.

IN ENGLISH

The Philippine flag consists of two stripes.
One is red and the other is blue, the blue being on the top.
The red signifies bravery and courage.
The blue representa ideals and justice.
Near the staff is a triangular space.
This space is white.
In the center is a golden sun having eight rays.
The sun signifies liberty or the birth of a new nation.
The eight rays represent the eight provinces in which rebellion against Spain started.
These provinces were: Manila, Bulakan, Pampanga, Nueva Ecija, Morong, Laguna, Batangas, and Cavite.
The white triangle stands for equality and brotherhood.
In each corner of the triangle is a golden star.
As there are three stars in all, they represent the islands of Luzon, the Visayas, and Mindanao.
Sometimes the Philippine flag is called "Daughter of the Revolution," because it came into existence during the Philippine Revolution.
It was on June 12, 1898, that the national flag was officially adopted and recognized by the Philippine Congress.
Among the flags of independent nations, the flag of Czechoslovakia is the nearest in appearance to the Philippine flag.

Subsidizing the World Against Us?

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Altoona Tribune of June 9, 1949:

SUBSIDIZING THE WORLD AGAINST US?

Perhaps we are not giving our leaders in Washington credit for foresight. On the other hand, perhaps they do not have very much of that precious attribute.

In view of the wholehearted support given the Marshall program in official circles in Washington, it seems, indeed, a difficult proposition to criticize it effectively.

Yet, we'll dare to do that. We have seen the working of the high-pressure propaganda turned on from White House and State Department in favor of their pet programs, and, perhaps we are "far enough removed from the forest to see the trees."

UNIVERSITY OF MICHIGAN LIBRARIES

General Marshall the other day admitted that the program which bears his name was inadequate. Although, it was sold to the American people as the answer to all the European problems.

No, says the general, more is required. To wit, the Atlantic Pact.

But, while the objective of the Marshall program to halt expanding communism undoubtedly is worthy in every respect, it remains extremely doubtful if we shall do any good by trying program after program, finding each needs more until the time comes when we can't give more, and the problem perhaps remains as it was, or even worse.

Then, what?

For example, may we not be subsidizing the whole world against the United States, by our efforts to reconstruct Europe?

If the Marshall program were to work as some in Washington say they hope it will, what would become of American production, trade, and employment in a few years?

Perhaps, if no war appears within the next 5 or 10 years, we may suddenly become aware that we have played the part of fools and let our Government tax the American people to destroy all our world markets.

American industrialists and businessmen have never lost sight of the danger of low labor cost products from Europe, as a menacing competition to American production and markets.

But, the State Department is determined to build them up, come what will.

Some day, not far distant, we may find that the Marshall plan, our reciprocal trade agreements, and low labor costs abroad may have combined to isolate us from world markets.

Already, we have noticed how the British are invading our foreign oil markets. They are trying hard to take them. Export trade is Britain's life, says Sir Stafford Cripps. Our State Department is doing all it can to help Britain. That is very fine, perhaps.

But, what our State Department apparently forgets, and what no Briton ever forgets, is that world markets are the principal economic base for most empires, and most nations. They have been the cause of a great many wars. The loss of them has meant death to many a regime and many a nation.

So, here we are, forgetting the laws of world economics, and making our people pay to have foreign nations take our markets from us.

It seems inconceivable. Yet, the British oil deals are tangible proof of how this thing is working out. And not only in oil, but in other exports too.

It brings up the thought again: Are we dividing up America to rebuild a shattered world, which, if it ever recovers, will do so upon the absorbed strength of the United States, leaving only a shattered shell in North America?

The Free Man Versus the Puppet Man

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Mrs. Norman K. Beals, of Franklin, Pa.:

THE FREE MAN VERSUS THE PUPPET MAN

Today sweeping against the Statue of Liberty and across our great Nation are strong winds of socialism, communism, materialism, and atheism. These subversive forces and influences which are hostile to the ideals and institutions on which our great Nation was founded, have been spreading until today they constitute a real and increasing danger to our national life.

One of the greatest bulwarks of the American life has been private enterprise. Every page in our history reveals to us that there is but one source of progress, namely the independent man in a free world. We are free Americans, free to speak without fear; free to worship God in our own way; free to stand for what we think right; free to oppose what we think wrong. The right of liberty means every man's right to individual action, individual initiative, and freedom of choice.

We who are true Americans in spirit are vitally interested in the preservation of our freedom. We are one of the last remaining countries defending the sanctity of the free active man in a free world. Here we have the highest standard of living of any other nation in the world. Why? You have heard it said that it is because of our huge natural resources; yet did not the American Indian have all these resources available before the country was settled by the white man? Does not Russia, China, and India have more natural resources than we have? Yet their standard of living is so much lower than ours that there is no comparison. So it cannot be a question of natural resources. Although we admit they have been a vital factor in the progress and achievements of the American people. But these tangible material things are but a part of America. The things that have counted the most in her past, and that will count the greatest in her future, are the great intangibles of the spirit of the people—our sense of freedom, of liberty, our traditions of past glory and sacrifice, our lofty ideals and spiritual appreciation, all of which spell greatness and the true glories of the American people.

From the beginning of history two antagonists have stood face to face; one is the free active man, the other is the passive governed puppet. Every type of good work, from laying bricks to writing a symphony, is done by the free active man; the puppet man would live softly and easily from the toil and hardship of others.

Let me give you a few examples of the freeman in a free world: Andrew Carnegie came to the United States in 1848 as a 13-year-old boy, and because our Constitution offered him freedom of choice and individual initiative he became one of the greatest leaders in our Nation. From a poor bobbin-boy in a cotton factory, to a self-made multimillionaire. And he so appreciated what America had done for him that before he had died he had given away to his fellowmen $350,000,000.

Henry Ford, under our system of private enterprise, became the father of mass production, of world-wide low-cost transportation which has extended all men's horizons and brought citizens together as neighbors; friend of the workingman and the farmers. America's great citizen who built an industry by enriching the world. Whose honest life is an inspiration to youth everywhere, and who, like Abraham Lincoln, climbed from poverty to the service of mankind.

Dr. George Washington Carver is one of the most remarkable men of this age. Born in slavery with obstacles almost insurmountable, he climbed to a position of equality with the foremost scientists of the world. The peanut has yield to this great scientist, marvels ranging from food to dyes, wood stains, face powder and ink. From the clays he has produced over 100 tints and shades of colors, from wood shavings and other waste materials he has produced synthetic marble. From peanut hulls he has made insulating boards for houses. Many other common things usually thought of as waste products have been turned into useful commodities.

He was not only a scientist but a botanist, chemist, musician, artist, and an educator. And where under God's sun would a man born of Negro parentage and in slavery have the chance for success, except in the good old United States? These men—these souls in bodies of different colors, of all races and all faiths, were given in America, the greatest gift to mankind—faith. Faith in a great God, faith in the ability of the people to govern themselves and belief that they were capable of building a richer, fuller and happier life. Which all means faith in the value and potentialities of the common man.

Who is the puppet man? He is not an individual but a serial number, owned by the State, regardless of ability or effort. That is what socialism means. It makes the individual dependent upon the State in all material, social, and political matters. It nullifies ambition by putting restriction in choice of occupation and reward of attainment, and smothers initiative, the backbone of progress. The result is impersonal service and indifference. It is the death knell to all that we hold most dear, individual liberty and progress.

This is what some officials in Washington are trying to bring about in America. So that today we are faced with the danger of the socialization of one of the greatest private enterprises of our Nation the medical profession.

Mr. Oscar Ewing's report to the president last spring, entitled "The Nation's Health—A Ten-Year Program," is nothing more than compulsory health insurance, which has only one meaning—political medicine controlled by the bureaucrats at an overwhelming expense to each and every citizen. Do you realize that since 1930 tax-eating Federal jobholders have increased from 2 per 100 families to 5 per 100 families in 1947, and now a total of more than 2,000,000 jobholders are living on taxpayers? Senator HARRY F. BYRD stated: "These politicians calculate a million jobholders can be counted upon to swing three or four million votes to keep the spenders in power."

Sir William Darling, a member of the House of Commons in England, made the following remarks to the Senate of the United States on December 8, 1947, "Before I go back to my country with its shilling's worth of meat, its declining standard of life, its business desperately entangled, please let me tell you, my friends in the United States and in Canada, that the road Great Britain is traveling is the road you should not travel. The experience is not worth while. It is a road which has led to degradation and lowering of our human standards in which you and we believe. I believe that the organization of communities on a large scale is the greatest danger with which the world is faced. There is a deep-rooted conviction that somehow, government can do things better than the people themselves. So our socialist government in Britain is attempting it. I can tell you the result very simply by quoting the remark made by one of my electors: 'This nationalization is a very queer thing. The more you own, the less you have. We own the Bank of England in Britain, but I am no better off. We own the coal mines, and I have less coal, we own the railroads, but I can't get a train for my holidays. This is socialism, the more we own, the less we get.'

"All that my friend said is true—and more. We discover that we are approaching a real dictatorship, because the British citizens have no choice but to accept what is offered them, and even then they have less of the satisfaction which they formerly enjoyed."

New Zealand has been described by some as the socialistic laboratory of the world—this may or may not be true. The following

is part of an editorial which appeared in the Oil City Derrick of Oil City, Pa.:

"The Government of this country is seriously considering whether that country's free physician service will be continued. The record of New Zealand's compulsory insurance reveals they have been unable to keep its cost of operation on an even keel; due to the fact of the human tendency to take advantage of benefits offered under a compulsory system; another is the political pressure for increase in rates and duration of benefits. New Zealand has had the compulsory health insurance since 1939, and in these years of trial its operation has become more costly with every passing year."

This is something for America, now burdened with a Federal debt of nearly 300 billion, to think about when it considers entering the field of socialized medicine. If the Government is so concerned with the welfare and health of its citizens (which incidentally is the best in the world as proven by surveys) why doesn't our Government take care of the American Indians which are legally and technically wards of the Federal Government? Have we forgotten the shameful facts which received national attention through the newspapers, Time, and Life magazines in regard to the Navajo Indians last year? There are about 70,000 Navajo Indians, much the largest of the surviving Indian tribes, living on an immense but arid area of about 30,000 square miles. It was pointed out that the Navajos are existing on 1,000 calories a day, less than the Germans are getting under United States control, and that so many of them are so weak that they cannot stand moderate exertion. They have been so plagued with illness and mortality rates are so high that only an amazingly high birth rate has kept the tribe on the increase. For instance the rate of tuberculosis infection is 14 times the average of the country as a whole. The single tuberculosis sanatorium has only 100 beds. There is only one doctor for every 6,000 Navajos.

It has been our privilege to know and talk with a Christian Navajo Indian who just came from the reservation in Arizona where he has been a missionary for 2 years. It was heartbreaking the revealing things we learned from the color films he showed here in our community. We saw one-room shacks built without any windows and without a floor known as hogans. We were told that as many as 16 people lived in one of these hogans, that in most instances water has to be carried long distances. We are told of a family that had to carry their water a quarter of a mile up the hillside from a spring that was also a watering place for hogs and a stamping ground for cattle. That thousands of school-age children have never seen the inside of a schoolhouse. That hundreds of them are so far away from the Government hospitals, they only go there in cases of life and death, that the means of transportation are so poor and the roads so bad that many of them die on their way to the hospital. Most Navajos depend almost completely on their sheep for a living. But even this meager source of income has been cut by the Government. Life magazine puts it in this way, "It has been estimated that a small Navajo family could get by on 250 sheep. But the Government's cold arithmetic proves that the range can support only 600,000 head, or enough for only 2,400 of the 11,000 Navajo families. More than nine-tenths of the other Navajo families have less than is needed to sustain even the simple way of life they value above all else."

If the present helpless and desperate situation of the American Indians who are wards of the Federal Government is a picture of the paternalistic management of our Government, then it behooves each one of us to beware of Government controlled medicine.

Touro Synagogue: A National Shrine

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. FORAND. Mr. Speaker, under leave to extend my remarks, I enclose a statement I have prepared which should be of interest to all who are familiar with Touro Synagogue in Newport, R. I., which only a short time ago was made a national shrine. It is my hope that this statement will also be of interest to those who are not familiar with this old synagogue, which opened on December 2, 1763. The statement follows:

A NEW NATIONAL SHRINE

In these days when religious liberty is menaced in so many countries of the world, Americans cling more firmly than ever before to the principles of freedom of worship for all. The people of Rhode Island have particular reason to be proud of their heritage of religious liberty, for it was in this State that Roger Williams first established a colony dedicated to protecting the rights of every man to worship God as he saw fit. Only recently, an event took place in Newport, R. I., which underlined the historic role played by the people of that State, in making America a home of religious freedom.

On August 31, 1947, President Truman sent the following message to Dr. Bernard C. Friedman, president of Congregation Jeshuat Israel of Touro Synagogue:

"I am happy to congratulate the Congregation Jeshuat Israel and the community of Newport, R. I., on the setting apart of the Touro Synagogue as a national shrine. It is fortunate that the venerable fabric of the synagogue, opened on December 2, 1763, a century after the founding of the congregation, is still in use and admired by all lovers of good architecture.

"The setting apart of this historic shrine as a national monument is symbolic of our tradition of freedom, which has inspired men and women of every creed, race, and ancestry to contribute their highest gifts to the development of our national culture.

"I trust that through long centuries to come the spirit of good will and tolerance will ever dominate the hearts and minds of the American people."

This message high lighted the dedication ceremonies in which Touro Synagogue was made a national shrine. Carl Van Doren, the noted American historian, acted as master of the formal ceremonies. The Honorable JOSEPH W. MARTIN, Jr., Speaker of the House of Representatives, delivered the main address. Dr. David De Sola Pool, rabbi of the Spanish and Portuguese Synagogue in New York City, gave the benediction. Miss Patrice Munsel, youngest star of the Metropolitan Opera, enriched the occasion with her fine soprano voice. Dr. Francis S. Ronalds, of the National Park Service, Department of the Interior, unveiled the tablet on the outer wall of the synagogue, concluding the ceremonies.

Less than 6 months after that memorable occasion, the Society of the Friends of Touro Synagogue National Historic Shrine was formed. Its purpose was to enlist public support in maintaining the structure and grounds of the Touro Synagogue as a pilgrimage center, open to visitors throughout the year; to make available educational material on Touro and to build, eventually, a museum that would house the priceless gifts of manuscripts, paintings, and other treasures associated with the early congregants, that are coming in from all parts of the country.

The Society of the Friends of Touro have published an attractive volume describing the history and background of that historic site. This brochure makes inspiring reading, for it throws light on another facet of our great and many-sided American heritage.

Nine distinguished Americans contributed essays to this brochure, each of which gives us a glimpse of a different aspect of Touro's history. Together, their work provides a well-rounded picture of Newport in colonial days.

Rabbi David De Sola Pool tells the story of the synagogue. Dedicated on the 1st day of the Jewish holiday Hanukah, December 7, 1763, Touro is the oldest synagogue building in the United States. At the time when Newport was building its temple, there were Jewish congregations also in New York City, Charleston, Savannah, Philadelphia, and Richmond. But none of these possesses a house of worship comparable in age to Touro. Newport boasts not only the loveliest, but also the oldest, synagogue building in the country.

The Touro Synagogue played an historic role in the State of Rhode Island. In 1780, after the evacuation of Newport by the British, the General Assembly of the State of Rhode Island held its first meeting in the synagogue. In the words on the tablet affixed to the building when it was officially designated as a national historic site:

"Here in 1781–84 the Rhode Island General Assembly met, and during Washington's visit to Newport in 1781 a town meeting was held here. The State supreme court held sessions here at that period."

The distinguished Mr. Fiske Kimball, director of the Philadelphia Museum of Art, tells the story of Peter Harrison, the amateur architect who designed Touro Synagogue. Harrison, a merchant by profession, received no pay for most of his work, taking his reward in the thanks and well wishes of his fellow citizens. He designed many of the public buildings in Newport including the Redwood Library and the Brick Market.

Dr. Morris A. Gutstein, rabbi of Congregation Shaare Tikvah, Chicago, and formerly rabbi of Touro Synagogue, contributes a history of the Jews of Newport in colonial times. In so doing, he provides valuable insights into the whole prerevolutionary period.

In the spirit of Roger Williams who advised them to purchase that land, the settlers of Newport adopted the ideal of religious freedom as the very first principle of their government, thus inviting to their new community all those hardy souls of all faiths who refused to compromise with conscience.

Toward the end of the seventeenth century, the Jewish congregation of the Newport community was greatly increased by a group of settlers who came from Curacao. These Jews, like their coreligionists already living in the city, were of Spanish-Portuguese origin. With their natural energy and ability, they brought new grace to Newport.

By the middle of the eighteenth century, Jewish colonists in town owned 7 vessels engaged in inter-colonial and foreign trade. They were active also in manufacturing. As early as 1705, they had introduced into the colony the manufacture of soap. They joined in the established foundries as workers of brass and iron and also worked as silversmiths.

In the armed forces of the colony, there were Jewish soldiers from earliest times. Jacob Judah served in the French and Indian War in 1747. Michael Isaacs volunteered in the campaign of 1755. Isaac Moses marched in the company of Capt. J. Whiting in 1757.

Thus in Newport, Christians and Jews, though worshiping in different churches, had

UNIVERSITY OF MICHIGAN LIBRARIES

the same aspirations and met as neighbors in the street, the home, the factory, the club, and the town meeting throughout the early part of the eighteenth century.

This fine volume contains a glowing account of the history of religious freedom in America, by the eminent Judge Joseph M. Proskauer, former president of the American-Jewish Committee. Judge Proskauer pays tribute to George Washington as the staunch advocate of religious liberty. He tells of Washington's famous letter to the Congregation of Touro Synagogue in which the first President wrote this historic declaration, "For happily, the Government of the United States, which gives to bigotry no sanction and to persecution no assistance, requires only that they who live under its protection should demean themselves as good citizens, in giving it on all occasion their effectual support."

The American people, says Judge Proskauer, are Washington's living memorial. Only recently, they have overwhelmingly approved the report of the President's Committee on Civil Rights, which called for a sweeping legislative program to insure full opportunity in jobs, housing and education for all Americans. And the American people have also endorsed the Charter of the United Nations which sets forth the aim of "promoting and encouraging respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language or religion." In so doing, they have proved themselves the true spiritual descendants of Washington.

This bond between the early heritage of our Nation and its present dedication to human rights is further investigated by Lee M. Friedman, president of the American Jewish Historical Society. Mr. Friedman tells of the founding of Rhode Island by Roger Williams in 1636.

Although many of our American colonies were settled to afford religious asylum for oppressed sects—Massachusetts for the Puritans, Maryland for Catholics, and Pennsylvania for Quakers—none welcomed a dissenting minority. It was not until the day of Roger Williams and the formation of Rhode Island, that those whose religion differed from that of the ruling majority found a shelter free from persecution. Thus, Rhode Island was the pioneer haven of complete religious liberty in America.

Another historian and scholar, Mr. Leon Huhner, paints a vivid picture of Judah Touro, son of the first rabbi of the synagogue and the man after whom it is named. As a result of an unhappy love affair, Touro left New England as a young man and settled in New Orleans where he soon became a prosperous merchant. In the War of 1812, he fought as a volunteer under Andrew Jackson and was severely wounded in the Battle of New Orleans. He was one of the first to realize the significance of steam navigation and, after the war, he expanded his enterprises on a large scale.

But Judah Touro's name stands out most prominently as a philanthropist. At his own expense, he built the free library in New Orleans which is named after him. He rescued the First Congregational Church from bankruptcy, endowed research to combat yellow fever and established a leading Southern hospital, Touro Infirmary, for the same purpose. On his deathbed, he executed a famous will providing liberally for various charities, including bequests to six Christian orphan asylums in New Orleans. As he desired, he was buried in Newport where there is now a Touro Street, Touro Park and, of course, Touro Synagogue.

The cemetery at Newport where Judah Touro lies has been celebrated by Henry Wadsworth Longfellow in his famous poem, The Jewish Cemetery at Newport. In a special piece written for the Touro brochure, a descendant of the great poet, Henry Wadsworth Longfellow Dana, tells of the deep impression the cemetery made on Longfellow and how hard and painstakingly the poet worked on the lines commemorating it.

Behind the associations of both cemetery and synagogue, Longfellow seemed to see looming the great misty figures of ancient Israel. In his first draft he wrote:

"But in the background figures vague and vast
Of patriarchs and prophets rose sublime;
They had the grand traditions of the past,
They had the promise of the coming time."

Carl Van Doren, noted historian, contributes a stimulating section to the Touro volume, in which he tells of the impression which the beautiful interior of Touro makes on the observer. He describes it as, "White except for the domed ceiling which is blue, with silver stars. The 12 pillars, 6 on a side, that support the gallery, represent the tribes of Israel; but they are cut from New England trees and the columns are Ionic. Above them Corinthian columns rise to the beams on which the ceiling rests. The Ark is in form of a superb Georgian cupboard against the east wall, beautifully carved and painted white. The lamp before the Ark, with its perpetual flame, the bronze candelabra hanging from the dome, and the clock on the gallery are the work of eighteenth century craftsmen in the strong yet graceful style of the period. And against another wall is the seat of the presiding warden, not a mimic throne, but a high pew with a solid rail in front of it."

Mr. Thomas J. Allen, regional director of the National Park Service, tells us that Touro Synagogue is the fourth church edifice to be designated as a national historic site, not federally owned. Those which preceded it in order of establishment are San Jose Mission, near San Antonio, Tex., June 1941; Gloria Dei (Old Swedes Church), in Philadelphia, Pa., November 1942; and St. Paulos Church, Eastchester, N. Y., July 1943. These, being national historic sites, were established under the authority of the Historic Sites Act of August 12, 1935, which declares "that it is a national policy to preserve for public use historic sites, buildings, and other objects of national significance for the inspiration and benefit of the people of the United States."

Thus, Touro Synagogue now takes its place as a national monument to religious freedom and to this land where all have a chance to contribute to the national welfare. Let us see that we pass on to our children, untarnished by bigotry or prejudice, this heritage of freedom and opportunity for all—the priceless estate we have inherited from our forefathers.

Outstanding Executive Approves Resolutions to Strengthen United Nations

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1949

Mr. HAYS of Arkansas. Mr. Speaker, under leave to extend my remarks I wish to include in the RECORD the following excellent statement by Mr. W. T. Holliday, president of the Standard Oil Co. of Ohio, with reference to House Concurrent Resolution No. 64 and other similar resolutions, to strengthen the United Nations.

Mr. Holliday's letter follows:

THE STANDARD OIL CO.,
Cleveland, Ohio, June 13, 1949.

Hon. BROOKS HAYS,
House Office Building,
Washington, D. C.

DEAR MR. HAYS: I wish to express to you my deep personal gratification and my congratulations for the work which you have done in bringing about the introduction in Congress of the joint resolution, sponsored by 91 Members of the House, urging that it be a fundamental objective of our Nation's foreign policy "to support and strengthen the United Nations and to seek its development into a world federation."

I congratulate you for your courage and statesmanship in pressing this matter to its present status, and I earnestly hope that your efforts will have the support of a large majority of both the House and the Senate.

It is most fitting and appropriate that our Congress should take the proposed action. It is inevitable that the Government of a democracy such as ours can have no strategy, no fundamental objectives in its foreign policy unless those objectives are determined and impressed upon it by public opinion. In a democracy such as ours the responsibility for fundamental foreign policy rests squarely upon the people, and the spokesmen of the people are their elected representatives in Congress. It is indeed the function of Congress to state what the fundamental objective of our foreign policy should be. The executive department of our Government needs the assurance offered in the proposed resolution if it is to have the confidence and the courage to stop opposing world federation and to take its accomplishment as the fundamental objective of our foreign policy.

I think the resolution in question is much superior to the ones which were offered at the last session of Congress, because it confines itself to fundamental strategy and does not attempt to go into the tactical questions of when and how.

If the United States clearly announced to the world that its fundamental objective in international affairs is the elimination of international anarchy and the achievement of world law and order, I believe that world federation, limited to the prevention of war, would be achieved much more quickly than we think.

Again I extend to you my deep appreciation and congratulations.

With every good wish,
Cordially yours,

W. T. HOLLIDAY.

The Challenge to Lincoln's Party

EXTENSION OF REMARKS
OF
HON. LEONARD W. HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1949

Mr. LEONARD W. HALL. It is with a real sense of privilege and satisfaction that I include in the RECORD, under the leave granted me, a speech by our colleague from Connecticut, the Honorable JOHN DAVIS LODGE, at a meeting sponsored by the New York Republican State Committee at the Waldorf Astoria Hotel, New York City, on Tuesday, June 14, 1949.

The speech, in full, is as follows:

THE CHALLENGE TO LINCOLN'S PARTY

It is a real privilege and a genuine pleasure for me to be with you here this evening. I

UNIVERSITY OF MICHIGAN LIBRARIES

am happy to meet with my Republican friends and colleagues from New York. They are rendering distinguished and courageous service at a time of great stresses and strains.

I regret that we do not have with us tonight the great Governor of the Empire State, Thomas E. Dewey. His notable accomplishments as chief executive of the most populous State in the Union have twice earned for him the party's nomination to the highest office in the land. I join with you all in expressing the hope that his energies and talents will remain available to the Republican Party for many years to come.

This occasion is a most heartening expression of the vigor of the Republican Party in New York State. We shall need all the vitality we can muster if we are to gain control of the Congress in 1950 and of the Presidency in 1952. A Republican victory is not only essential to our national political health; it is also vital to the effective functioning of the two-party system.

For the two-party system is probably the most important single factor in the preservation of American freedom.

If we had less than two parties we would quite obviously have a one-party system and this would completely invalidate our Constitution, our Bill of Rights, and all our free institutions.

And yet we have a growing body of independent voters in America.

More serious still, there were in the last election some 45,000,000 people who failed to exercise their franchise.

The independent voters represent the balance of power in our elections. To some extent this can be a healthy condition. It can produce a fine spirit of political competition from which the country can benefit. But if such independence is carried too far, it can undermine our two-party system.

As the executive branch of our Government has extended its power, as the virus bureaucoccus has infected our political structure, it has become increasingly difficult for the people to understand how their Government operates. This difficulty has caused many people to think of their Government as a vast organism over which they have no control and for which they, therefore, assume no responsibility. They do not identify themselves with their Government. When they fail to vote they fail to participate in the work of their Government and thereby create a condition which produces minority rule and which threatens the survival of our two-party system.

The concept that the Government is a thing apart, that it has a life of its own, has, I believe, done a great deal to create the feeling that our political parties operate in an ambit outside the field of action of the average citizen. Indeed, many people think of our political parties as groups organized mainly for the purpose of playing the game of politics whereas they are, in fact, the lifeblood of the entire political structure on which our freedoms depend.

In reality the independent voter of America depends upon the effective functioning of our two-party system. The system is more important than the party, but it in turn depends on the survival of the opposition party.

Narrow partisanship is, of course, deplorable. Partisanship which places party above patriotism, patronage above principle, and personalities above policies is highly reprehensible. Yet the best way to discourage such sordid attitudes and demagogic practices is not to retire to the sidelines in derisive independence but rather to plunge into the political melee and endeavor to influence the party of your choice. This then is the primary function of the Republican Party: to promote increased participation in politics which is, after all, the science of our form of government.

The grave issues of the day should, of course, be met in the most responsible manner and without regard to party advantage. But it is a disservice to the people of the country to deprive them of a second voice in matters of serious import. Bipartisanship in foreign affairs does not consist in following blindly, especially when there is inadequate leadership. It is more important to be right than to be bipartisan.

Neither does bipartisanship in foreign affairs require us to be partisan when the welfare of the working men and women of this country is at stake. Surely they are entitled to be influential in both parties; they are entitled to as lofty an approach to their problems as are the people of Europe. It should be the mission of the Republican Party to take labor legislation out of politics.

Similarly, while economy in government is certainly not a partisan matter, it is of vital concern to all Americans. We Republicans should not remain silent while the Hoover Commission reports and recommendations remain dormant. It is to be feared that the dust will be allowed to settle on the work of the Hoover Commission as it has settled for the past 5½ months on most of the Democrat legislative program promised to the voters in the last campaign. It is to be hoped that the President and the Democrat leaders of the Eighty-first Congress will act promptly and energetically in order to save the American taxpayers upwards of $3,000,000,000 a year.

While principle rather than expediency should be our watchword, it is also in the public interest that fundamental differences of opinion among the American people should be reflected in the platforms and in the actions of the Republican and Democrat Parties. That there are substantial divisions of thought among the people of our country is indicated by the fact that nearly 22,000,000 people voted for Governor Dewey in the last election. The American people want a choice. They want to be faced with constructive, with feasible alternatives. This does not mean disagreement for the sake of disagreement. It does mean, however, that what has been referred to as the "me-too" policy involves not only a sacrifice of principle but a departure from political reality.

The Republican Party—the party of Lincoln—is the party of individual freedom. Lincoln believed that the individual is the complex heart of society. That these principles of freedom are timeless in their validity is evidenced by the fact that Democrat Party gives them lip-service while recommending policies which would tend to destroy them. If one could believe the Democrats' heated protestations of faith in the private property free competitive system, the Democrat Party would be the "me-too" party. Actually, Democrat actions frequently constitute a betrayal of that system, thereby creating the dramatic issue of principle on which our party should stand.

Indeed, the value and the present power of these immortal principles is further illustrated by the fact that none other than the Vice President, the Honorable ALBEN W. BARKLEY, made a Lincoln Day address at Springfield, Ill. In these circumstances I may perhaps be forgiven if I quote the words of Thomas Jefferson: "Were we directed from Washington when to sow and when to reap, we should soon want bread * * * when all government, in little as in great things, shall be drawn to Washington as the center of all power, it will become venal and oppressive." And it was Lincoln himself who remarked: "The principles of Jefferson are the definitions and axioms of free society." Under a deceptive fog of hypocritical incantations on the altar of free enterprise, the Democrat Party has departed from these principles.

Actually then, the Republican Party, being the party of freedom, has been, and is today, the party of the people in their eternal fight against vested interest, wherever that interest may be centered.

Fully as important as our failure to familiarize the American people with the record of the Eightieth Congress and with the principles and objectives of the Republican Party was the impression created in certain quarters that the Republican Party is the party of special interests.

But if Wall Street and cartels and monopoly interests are sitting astride of the American people, as the Democrats say they are, surely it must be the fault of the Democrats, since, for a great many years, they had complete control of the executive, the administrative, and the legislative branches, and virtual control of the judicial branch of the Government. One is entitled to wonder at the wide gap which separates Democrat protestations of concern for the common man and the conditions which the Democrats decry and for which they must assume responsibility, since they failed in the 14 years preceding the Eightieth Congress to provide the very legislation for which they have made such an outcry.

In fact, the Republican Party has no room in it for anyone who will put the welfare of any organized group, no matter how large or powerful, ahead of the welfare of the people. The Republican Party has no place for complacent reactionaries, for purveyors of intolerance, for sowers of confusion and discord. The Republican Party is the party of insurgents, of true liberals; it is the party of progress, of intellectual ferment—the party of Lincoln; the party of freedom.

That our choice is not between reaction and me-tooism is further illustrated by the felicitous fact that there is a large middle ground for useful governmental action. There are many accommodations which Government should make to modern needs. In a Nation of our industrial power and productivity abject poverty and extreme hardship can and must be prevented. While many of these problems are primarily for the States and municipalities, there is a substantial area for limited and directed Federal aid. There are many instances where the Federal Government should step in and fill the gaps where our private property system does not reach. The Government can run the traffic signals without operating the automobiles.

Yes, the health of our Nation and the education of its citizens, old-age pensions and social security, minimum wages and unemployment compensation, large scale production and full employment, rural electrification and flood control, adequate housing and soil conservation are all matters for proper Federal concern. They all involve the people's welfare. But it is most important how these objectives are approached and it is all important to bear in mind that the essential, the ultimate welfare of the American people depends upon the continuation and increase of the vital opportunities inherent in our free society.

These legislative goals require money. In spite of the fact that taxes now absorb 39 cents out of every dollar, the revenue of the Federal Government for the first 5 months of 1949 is more than $3,000,000,000 less than for the first 5 months of 1948. The most insidious way to socialize America is by a tax burden which will cause a break-down of the American economy and thereby give the State an excuse for the investment of public funds. These objectives will become purely illusory if, in our efforts to reach them, we obliterate the very sources which produce the taxes and destroy the free society which is the source of our greatest strength. There lies the basic public interest. It is there that the Republican Party must make a

stand. It is there that it must furnish effective and constructive opposition.

In order to provide more jobs and higher wages, in order to increase our standard of living, we must increase and improve our tools of production. This we cannot do if incentives are stifled, if risk investments are made so risky that people won't take a chance.

This is the paramount interest of all our citizens and in particular of labor. It has been estimated that the average job in America requires a $6,000 investment. It is a disservice to labor to discourage such investments.

The interests of the people who work come ahead of the interests of capital and this is traditional Republican policy. Lincoln said: "Capital is only the fruit of labor; it could never have existed if labor had not first existed. Labor is the superior of capital and deserves the much higher consideration." And he went on to say: "That men who are industrious and sober and honest in the pursuit of their own interests should, after a while, accumulate property and after that should be allowed to enjoy it in peace, is right." Labor and capital are component parts of what is essentially a cooperative effort. In order to retain the right to enjoy the fruits of his labor, it is imperative that the working man should not be weighted down with taxes.

Is it not clear then that we must, in the interest of our national security—of which our economic health is such an essential part—postpone some social legislation, however desirable it may be, in order to achieve the larger, primary objective of world peace and security?

Any social gains we make will melt like snow in the sun if we have war.

For we are faced with the relentless fact that although we are legally at peace, actually we are inextricably engaged in a mortal conflict of titanic proportions. We know from grim and recent experience that when freedom succumbs abroad, freedom in America is threatened.

A world contracted by science must be united by freedom if peace is to prevail.

We can take heart from the success achieved to date by the Marshall plan. We can take heart from the Atlantic Pact and from the growing power of our national defense establishment. We can take heart from such splendid victories as the Italian election of a year ago. We hail the birth of the new State of Israel. We can be encouraged by the growing determination of all free peoples to resist the onward tide of communism.

But essentially we are engaged in a holding action. No conflict was ever won by holding. Victories, whether in peace or war, are achieved by pressing forward with patience, with imagination, and with courage. Furthermore, if we do not win the cold war, we shall inevitably have war.

It is the historic tendency of those who have been in power for too long to concentrate on justifying their mistakes rather than on correcting them. A stupendous example of this weakness is to be found in the State Department's announced policy with regard to China to "wait until the dust has settled." Well, the dust is settling pretty fast in China and, intermingled with that dust are the ashes of our great Pacific victories. Surely, in view of the stake which we have in this fateful game, we cannot afford to throw up our hands in despair and say that nothing can be done.

My friends, the evil tentacles of communism are reaching round the world in an effort to strangle the United States. A strong American economy is a vital factor in our struggle for the preservation of freedom.

We Americans stand today on a pinnacle of power and prestige with the floodlights of the world upon us. The people who have been enslaved by our godless "self-made" enemies look to us for help and guidance. The responsibilities of leadership in the fight for freedom both at home and abroad devolve in large part upon the Republican Party. We can take comfort from the knowledge that our opportunities for useful service, for dynamic leadership, are equal to these responsibilities.

The ideals which, in spite of our victories in World War II, are still embattled must be made as vital, as vibrant, as victorious in peace as they were in war.

We must find in peace the progressive counterpart of our war effort. The enemies of human progress are still on the march.

This is a formidable challenge. It is a challenge worthy of our mettle. This is a good time to be alive, to be a Republican, to be an American.

Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial from the New York Herald Tribune and a news article from the New York Times by Bess Furman on Federal aid to education:

[From the New York Herald Tribune of June 15, 1949]

THE PRINCIPLE IS THERE

Dwight D. Eisenhower, president of Columbia University, holds that Federal aid to education should be distributed solely on an equalization basis. He has written Representative GWINN that though he is not against aid to the poorer States, he would flatly oppose any bill applying to all States. He is convinced that power added to the central government undermines the vitality and responsibility of local government; that Federal funds defeat the watchful economy that local supervision over locally provided funds entails. And he is right.

This newspaper has long held that the major justification for Federal aid to States is the equalization principle. We also believe, with General Eisenhower, that no child should be handicapped because his State lacks adequate resources to provide for his education. The bill passed by the Senate offers far more aid to Mississippi than it does to New York. However, partly because schools everywhere in the country are hard-pressed, it is utopian to hope that Federal aid can be voted solely to the poorer States, even though their need is more desperate. During the Senate debate, Senator TYDINGS tried an amendment which would have limited disbursements to the 25 States with the lowest incomes. It was defeated 57 to 17.

The emergent question, then, is whether there is to be a measure to meet a universal need for new schools, better teachers, more teachers, more teachers-in-training—and to meet a real school crisis in the most-handicapped States. We believe that the measure which has passed the Senate and is now before the House should be enacted. It preserves, in large part, the ideal which General Eisenhower wisely and consistently holds before the country. The absolute ideal is seldom achieved in one sitting in the legislative halls of a democracy.

[From the New York Times of June 15, 1949]

SCHOOL-AID STAND OF EISENHOWER HIT—SENATOR MORSE CALLS GENERAL "SOPHOMORIC" FOR HIS FEAR OF DANGER TO LOCAL CONTROL

(By Bess Furman)

WASHINGTON, June 14.—Senator WAYNE MORSE, Republican, of Oregon, today attacked as "sophomoric" a statement by Gen. Dwight D. Eisenhower yesterday that Federal aid to education would endanger local control.

While the Senator, in conducting a hearing on Federal aid to school construction, did not mention the general's name during the proceedings, he did so later in a recess. He made clear to a committee room filled with superintendents of "distressed" school districts that he was referring to the Eisenhower statement. He also told them he would take up the subject again on the Senate floor when the school construction bill was considered.

The Oregon Senator said that "misleading propaganda" had been coming from "high personages" in "schools supported by private endownments," adding:

"A background of leadership in military affairs is not to my mind the background for making pronouncements on the public school system. And I say that as an alumnus of Columbia University."

Senator ROBERT S. KERR, Democrat, of Oklahoma, then on the witness stand said:

"Without Federal aid our roads would be of little use to the military, and the same principle applies to human resources."

"To me it is so perfectly obvious that the Government can aid without control," Senator MORSE added; "that for someone to come along and raise the scarecrow that to provide such funds will endanger the schools is sophomoric and shows lack of understanding of the whole history of the country."

Senator MORSE then added to the witness stand more than a dozen men whom he described as "on the firing line" of public school problems.

W. E. Wilson, superintendent of schools of Jacksonville, Ind., testified that up to 1940 his district, with an enrollment of about 500, could support its schools. Then a very large arsenal works moved in, "taking 15,000 acres of our best land off tax."

Said Superintendent Wilson:

"We were warned by the Government that 1,450 school children would come in, increasing our enrollment 300 percent. The 2 percent construction bonds allowed by our State would not start the foundation of the school that we needed. So we made a careful survey and were allocated the first $600,000 Federal grant made under the Lanham Act.

"But we had a local trustee who was afraid to accept Federal money. It was obnoxious to him, tainted. We had five extraconservative board members who thought the district would go bankrupt after the war, having such a large building on our hands. We did not get the building. The children came as had been predicted.

"No one here could testify to a situation as bad as ours—children in farmhouses, storehouses, basements, churches."

EFFECT: CHILDREN DROP OUT

Mr. Wilson said that with such a school system, the children dropped out instead of finishing. With an enrollment of 1,485 in grades 1 to 12, he said, there were 200 in first grade, only 28 in twelfth, and the graduating class was far smaller than 12 years ago.

"Sometimes a small minority can prevent the good of a whole group," he added.

"Very frequently," commented Senator MORSE, who said also that it might take another election to convince Congress that the American people did not wish to continue unjustifiable discrimination in education.

He charged the House of Representatives with "bottling up" the aid-to-education bill.

Superintendent Oscar V. Rose declared that in Midwest City, Okla., school attendance jumped from 104 before the war to 2,648 now, and that the school housing situation gave obvious evidence of health, sanitation, and fire hazards.

Superintendent Glen T. Goodwill, of Monterey, Calif., said that Army, Navy, and Coast Guard installations had taken more than 29,000 acres of finest residential property from his district. He showed pictures of the overcrowding in the Monterey schools.

The Equity Capital Market: Its Significance to Management

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1949

Mr. DELANEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks by Emil Schram, president, New York Stock Exchange, at the general management conference of the American Management Association at the Waldorf-Astoria Hotel, New York City, Thursday, June 9, 1949:

THE EQUITY CAPITAL MARKET: ITS SIGNIFICANCE TO MANAGEMENT

In many respects, this is the most pleasant time of the year. To me, June always signifies a month of youth and hope, when young men and women by hundreds of thousands turn their backs on a sheltered world and put the knowledge and skills acquired at school to the acid test. That means jobs, which, in one word, is the significance of the equity capital market to management.

There is no crueler fate than to provide these eager, hopeful thousands with the best in education and have them find that no jobs are available. Grandiose words about the virtues of our political institutions are no substitute for jobs.

Youth abroad rejected democratic institutions because they themselves were rejected in their efforts to become useful men and women. This June some 700,000 new workers will be added to the labor force. We must not permit them to become exhibit A of a stark contradiction between the claims of democracy and actuality.

This is a pleasant time, but not a time for pleasantries. If there are more shadows across the minds of the graduates of our high schools and institutions of higher learning than a year ago, we have to share the responsibility.

Recently, one of the New York daily newspapers was good enough to write that I have been conducting a one-man crusade in behalf of venture capital. This, of course, is an exaggeration. Although I have made four other addresses on this topic within recent weeks, I have no desire to appear in the role of a knight in shining armor. The plain truth is that, until recently, our fight had not aroused the enthusiasm of responsible executives and other leaders or had the cooperation which it merited. I think I know why some thought: "Schram is talking through his hat; all he wants is more activity on the stock exchange."

When our tax study, Economic Progress: Tax Revision and the Capital Markets, was published in October 1947, and in the period following until this year, my warnings seemed to run athwart the times. We said, in our 1947 study:

"Funds for business expansion cannot be met entirely through the generation of funds through internal sources, and we must, (1) make it possible for the groups which are the traditional source of venture capital to accumulate funds; and (2) provide incentive for them to invest such funds profitably. The only other course is to have the Government provide funds. Nowhere has this policy been compatible with the maintenance of initiative and incentive and, in the end, of freedom."

Who cared if the equity market was stagnant? All of the economic indices—that is, all of the other economic indices—were pointing upward and making new highs, in employment, production, and profits. Labor could only see in our concern an effort to capture a greater part of the national income. Government, still under the influence of a school of thought that envisions automatic economic adjustments as if they were as simple as the setting in and pulling out of plugs at a national switchboard in Washington, had scant sympathy. And, as for management, beyond polite agreement and sporadic evidence of genuine interest, I had the feeling that satisfaction with the way the ball was rolling and the strong position of many leading companies, as well as the large additions to net worth through retained earnings, were militating against the campaign to release risk capital for inevitably necessary expansion.

Having found fault with others, it is only fair to see where I may have been amiss. It may be that, in discussing the equity capital market, we have not driven home sufficiently its social significance or adequately stripped away the mysteries associated with finance. What has the equity capital market been saying? When the values of evidences of ownership move inversely to business activity and profits, when reinvested earnings seem to have no value and practically every new offering of common stock is greeted by a wave of apprehension and fall in the price of the outstanding stock, it should be clear that something is wrong. The equity market is a place where evidences of ownership can be acquired and transferred, but it is much more than that.

That one of the largest banks should have to pay 6 percent for additions to capital funds and dilute the equity of existing stockholders by offering stock at 64 percent of conservative book value at a time when corporate bonds are salable at prices to yield less than 3 percent is eloquent proof that investment funds are absent insofar as savings going into ownership securities are concerned.

By necessity, only the stocks of very large or sizable companies are dealt in publicly. Yields of 7 and 8 percent or more for the equities of cash—rich companies earning money spells lack of interest. It is as if the wares of a merchant were advertised at ridiculous prices in his windows and the public merely passed by and said, "No thanks, we are not interested." But important as these companies are, they present only a part of the economy.

Small and medium size businesses are effectively precluded from raising equity capital. We may talk about the vast pool of savings. For these enterprises it might just as well not exist. The most persistent force adding to the strength of bigness and to the weakness of small and medium size business is the present tax structure.

Big companies under present conditions cannot sell common stock except on a costly basis, but at least they have access to the marketplace. Not so with smaller companies, and yet in a readjustment period their needs are likely to be most urgent. According to data compiled by the Federal Trade Commission and the Securities and Exchange Commission, all manufacturing corporations at the end of 1948 had a current ratio of 2.7 to 1. Those with assets of $1,000 to $249,000 had a current ratio of only 2.14 to 1. The liquidity ratio, or ratio of cash plus Government securities to total current liabilities, improves steadily as one moves from small to medium size, and upward to companies in the high group. This indicates where the inability to obtain additional equity funds is most serious.

Applications to the Reconstruction Finance Corporation for business loans have mounted rapidly in recent weeks. The place of the commercial banker in the financial organization of society is secure and life insurance companies have aided companies which did not want to pay going market rates for equity money. Again I say with the utmost emphasis at my command: None of these sources can or should take the place of the individual seeking a participation in enterprise. Trouble is bound to arise, as it already has cropped up, when management cannot accept the values placed by the market on common stocks.

To every estate faced with the problem of liquidation of business interests and every individual proprietor or family-owned enterprise, a market such as we are now experiencing means that all capital values must be reduced proportionately. To every group contemplating investment in new enterprise or debating expansion, the question is raised as to what rate of return must be earned to justify the use of funds for unsheltered investment, and the prices of stocks cannot be ignored. Our studies show that, depending on the industry, it takes from $3,000 to $36,000 per worker to provide a job and this figure is an understatement because the worker in going companies is using other assets acquired when the price level was much lower.

Savings, however, we are told are plentiful. The saving figures are brought up every time we bring up this question. Without going into detail, the very size of aggregate savings, in conjunction with the apathy toward ownership, tell the story. Savings, like water, will not run uphill. The flow of savings is largely in the direction of riskless investment and the attainment of a creditor or preferred position.

Until recently, everyone—domestic and foreign observers alike—admired the adventurous spirit of Americans. New products, new businesses, and new jobs—these cannot develop from riskless investment alone. Rather than conclude that Americans have changed, the inference must be that the change in conditions has forced a change in their attitude.

These conditions arise out of the faulty tax structure. Your knowledge of industry and your experience in meeting the various and sundry tax bills undoubtedly have convinced you as to the imperative need for improvements in this structure. I am afraid, however, that revenue requirements in the foreseeable future preclude the thorough revision of the Federal tax structure and the integration of Federal and local taxes and personal and corporate taxes that are urgently necessary. When the best is unattainable, it is good sense to accept the better. It is for that reason we are concentrating, in our new study, Jobs and Taxes, to be published shortly, on only two phases of Federal taxes. With no loss of revenue to speak of, and a prospect of ultimately increasing revenues, changes at these strategic points made now would turn the tide and help make the jobs without which disappointment and frustration face so many of our young people.

Whether you represent consumer goods or capital goods industries, I am sure you are agreed that a dynamic economy is synonymous with adequate capital formation. The high degree of postponability of consumer durable goods accentuates the fluctuations of business activity and employment. Gov-

UNIVERSITY OF MICHIGAN LIBRARIES

ernment economists would like to have the public spend more of their income. They will if they are confident about their jobs. High employment goes hand in hand with high expenditures on capital and equipment. In fact, the deficit at the end of the war was so large that in current prices it is estimated it would require nearly a decade of spending on new plant and equipment at recent rates in order merely to erase the accumulated deficit.

To quote from the study to which I have alluded: "In view of the ravages of the past 16 years on our stock of capital, we would expect to find both capital formation and expenditures for new plant and equipment proceeding at a pace considerably in excess of the average ratio of the years before 1929. Instead, they have been falling behind or, at best, just about equalling these rates. Still more serious, however, in its implications for our future economic growth, is the fact that expenditures for plant and equipment tended to level off during 1948 and threaten to show an absolute decline in 1949.

"While plant and equipment outlays for the four quarters of 1948 were larger than outlays during corresponding periods one year before, the successive percentage increase showed a generally downward trend. Official estimates indicate that expenditures for the second quarter will fall slightly below those of the corresponding period of 1948, and that during the second half of 1949 they will be about 14 percent below those of the last half of 1948. It is particularly significant that the decline in capital expenditures reflects in part the fact that the growth in the number of business enterprises had virtually ceased before the close of 1948 and that the increase in the number of small firms already in existence was seriously retarded. A continually increasing proportion of expenditures by manufacturing concerns was accounted for by firms with assets of $5,000,000 and over. It is vital that we take steps to create a more favorable climate for investment so that no serious drop in expenditures on new plant and equipment will materialize. We would not indeed be setting our sights too high if we endeavored to maintain such outlays in the future at a rate above 1948 levels."

To this end I make the following recommendations:

1. Attack the problem of double taxation of dividends by allowing individuals a credit for dividends received when computing their Federal-income liability. The credit should begin with 10 percent and be increased later as the general budgetary situation permits.

2. Change the tax treatment of capital gains and losses by reducing the maximum effective rate on capital gains from 25 percent to 10 percent and the long-term holding period from 6 months to 3 months. Allow individuals to charge a maximum of $5,000 of capital losses against their ordinary income each year.

Given these changes, I visualize a current of renewed vigor running through the economy. This would break the vicious cycle which has caused only a trickle from either the vast pool of stagnant capital or the present accretions of savings to enter the job-making processes. It would enable business to liberalize dividend payments and avoid contractual obligations that necessarily restrict freedom of action and add to economic rigidities that are already too severe.

Earlier this week the monthly report on the labor force was published by the Bureau of the Census. It showed that unemployment had risen again to the highest level since the spring of 1942. The rise in unemployment was contrary to seasonal expectations, and was partly attributable to the number of young persons of high-school and college age seeking work.

We cannot attribute unemployment to speculative excesses or to a weak banking structure; or to the failure of wage rates to keep pace with the cost of living. Certainly, the answer can't be that the Government is spending too little. All of the standard arguments fall by the wayside.

My message to you is that we should begin at once a new campaign—a venture capital campaign. You and your associates can, out of your unusual experience and knowledge, tell Congress, in specific, understandable terms, how much your company has to invest to hire an additional employee, or install an additional machine; how much you or others who might be in a position to assume risks of enterprise would have to receive to make a dividend attractive, after taxes; what your rate of profit on a dollar's additional investment would have to be to pay such a dividend; the change in your debt-net worth ratio and the reasons why you would prefer, under more equitable tax treatment, to obtain permanent ownership funds rather than borrowed capital. And you can tell Congress why capital-gains taxes represent a mingling of two different concepts, income and capital, and why the present rate cuts into the willingness to put funds to work to bear the brunt of inevitable economic squalls and storms; tell the story to stockholders and workers, in annual reports and enclosures with dividend checks and in house organs, at social gatherings and in meetings of businessmen. No story is fraught with greater significance to the country's economic welfare.

What I propose is an all-out attack on a tax structure that is obstructing expansion and throttling incentive and initiative. Squeezed between institutional changes of a deep nature and a hostile tax structure, realistic treatment of ownership savings is demanded. When farmers were injured by forces of a general character in relation to the conditions affecting the rest of the country, farm parity was devised to correct the situation; when legislation lagged behind economic forces and labor was at a disadvantage, labor was granted the equivalent of parity treatment. Ownership, which lies at the base of the whole economic structure, is threatened. The situation must be corrected. What I am striving for, in effect, is merely parity for ownership insofar as the extraordinary fiscal situation will permit. Fortunately, strategic changes can be made that will help activate stagnant pools of existing funds and energize current savings. But these changes cannot wait.

This isn't a fight in behalf of a few imaginary absentee owners of industry; or executives who have already made their place in industry. It is a fight to encourage industry, to remove the basis for the fear that is spreading, to prevent hardening of the economic arteries.

Equity for equity capital is the slogan in this venture capital campaign. I ask you to join with me in the interest of the Nation's continued well-being.

Address by Hon. Andrew F. Schoeppel, of Kansas, Before Gettysburg College Alumni Association

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, June 16 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address delivered by the junior Senator from Kansas [Mr. SCHOEPPEL] at the annual alumni association meeting of Gettysburg College, at Gettysburg, Pa., on June 3, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am most appreciative of the opportunity of meeting with you, the alumni of Gettysburg College, tonight.

Mrs. Schoeppel and I enjoyed the drive from Washington to this historic spot in the Blue Ridge Mountains. The panorama of fertile valleys and beautiful mountains, with the unfolding of the history of our Nation throughout the day, indeed brought pleasant relaxation from the strenuous schedule of a legislator's day in Washington.

One cannot help but think in retrospect of the story that might be told by those who have passed through the halls of this college since its founding in 1832. What magnificent pages of our history could be written by the alumni of this seat of learning, which I have recently learned ranks among the 50 best colleges in America.

You may well be proud of the religious and cultural contributions made by the Lutheran Theological Seminary since 1826, and Pennsylvania College.

This heritage passed on to you places upon the alumni a responsibility to guard well the wholesome traditions symbolized by Old Dorm. Guard well against attempts to infiltrate into the halls of higher learning creeds that would undermine all that is good and sacred in our religious heritage—that would teach philosophies of hate and bigotry and so destroy our free Government.

I like the story that is told of the period during the War Between the States, of a postmaster of a village in Illinois. He probably spent almost as much time writing and reading letters as he did in sorting them for delivery because it was considered part of his duty to write letters to the boys at the front for parents who never learned to write.

And when the answers came back, often written for the boys by an officer in the field, he would read them. In those days about 20 percent of the grown men and women in the United States could not sign their names. In 1865 less than 10,000 were graduated from all the colleges and universities in this country.

The differences achieved in less than three generations is the miracle of American public education. We are now 95 percent literate. When my neighbor's boy who is now in high school graduates from college in 1955, he will be one of at least 300,000 in that year. The children of today are getting, on the average, four more years of schooling than their parents had.

They have to know more to live in this changing and difficult world. Knowledge must be the common possession of our people and we have to keep on learning as long as we live. In the schools we lay the foundation for a free and rational life.

Tonight we meet on hallowed ground, made sacred to every American 86 years ago the first day of next month. And just 86 years ago, on the 3d day of July, the most important battle of the Civil War had been won by a Union victory. It was decisive in the sense that it was the definite turning point of the fortunes of the Confederacy. It meant the preservation of the Union and the Republic. Preservation of liberties and freedoms, never before known in the history of governments.

It was on November the 19th, 1863, when the immortal Lincoln dedicated this shrine to those brave men whose supreme sacrifice contributed to that victory. The words of that great man, uttered here at that time, with the simplicity and honesty which so personified the speaker, are engraved upon

the hearts of every man, woman, and child who loves this great land of ours.

I cannot refrain, however, from quoting just a few of his words to you tonight, for they are the theme of thought that I would like to leave with you.

Lincoln said, "It is rather for us to here be dedicated to the great task remaining before us, that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion. May we here highly resolve that these dead shall not have died in vain. That this Nation under God shall have a new birth of freedom and that Government by the people, for the people, and of the people shall not perish from the earth."

Here Lincoln gave utterance to his faith that the national idea was one of constant issue, for which he had asked his countrymen, and would continue to ask them, to die.

And in three conflicts since that time the flower of the youth of this Nation has again been called upon to lay down precious lives that this Republic might remain the beacon light for freemen.

Have we, and are we, heeding the admonition that these dead shall not have died in vain?

Within the past few days throughout the Nation on Memorial Day homage was paid to our heroes of the past. On this one day patriotism and national pride were foremost in the hearts and minds of most of our citizens. I have said on this one day, with meaning, for I fear that we have too many one-day patriots among our people.

I have recently said, and I repeat—political apathy is the most dangerous and fastest-spreading disease in America today. It is the result of worshipping the golden calf of economic security. It substitutes dependency for independence. Its end product is bondage rather than freedom.

Just what is the extent of this apathy? In 1900, when it was difficult for many to get to the polls, 75 percent of those eligible got there and voted. But in 1943, when it was much easier, the percentage dropped to 63 percent. In 1944 it was 55 percent.

In 1948, it was 45 percent.

Contrast with these figures the situation where the right of franchise is fresh and new and is a prize that has been long sought and only recently attained. In Puerto Rico, at its first election last fall, 80 percent of the eligible voters went to the polls.

There was a time, in this country, when even a whole day of life was not taken for granted; much less water, shelter, a safe night's sleep. Now, by reason of a uniquely bountiful heritage, we take for granted—too much. We assume. Expect. Insist. Nowhere else in the world is this possible.

Unthinking, we accept not only the great urgencies of food, shelter, and clothes, but the whole spate of little things that make up a way of life, a pattern of security. We take for granted the protection of our locked front door; a roof to our living room; heat, lights.

We expect our children, bursting with vitality and vitamin B, to knock our hats askew with the vigor of their welcome. As breathing, we take for granted a hot bath, soap, penicillin, sodas at the corner drug store.

We assume that young husbands will make a successful future for themselves, that older husbands will retire on what, over the long years, they have put away. We expect our daughters to have an evening dress. We cheerfully assume that some decent men will be voted into public office. We know that veterans can get a GI loan, and assume that, with it, one of them will start a future United States Steel. Another will marry, and produce an Edison, a Jefferson, a Carver. We take for granted that we will not be shot, imprisoned, or have our "everything" confiscated; that our children will live to grow up.

What we forget every day, every moment, is our own history. That it was not entirely to give us these luxuries-become-necessities that those men stayed on at Valley Forge for 22 cents a day; that Lincoln did the fine, unpopular thing, unwaveringly; that over 56,000 men died in prison camps between '61 and '64; that later, half a million lay in their blood on foreign soil. It was not to guarantee us ice cream and radios that women bore children during Indian attacks, were partners in the great pioneering sweep to the West.

It is good to remember what our simple right to vote cost other human beings. Perhaps they had no thought of us; they were concerned with making their America. What they made is what we have. To take this heritage, unthinkingly, for granted, is a first step to losing it.

These facts I have given you should convince anyone that there is political apathy, because failure to exercise such a simple, yet valuable, function as voting is the first evidence of the disintegration of self-government.

I am afraid that because we enjoy the greatest freedom of any people we have become so accustomed to that freedom that we now take it as a matter of course, and expect to reap the harvest of its bounty and accept none of the responsibility of planting its seeds or cultivating the field to destroy the insidious weeds which may destroy the crop.

Yes, my friends, the weeds are growing—and as weeds grow—are growing fast.

Unless an enlightened and vigilant American citizenry plows under that growth within our body politic, we shall one day in the not too distant future find ourselves engulfed in an ideology of government unfamiliar to the American way of life.

The average American tends to think of protecting free government in terms of protecting it from violence. He fears foreign conquerors or domestic revolutionists and believes that when a free government has an adequate army or police force its security is secured as far as it is possible to assure it. Like the Chinese, centuries before Christ, who thought to preserve their civilization by building a great wall on their western frontiers, only to be conquered from the sea, this kind of thinking does not provide against the really effective way in which free governments have been destroyed in history.

Up to the time of World War II, eight important free governments had flourished and perished in the last 25 centuries. Five hundred years before Christ a vigorous, democratic government prospered in Athens. Two thousand years before the American Revolution Rome had been the center of a thriving free government. The Venetians maintained political freedom for some nine centuries in the Middle Ages, while the people from medieval Florence fought off tyranny for hundreds of years. The people of eighteenth-century France established a free government based on manhood suffrage. Although it lasted for only 10 years, it was in its day a beacon light of hope in a Europe dominated by despots. Shortly after the middle of the nineteenth century, free government reappeared in France, this time on a more enduring basis. And France became one of the great republics of the modern world.

Then it was that the Republican Government bobbed up in modern Germany for a brief period of 12 years. For a nation that had been many years under the iron heel of the Hohenzollerns, the birth of a republic in modern Germany was a notable achievement. Even in modern Italy after centuries of despotism, the people had finally managed to re-create their ancient Republic into a nation again united, only to lose it in a few fateful years.

I believe it well to point out that of these eight free governments only two were destroyed by conquest. Athenian democracy was destroyed by Philip of Macedonia in the third century before Christ, while the Third French Republic, born in 1870, perished from the sword of Hitler only a few years ago. Not one of these free governments was destroyed by revolution. History fails to record a single instance of any important free government being destroyed by revolution.

The destruction of the other six free governments was accomplished entirely within the framework of democratic processes. In the case of five, startling as the thought may be, free government passed away by the vote of the people. Or perhaps it would be well to say by the failure of the people to vote. History thus presents the strange paradox of despotic government created by consent of the governed, a result as strange as if an absolute monarch had voluntarily relinquished his despotic powers and conferred sovereignty upon the people. Six important free governments in the past 25 centuries have been destroyed, not by war or revolution, but by internal economic conditions.

By giving consideration to the past of history, is it not therefore proper for us to consider on a down-to-earth basis our own Nation today? Is it not proper to consider what we as citizens owe to this Government, in order that we, too, may not be recorded in the history of the future of having failed our responsibility and by our own consent changed the form of government which we love so well? The kind of government which, Lincoln said, the dead shall not have died in vain to preserve for us and for posterity.

The cross currents of our national life and world affairs are such that there was never a more urgent need than now for American citizens to assume a responsible role in national politics. There is a proper place for you, the alumni of Gettysburg, and for those who graduate this year, in the political scene of our country.

Good citizenship does not alone mean the paying of taxes, contributing to your community fund, membership in your church, or supporting your chamber of commerce. Good citizenship demands your active participation in government in some form. Too often laymen take too lightly, not only their responsibility as citizens, but also their job in national politics. I am not speaking of politics in the narrow sense, but rather in the broad sense of government, involving the enactment and administration of laws. It is a fact, nevertheless, that Government policies are projected, tested, and weighed in the political arena.

It is in the political arena that the spotlight is turned on the stand taken by parties and by candidates. It is in the political arena that citizens endorse or reject, the policies espoused by parties or candidates.

It is for that reason that I have said that our form of government can be changed by consent, by the vote of the people. In fact, by a minority of the people, if the present apathy continues to grow. It is up to the citizens of the Nation to decide whether they want to take more responsibility in politics and have a say on how things are run or whether they want to give centralization a free and unfettered hand. If the citizens make the latter choice they can blame nobody but themselves for what happens.

From this fine college, steeped in fine traditions of the American way of life could come many young Americans who could in public life leave behind them a monument of service to the Nation and a symbol of achievement for their college, but too few young Americans, of the sturdy stock you have here, make the choice of such a career.

It is the fashion with many to discourage the young from political activity. The common advice is "politics is dirty, keep out of it. You will never make any money. It is not a good career."

UNIVERSITY OF MICHIGAN LIBRARIES

Perhaps the remuneration is low as compared with other walks of life. Even so, part of the reward remains in a sense of making the most progressive and enlightened form of government prove itself capable of meeting the people's needs.

We need good, clean, young Americans who are willing to make public service a career. Not the Hans Freistadts, who embrace the Communist philosophies and receive their education from funds doled out by the American taxpayer. This one example, my friends, proves all that I have said tonight.

Let me give you an example of one fine young American of my State of Kansas, who was turned down for enlistment in the Navy during the war. Intent upon service to his country in time of crisis, he joined the merchant marine and made many trips across the submarine-infested waters. With the event of peace he sought to return to college. He could receive none of the benefits under the GI bill of rights, nor did the Government have any scholarship for him, but in the case of Hans Freistadt, son of one of the European Communist leaders, himself a Communist writer and adherent, a scholarship of $1,600 a year was granted, under the jurisdiction of the Atomic Energy Commission.

Need I say more in a plea for some semblance of activity by the citizens of this Nation, that "these dead shall not have died in vain?"

We have a great country and we should be grateful to God for it.

We cannot expect to succumb to all of the isms and hand-outs of a paternalistic government, and still have our freedom.

Everybody craves security. But there are two kinds of security and as surely as one leads to success—the other leads to failure. Static security is the illusion that something outside yourself can protect you. Static security makes people bury their one talent in the ground. It causes them to build Maginot lines. Slaves have static security. So did the serfs. So does the oyster which has only to open its shell and food comes to him. But man was not made for this kind of security, which saps initiative, destroys ambition, makes men fearful, and literally "kills their souls."

The other kinds of security is dynamic security. It is the security a man feels when he has the absolute knowledge that he can make his own way. It is the security in adventure, the security that the pioneers felt when they founded this country. They had very little in the way of static security—no bank accounts—no Government to pay them old-age pensions—no stocks and bonds—no guaranteed yearly wage. What they did have was the spirit of adventure, within themselves—the determination to achieve—and the open fields and prairies—a "land of opportunities" ahead of them.

While the oyster is the symbol of static security, the eagle is the symbol of dynamic security. He lives on the crags, he flies hundreds of miles in search of food. And it is fitting that the eagle is the symbol of our country.

For it was dynamic security that made our country great. The right to express our own individual powers, the right to do and dare, to adventure and achieve, is what makes life worth living. Yet there are those who would sell us the idea of static security, of looking to the Government or some other protector of our "security," instead of within ourselves. But when we accept that sort of false security from any outside source, we always give up a portion of our real security inside us. This is a poor bargain, as any man who ever sold his birthright for a mess of pottage can testify.

This is a time for the rebirth of American traditions. A time to protect our inalienable rights of life, liberty, and the pursuit of happiness, against the designs of socialism, and communism, or the other isms, by whatever name they may be called.

The time to esteem the sacrifices and triumphs of those who have gone on before us, to acclaim the good in America, which lightens our day. A time to prepare the way for a greater America, which by God's grace shall be hereafter. A time to again dedicate ourselves that those dead shall not have died in vain.

Appropriations for the Central Valley Project

EXTENSION OF REMARKS

OF

HON. THOMAS H. WERDEL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1949

Mr. WERDEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement presented by Edson Abel, assistant director, public-utilities department, inserted by request of members of the California Farm Bureau Federation, to the Subcommittee on Interior Department Appropriations, Committee on Appropriations, United States Senate:

Mr. Chairman and members of the committee, my name is Edson Abel. I am an attorney by profession and by occupation the assistant director of the public-utilities department of the California Farm Bureau Federation. I am here representing that organization in connection with appropriations for the Central Valley project and with a plea for expedited construction of the irrigation features of that project and lower and more realistic water costs for the irrigators so as to bring it within their actual ability to pay. For record purposes, the California Farm Bureau Federation is a nonprofit corporation representing the voluntary association of 51 county farm bureaus in the State of California. These county farm bureaus have an aggregate voluntary membership on an annual renewal basis of over 52,000 farm families. The California Farm Bureau Federation was organized and is maintained for the purpose, among other things, of representing, protecting, and advancing the social and economic interests of its members, their members and farmers generally in the State of California. The public utilities department is one of the service departments maintained by the federation for the achievement of these objectives, and its personnel has been engaged for over 25 years in obtaining power, telephone, water, and transportation services for its members and other farmers of California at the lowest possible lawful rates.

The interest of my organization arises from the fact that over 9,000 Farm Bureau families carry on their farming operations within the five counties of Fresno, Madera, Kings, Tulare, and Kern, which, roughly speaking, comprise the area the relief of which is supposed to be the primary objective of the Central Valley project. I say "supposed" because there have been many things happen which create doubt that this objective still retains its original status so far as the construction agency is concerned. The interminable delays which have characterized the construction of the irrigation features and the absence of any indication of a change in policy have dimmed the hope of immediate relief. Virtually all of these 9,000 farm families are vitally concerned in early access to supplemental water supplies as in all too many cases, their very existence is contingent on speedy relief.

As a preface to my remarks, I want to make it perfectly clear that what criticisms I subsequently voice do not in any way refer to the Congress or to any of its committees. The people of California are extremely grateful for the generous treatment which this committee and the Congress have accorded the Central Valley project. Funds have been provided faster than they have been spent by the Bureau of Reclamation and the fact that the delivery of water from the project is no nearer than it is today is not in any way due to any stinting on the part of the Congress. We are deeply appreciative of that treatment.

The five-county area which I mentioned needs water and needs it desperately. The unprecedented drought of last year aggravated a situation which had already progressed beyond the critical stage. The need for water to take the place of the usual rains caused still larger draughts upon water supplies already receding beyond economic pumping lifts. This year the snowpack in the Sierras east of the San Joaquin Valley is considerably better than it was last year but the rainfall situation in the valley is worse. The city of Fresno is fairly representative so far as rainfall conditions in the southern San Joaquin Valley are concerned. The latest reported figures from the Weather Bureau station there, as of May 26, 1949, are: seasonal rainfall to date, 6.66 inches; normal rainfall to date, 9.26 inches; seasonal to date last year, 7.57 inches. Thus, the farmers in that area have less natural irrigation than they had last year and that was about the worst of record.

This drought situation has been recognized, seized, and dilated upon by the publicity agents of the Bureau of Reclamation for its own purposes but so far there has been no indication of any effort by the Bureau to accelerate its irrigation construction program to take care of this urgent need. This easily could be accomplished. The irrigation facilities still to be constructed readily lend themselves to sectionalization. Congress has always supplied ample funds as is shown by the fact that from April 8, 1935, to June 30, 1947, the average annual unexpended balance of appropriations to the Bureau of Reclamation for the Central Valley project was over $12,000,000. The only thing lacking apparently is inclination on the part of the Bureau of Reclamation to hasten the actual delivery of irrigation water.

In its justification to the Congress in 1944, the Bureau of Reclamation said the Friant-Kern canal could be constructed in 2 years. This work started in September 1945, and here nearly 4 years later, it is not yet half done. There are over 40 miles of this ditch untouched and the Bureau has announced that it will not ask for any bids on this last stretch until December 1949. This new statement is to be contrasted with its statement on March 4, 1947, at the hearings before the House committee that this canal would be completed in 1949.

The story on the Delta-Mendota canal is a similar one of dawdling and dilly-dallying. This is one of the key units in the project. Commissioner of Reclamation Straus told the Senate Committee on Appropriations in 1947 that the Delta-Mendota canal had to be finished and in operation before any water could be delivered from the Friant-Kern canal. As of the first of this year, the canal was only 20 percent completed. The Delta Cross Channel is the conduit through which Shasta water is to be conveyed from the Sacramento River across the Delta to the Tracy pumps; thence to be lifted to the Delta-Mendota canal. It is an essential unit in the plans. All of the estimates of the Bureau of Reclamation for construction time on this unit say that 4 years will be required to complete it. As of

now, they haven't even started on its construction.

It was this dilatory construction record that caused the adoption over a year ago of a policy resolution by my organization which I now offer for the committee's consideration. It was adopted by the State delegates from the 51 counties comprising the California Farm Bureau Federation at their annual meeting in November of 1947. Voting on all resolutions of this nature is by the delegate body composed of farmers elected by the 51 county farm bureaus, one from each county organization. This resolution reads as follows:

"COMPLETION OF CENTRAL VALLEY PROJECT

"The Central Valley project had its inception in the increasing and critical shortage of water for irrigation in the San Joaquin Valley. This project has been under construction since 1935 and present plans of the Bureau of Reclamation do not include the delivery of any water for irrigation in the areas of critical shortages until 1952. The hydroelectric-power feafeatures of the project were included in the project for the purpose of financially aiding and assisting the other purposes of the project.

"We insist that the long and unduly delayed delivery of irrigation water in the central valleys be expedited beyond the present program and to the greatest possible extent and that other authorized Federal water-conservation and flood-control projects in the central valleys be completed at the earliest practicable date.

"Irrigation is the primary objective of the Central Valley project and the basic law authorizes the inclusion in the project of hydroelectric-power facilities for the purpose of financially aiding the project.

"We oppose the expenditure of any funds for the construction of electric-power facilities which will reduce the financial aid to the project which can be derived from hydroelectric-power developments."

As stated in the resolution, the Central Valley project is the solution developed by California after many years of study to alleviate the critical water shortage of the southern San Joaquin Valley.

The responsibility for the construction of this great project was enthusiastically assumed by the Bureau of Reclamation in 1935. It has been at the job ever since that time and has had all the money it could spend, but aside from limited deliveries of water to Madera and Contra Costa Counties, the extensive agricultural developments for whose sake the project was originally conceived have as yet received no water. And what is more, a tally of the actual construction record, as of February 1949 shows that the strictly irrigation features, viewed as a whole, are less than one-third done. These are shocking and disheartening facts to irrigators who have placed their faith in their Government.

Under these circumstances, it is our position today that the situation demands drastic remedies. With that in mind it is our plea that generous appropriations should be made for the completion of the irrigation and power-generation features of the Central Valley project and that no money at all be provided for transmission lines and facilities, at least until the project's irrigation obligations are being satisfied. Our reasons for that recommendation are:

1. The Bureau of Reclamation has shown it has neither the inclination nor the ability to press with the required vigor more than one phase of this project at a time.

2. With only the slightest encouragement, it will, more than ever, concentrate its attention on the commercial power system which it is seeking to establish and will neglect the primary purpose of the project—irrigation.

3. The present method of disposing of Shasta power is bringing in more net revenue to the project than any other method suggested but if the Bureau is permitted to establish its commercial power system, the solvency of the project will be in serious jeopardy.

4. The continuance of the present method of disposing of Shasta power will not only assure the solvency of the project but will also permit power revenues to carry out their lawful assignment of financially aiding the project.

In support of the first thesis, we have only to point to the dismal construction record so far made to which we have already alluded, and to the known gloomy prospects for the future. The Bureau has been dividing its attentions in the past between irrigation and power, with the latter receiving the major consideration. The record discloses the result.

The second thesis also is sustained by the record. The Bureau of Reclamation has been so obsessed with the creation of a Government-owned commercial power system operated by the Bureau of Reclamation that it has diverted to that objective all of the funds and attention it was possible to so apply. That has been the major objective of the Bureau in connection with the Central Valley project virtually ever since it took over the project. It has never needed any appropriations to spend a large amount of its time and overhead on its power pet. It has even defied Congress and used funds supplied for other purposes for the building of transmission lines. During this period, it has also compiled its record of dawdling and dillydallying in the construction of the irrigation features.

The irrigators are being forced to pay dearly because of a bureaucratic obsession and are faced with mounting penalties unless the Congress takes the necessary action. It is a foregone conclusion, based on experience, that the irrigation phases of the project will receive less attention than ever if Congress fails to confine the Bureau of Reclamation to its proper channels of activity. The most detrimental action that could be taken, so far as the irrigation phases of the project are concerned, would be to appropriate funds for the Central Valley project without specific allocations. That would discount in toto all of the promises made by the Bureau as to completion of the irrigation features.

With all due respect to the House, it took the action best calculated to encourage further delays in the construction of these irrigation features. We do not quarrel with the amount of money but it was appropriated to the Bureau of Reclamation for the Central Valley project in a lump sum which is tantamount, in the light of the record, to a green light on all of its commercial power system aspirations. Under that arrangement, irrigation will be short shrift indeed.

Turning to the third thesis, the arrangement under which Shasta power is now being disposed of is bringing in, and will result in, more net revenue than any other proposed method of handling. The purpose of the inclusion of the transmission lines, in the first instance, was to assure a satisfactory selling price for Shasta power. They were intended to be a club to persuade power purchasers to pay fair prices. We would be the last to suggest that this club be discarded. The potentiality of these transmission lines has done a very fine job because they have caused the present purchasers to pay a price which gives the project more net revenue than it would receive under any other proposal so far made. And the Bureau of Reclamation wants to throw that revenue in the ashcan because it conflicts with its commercial power system.

It has a demand and energy rate of a postage-stamp character at which it offers to deliver power f. o. b. any point in an area approximately 250 miles square. This is the rate at which the power is now being sold to the private utility at Shasta substation, a point about 25 miles from Shasta Dam. The Bureau of Reclamation is violently opposed to this arrangement and has proposed to the Congress that it be given millions of dollars for the construction of transmission facilities so that it can obtain, 200 miles and $77,000,000 away from Shasta substation, the identical gross price per kilowatt-hour it is receiving now at Shasta substation, in entire disregard of additional costs of investment, operation and maintenance, and very substantial and unavoidable transmission losses.

The Bureau stands all of these charges in order to sell the energy, 200 miles and $77,000,000 farther away, at the identical gross price per kilowatt-hour it now receives and can get in the proximity of Shasta Dam. It is a most fantastic proposal, violative of every principle of economy and sound business. Only an obsessed bureaucracy with unlimited access to a public treasury would consider it for a moment.

We have lately heard that the voice of economy is becoming louder in the Halls of Congress. This is a rare opportunity for that voice to be heard and one in which the difference between economy and abject squandermania could not be more strongly high-lighted. The Bureau's program is simply a case of spending more millions so as to make absolutely sure of getting less revenue.

Furthermore, sight cannot be lost of the fact that the additional salable power made available by the proposed steam plant cannot be produced for the price at which the Bureau proposes to sell it. The proposed unit is mainly for stand-by or firming service and it cannot be used to any great extent except to fill out the demands on Shasta power. Compared with its capacity, its actual production of salable energy will be relatively small. In other words, the cost of fuel for that plant will make the small amount of power it produces so costly that the rest of the power operations will have to subsidize its production.

There is another aspect of this matter which demands attention. The Bureau of Reclamation proposes to set up and operate a Government-owned and bureaucratically operated electric power system. This system will have for disposal to the consuming public the power generated from an installed capacity of approximately 460,000 kilowatts. When in operation, this will be roughly about one-sixth of the serviceable capacity of the competing privately owned power company which serves the central valleys of California. The energy from the Government-owned facilities will be sold, according to Mr. Ben W. Creim, regional power manager of the Bureau at Sacramento (see hearings, fiscal year 1947, p. 319, February 19, 1946), at a rate which will save the favored consumers "some $2,500,000 per year on their power bills." In other words, approximately one-sixth of the power consumers in the central valleys area are to be selected by the Bureau of Reclamation as the recipients of an annual governmental beneficence of $2,500,000 while the other five-sixths will be left to obtain their service from the privately owned utilities and through them and otherwise will pay taxes to support the gratuities showered on its personal selectees by the Bureau of Reclamation.

Perhaps to avoid this rank favoritism to those selected by the Bureau to be the recipients of governmental beneficence, this Government is prepared to go further into the power business and put all consumers in the areas involved on the same preferred basis. Otherwise, what answer can there be to this unexampled generosity to only a selected few of a given class.

UNIVERSITY OF MICHIGAN LIBRARIES

With reference to the fourth thesis that, if the present revenues are continued without diminution the irrigators could be given water at substantially lower rates than are now proposed, a little background is necessary for a complete understanding of the proposition.

The rates for irrigation water now offered by the Bureau of Reclamation to Central Valley project irrigators are $3.50 per acre-foot for class I water and $1.50 for class II water. The latter is not firm water and is available only occasionally. Both of these prices are canalside and the irrigators must take the water there and pay the additional expense involved in conducting the water from the canalside to its place of use on the land. This additional cost varies from $1 to $5 or more per acre-foot. Thus, at the place of actual use, it is far from cheap water. In fact, with a few exceptions, it is probably the most expensive water available to California agriculture.

The $3.50 per acre-foot figure was arrived at by the Bureau of Reclamation after an exhaustive study by it of the irrigator's ability to pay and represents the maximum which the Bureau thought the irrigator could afford. The figure has been seriously criticized as not including items of expense customarily paid by irrigators but its major defect lies in the fact that this ability to pay was calculated on 1939–44 farm prices. One does not have to be an economist to know that the average prices prevailing on all agricultural commodities during that period were more or less inflated and could not possibly serve as any sound basis for the calculation of ability to pay in any more normal period. The Bureau, in its report to the Congress (H. Doc. 146, 80th Cong., 1st sess., pp. 21 and 22), concedes that $3.50 per acre-foot is a maximum figure and admits the probability that a lesser figure will more closely approximate the actual ability of the irrigators to pay.

In passing, it is interesting to note that under the Bureau's program the irrigators whose relief was supposed to be the original and primary purpose of the project, are to be required to pay to the maximum of their ability while the power users are to financially aid the project by getting their electricity at the lowest possible cost.

Now if the present method of disposing of the project power, which is satisfactory to everybody except the Bureau and its cohorts, is unchanged and the present price is maintained, project water can be sold to irrigators at rates which are less than half the presently proposed charges. Firm or class I water could be furnished at not more than $1.50 per acre-foot canalside, and class II water at 65 cents per acre-foot even if interest on the investment in power facilities was returned to the Federal Treasury. The Bureau does not propose to do this and in that case the cost of water could be reduced to $1.25 and 55 cents per acre-foot for class I and class II water, respectively.

In 1937, Congress authorized the inclusion in the project of power facilities for the purpose of financially aiding the project. Without the exercise of some strict congressional guidance it is very evident that anything derived by the project from its power facilities will be on the debit side and that the financial aid mentioned in the authorizing statute will be of a minus character.

We believe that some drastic action by the Congress to expedite this construction work on the irrigation features of this project is overdue and badly needed. The necessities of the irrigators seem not to have influenced the Bureau of Reclamation. We can only hope that the Congress will take a different and more sympathetic view and that it will confine the Bureau to irrigation construction in the Central Valley project until that part of the project is done.

We deeply appreciate the time and consideration accorded by this committee to this presentation of our position.

The Coplon Trial

EXTENSION OF REMARKS
OF
HON. CECIL R. KING
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1949

Mr. KING. Mr. Speaker, on Tuesday, June 14, I addressed the House of Representatives and answered the criticism by a colleague of the Attorney General's handling of the Judith Coplon espionage trial. In connection therewith I submit an editorial contained in the Washington Evening Star under date of Wednesday, June 15, and an editorial contained in the Washington Post under date of Tuesday, June 14, which I believe very concisely analyzes the issues:

[From the Washington Evening Star of June 15, 1949]

CHOICE OF LESSER EVILS

The jury will have to decide the guilt or the innocence of Miss Judith Coplon. But two decisions made in the course of the trial seem to overshadow in importance the question before the jury.

One was Judge Reeve's decision that the Government must produce all of the evidence upon which it relied in the prosecution or drop its case. It could not suppress part of the evidence on the ground that it would endanger national security. As far as this principle is concerned, it is hard to see how the judge could have decided otherwise.

The other decision was Attorney General Clark's, to go ahead with the case despite resulting embarrassment to the Government. And here again, it is hard to see how Mr. Clark could have decided otherwise. For such a decision would have served as notification to spies that their safety from prosecution lay in the importance of the documents they stole.

If the judge was at fault in his decision, the fault was in one of the refinements of the principle at stake, rather than the principle itself. Undoubtedly he was correct in saying that the Government could not withhold from evidence some of the data slips—brief, index-like references to complete FBI reports—alleged to have been found in Miss Coplon's possession. For, as the judge said, the mere act of withholding them on the claim of their importance to the Government, would prejudice the defendants' case.

But the Government had good reason to suppose that when it came to the documents themselves, only parts of which the data slips referred to, the judge would exercise his judicial responsibility of deciding how much of these documents had any relevant bearing on the case. A great mass of matter contained in the documents had nothing to do with the data slips. That the judge permitted all of this material to be brought in, thus suggesting a decision of his own that all of it was relevant, came as a surprise.

That was when Mr. Clark had to make his final decision. He was naturally aware of the embarrassment to the Government—especially to the work of the FBI—which revelation of these voluminous documents, filled with gossip, hearsay, and innuendo against innocent citizens, would entail. He also knew that their publication would undermine some of the past work of the FBI by revealing methods and sources of information. But the criticism he has encountered for going ahead with the case, once he was powerless to prevent revelation of this matter in the prosecution, is small as compared with the criticism he would have received had he dropped the case. And dropping such a case, in the Star's opinion, would have been a great mistake. It seems incredible that the Government has become so enmeshed in the web of its own secrecy that it must admit paralysis in the prosecution of suspected crime against itself.

Caught in the middle of this dilemma, of course, and with no control over decisions made, has been the FBI. Its Director, Edgar Hoover, has nothing to apologize for. No one has fought more consistently or with greater determination to protect the confidential nature of FBI records. He knows a great many of the records have no value as evidence in a court of law, that they contain highly damaging innuendoes concerning innocent people. Like the millions of fingerprint records on file in the FBI, much of the documentary information channeled into FBI files will never be referred to unless circumstance prompts detailed investigation. And the record of the FBI's own investigations shows that the FBI does not depend on hearsay and gossip. That some of this unevaluated assortment of information found its way into print is highly unfortunate, in its effect on FBI work and for its smearing effect on innocent bystanders.

But in balancing all the risks involved in the decisions made, this risk of revealing the secret FBI records may have been the lesser one. Both the citizens who have been unjustly smeared and the FBI, some of whose secrets have been revealed, will recover. But we have not compromised the principle of a fair trial or the Government's determination to prosecute suspected spies.

[From the Washington Post of June 14, 1949]

GOSSIP AND THE FBI

Dr. Edward U. Condon's assertion that "any American can be slandered, his name ruined, his career blasted by any other person who chooses to relay malicious gossip to the FBI" is a charge of the gravest sort. If true, it means that we have traveled a long way toward the loss of cherished liberties. If not true, then Dr. Condon himself is throwing mud in much the same fashion that the Committee on Un-American Activities threw mud at him.

It is an unquestioned fact that the FBI assembles a great deal of gossip and unsubstantiated evidence. When this is dragged out into the light of day the reputations of innocent persons may be gravely damaged. Dr. Condon has good reason to be sensitive over the malicious use of such information. But misuse of unsubstantiated evidence does not alter the fact that every investigator must take advantage of hearsay and gossip in trying to track down the facts. An FBI agent who did not record clues, tips, and suggestive facts bearing upon an important case would not be worth his salt.

It is well to remember that the FBI does not investigate every complaint made to it. If a complaint appears to be merely malicious, no investigation whatever is made. As we understand the operations of the FBI, the first question asked when a complaint comes in is whether, if the report should prove true, the conduct complained of would constitute an offense over which the FBI would have jurisdiction. If so, an investigation is made. The agents who conduct these investigations are sometimes indiscreet in the type of questions they ask, and it seems to us that they should exclude a vast number of trivialities that have no bearing on the case at hand. But it is a fact that the hearsay and evidence they collect are overwhelmingly favorable to the average individual investigated. The favorable and unfavorable facts go into the file together.

More important is the fact that the FBI's files have heretofore been kept strictly confidential. A number of criminal charges related to security have been dropped because of fear that the court would order secret data spread upon the record. In Chicago an FBI agent has been cited for contempt for refusing to yield a confidential

file. And it is fresh in the public memory that the Department of Justice resisted the opening of FBI files in the Coplon case. If Dr. Condon feels that an apology is due his wife in the light of these facts, he should obviously seek it from Judge Reeves instead of FBI Director Hoover.

The secret FBI report incidentally "indicated that Emily Condon and Morton Kent have met concerning Sotiroff at which time Kent was furnished with Sotiroff's address in New York." Sotiroff, suspected of being a Russian agent, is the subject of the report. The report itself suggests that Mr. Kent may have been attempting to use Sotiroff as a sales entry to the United Nations. In the light of this and Dr. Condon's explanation, it may be assumed that nothing more than a prospective business transaction was involved. But any investigative agency under obligation to cope with the widespread Soviet espionage in this country would be naive to close its eyes to facts of this sort. Certainly every conceivable safeguard ought to be taken to prevent the disclosure of such undigested bits of information that may reflect upon the reputations of innocent citizens. Nevertheless the FBI could not ignore such data without failing in its duty in connection with our national security. In this instance it looks as if the previous injustice to Dr. Condon has led him into making excited charges that only confuse a very grave problem.

Deplores Reduction in Funds for Merchant Marine Academy

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1949

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include an excellent letter from Hans Isbrandtsen, highly regarded and successful merchant and shipowner, which stresses the importance of maintaining the high standard of the United States Merchant Marine Academy at Kings Point, N. Y. This letter should prove to Members of the House of Representatives that they voted right when they restored funds for the Merchant Marine Academy when the independent offices appropriation bill was considered.

The letter follows:

NEW YORK, N. Y., *June 14, 1949.*
Hon. PAUL W. SHAFER,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN SHAFER: I am sending this letter to you * * * to set before you my views with respect to the reported reduction in the allocation of funds for the United States Merchant Marine Academy at Kings Point, N. Y. At least I have understood from reports circulated in the press and in the industry that a substantial reduction was or is contemplated.

You may have attended, as I did, the graduation exercises of this institution and noted that there were young men from every one of the States, including undoubtedly some from your own.

The Academy, as we know, was built up from scratch at a time when the country found itself in urgent need of young men who could be trained to fill the breach and carry on with the industry. From the excellent results achieved it has more than justified its inception and continued existence.

My concern, along with others, is always glad to take on the graduates of the Academy for duty aboard our ships as well as for shore duty within our organization, and on our part we have not had a single case yet where the excellent training they received at the institution did not carry over. The whole plan of the Academy as it has developed has apparently attracted a high grade of our young men.

I believe that I am in a position to fully evaluate and appreciate this because I happen to be an American merchant and the owner of American-flag vessels engaged in the foreign commerce of this country. I have no ax to grind politically or otherwise, having enough to contend with in my own affairs with international competition such as it is today and, incidentally, am not a recipient of subsidy or favor of any kind. I am interested to see that our American flag is held high wherever it is carried and that the whole business of shipowning and the foreign commerce of this country is conducted and maintained on the highest plane possible and pursued in an energetic and honorable manner.

Carrying this out, so far as my part has been concerned therewith, has been no sinecure in these turbulent years since the war. To exponents of restraint upon such institutions as the Academy on the grounds that the young men coming from it would take opportunity away from seamen or transport workers now on the beach, let me say that the best way I see to avoid that is to stop the decline in the industry.

And to what is this decline due? Our foreign seafaring neighbors, such as Holland, England, Belgium, and the Scandinavian countries (and I suppose Germany and Japan will put in their appearance shortly), are coming to these shores with ever-increasing numbers of new, well-built ships, which are well-officered and manned, and all the while new buildings in this country have come to a virtual halt. One of the causes of this decline has been the left-handed prohibition that the American shipowner may not set aside reserves by which new and replacement tonnage could be built, and another contributing factor, in our opinion, has been the sort of union leadership which leads its flocks into economic blind alleys from which there are no out for themselves or the industry.

As a result, we here keep working down (as a young visiting Finn expressed himself to me lately) while the others work themselves up.

And now, indeed, we appear on the verge of begrudging the cost of training a few young men each year from each State to be fitted properly to go out and represent this country with its far-flung interests, and at a time when we know that every effort is being made by our maritime neighbors to put their young people in a progressively better position competitively.

I can tell you that the percentage of indifferent, negligent people on our crew lists in these latter years has been altogether too high, and if that condition, which we have had on many American vessels during this period, should be allowed to continue, then we might just as well call it a day. Conditions aboard at times have been such that one wouldn't countenance them for a minute in one's affairs here at home. I could relate instances that would get your temperature up, too, as it did ours, but I do not wish to lengthen this letter.

It has always been in this country, I think, that when things got bad enough somehow we woke up. The efforts on the part of those who brought about the founding of such institutions as this Academy must have been instinctively inspired with that traditional thought in mind. Subsidies and that kind of thing are not worth looking forward to as a means of setting things permanently to rights. But getting new blood into the industry distinctly is worth while. The men who man the ships that carry the foreign trade of this country to a great extent are what we are judged by abroad, and it behooves us to put our best foot forward. The Academy makes a contribution hereon indeed.

I personally would be the last to advocate unnecessary public spending, but believe that the training of good people to do a good job, along with the instilling of moral concepts and the fundamental American principles, is something which is not expense, but a good national investment.

These are indeed confused times, with accounts almost daily in the newspapers of our huge expenditures for this and that purpose abroad—western Europe, the Far East, the Mediterranean—even now reaching out to complete rehabilitation of our late adversaries, a part of which will undoubtedly go toward training of their coming generations. This being so, we ought not to be so unselfish as to place our own youth in the background and cut off the comparatively insignificant amounts required for much-needed facilities here in our own front yard. Our thought ought not to be to curtail such institutions, but to enlarge upon them and give them plenty of rope to assist in our country's progress.

I may be writing this somewhat expressively, but I believe so sincerely that our future is in the hands of these young people that I do not hesitate to express myself forthrightly. Their opportunity, which is also ours, should not be denied them.

Sincerely yours,

HANS ISBRANDTSEN,
President, Isbrandtsen Co., Inc.

Colonel Vogel Will Be Missed

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1949

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include an editorial from the Buffalo (N. Y.) Evening News of May 28, 1949, which pays tribute to Col. Herbert D. Vogel, Buffalo district engineer, who has been reassigned to the Panama Canal Zone.

COLONEL VOGEL WILL BE MISSED

The transfer of Col. Herbert D. Vogel to Panama is one occasion on which the "tour-of-duty" policy of the Army Corps of Engineers will be thoroughly regretted by every Buffalonian who came in contact with his office during his 3½-year "hitch" as Buffalo district engineer. The Army has never had a more competent representative here, nor one more keenly aware of, and interested in, the city's problems. In a very special way, Colonel Vogel has exemplied the highest type of Federal-local cooperation in approach to mutual problems.

Careerwise, this assignment to Panama represents a distinct advance for Colonel Vogel. His work will be primarily civilian and his capacity, as engineer of maintenance, will be that of an understudy in line of succession to the governorship of the Canal Zone, an appointment which normally becomes the next tour of duty for the man occupying his new post. Buffalo wishes him every success, and—Army affairs being ordered as they are—it can only hope that his successor will be of his same high caliber. In Colonel Vogel, the Corps of Engineers has an officer, a gentleman, and a civilian-minded public servant of whom it can well be proud.

UNIVERSITY OF MICHIGAN LIBRARIES

Buffalo will indeed miss Colonel Vogel. However, it has been fortunate in securing as Colonel Vogel's replacement a man of wide and varied Army experience, Col. Frank H. Forney, who is rounding out his twentieth year as a commissioned officer in the Army. He is being assigned from the office of the Chief of Engineers in Washington, D. C. He has been stationed in many parts of the United States and, during World War II, was commander of the One Thousand One Hundred and Thirty-second Engineer Combat Group in England. He was assigned to the British Second Army which was preparing to cross the Rhine River into southern Holland and after the war he became engineer for the United States forces in Austria.

I join with all Buffalonians in welcoming Colonel Forney and his family to Buffalo and I sincerely hope that his tour of duty in our city will be a pleasant one.

How the Taxpayers of Each State Will Share in the Cost of the Proposed 1950 Foreign-Aid Programs

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1949

Mr. REED of New York. Mr. Speaker, I am receiving many communications from my congressional district, and from other areas of the country, urgently requesting that Government spending be reduced. This is not a new program for me. I have been voting against these wild and reckless expenditures that have now brought the Government to a deficit.

In view of the fact that Government spending is not quite so popular as it was some time ago, I feel that the people should have some more pertinent facts with reference to this Democratic raid on their pocketbooks. The Council of State Chambers of Commerce has furnished a table showing how the taxpayers in each State will share in the cost of the proposed 1950 foreign-aid programs. Let me emphasize and reemphasize that the cost to the States, respectively, is only for the 1950 foreign-aid programs, and does not account for the billions upon billions of dollars heretofore spent for foreign aid.

I want to also stress the fact that these are not loans—these are dollars right out of the taxpayers' pockets. I might also mention that each of these dollars donated to foreign governments will have to be earned by the sweat of the brow of the persons who work.

Now, then, I am inserting, under leave heretofore granted, the cost not only to other States, but especially the cost to New York State, which, for the year 1950, will amount to $772,591,000. I might also mention that this extracting money from the pockets of the taxpayers will continue for years if the present crew of spenders are permitted to remain in office.

I mention again that these are not loans, but outright gifts. There is no use of talking economy in Government with billions of dollars going through a pipe line into 17 foreign countries.

	Percent allocable to each State [1]	Amount to be borne by each State
United States total	100.00	$4,990,900,000
Alabama	1.14	56,896,000
Arizona	.34	16,969,000
Arkansas	.64	31,942,000
California	8.32	415,243,000
Colorado	.81	40,426,000
Connecticut	1.73	86,343,000
Delaware	.40	19,964,000
Florida	1.29	64,383,000
Georgia	1.41	70,372,000
Idaho	.30	14,973,000
Illinois	7.88	393,283,000
Indiana	2.23	111,297,000
Iowa	1.48	73,865,000
Kansas	1.16	57,894,000
Kentucky	1.17	58,394,000
Louisiana	1.12	55,898,000
Maine	.45	22,459,000
Maryland	1.70	84,845,000
Massachusetts	3.57	178,175,000
Michigan	4.68	233,574,000
Minnesota	1.85	92,332,000

Wisconsin	2.06	102,813,000
Wyoming	.16	7,985,000
District of Columbia, Hawaii, and Alaska	1.28	63,884,000

[1] Percentage of total Federal taxes borne by each State.

Federal Educational Finance Act of 1949, S. 246—Amount To Be Paid and Amount To Be Received by Each County in Ohio

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1949

Mr. McGREGOR. Mr. Speaker, the estimated cost of Senate bill 246 to the taxpayers of Ohio, $15,629,000, is based on the average of the total Federal taxes paid by Ohio taxpayers—approximately 5.83 percent of the total. This figure applied to $268,083,000, the estimated cost of the bill, yields $15,629,000, as the portion to be paid by Ohio taxpayers.

The amount to be returned to the State of Ohio under the provisions of S. 246, $7,320,000, is determined by the formula incorporated therein.

In determining the share of the cost to be borne by each county, the proportion of the total Federal taxes paid by each of the 88 counties to the total for the State was applied to the $15,629,000 previously determined as Ohio's share of the total cost.

The amount to be returned to each county is based on the percentage of the population of Ohio, residing in each of the 88 counties as of January 1, 1949. This percentage was applied to the $7,320,000 previously determined as the amount to be received by Ohio under the formula incorporated in Senate bill 246.

Federal Educational Finance Act of 1949 (S. 246)—Amount to be paid and amount to be received by each county in Ohio

Episcopalians Worship With 1549 Rite

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1949

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article and editorial from the Buffalo Courier-Express of June 10, 1949:

EPISCOPALIANS WORSHIP HERE WITH 1549 RITE—ORIGINAL PRAYER-BOOK SERVICE FOLLOWED

Commemorating the four hundredth anniversary of the English book of common prayer, Episcopal clergy and laity of the diocese of western New York filled St. Paul's Cathedral yesterday morning for a choral eucharist which followed word for word the service ordered in the 1549 prayer book for "the Supper of the Lorde and Holy Communion, commonly called the Masse."

The mass took place at 11 o'clock in the morning and was celebrated by the Very Reverend Edward R. Welles, dean of St. Paul's and president of the American branch of the Anglican Society, under whose auspices the anniversary observance was held.

BISHOP DELIVERS SERMON

The Right Reverend Austin Pardue, bishop of Pittsburgh and former dean of the cathedral, preached the sermon. The Right Reverend Lauriston L. Scaife presided. Others participating in the mass were:

The Reverend L. Densmore Jacobs, rector, Church of the Good Shepherd, Binghamton, gospeler; the Reverend Arthur J. Rantz, rector, Church of the Epiphany, Cleveland, epistoler; the Reverend Paul B. Hoffman, rector, Trinity Church, Hamburg, deacon; the Reverend Rudolph O. Liesinger, rector, St. Matthew's Church, Buffalo, subdeacon; the Reverend Frank S. Patterson, rector, Calvary Church, Williamsville, master of ceremonies; and the Reverend Robert R. Spears, canon, St. Paul's, assistant master of ceremonies.

In an afternoon session, also at St. Paul's, the Reverend Dr. William H. Dunphy, rector of St. Mark's Church, Philadelphia, declared that Communist attempts to build a "holy community" fail because they neglect to place "Holy Communion at its center."

SEES TASK FOR CHRISTIANS

The Philadelphia cleric quoted the Russian Orthodox philosopher, Nicholas Berdyaeff, as observing that "the three words, communion, communism, and community come from the same root."

"The trouble with the Communist is that he tries to build a holy community without Holy Communion at its center," said Dr. Dunphy. "He tries to build heaven on earth, but instead he gets the opposite.

"But the Communist propaganda would not even be plausible, if Christians had remembered their own tasks to go out from the Holy Communion to build a holy community based on a common faith and common prayer."

RECALLS CHURCH HISTORY

Stressing the theme of "common faith and common prayer," Dr. Dunphy traced the history of the Anglican reformers who produced the book of common prayer. In the early time of the church, he said, the bishop of Rome "was the president or primate of the church."

"But his primacy was a constitutional primacy. It was the whole church which acted and bore witness to its faith. It was the action of the one body and the one spirit.

"In the Middle Ages all of this changed in western Christendom. The western church became a totalitarian pyramid, with an autocrat at its apex. Each diocese reproduced the same pattern with a bishop as a local autocrat.

SERVICE TRANSLATED

"The Anglican reformers did not try, like Protestant reformers on the Continent, to reform the church on their own ideas of what the New Testament taught. Instead, they went back to the Catholic Church of the early centuries, the one body under the one spirit.

"Especially was this true of the worship of the church. They wished to restore common prayer, and so they translated the service into English, simplified and gathered into one book, the Book of Common Prayer."

Speaking on the afternoon program along with Dr. Dunphy was William R. Castle, of Washington, former Undersecretary of State under President Hoover.

"The prayer book," he said, "should be our companion in meditation just as it is our gateway to prayer and praise in common with others. It is the answer to the question of life in all ages. The Book of Common Prayer makes us laymen realise that the church is truly the body of Christ."

GREAT SPIRITUAL HERITAGE

There long has been general recognition of the great influence, literary as well as spiritual, which the King James version of the Bible has had on English-speaking people of all religious affiliations. Recognition has been less general, perhaps, of the comparable influence of the English Book of Common Praper. Yet the Book of Common Prayer of King Edward VI, the first unification and translation into English of the chief ancient liturgical books, antedated the 1611 translation of the Bible by more than 60 years. The magnificent and majestic phrases of the Prayer Book found their way into the currency of English speech in the latter half of the sixteenth century and undoubtedly influenced the writers of the Elizabethan era.

In a letter published elsewhere on this page, Donald Bain, Buffalo lawyer and Shakespearean scholar, cites evidence of Shakespeare's familiarity with the Book of Common Prayer; and such instances undoubtedly could be multiplied as to the Elizabethan writers generally. The Book of Common Prayer first was used in English churches on Whitsunday, June 9, 1549, and the religious significance of the four hundredth anniversary, of course, far transcends the literary aspects.

Buffalo will participate today in the English-speaking world's observance of this anniversary with a celebration in St. Paul's Cathedral of the Eucharist which will follow precisely the service ordered in the 1549 Prayer Book for "the Supper of the Lorde and Holy Communion, commonly called the Masse." This observance, arranged by the American Branch of the Anglican Society of which the Very Reverend Edward R. Welles, dean of St. Paul's, is president, is one of many which will take place in English-speaking countries today. This is a fitting recognition of a spiritual heritage which is not confined to Anglicans.

FEPC Is Not the Remedy

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, once more we are confronted with a so-called Fair Employment Practice Act.

In 1946, similar legislation was proposed and, at that time, I put into the CONGRESSIONAL RECORD—volume 92, part 9, Seventy-ninth Congress, second session, page A494—a statement and an analysis of the then pending bill.

As the present bill—H. R. 4453—differs somewhat in its provisions, I am printing herewith an analysis of that bill, which came to my desk this morning:

MR. EMPLOYER: HERE IS WHAT THE SO-CALLED FAIR EMPLOYMENT PRACTICE BILL, HOUSE BILL NO. 4453, MEANS TO YOU

This so-called fair employment practice bill is now awaiting congressional consideration and enactment.

The title of this bill is, "To prohibit discrimination in employment because of race, color, religion or national origin."

No fair-minded person can quarrel with the elimination of discriminatory practices. There are several ways, however, of accomplishing this objective. The best way is by the process of education, which has already achieved results. The desired objectives can be defeated by improper legislation.

With this in mind every Member of Congress, every employer and every labor leader should examine the provisions of this bill.

Consider the following words and phrases quoted verbatim in terms of how the national economy might be affected. Note the wording is subtle—the implications are hidden—but authority is written into this measure which can and may destroy the fundamental principles of a successful, private free enterprise.

1. "With respect to his terms, conditions, or privileges of employment."

This bill provides for control of your hiring by outsiders—persons not in your employ. It aims not only to tell you whom you may employ but controls all phases relating to employment, including promotions, wages, hours, retirements, vacations, lay-offs, discharges, and in-plant employee activities.

2. "The term 'employer' means a person engaged in commerce or in operations affecting commerce having in his employ 50 or more individuals, and any person acting in the interest of an employer, directly or indirectly; but shall not include any religious, charitable, fraternal, social, educational, or sectarian corporation or association, not organized for private profit."

By this language the test is not whether you as an employer of 50 or more persons authorized an act made unlawful by the bill. The above provision makes you liable for back pay awards and subject to expensive legal proceedings if the alleged act was done by a person who was acting even indirectly

UNIVERSITY OF MICHIGAN LIBRARIES

in your interest. These words have been held to include trade associations, civic organizations, counsel, superintendents, foremen, or anyone placed in a position to represent you.

This provision is in itself discriminatory in that it is aimed at larger employers only, specifically exempting all those who employ less than 50 individuals, as well as religious, charitable, fraternal, social, educational, or sectarian corporations, or associations not organized for private profit. If such proposed legislation is sound and fair it should apply alike to all employers and employing organizations. Its failure to do so is, in itself, an admission of its inherent weakness.

Under this section an employer of 50 or more persons comes under the act if the work of his employees in any way affects interstate commerce. The Supreme Court has held that elevator operators in a building having tenants doing business in interstate commerce come under such language.

3. "It shall be an unlawful employment practice for any labor organization to discriminate against any individual or to limit, segregate, or classify its membership in any way which would deprive or tend to deprive such individual of employment opportunities, or would limit his employment opportunities or otherwise adversely affect his status as an employee or as an applicant for employment, or would affect adversely his wages, hours, or employment conditions, because of such individual's race, color, religion, or national origin."

This in effect puts governmental agencies in control of labor union membership.

4. "It shall be an unlawful employment practice for an employer * * * (2) to utilize in the hiring or recruitment of individuals for employment any employment agency, placement service, training school or center, labor organization, or any other source which discriminates against such individuals because of their race, color, religion, or national origin."

This places an investigatory burden upon the employer. Even his occasional utilization of an employment agency without first fully ascertaining whether it discriminates against individuals because of their race, color, religion, or national origin is done at his own risk.

If closed-shop labor contracts are once again legalized this section could require an employer to breach a closed-shop contract with a union which discriminates in violation of the act.

5. "The Commission shall have power * * * to cooperate with regional, State, local, and other agencies * * * to make such technical studies as are appropriate to effectuate the purposes and policies of this act and to make the results of such studies available to interested governmental and nongovernmental agencies * * *."

In what other law have secret and confidential data and official files involving the rights of the individual citizen been turned over by specific statutory command to private nongovernmental agencies? Who are these mysterious nongovernmental agencies left undefined and anonymous in the law? The so-called "interested nongovernmental agencies" might be irresponsible, self-serving, or subversive organizations.

6. "The Commission shall cause a copy of such written charge to be served upon such person who has allegedly committed any unlawful practice, together with a notice of hearing before the Commission, or a member thereof, or before a designated agent, at a place therein fixed, not less than 10 days after the service of such charge."

Before you can prove that you did not discriminate against an individual the following train of events are by the above and other language contained in the bill placed in motion against you:

(1) You would be investigated by the Commission and subjected to a hearing before the Commission or an agent or member of the Commission.

(2) You might be required to answer the charges in 10 days and appear in any place designated by the Commission, subject to any limitations of the Administrative Procedure Act.

(3) The Commission or a member or agent thereof would have power to examine your records or those of any person under such investigation and the Commission or a member thereof could issue subpenas requiring the attendance and testimony of witnesses and the production of any evidence relating to any investigation, proceeding, or hearing before the Commission, its member, or agent. Any member or agent of the Commission may administer oaths, examine witnesses, and receive evidence.

(4) The Commission may require witnesses to appear and produce evidence from any place in the United States or its Territories or possessions at any designated place of hearing.

(5) In case of contumacy or refusal to obey a subpena the Federal district court in the proper district would have jurisdiction of the person refusing to obey and could order his appearance before the Commission. The refusal to obey a court order could be punished by contempt of court proceedings.

(6) The Commission would have power to issue its own regulations subject only to the limitations of the Administrative Procedure Act.

(7) Anyone who shall forceably resist, oppose, impede, intimidate, or interfere with a member, agent, or employee of the Commission while engaged in the performance of duties under the act shall be subject to a $500 fine or imprisonment for 1 year or both.

(8) If, after such an investigation and hearing, the Commission finds you guilty of discrimination, you will be required not only to cease and desist but to take such affirmative action as will carry out the broad policies of the act, including reinstatement or hiring with or without back pay, as the Commission determines.

7. "This power shall be exclusive, and shall not be affected by any other means of adjustment or prevention that has been or may be established by agreement, code, law, or otherwise."

This language would seem to interfere with the rights of States to regulate employment matters within their own borders. It would also permit the Commission to nullify provisions of labor contracts establishing grievance procedures for the disposition of discrimination charges.

8. "The President shall have power to provide for the establishment of regulations to prevent the committing or continuing of any unlawful employment practice as herein defined by any person who makes a contract with any agency or instrumentality of the United States (excluding any State or political subdivision thereof) or of any Territory or possession of the United States, or of the District of Columbia, in any amount exceeding $10,000."

Anyone who makes a contract in excess of $10,000 with any Federal governmental agency or instrumentality may thus come under this act. Governmental agencies and instrumentalities have been held by the courts to include even national banks. While this section contemplates that the regulations which may be established by the President shall be enforced by the Commission according to the procedures provided for in the act, there is no other limitation expressed in the act as to what those regulations shall contain.

Bear in mind that every time an employer hires or discharges anyone, or anyone is dismissed from membership in a labor union, a potential unlawful employment practice is committed. If there are 100 applicants for a job, it is possible for charges of discrimination to be brought by the 99 unsuccessful applicants. In this event, the employer, in effect, must demonstrate to the satisfaction of the Commission or its agent that the applicant selected was clearly the best qualified for the job.

When an employer is forced to hire a particular applicant, and the employer and applicants not hired believe that someone else was entitled to the job according to sound standards of personnel administration, ill feeling would be engendered that could only cause racial antagonism and strife.

In cases where hearings are extended over long periods of time and large awards of back pay are ordered, many small businesses could be bankrupt.

In my humble judgment, education, not legislation, is the answer to any problem growing out of claimed discrimination.

The issue at the moment, as so often heretofore, is merely being kicked around as a political football by some politicians, used by professional agitators to earn a livelihood or to get a little easy money.

If we must have legislation, then the remedy made available should be one given by legislation administered through our courts, which, through the years, have been found to be the most efficient tribunals for the administration of justice, the righting of wrongs.

Such a bill I have introduced on several occasions. It is my hope that, if and when legislation of this type comes before the Congress, it will give consideration to the bills to which I have referred.

The Credit Bubble

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bristol (Pa.) Courier of June 13, 1949:

THE CREDIT BUBBLE

Only a handful of Americans are thinking seriously about the weakness of national finances.

The fact that a good many millions are openly uneasy about what the future holds, and are frankly worried for fear we are sliding deep into a renewed depression, doesn't mean that they have analyzed the situation and know just what things are wrong.

You can be afraid of something without knowing what it is, and can sense danger without understanding it.

For those who do examine the national situation, there are factors in it which justify all the present uneasiness.

Part of our present crisis comes from the existence of vastly overexpanded credit structure—a bubble of inflated public and private credit which, like a bubble, is held together by the thinnest imaginable sort of a skin, and which, again like a bubble, trembles and shivers at the slightest breath of air.

If the bubble bursts, no one can possibly figure what will happen next.

There is great likelihood that not merely the National Government, but all the American people, would be bankrupted overnight. We could be thrown at once into mass destitution such as, for example, the Chinese and other races have experienced in the past.

One thing is certain, or almost so—if the bubble breaks, free Government as outlined by the American Constitution will cease to exist. We will slide into dictatorship, just as Germany and Italy did after World War I. Unlike their situation, however, there would then be no remaining rich and prosperous areas remaining in the world where we could try, as they did, to seize other people's wealth when our own disappeared.

The most conspicuous side of America's credit bubble is that which involves the national or public credit.

Part of this can be measured with some exactness. The two direct obligations of a government are its currency and its bonded debt. What has happened to these in the course of seventeen New Deal years? Here is the picture in rounded-off figures:

In 1932, when Franklin D. Roosevelt was running for President the first time, the United States Government had a debt of roughly $20,000,000,000 and currency in circulation of about $5,000,000,000—a total of these direct obligations amounting to $25,000,000,000.

Aside from a government's "good intentions" the actual asset back of its currency is the amount of gold held by the Government. In 1932 the Government owned $4,000,000,000 worth of gold, as valued at the official price of $20.16 an ounce, which had been based on a full century's experience with gold values.

That gold was freely available, in the ratio of about 70 percent, to "back up" the currency—that is, anyone with a dollar bill could easily swap it for a dollar of gold, and at a price for the gold which had been proven by a hundred years experience.

The ratio of debt-plus-currency to gold on hand was 25 to 4, or 16 percent.

These figures have changed as follows: National debt, $252,000,000,000; currency in circulation, $32,000,000,000; gold stocks on hand, valued by Government at $24,000,000,000. However the Government valuation on its gold is a wholly fictitious price, representing an arbitrary mark-up from $20.16 an ounce, the century-old price, to the $35 an ounce level set by Messrs. Roosevelt, Morgenthau, et al., on January 31, 1934 (the "59-cent dollar" transaction).

Correcting the value of gold to its price as set in a hundred years experience with gold as a free commodity, the actual value of the gold (i.e., what it would bring on an open market) is approximately $14,000,000,000.

These figures add up to a ratio of direct obligations, or debt-plus-currency, of $284,000,000,000 in debt matched by $14,000,000,000 in assets—a ratio of a little less than 5 percent.

These figures show that Uncle Sam, in 17 years, has expanded public credit in this one field alone so that assets have fallen in ratio debts from 16 percent to 5 percent.

They show Government credit inflation of more than 300 percent.

This figure of 300 percent public-credit inflation may or may not be precisely accurate, but any error in it is in the nature of being too low rather than too high. In innumerable other fields, the Federal Government has expanded its credit in manners where it has no tangible assets whatever to meet its obligations.

There is a rule-of-thumb calculation which strongly supports the 300-percent figure as showing the extent of public-credit inflation. This is the ratio between Government-controlled interest rates and those which are natural—determined by the laws of supply and demand.

The general rate of interest, in all fields in which the Government dominates the situation, is, as everyone knows, approximately 2 percent.

Where can we find the natural interest rate which would be current if all Government controls and pressures were removed? We cannot do it in bond market figures, for in that field Government "pegging" of its own bond prices creates an artificial situation. The place to look is in the field of reasonably sound income-bearing stocks, where the free price in the exchanges is the factor which establishes the ratio between capital value and return.

This is easy to ascertain. In a list of "gilt-edge" stocks, their current prices call for an annual return on investment of 6 percent or a little better.

This 6 percent, freely determined by buyers and sellers, is obviously the natural interest rate of the times. The 2 percent represents what has happened to the natural rate as a result of the Government so greatly expanding its own credit.

Note that the natural interest rate is 300 percent higher than the rate where Government inflation has been the controlling factor.

Trying to pump-prime industry and commerce so as to support the immense spending of the present national administration, Uncle Sam has been quietly encouraging the expansion or inflation of private credit.

This is much harder to measure, in any over-all sense, than is the public credit, since the asset figures are almost impossible to analyze. But many sample statistics show the inflation which has been going on—and show also how vulnerable the credit bubble has become.

Recent figures on automobile purchasing show that credit use has risen to (in very rough figures) $2,500,000,000, or a billion dollars more than in 1939, the last prewar free market for cars.

Now, think of these figures a moment. There are now being sold just about the same number of automobiles as in 1939. In actual value they are worth the same, possibly a little less—measured in terms of man-hours and materials involved. Being turned out more by machinery now than in 1939, having more efficient practices available, and using in most cases less materials and less valuable materials—these are factors which justify the statement that the true value of 1949 cars is less than the true value of 1939 cars.

Yet a billion dollars more credit is being drawn upon to finance auto buying. A billion dollars more of somebody's credit has been put up for this purpose, and the automobile industry has a billion dollars more in paper on the same number of cars.

If you think this isn't inflation, just stop to think what would happen if the bubble were hit from either side. Suppose, on the one hand, that there were to be a sudden sharp tightening of credit—where would the auto industry come out? Or where would it come out if someone somewhere suddenly found a way to produce cars for sale at their true value, instead of an inflated price, how long would it take for a popular $500 car to bring this whole inflated credit structure down on everybody's ears?

Here is another sample of how far private credit has been expanded. The television is a lusty new industry. The demand thus far has much exceeded the supply.

Yet some months back, when a financial survey of the industry was made, it was revealed that approximately 67 percent of television set buying was on credit—and that substantially half of this credit was being drawn upon by border line income families who will be the first to go into a hole if a serious recession hits us.

Or take another field where the facts are better known to the average citizen—that of housing. As everyone knows, thousands of homes have been built at prices at least double what always was considered normal before—and probably twice what they will bring in the future if normalcy returns.

In innumerable cases, with Government support, the mortgage has been generous even for the inflated price. In the case of war veterans, in some instances the mortgages have been substantially a hundred percent.

This means several things. In many cases the war veterans already have found that the "bargain" the Government offered them wasn't as good as it seemed at the time.

For one thing, it means that the war veteran and his family are tied up in a mortgage requiring them to pay about twice as much for their home as it will probably be worth when they finish paying for it.

For another, it already has meant that the veteran's "equity" in his property, which is the amount by which the value of the house exceeds the mortgage on it, disappeared months ago and may never reappear until he has retired half or more of the mortgage.

For still another, it means that a great deal of public and private credit has become tied up where it may never successfully get out—tied up by the process of making $10,000 loans on tangible assets worth normally no more than $5,000.

That's a process which will bankrupt anyone in the long run. Whether it is done by individuals or by a government, or both, where it eventually comes out is all too obvious: To the poorhouse—and nowhere else.

Father Smith Says Unionism Is Labor's Only Salvation

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1949

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Westbrook Pegler, from the Buffalo Evening News of June 8, 1949:

FATHER SMITH SAYS UNIONISM IS LABOR'S ONLY SALVATION

(The first "guest columnist" for Westbrook Pegler is the Reverend William J. Smith, S. J., director of the Labor School in Brooklyn. He is a brother of Miss Helen Smith, of 54 Yale Place, and was graduated from Canisius High School and Canisius College. From 1926 to 1929, he taught in Canisius High School, and in 1933–34 was student counselor there.)

(By Westbrook Pegler)

NEW YORK, June 8.—The Reverend William J. Smith, a Catholic priest of the Society of Jesus and an authority and teacher in the field of labor relations, occasionally has disagreed with my opinions on phases of unionism. Better to understand an opponent in debate and for the enlightenment of others who read these compositions, I invited Father Smith to write a piece stating his position. I refrain from fly-catching and present the only "guest-columnist" I have ever entertained, the director of the Crown Heights School of Catholic Workmen, Father Smith:

(By William J. Smith, S. J.)

The fact that this piece appears in this column is an earnest of good will on the part of Mr. Westbrook Pegler which should be appreciated by those who hold views contrary to his.

Our dissent from Mr. Pegler's viewpoint on trade-unionism has been deepened by a recent charge that some of the Catholic clergy have been taking moral short-cuts in their

UNIVERSITY OF MICHIGAN LIBRARIES

defense of the labor movement. This accusation was the occasion of a protest and Mr. Pegler has consented to print a reply in his column. We speak only for ourselves, but we feel confident that our remarks are typical of the reaction of most of the so-called "labor" priests.

Our position, in general, is that the trade-unions, in spite of certain abuses, are a beneficial and a necessary means for workers to gain the ends to which they are rightfully entitled. Mr. Pegler, concentrating his attention entirely on the abuses, seems to conclude that the trade-unions as they presently exist and operate are an evil.

We do not believe that you should cut out a man's heart because he has a boil on the back of his neck. Nor can you meet a barrage of artillery with a popgun. The first of these statements refers to the racketeer elements in the trade-unions. The second symbolizes the plight of the individual worker in his struggle for existence against the giant corporations.

We will agree with Mr. Pegler that a racketeer is a racketeer whether he calls himself a Catholic, a Christian Scientist, or a Holy Roller. We believe Mr. Pegler has done a service by his writing in making his readers racketeer-conscious. Long ago, however, he lost sight of the forest for the trees and the end result has been the formation of an antiunion mentality among a vast multitude of the reading public. Refusing to assent to this narrow, one-sided, isolated viewpoint on a subject that involves endless relationships is not a moral short cut. It is a dictate of right reason.

To defend the trade-union movement, in spite of certain parasites masquerading as labor leaders, is no more an approval of the racketeers than the defense of freedom of the press is an approval of a journalist who pillories an honest man even unto death by character assassination.

On the other hand, it has been our experience that 9 out of 10 people who read Mr. Pegler regularly are not merely antiracketeer, they are antiunion. Unwittingly they ally themselves with the antisocial elements who actually make every effort to deprive workers of legitimate rights and union activities.

We believe we have the moral obligation to defend and promote the trade-union movement. The labor unions are not isolated entities. Neither management nor the unions are absolutes, standing alone. They are corelatives. The good and evil in both represent action and reaction.

There are evils and excesses on both sides. The abuses which are peculiar to either side alone are often police problems rather than labor or industry problems. Extremes which flow from the mutual relations of the two parties—for instance, in the closed shop and the open shop, strikes, picketing, boycotts, etc.—have their source primarily in the class-warfare nature of the capitalistic system itself.

The principle of free competition, devoid of any norm or code, divorced from the guiding principles of justice, charity, and respect for the common good, has created a class-warfare economy. Most people do not stop to think about it, but it works two ways. Freedom to produce implies freedom not to produce. A strike is free competition in reverse, with the union pulling the switch.

The labor leaders of today are the products of the system that has produced them. When John L. Lewis follows this capitalistic principle to its logical conclusion he is as logical as the law of gravitation. Lewis gives everybody concerned all the free competition they can handle.

Granted that a certain number of labor leaders are corrupt. (It would be naive to assume that they do not have their counterparts, shielded from notoriety, in management and financial circles.) The fact remains that 16,000,000 American citizens are dependent for social and economic protection upon the leadership that now prevails in the labor movement. Some 44,000,000 other workers need a similar protection but to date do not enjoy it.

The history of our industrial relations clearly attests that only through labor unions, free of company domination, can the majority of the workers attain the ends to which they are rightfully entitled. Strip the movement of its present leadership, good or bad, and they would become the prey of an evil worse than anything that exists at present. They would be at the mercy of the monopolists, subject to the threat of dictatorship inherent in the economic power wielded by the giant corporations, victims of discriminatory legislation which was their lot for almost 100 years. Is it a moral short cut to defend them against such a fate?

In determining the morality of any problem all the circumstances must be included. Not the least of these is the class-warfare nature of the capitalistic system itself.

The Marshall Plan at Work in Italy

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1949

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith one of the series of articles by W. G. Hetherington, staff correspondent of the Newark Evening News, dated June 12, 1949, from Rome, Italy.

Mr. Hetherington was in Italy covering the election in April 1948. He saw a freedom-loving people give the Reds a sound trouncing.

His assignment in Italy now, reporting at first hand the results of the Marshall plan in operation, is not only interesting but illuminating as factual evidence of the recovery of a country that was previously torn politically asunder by agents of Communist Russia.

The full impact of American aid under the Marshall plan is graphically shown in the following article:

ITALY GEARING FOR RECOVERY

(By W. G. Hetherington)

ROME.—Thanks to the Marshall plan, Italy today has communism on the run. And, in the rest of Europe, where political prestige means so much, this is a score against Soviet Russia to compare with Western Powers' successes in Germany.

After postwar years of mortal political conflict, Premier de Gasperi and his democratic coalition are free to face the problems of state, without first fearing for the very life of the state at the hands of Palmiro Togliatti and the extreme left. The Communists are still present, to be sure, and still buzzing, but their sting has gone.

Here in the capital, surface appearances bear out the expressed conviction of the government—that Italy has turned the corner, politically and ideologically, though its major social and economic problems are still to be solved.

At Capriccio's, where the elegant of Rome still linger over luncheon cocktails. Mario, the waiter captain, tells the story of the workingman.

CHANGED HIS VOTE

"For me," said Mario, looking over the prosperous and well-fed guests, "times are better because I live off the rich, and most of them are richer. But the story of my brother is what you want * * *.

"He is what you call the expert mechanic. He still earns 2,000 lire a day (roughly $3), and the prices are as high as ever. Last year he voted Communist because he didn't work steady, nor did he trust De Gasperi.

"But today, my brother's factory is very busy, and he is sure of a raise. He has quit the Communist Party because he is convinced now that De Gasperi can do more for his future than Togliatti."

The case of Mario's brother is important inasmuch as Italy's destiny lies in the convictions of its working millions. Last year, there was a marked lack of confidence in De Gasperi, even among those who voted for him against the Communists in the crucial elections of April.

CONFIDENCE BOLSTERED

In those dark days, before and after the national elections, lack of popular confidence in the government seemed to be as much a danger to democracy as the underground army of the Communists.

That situation has been reversed by a full year of American aid, represented by some $550,000,000 applied to the Italian economy by the Economic Cooperation Administration.

Business indexes have risen sharply, as will be detailed in another article. This strengthening of the Nation's economy has enabled the government to conduct its affairs with a new firmness and assurance. Both of these factors, in turn, have inspired the confidence of the masses.

This confidence, paradoxically, is the only appreciable benefit which has percolated down to the masses from the upper levels of government and industry. As with Mario's brother, prices are still too high and wages too low, yet there is this new confidence—at last—that conditions will improve faster under De Gasperi's Democrats than under Togliatti's Communists.

This change of political climate induced by ECA has had a positive and deleterious effect upon Italy's Communist Party. Last year its membership was a rebellious 2,500,000, whose strikes and riots crippled the nation's industry, terrified its masses, and threatened, time and again, to plant the hammer and sickle atop the Parliament Building itself.

Today, the party has shrunk to 2,000,000, but, more important, it has lost its punch. Communists still riot, as they have in the recent land strike in the Po Valley, but the disturbances are put down in short order by the security forces which the government has brought to a high state of anti-Communist efficiency.

Instead of striking fear the length and breadth of the nation, Communist uprisings now are regarded by the people as isolated incidents—to be stamped out by the Regular Army, which is limited by the peace treaty to 165,000, or by the Carabinieri, similarly restricted to 65,000, or by baton-wielding municipal police, the "reparto celere" mounted in jeeps and trucks.

This application of government force, popularly approved, has flattened the Communist Party as a national menace. The strengthened economy has deflated Communist warnings and drained much of the appeal from Communist promises.

For all of this, the credit must go to ECA. The job in Italy is not finished—as Mario's brother would tell you—but it is well begun.

Wheel-Chair Queen of the Chin-Uppers

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1949

Mr. ANGELL. Mr. Speaker, a unique organization exists in my State known as the Chin-Uppers which has for its purpose the bringing of sunshine, hope, and the opportunity to be of real service to the thousands of our citizens who through misfortune have become handicapped by physical or other injuries or defects. This group of Chin-Uppers are doing a marvelous work. Much of the success of the organization and its outstanding achievements are due to the foresight, tireless efforts, and boundless enthusiasm of a citizen of my State, Beth Sellwood. Her great work in behalf of the disabled and handicapped citizens, of whom she is an outstanding member, through this organization, is worthy of consideration by all of us and for that reason I am including as a part of these remarks an article appearing in the May 1949 Coronet, entitled "Wheel-Chair Queen of the Chin-Uppers." I commend its perusal to all of our colleagues. The article written by Norman and Amelia Lobsenz follows:

WHEEL-CHAIR QUEEN OF THE CHIN-UPPERS

(By Norman and Amelia Lobsenz)

The farm wife peered cautiously at the husky man who stood on her porch.

"Evenin', ma'am." He tipped his hat awkwardly. "My name's Sellwood. I have a farm down the road a bit."

"Yes?"

"It's my daughter," he went on. "She's tryin' to get a club organized, and I was wondering if I could talk to your son about it."

Hastily the woman began to shut the door. "No," she said. "He can't belong to clubs. He doesn't want to see anybody."

As the door was closing, a low voice came from a woman in a wheel chair resting in the porch shadows. "Would he see me?" she asked softly.

The farm wife sucked in her breath as she saw Beth Sellwood. Beth sits sideways in her chair, her twisted shoulders sloping at an unnatural angle. Virtually fleshless arms end in withered, tortured fingers. The creeping paralysis of muscular dystrophy has ravaged even her face, freezing it into an immobile mask. Her tongue, too, is partially powerless.

Only in her wide, blue eyes does life shine through, and there it glows with unquenchable spirit. "Would your son see me?" she repeated.

The farm wife nodded. Beside this woman, her son's affliction was as nothing. If she could have such courage, then perhaps—. The door was opened wide.

Beth went in, that spring evening in 1941, to begin a labor of love that will end only when she dies. For that visit to an Oregon farmhouse was her first step toward breathing life into an idea that has since brought inspiration, faith, and happiness to hundreds of physically disabled persons. It was the start of one of the most amazing organizations in America, the Chin-Up Club of Oregon.

More than 600 men and women—the paralyzed and the deformed, the blind and the bedridden—have been raised by the club from their half-world of mere existence into the flush of a full and active life.

Many who were helpless burdens on their families now have their own homes and businesses. A man doomed to an invalid's bed learned to tie fishing flies. Today his flourishing enterprise not only gives him financial independence, but also provides jobs for half a dozen fellow Chin-Uppers.

Another, totally paralyzed save for his head, operates a message service with a special telephone worked by chin pressure. A young woman, stricken with polio in her childhood, is now a successful secretary in a childen's hospital.

Other handicapped persons, who hid from the world in darkened bedrooms, today are the life of numerous Chin-Up parties. One youth, his body made rigid by arthritis, is a jovial master of ceremonies at monthly get-togethers of the Portland chapter. Two young girls, crippled by polio, stage gay holiday affairs which they hostess from their wheel chairs.

The Chin-Up Club's annual Christmas dinner draws 300. Tables are spaced far enough apart to give plenty of room for cots and wheel chairs. There are socials almost every week in various towns, and Chin-Uppers manage to get to nearly all of them. And every one of these reborn people tells you:

"Beth did it. Without Beth, we'd still be more dead than alive."

Five days a week, the 38-year-old Beth Sellwood works at a large table in the kitchen of her farm home near Salem, from 10 in the morning to well past midnight. Doctors have expressed astonishment at this display of stamina; yet there are reasons why Beth must put in a 14-hour day. For one thing, she can peck at her typewriter only with the second finger of her left hand. It took her 3 years to teach herself this.

For another, almost every move she makes—reaching into a card file, answering the phone—takes an agonizing amount of time. Beth's atrophied muscles make it necessary for her to go through involved motions to attain a physical position which a normal person assumes without thinking.

Finally, Beth's paralyzed tongue and jaw make it difficult for her to talk. But through constant effort, she has overcome that obtacle, too.

Beth devotes her time and strength to Chin-Up Club business: handling official correspondence, seeking jobs or business opportunities for members, soliciting ads for the organization's newspaper, the Beacon, writing handicapped persons to boost their morale, and answering the sacks of mail that pour in each week.

Most of it is addressed properly to route 2, box 366. But even a letter from South Africa sent merely to "U. S. Chin-Up Club" reached its destination.

Greatest handicap to Beth Sellwood's work is the crippled person's fear of being ostracized or pitied. "That was my own first big fight," she says. Today, she has even reached the point where she can laugh at her condition.

However, few handicapped persons can so completely overcome self-consciousness. To battle this problem, Beth has often journeyed to distant Oregon towns to prove what can be accomplished simply by facing—and then fighting—unpleasant facts.

There was, for instance, the day she went to the village of Milwaukee to see Bill Judd, who at 19, fell out of a rowboat and broke his neck. He is permanently paralyzed from the chest down. When Beth entered his bedroom Judd had his hands behind his wheel chair.

"What's the matter with your hands?" she asked.

"They're—no good," muttered Judd self-consciously.

Beth had a book on her lap. Slowly she worked her fingers around it, lifted it, and held it out. "I brought you this," she said. "I want you to take it from me."

"I can't. I can't do anything with my fingers."

Beth's eyes flashed. "There's no such thing as can't. If I'm able to hand you the book, you're able to take it."

Bill slowly drew his hands from behind the chair and awkwardly grasped the book. He stared at Beth Sellwood. "This is the first time in years," he whispered.

But Beth was not satisfied with this triumph. When Judd admitted he was ashamed of his hands, she gave him the address of a Chin-Up girl in Portland whose hands were even more deformed. Judd wrote to her. When he learned that she worked delicate embroidery, he decided that anything was possible.

Judd taught himself how to type by hitting the keys with a wooden block grasped in the palms of his hands. Beth urged him to get a gasoline-powered wheel chair—which he drives with his thumbs—and started him in the greeting-card business.

When Judd was sure of success, he thought the Chin-up Club had done everything possible for him. But at one chapter meeting, he met Opal Berlincourt, confined to a wheel chair by polio since childhood. Letters blossomed into romance, and romance into a wedding. Bill and Opal have been married 4 years now, and they live in a house built especially for them.

Twenty-four years ago, doctors gave Beth Sellwood only 6 months to live. But that was no news to her. She had been living on borrowed time since she was seven, when her young muscles first began to wither into uselessness. For weary years she existed in hospitals, where even specialists were unable to check the advance of the paralysis which made her case one of the most extensive in medical history.

When doctors gave up, Beth returned to live with her parents. Yet, knowing from experience the despair that affliction and loneliness can bring, she determined to reach out beyond her wheel chair to help others. She wrote to handicapped persons she knew or heard of, and to others she learned of through their advertisements for wheel chairs and invalid beds. The response was eager.

In October, 1941, the Chin-Up Club, with a nucleus of 18 members, held its first meeting in Salem. Next year, Beth was elected president. She was reelected by acclamation for the seventh time last June, when more than 200 Oregon Chin-Uppers attended the annual State convention.

"Beth will be president as long as she lives," one member declared.

As the club grew, it attracted the cooperation of many prominent nondisabled Oregonians, including the late Gov. Earl Snell, who helped solve one of the group's big problems by arranging for special busses to transport Chin-Uppers to meetings and parties.

If you congratulate Beth Sellwood on what she has accomplished, she will figuratively shrug you off. For Beth has plans that go far beyond any mere club. She is determined to found a home to be operated and occupied exclusively by physically disabled persons. It would be a four-sided venture, for in addition to conventional living and hospital quarters the home would include a school, a social center, a manufacturing shop, a printing press and a craft shop where handicapped people could combine occupational therapy with income-producing work.

The dream is no idle one, since more than $9,000 has already been contributed to the building fund. But the ultimate goal, $125,000, seems far off. Beth, however, is not discouraged. "We know it will be slow work," she says, "but the fund is beginning to snowball."

UNIVERSITY OF MICHIGAN LIBRARIES

We asked Beth Sellwood the question that leaps to the minds of all who meet her: What keeps her going as the driving force behind this organization? What philosophy holds her upright on the edge of the black pit?

"Belief," she answered simply. "Belief in God, in a happier future, and in a faith that you can't be beaten if you keep your chin up."

Address by Hon. Hubert H. Humphrey, of Minnesota, Before Society for Advancement of Management

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, June 16 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me before the Society for the Advancement of Management, in Washington, D. C., on June 4.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

There has never been a greater challenge to scientific management than that which exists today. The world is beset with crumbling and decadent institutions. The unprecedented changes in the fields of government, economics, and science during the past half century have literally strained the established institutions of society to the breaking point. Every year change and the need for change is evident. Fantastic advances are being made in the realm of scientific achievement. This within itself presents a whole new series of problems in the sociological and economic areas of human conduct.

A world that has been beset with two world wars in a period of 25 years inevitably finds itself confronted with the need of rebuilding a society that literally has crumbled under the impact of economic and political pressure. No matter where we look, there is a crying need for effective and scientific utilization of our human physical resources. In a world rich with people and natural resources we find approximately 75 percent of that world afflicted with poverty, disease, and turmoil. In Europe, Asia, and Africa the issue of the proper utilization of our human and natural resources is the basic problem of our time.

People everywhere look to the United States for guidance, help, and experience. Our country is the cornerstone of freedom. It is the beacon light in a storm-filled world. Fortunately for mankind we are blessed with tremendous reserves of scientific knowledge, practical experience in government and an essentially sound economic system. We have the resources to back our commitments but like all nations and all peoples these resources are not unlimited. The efficient management of these resources becomes ever more important when we view our great responsibilities in a world that looks to us for help.

Our problem is not only one of being able to help others. It is also one of so directing our own energies and using our own resources as to be able to maintain an economy that is capable of giving an ever-rising standard of living to the American people while extending the helpful hand of charity and rehabilitation to others.

Yes, in our own economy we are forced by necessity, if not by humanity to do more—much more for our own people. We are compelled by the obligations of our leadership and our own responsibility to strengthen our own economy. The basic threat to our political and economic institutions does not lie outside our own borders but rather lies within. We are now facing the issue as to whether or not our Government has the strength and the integrity to properly direct its efforts in such a way as not to deplete the strength of our national economy.

We must provide for our own citizens, but the cost of our Government is running perilously high. Our task is to obtain the maximum use and production use of every budget dollar. Economy in government does not necessarily mean spending less. It basically means obtaining the most that is humanly possible out of every dollar committed to public service. The question of economy in government could well be stated not in terms of dollar appropriations but in the use of those appropriations. The effective use of public revenues is directly concerned with proper organization of administration. Modern tools of government are no longer matters of academic theory. They are absolute essentials if we are to continue our program of social welfare, public improvement, and international leadership.

The biggest business in the world—the Government of the United States—can no longer be managed with the political instruments of the eighteenth and nineteenth centuries. Government in the United States is no longer a simple thing that can be left to political chance and mediocre administration. A twentieth-century economy propelled by the boundless energy of mass-production industry and constantly accelerated with new advances in the field of science cannot be managed or regulated with the mechanism of a hodgepodge, unplanned, unrelated administrative establishment. The need for governmental reform and organization is imperative. It is a matter of sound economics and literally life or death for American political and economic survival. When 20 percent of the national income is utilized by the Federal Government, it is time to take stock of the means and methods which are employed in the use and expenditure of such a vast sum.

It is for these reasons that I strongly support the basic recommendations of the Commission on Reorganization commonly known as the Hoover Commission. This is not a partisan issue. It is not one of mere dollars or of the number of governmental employees. It is an issue that runs deep into the very survival of free government and a free economy. Either we learn how to manage government or the bigness of government will overwhelm us. Either we learn how to properly utilize the vast sums of public revenues and how to appropriately control and manage their use or we will bleed our economy into an impoverished condition. This is the issue that the Society for the Advancement of Management faces in its consideration of the legislation which is now before Congress and I refer in particular to S. 1809 and H. R. 4754 which would creat a new agency entitled "The Office of General Services." It is this agency which affords a real opportunity for those in government service to make a significant saving for the American taxpayer.

The Director of the Budget recently estimated that the annual cost of the National Government is about 20 percent of our national income. It is around $42,000,000,000 a year. It only reached the billion mark during World War I except for the Civil War year 1864. Our national debt as of May 24 was about $252,000,000,000. And yet, despite our gloomy fiscal picture, we need to do more essential things in the way of health, schools, homes, conservation of resources, and recreation for our people. How can it be done?

Obviously, we must do more at less cost. We must practice better management in government and in industry. We must get more from our resources and from our tax dollars. It is fine that institutions such as the Society for the Advancement of Management are organized to consider ways and means to accomplish these objectives. I congratulate its officers and its members.

If tax money is to be saved, we should examine to see how it is being expended. I have been surprised to learn that, except for the cost of personnel, the cost of supplies, equipment, transportation of things, and related objects constitute the greatest element of cost in our Federal budget.

I would like for you to consider with me some figures derived from analyses made by the Bureau of the Budget.

Summary of obligations by object (estimate, fiscal year 1949)

Object classification:		*Millions of dollars*
01	Personal services	8,869
03	Transportation of things	853
04	Communication services	58
05	Rents and utility services	184
06	Printing and binding	45
08	Supplies and materials	4,380
09	Equipment	2,299
	Total	7,819
	Total supplies and equipment only	6,679

The personnel cost of administering objects 08–09 is included in object 01. The Hoover Commission Task Force on Supply reported an estimate of 150,000 persons on this work with annual salaries of $440,000,000. But salaries of part-time workers are not included in this total.

To know the object of our costs is revealing but let's consider for a moment who does the spending with respect to these objects. In this connection we learn that the NME will spend in fiscal year 1949, 83 percent of the supply money, 90 percent of the equipment money, and 60 percent of the transportation supply.

Where is the money spent? This is a difficult question. However, in the continental United States there were, as of December 1946, 46,865 offices operated by Government agencies in the 3,050 counties of the United States according to the Committee on Nonessential Federal Expenditures. This means that on the average there were 15 Government offices in each and every county of the United States. We know that each office uses paper, pencils, typewriters, space, cards, files, telephones, electricity, and many other things. Just think of the size of the Federal organization. Here is a chart which shows the organizational set-up. These individual lines represent agencies—not individuals. This one has ——— employees, this one ——— employees.

Before attempting any solutions I would like to give you some more figures showing the scope of our supply, space, records management and related problems.

The Hoover Commission Task Force Report on Federal Supply (p. 2) indicated that the agencies had an inventory of approximately $27,000,000,000 about a year ago. This is a minimum figure since some agencies consider inventory as expended when it is issued to various kinds of subunits. As a matter of fact, property accounting is such that we don't know the extent of our inventories.

No one has the slightest idea as to the value of personal property that is in use in the Government. And as to the value of real property, we know much less.

As to one class of equipment, i. e., motor vehicles, the Budget Bureau report for the fiscal year ending June 30, 1948, shows:

Civilian vehicles in continental United States on hand June 30, 1948

	Number	Miles run [1]	Cost of operation, maintenance
Automobiles	20,886	241,248,415	$8,675,240
Trucks, ambulances, etc.	59,374	282,469,047	31,134,080

[1] Does not include vehicles reported on hourly basis.

Information as to military vehicles is sketchy. However, it is estimated that the Government has approximately 1,000,000 vehicles of all types in all agencies. They probably cost $2,000,0000,000. This does not include aircraft and ships and other floating equipment. Not counting the combat vehicles, but including the noncombat (administrative) vehicles, of the military agencies, more than 237,000 motor vehicles were operated by the Federal Government as of June 30, 1948, approximately 180,000 of them within the continental United States. You can estimate that each vehicle ran 6,000 miles so the 237,000 administrative type vehicles ran about 1,400,000,000 miles. Remember this does not include the much greater number of combat vehicles. You may do your own computing of gas consumed at 9.8 miles per gallon for automobiles and considerably less for trucks on the average. You may also be interested to learn that the civilian agencies as of January 1947 had 391 federally owned and operated automotive repair facilities in the continental United States. From the taxpayers point of view, can we justify the situation where several agencies have repair shops in the same town? Isn't it fair to expect that the agencies can get along and not duplicate staff, space and equipment?

The semiannual report of the Public Buildings Administration as of December 31, 1948, shows that the Government owned or rented almost 31,000,000 square feet of space in the Washington area. The uses of the space were as follows:

	Square feet
Office	13,849,074
Files	5,162,287
Storage	3,297,570
Special equipment	1,963,790
Concessions	978,470
Libraries, exhibits, conference rooms, auditoriums	1,161,400
Building maintenance	986,373
Garages	547,696
Assigned vacant space	417,128
All other space	2,469,688
Total	30,833,476

Please note that some 14,000,000 feet of space were used for office purposes and some 10,000,000 feet for files, storage, and special equipment. Over 5,000,000 feet for files alone. The net space in the Pentagon is only 3,689,066 feet. One hundred and thirty-four of the 199 buildings, with an area of 28,000,000 feet, were Government-owned and 65, with 2,600,000 feet, were leased.

At this point, I would like to raise a question: Does the Government really need all this space?

What about the space situation in the field where approximately nine-tenths of the employees work? Accurate figures are not available but we know that there are Government-owned or occupied buildings in the 46,865 offices throughout the country that use millions of feet of space. In this connection, the Senate Committee on Expenditures in Report No. 1617, Eightieth Congress, second session, reported that as of December 31, 1947, the Government leased over 28,000,000 square feet of space in the 48 States and District of Columbia. Of this, 17,500,000 million square feet were in 20 cities. The Senate report makes this pertinent comment:

"The United States Government is the largest single user of space in the Nation. Offices for its departments, agencies, and field branches, storage space for files, war surplus and strategic materials and equipment, conference, training, and examination rooms to consider and process the many Federal activities initiated by Congress in the public interest; and numerous other activities have necessitated the establishment of a widespread policy of Government ownership of property extending into all the States and practically every city in the United States. The Public Buildings Administration estimates that the Federal Government held by lease or title, as of December 31, 1947, a total of 340,500,000 square feet of space, of which approximately 31,300,000 square feet are located in Washington, D. C., the seat of government. The remainder is spread over the entire Nation."

It has not been possible to obtain data as to warehouse space in use in the United States but recent figures from the National Military Establishment alone show that in 130 locations in the United States, the gross storage space is about 530,000,000 square feet. Of this amount, about 240,000,000 square feet, or 45 percent, is open storage, most of which is improved hard-standing space. Two hundred and ninety million feet, or 55 percent, is covered space. That is roughly the equivalent of 80 Pentagon Buildings.

The cataloging experts have estimated that there are some 12,700,000 items listed in the Federal agency supply catalogs. When duplications are eliminated, the number may be around 3,000,000.

The picture of general statistics would not be complete without some mention of forms. I have already stated that our printing and binding cost for this fiscal year will be around $45,000,000. Much of that is for forms. The space statistics show that over 8,000,000 feet are used for files and storage. A great deal of this is for forms, both new and used.

It is estimated that an average agency uses 1,000 different forms. Of these only 5 to 20 percent are standard forms. Using a conservative figure of 100 agencies, we find that at least 100,000 different forms are in use. A few years ago, it was estimated that the Government uses several billion envelopes per year.

It is not my intention to overwhelm and confuse this audience by quoting a great mass of statistical data. However, it is my intention to convey to you an idea of the enormity and complexity of the supply and related general-services problems in the Federal Government at the present time. It should be abundantly clear to everyone that the time for constructive action is past due.

It seems to me that a short historical review of action that has been taken with respect to this important subject will be of help in orienting our thinking at the present time.

The Constitution in article IV gave to the Congress "power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States."

That is the fundamental property-management charter. What has been done under it?

In 1879 Congress passed an act (now R. S. 161) providing that each "department head was authorized to prescribe regulations, not inconsistent with law, for the government of his department—and in the custody, use, and preservation of the records, papers, and property appertaining to it."

It should be remembered that in Washington's administration there were only three departments in our Government. The population in our country in 1790 was 3,929,214. The average annual expenditures from 1789–1800 were $5,776,000. For the present fiscal year it is estimated that 12 agencies will spend in excess of $500,000,000 each. Puny and undernourished, indeed, is the agency that will not spend as much as the entire Government did during the period 1789-1800. In fact, there are many agencies that today spend more than the entire Government did before the World War I period.

When the Government was small and the agencies few, there was no need for comprehensive property legislation and R. S. 161 which left the departments independent to buy, use, and dispose and manage without regard to other agencies, was adequate.

But as the agencies grew in size and number common problems arose in Government and with respect to vendors who asked for uniformity in forms and procedures. Common problems call for common solutions. So functional concepts that cross agency boundaries emerged to challenge the peace of mind of the heretofore autonomous agency heads. The situation is comparable to States' rights versus interstate commerce. Common problems require common solution through central control.

In 1861, R. S. 3709 with respect to competitive bidding was enacted. This was required since several agencies were buying in unrelated ways. So the Government and the vendors needed the protection of a simple law to provide for common practices.

By 1877 the Congress was aware of the lack of adequate property accounting so the act now known as R. S. 107 provided that the Secretaries of the Departments "shall keep, in proper books, a complete inventory of all the property belonging to the United States in the buildings, rooms, offices, and grounds occupied by them, respectively, and under their charge, adding thereto, from time to time, an account of such property as may be procured subsequently to the taking of such inventory, as well as an account of the sale or other disposition of any such property, except supplies of stationery and fuel in the public offices and books, pamphlets, and papers in the Library of Congress."

In 1910 a General Supply Committee was established to eliminate duplications in specifications and to buy common items for all agencies.

Strangely enough no one seemed to anticipate the surplus problem of World War I so it was not until December 3, 1918, that President Wilson issued Executive Order 3019 to deal with surpluses in the District of Columbia. Prior to this time, the surplus-property problem had been very small and each agency took care of its own needs—there were no common areas.

Executive Order 3019 directed that surplus materials, supplies, and equipment should be transferred to the Secretary of the Treasury for reissue to other Government establishments through the General Supply Committee. The committee thus claimed all surplus material and endeavored to classify, warehouse, repair, and reissue it. It was estimated that by June 1921 there existed an inventory of surplus stocks of approximately $5,000,000,000. Incidentally, I ask the general public to note that a much bigger job has been done much better in connection with World War II surplus property. Gen. Charles G. Dawes, assuming the post of first Director of the Bureau of the Budget, set about disposing of this surplus before deterioration. On July 27, 1921, he issued Budget Circular No. 15, approved by the President. The basic provisions of Budget Circular No. 15 which created the Coordinating Service were:

1. To provide for the prompt location, inspection, and inventorying of supplies, and to determine whether they had been reported as surplus.

2. To supervise the purchase functions of all departments and establishments coordinating purchasing with the transfer, sale, or disposal of Government property.

UNIVERSITY OF MICHIGAN LIBRARIES

8. To fix the fair market price in transfers of surplus property between departments, and to determine whether public surplus-property sales should be held and are in the interest of the Government.

The Coordinating Service was established to take action with respect to certain weaknesses which were found in Government service during World War I. It was dedicated to "enabling the President, in matters of routine business, to so coordinate the activities of the different departments and establishments as will insure the most economical and efficient expenditure of moneys appropriated by Congress."

Under the Coordinating Service 12 boards, composed of representatives of departments and establishments in Washington, were created. They were:

The Federal Purchasing Board.
The Federal Traffic Board.
The Coordinator for Motor Transport of the District of Columbia.
The Federal Specifications Board.
The Interdepartmental Board of Contracts and Adjustments.
The Federal Real Estate Board.
The Interdepartmental Board on Simplified Office Procedure.
The Coordinator for Purchases.
The Interdepartmental Patents Board.
The Forest Protection Board.
The Federal Standard Stock Catalog Board.

The Permanent Conference on Printing (an activity already in existence at the time, it was also announced as an agency for coordination).

Most of these boards remained in operation for several years. While some worth-while work was accomplished by the boards, none had legal authority to enforce action, and in the final analysis was merely an advisory agency dependent upon participating agencies for staff and funds. They did, however, high light certain common practices which required attention, and subsequently, when the Procurement Division of the Treasury Department was created, many of the functions of the Coordinating Service were transferred to the new agency.

It is significant to note that the supply and related problems which arose during the stress and strain of World War I have been repeated and reemphasized during World War II.

Executive Order 6166 of June 10, 1933, pursuant to the Economy Act of 1932, established the Procurement Division in the Treasury Department and it was presumably given broad authority with respect to procurement functions in the Federal Government. While Executive Order 6166 provided a theoretical charter for all types of supply activities emphasis in operation has been placed upon purchasing, specifications, and special emergency programs and very little has been accomplished in the way of traffic management, warehousing, and the broader phases of supply management.

During the thirties, the liquidation of emergency agencies, such as CCC, NYA, and WPA, created certain property-disposal problems since large quantities of property became available for use in the Government establishments generally. The concept of a property-utilization program began to develop in the Bureau of the Budget and in the Bureau of Federal Supply. This concept may be expressed as a combined procurement use-surplus property program. In other words, use well what is available before going to the open market for more. Don't buy what you have. This concept has as a corollary the idea of inventory control, positive item identification, and a central clearance agency.

As stated in A Federal Inventory Control System, prepared by representatives of the GAO, Budget Bureau, and Treasury, "property cannot be managed if its indentity, classification, location, quantity, and physical characteristics are not known. What is it? Where is it? How much is there of it? These are some of the questions to which management needs the answers. In most Federal agencies studied management does not appear to have adequate answers to these questions."

With the advent of World War II and the critical need for many types of property, the Bureau of the Budget was instrumental in obtaining the issuance of Executive Order 9235 which had provisions for the survey, identification, and declaration of property which was actually surplus to the needs of Government agencies and the provision that the Procurement Division of the Treasury Department should undertake certain warehousing, rehabilitation, and distribution of supplies and equipment, including the consolidation of facilities of other agencies, as might be necessary in furthering the property utilization program of the Federal Government.

Under this Executive order there has been a stimulation of property management in the Federal Government. Since the order was predicated on the First War Powers Act primarily, it was a temporary directive. By 1942 it became apparent that the time had come to develop comprehensive property management legislation dealing with all phases of a complicated subject instead of treating the closely related parts piecemeal as had been the approach in the past. Bills were introduced by the Seventy-seventh and Seventy-eighth Congresses to develop permanent property legislation. But in 1943 and 1944 Congress became deluged with surplus property legislation which culminated in the Surplus Property Act of 1944, so the development of permanent legislation was temporarily set aside. It is noteworthy that the Surplus Property Subcommittee of the Committee on Military Affairs, pursuant to Senate Resolution 129 in Subcommittee Print No. 14, December 30, 1946, urged "the appropriate committees of Congress to carry on with respect to permanent property management legislation where the Seventy-eighth Congress left off."

Executive Order 9425 of February 19, 1944, established the Surplus War Property Administration, which superseded the surplus-property phases of Executive Order 9235. The section relative to consolidation of warehouses remains effective, and during the period 1942 to 1945 the Procurement Division, with the approval of the Director of the Bureau of the Budget, consolidated many agency warehouses into a national system of 12 common service centers located at Boston, New York, Washington, Atlanta, Cleveland, Chicago, Kansas City, Denver, Fort Worth, Seattle, San Francisco, and Los Angeles.

As the volume of war surplus material diminished and the administrative expenses of the War Assets Administration correspondingly increased, the President, in a special message dated March 5, 1948, recommended that the Congress renew consideration of comprehensive property-management legislation and directed the Federal Works Administrator to submit a draft bill. Following the general pattern of that draft, this committee unanimously reported out a bill termed the Federal Property Act of 1948 (S. 2754, 80th Cong.), which would have provided a uniform system for property management. Due to the press of other work, the Senate did not take up this bill before adjournment.

As everyone in this audience is aware, the Congress passed Public Law 162, which was approved July 7, 1947, and established the Commission on Reorganization of the Executive Branch of the Government. The task force did a great amount of work with respect to the Federal supply system of the Government, and also with respect to a related subject, records management. Accordingly the Commission on Reorganization in February 1949 issued a report recommending the establishment of an Office of General Services. This office would include the Bureau of Federal Supply, the National Archives, part of the Public Buildings Administration, War Assets Administration, and it also provides that certain other institutions, such as the District of Columbia, the Smithsonian Institution, the National Park and Planning Commission, the National Capital Housing Authority, and the Commission on Fine Arts, report directly to the head of the General Services Agency, rather than to the overburdened President of the United States. It is significant to note that the recommendations of the Commission on Reorganization closely relate to the administration bill, S. 2754 (80th Cong.), which has now become S. 1809, and upon which hearings have been held before the Expenditures Committees in both Houses. However, the bills now before Congress, that is, S. 1809 (H. R. 4754), would create a new agency, the Office of General Services and transfer thereto (1) Bureau of Federal Supply, (2) War Assets Administration, (3) Federal Works Agency, (4) National Archives Establishment.

I want to repeat that the time is at hand to take some definite action toward better management, and it should begin with a basic reorganization of our property and records system. At the beginning of my remarks I said that the United States must remain strong from within if we are to maintain a strong foreign policy.

It is crystal clear that we cannot do this if we are to waste our national wealth. Conservation of our national wealth, of course, encompasses many factors in our economy. I am directing my remarks today only to that of proper management in Government—management in particular in the fields of equipment, materials, and supplies, and the use and disposition of such property. S. 1809, or better known as the General Services Agency bill, deals directly with the problems of inventory, procurement, maintenance, transportation, records, management, and the operation and maintenance of public buildings. This bill provides an efficient, business-like system of property management. It is the result of long study and has the full support of the Hoover Commission. The passage of this bill is essential if the executive branch of Government is to be properly reorganized.

The Business Picture

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Thursday, June 16 (legislative day of Thursday, June 2), 1949

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Business Picture," delivered by the Secretary of the Treasury, Hon. John W. Snyder, before the Utah Bankers Association at their annual convention on Tuesday, June 7, 1949, at the Sun Valley Lodge, Sun Valley, Idaho.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE BUSINESS PICTURE

I have been most interested in the note of confidence in the economic and financial picture, emanating from the various bankers' conferences this year. I have found

these reports particularly reassuring, since you bankers have generally been the first members of the business community to detect approaching economic adjustments.

Bankers must be able to appraise much more than their customers' needs. They must be specialists in the whole broad field of business analysis. They must be able to interpret the changes occurring in business conditions, not only in their own communities, but in the Nation.

The requirements for successful banking have changed greatly since bankers in this part of the West began doing business in the early days as a side line in connection with the pioneer mercantile establishments. Banking techniques, in those days, were fairly simple. As recently as the 1890's, it is interesting to recall, there were only a few small banking offices in this area and most money transactions were in silver and gold.

Today, you bankers are responsible for the guardianship of hundreds of millions of dollars of funds entrusted to you by your depositors. To stay in business, you must make money on these deposits. Your investments must be sound, and yet—generally speaking, they must be capable of ready conversion into cash.

There are many financial pitfalls in the performance of obligations of this magnitude in the complex business world of today. A modern banker must find his way past all of them.

Moreover, bankers must make their decisions in the light of a multiplicity of laws and regulations which would have astounded and bewildered the founders of many of the institutions which you in this audience represent.

I have on my desk in the Treasury, for example, the 463-page volume of the last issue of Federal Laws Affecting National Banks. In the comparable volume for 1900, only 63 pages were needed to cover the ground. This is just one illustration of the complicated nature of modern financial operations, as compared with the situation a half, or even a quarter of a century ago.

Not only banking, but the entire life of the country has seen vast changes in the past 50 years. We have passed from a predominantly rural and small-town economy to a highly complex urban and industrial civilization.

In this part of the West, the railroads were the turning point. They spelled the end of the self-sufficient economy of your pioneers. Put the energy and determination which the early settlers showed in grappling with the problems of their environment still symbolize to Americans everywhere the pioneer spirit of triumph over physical and economic hardship.

Today, I believe that we can look forward to an era of expanding national opportunities equally as promising as those which began with the opening of the West.

This is a strong statement. It is made with full realization of the immense strides taken by the Western States in every decade of the last 100 years. But it is a statement which I believe is borne out by the plain facts of our present situation. Let us look at that situation.

As soon as we try to line up the major factors in the current state of affairs, two fundamental questions immediately arise: First, what are the prospects for further progress and further achievement in this country? Second, what is the significance of the current adjustments now going on in business conditions throughout the country?

Let us consider the first question—our prospects for the future. I believe that we have largely lost sight of our future prospects in current discussions of the short-term business situation.

To begin with, we have almost 17,000,000 more people in our population today than we had before the war. This is an increase as great as if six cities the size of New York, Chicago, Philadelphia, Detroit, Los Angeles, and Cleveland—our six largest in 1940—had been added to the population in the short space of 10 years.

Moreover, there have been vast shifts in the population as between different areas of the country. Our newly expanded communities need new schools, hospitals, roads, shopping centers, municipal service plants. More than that, many existing facilities—largely neglected during the war—have yet to be repaired, modernized, or replaced.

And finally, our entire population has come to demand a continually improving standard of living. Food consumption, alone—in terms of quantity—meat, eggs, fruit, and so on—is 10 percent higher per person now than the average in the years 1935 to 1939.

All of these facts point to a continuing ground swell of demand for the basic essentials of living, which will contribute to active business in the near future.

But there are even stronger elements in our present business situation. We have in our hands today a vast array of new techniques and new processes which undoubtedly hold the promise of future industrial revolutions as great as those brought about—for example—by the airplane and the automobile. Under the stimulus of wartime necessity, our scientists pushed far ahead of the ability of peacetime industry to explore the possibilities of the new findings. I am willing to hazard the guess that not even our most advanced atomic physicists are able to foresee the transformations which atomic energy—to take only one example—may make in the whole industrial life of the Nation.

Our great chemical and rubber industries, likewise, hold dramatic possibilities for the development of new markets and new products.

Many new products—such as penicillin and streptomycin in the medical field, and the new insecticides in the agricultural area—are already widely accepted as necessities. Yet, they were unknown outside of laboratories a few years ago. In the field of antibiotics, aureomycin, chloramthenicol, and bacitracin are just three of the new discoveries which promise a rapid broadening of demand in this field.

The rubber industry, too, is experiencing dynamic changes. This industry for volume production used to lean very heavily on tires and other transportation equipment. Now, an enterprising and resourceful leadership has opened up new outlets—and discovered new profits—in diversification. An example of recent experimentation and market research which is paying big dividends in the industry is foam rubber. This product is already in demand for cushions, mattresses, upholstery, and so on. This year, in fact, foam latex cushions are being used in all makes of passenger automobiles, even in the lower-priced models—a striking illustration of the extensive market opened up by just one new product.

Many other uses for rubber are in the experimental stage. One current field of investigation—the introduction of rubber powder admixed with asphalt to improve road surfacing material—may hold particular promise as an important new outlet for the rubber-manufacturing industry.

The field of electronics—to take another example—offers exciting possibilities. Today, the instantaneous preparation of a meal by means of electronic devices is odd enough to be featured by the news services. Yet, only a little more than 50 years ago, the news that a stove in a millionaire's home cooked entirely by means of electricity was just as novel a piece of information.

Television is, of course, an example familiar to all of us. The radio industry was among the first to run into a buyers' market. It responded with the introduction of television. Research had been going on for some years, but when people were grabbing old-model radios off the production lines as fast as they could be turned out, there was no incentive to change. It took the challenge of a lagging market to bring mass production of a new product. In 1946 around 6,400 television sets were produced. By 1948 the yearly output was 975,000. This year production estimates run to something like 2,000,000. Yet the television industry, it is evident, is only in its infancy.

I could cite many other examples. The fields of metal alloys, of plastics and other synthetic materials, of heating and temperature-control devices, of home equipment in general, to name only a few, appear to be at the threshold of developments which may result in replacing many common products now in daily use. Experiments with the new light metal, titanium, for example, indicate that a structural material equal in importance with aluminum or stainless steel may be about to come onto the market.

We do not know exactly what forms these new developments will take in the years ahead, but we can be sure that new industries will appear which will be as important to our future economic development as the great industrial enterprises which have grown up during the past 50 years

Moreover, we have, right now, the plant and equipment for moving ahead. American business has invested the enormous sum of $75,000,000,000 in new construction and new equipment since the war ended. This means that business is now in an excellent position to put the new techniques and new processes to good use. With aggressive leadership, new and improved products will help retain old markets and will uncover new ones.

As was to be expected, the rate of investment has slackened a little this year, but published reports on plans for further capital expenditure—this year and next—show that American industry is continuing to invest in the future of this country in amounts which are still far beyond anything experienced in the years before the war.

In short, the basic factors in our national picture today boil down to just this:

We have the opportunities—in our expanding needs, in our resources, and in our people.

We have the techniques.

We have the equipment.

And, finally, we have the buying power. That is a crucial factor, and I should like to discuss it a little further at this point.

Take employment and incomes, to begin with. In April, the number of people working was within 1 percent of the number employed in the record-breaking spring of 1948. And, currently, people in this country are earning money at the rate of about $214,000,000,000 a year—4 percent higher than a year ago, and within 3 percent of the all-time peak of last December.

It is an American custom, of course, to try to outdo the other fellow. That is why record-breaking figures are always news. But, in the period since the war, we actually became so used to new business records—month after month, and year after year—that our failure to keep making new highs during 1949 became the headline news of the year. The remarkable performance of American business in operating at close to peak levels, after 3 years of unprecedented output, was brushed aside.

This performance, however, is the real news of the year. And it has been accomplished without any impairment of our financial strength.

It is remarkable—when we look back on it—that the pressure to buy or stock everything that could be turned out in three record-breaking years of peacetime activity failed to result either in overextended credit or in a dissipation of assets. Throughout the reconversion period, businessmen—and I

UNIVERSITY OF MICHIGAN LIBRARIES

include bankers—have been on the lookout for unhealthy signs. Their very caution has tended to keep the situation under control.

The current position of our great financial institutions is an excellent example. As you will recall, there has been times in the past, following periods of active business, when frozen assets were a serious problem. Today, these problems are absent. There are virtually no excessive speculative positions to liquidate. On the contrary, holdings of cash and short-term Federal securities are at impressive levels.

In your own field of commercial banking, as you are well aware, caution and good judgment have prevented the overextension of inflationary credit which characterized some earlier periods of easy sales and large profits.

I am very much impressed—and I am sure that thoughtful people throughout the country were likewise impressed—with the results of the voluntary credit-control program of the American Bankers Association last year. When it looked as if the loan situation might get out of hand, you people had the energy and backbone to do something about it; and the whole country, today, is reaping the benefit. I know that American bankers will continue their record of good banking performance, now that conditions have changed and the situation in the business and financial world is returning to something more like normal.

American business in many sectors of the economy has exercised good judgment since the end of the war; and, in many cases, it has been with the aid and assistance of you people in the banking field. Agriculture is one example that readily comes to mind. Bankers in many communities in this region have particularly close ties with agriculture; and I know that you are gratified, as I am, with the sound financial condition in the agricultural portion of our economy as a whole. Farmers of this country have $20,000,000,000 of liquid assets; that is, their cash, their demand deposits, their savings accounts, and their Federal Government securities. This is a tremendous figure. It is nearly eight or nine times the entire agricultural income of the Nation 15 or 16 years ago. Another bright point is the relatively small volume of farm mortgage debt. The total of $5,000,000,000 is actually lower than it was at the beginning of the war. The entire farm situation is in striking contrast to the experience during and after World War I.

I have singled out the farmers merely for purposes of illustration. The same is true with respect to the liquid-asset position of individuals as a group. It is equally strong concerning business corporations and financial institutions.

The total liquid savings of all individuals, including farmers, are currently estimated at over $200,000,000,000—an amount which is more than four times the entire national income in the mid-1930's. About $67,000,000,000 of this amount is in savings accounts. Something like $43,000,000,000 is in checking accounts. Individual holdings of Federal securities amount to a little over $68,000,000,000, and $22,000,000,000 is in currency.

We have to remember, moreover, that the two-hundred-billion-dollar total figure for the liquid savings of individuals is not a complete picture of their asset position. In addition, individuals have very substantial savings in the form of insurance, equities in unincorporated business, securities of private corporations, obligations of State and local governments, and so on.

The figures on liquid assets alone, however, represent a tremendous backlog of funds available for future spending. They drive home the fact that whenever there is reluctance on the part of buyers as at the present, it is not primarily the result of a lack of money to purchase. The hesitancy this year reflects rather, a new determination on the part of all of us to get our money's worth.

Business enterprise in this country, prior to the war, always operated in an economy of abundance. Techniques were constantly being improved, and new products better than last year's models were constantly coming onto the market. The result was that the American consumer occupied the driver's seat. It is not surprising that, today, he is enjoying the feeling of the resumption of his former position.

Certainly, this return to normal conditions should not dismay our alert businessmen. Better than anyone else in the world, we know how to get out and sell. Private enterprise in this country has always operated best in response to the challenge of competition.

I have taken a good deal of time in discussing the business picture, because I believe that the spotlight has too often been played on the readjustments going on this year, and too seldom on the reassuring features of the current business outlook.

My confidence in our future comes from a close analysis of economic factors which warrant this conclusion. Not the least of these factors is American intelligence, and the determination to develop opportunities for increased production and distribution of goods and services. The economic development of the United States and of every nation has been built upon the vision and confidence of its people.

Our opportunities for national economic progress and for sustained high prosperity are tremendous. Our financial and economic position is basically sound. With the application of reasonable intelligence and foresight, I believe that we have every reason to face the future with confidence and enthusiasm.

Broadcast on Public Questions by Arthur Capper

EXTENSION OF REMARKS

OF

HON. CLYDE M. REED

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, June 16 (legislative day of Thursday, June 2), 1949

Mr. REED. Mr. President, our old friend and recent colleague, former Senator Arthur Capper, is maintaining contact with his long time constituency, the people of Kansas, talking through public address and otherwise. In a recent radio broadcast he uttered so much truth and common sense that I ask unanimous consent to have inserted in the Appendix of the RECORD his radio address of Sunday, June 12.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

These Democrats certainly are making the headlines in this part of the country these days.

Today, at Des Moines, Iowa, Midwest Democrats are opening a 2-day conference on the so-called new Brannan farm program. My prediction is that the Des Moines conference will approve the Brannan program and urge farmers and city folks alike to get back of it, and perhaps even suggest they vote the Democrat ticket in 1950 as proof of their support.

There always is a chance, you know, that politics will creep into a meeting called by the leaders of a political party.

I have mentioned the Brannan program off and on in these talks since it was first sprung on the Congress. I do not intend to go into a detailed discussion of it today. Perhaps I will some time soon.

For the moment it is sufficient to reiterate that it seems to promise so much to so many and has so much pocketbook appeal that it will get a lot of support.

In sum, the Brannan program seems to promise farmers high prices for their crops and other products. At the same time it seems to promise that city consumers will be able to buy food—these same crops and products for which farmers are to get high prices—consumers seem to be assured low prices.

It looks pretty simple, doesn't it?

You take a group of sellers and a group of buyers. You tell the sellers that their Government will see to it they get high prices for what they have to sell.

You tell the buyers that their Government will see to it that they will be able to buy at low prices.

Sounds as if that is a fine, paternalistic government—a Great White Father in Washington who will buy high from the sellers and sell low to the buyers.

Of course, there will have to be strings attached to any such program. Just as there were strings attached to the benevolent guardianship that the Great White Father in Washington exercised over the Indians who were wards of the Government.

The Indians only yielded themselves as wards of the Great White Father in Washington when they couldn't help themselves.

Perhaps the white consumers and farmers will become wards of the Great White Father in Washington with more enthusiasm than the Indians showed. The pocketbook appeal is hard to resist.

Some of the strings attached to the Brannan program are:

1. For farmers: To make the program work, rigid production and marketing controls will be necessary. In effect, each farmer will have to get permission from Washington to plant his crop. Then, when time comes to market, unless he has followed implicitly every Government directive, he may lose the Government check to make up the difference between actual cash receipts and the income the formula says he is entitled to.

2. For consumers: Taxes will have to be levied to make up the difference between farmers' cash receipts and his formula-determined cash income to which he would be entitled under the Brannan program. Not all these taxes can be levied on the other fellow down the road.

3. For both farmers and consumers: Farmers will be dependent upon Government (the administration in power) for their income. At the same time, consumers will be dependent upon Government (the administration in power) for adequate food at low prices.

I think both sides and all angles of this program should be considered before either farmers or consumers give it their support—or their disapproval. That is what I intend to do. But I must admit that so far my feeling is that the future evils outweigh the promised immediate benefits.

I note that repeal—or modification—of the Taft-Hartley Act has been given priority in the United States Senate over consideration of the North Atlantic Pact. Apparently, so far, the Eighty-first Congress now in session has not been convinced by the 1948 election returns that repeal of the Taft-Hartley Act was one of the mandates of that election, in which Harry S. Truman won his surprising victory, and 4 years in the White House on his own.

The act will be amended, somewhat. I was one of those who voted for the Taft-Hartley bill, and voted also to pass it over

President Truman's veto. I have no apologies for that vote. I think it was in the interest of the national welfare, and in the long-range interest of the American workingman.

I believe, during my 30 years in the Senate, I voted consistently for most so-called labor legislation. I believed in giving labor its rights in dealing with management. I still do. But it was my best judgment, and still is, that the Wagner Act and the way it was administered, had thrown the balance too far in favor of labor leaders. The power it gave them was being abused, and I voted for the Taft-Hartley Act as an honest attempt to restore a healthy balance.

I do not believe it will be repealed by this Congress. I do not think it should be repealed.

My information is that the North Atlantic Pact will be ratified as a treaty by the Senate, when the Senate gets around to it. There may be some reservations attached, to preserve the theory that the power to declare war still remains in the hands of Congress.

Of course, as history has demonstrated, the President has had, and Presidents have exercised, the power to wage war without prior approval of Congress.

But that is a different proposition from ratifying a treaty which some hold will place it in the power of some foreign nation to make a first and final decision whether the United States shall participate in a war overseas. It does seem to me that foreign governments would be entitled to place that construction upon the provisions of the Atlantic Pact, unless some reservations are attached to it.

I am trusting Senator VANDENBERG, whom I consider just about the ablest statesman of our generation, to see that the proper reservations are made.

It is my understanding also that the congressional leadership has decided to pass over to a future session the matter of appropriation of one billion to one and one-half billion dollars to our partners in the pact for armament purposes.

Expressed opinions in Washington, even in administration circles, are divided at present as to whether ratification of the pact carries with it a promise to other nations in the pact that we will provide funds and materials for their armament program.

It is my opinion, which perhaps on this is not much more than a guess, that once the Atlantic Pact is ratified, the President will inform the Congress it carried the obligation to arm our—presumably—allies in the next war with armament in preparation for that war.

The Margarine-Butter Tangle

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, June 16 (legislative day of Thursday, June 2), 1949

Mr. FULBRIGHT. Mr. President, on May 24, 1949, there was inserted in the CONGRESSIONAL RECORD an article from the Cleveland Plain Dealer of May 16, 1949, purporting to set out some facts picked at random on the margarine-butter tangle." The article was written by John C. Davis, upon the basis of information furnished him by the American Butter Institute. In a letter to that newspaper from Mr. Paul T. Truitt, president of the National Association of Margarine Manufacturers, every so-called fact set out by Mr. Davis is completely answered. His letter appeared in the Cleveland Plain Dealer of May 25, 1949, and I ask that it be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

REPLY TO JOHN C. DAVIS

EDITOR, PLAIN DEALER.

SIR: The article by John C. Davis in Monday's Plain Dealer, entitled "Added Color Raises Price," is pure butter lobby propaganda.

Mr. Davis frequently alludes to Mr. Russell Pifer, secretary of the American Butter Institute, as his source of information. He repeats the same arguments that Mr. Pifer made (vainly, as it turned out) before congressional committees this year. The committees weren't impressed. No one can be impressed with the butter line who knows the facts.

Please permit me to expose Mr. Davis' butter lobby line.

His main point is that if restrictions on margarine are repealed, margarine manufacturers will raise prices exorbitantly. To anyone who knows the food business, this is the silliest nonsense. Margarine is one of the most competitive items in the stores—ask the housewife. She has seen its price go down and down for well over a year, although margarine repeal was being accomplished in seven States, repeal of the Federal taxes is imminent, and butter is price supported.

What are Mr. Davis' facts? That a recent survey of retail stores of yellow and white margarine in nine cities showed that yellow margarine was priced well above the white even allowing for the 10-cent Federal tax and a penny for wrapping costs. That survey is as full of holes as a fish net.

It was made by the butter people, who are not exactly impartial friends of the housewife or grocer as regards margarine. You can find it as stated by Mr. Pifer himself, page 137 of the published margarine hearings of the Senate Finance Committee last month. (The committee voted out a repeal bill.) The nine cities include Olive Branch, Miss., and Harrisonburg, Va.

As the committee itself pointed out, Mr. Pifer failed to include the costs incurred by the retailer who must pay $48 Federal license fee to handle yellow margarine, and $6 for white. But, actually, the survey is no good. Compared to the butter institute's surveys on margarine prices, the polls on the last Presidential election were perfect. Here's why:

1. It isn't fair to compare yellow and white margarine prices regardless of brand, for different brands sell at different prices (just like butter). But the butter survey quietly slips over that. If a white margarine brand A is selling at 27 cents and a yellow nationally advertised brand B at 40 cents, that is gravy for the butter survey but is a lie concerning the price differential the housewife at that store actually found when she compared white brand A with yellow brand A, and white brand B with yellow brand B.

2. The butter survey was not a survey at all. It was merely an attempt to find isolated examples that would prove the butter claim. In the whole United States, 316,000 and more grocers are selling margarine. But the survey finds only 9 examples.

The fraudulent character of the butter survey on margarine has been shown by checks made of areas concerned. On April 7, in Georgia, the differential between yellow and white margarine of the same brand, excluding federal tax and 1-cent packing cost; but not including retailers' license cost prorated, was 2 cents for one brand and 1 cent for another. On that day, in Virginia, the amount was 1 cent for six different brands. In Arizona, none.

Why didn't Mr. Davis mention El Paso, Tex.? Because the butter lobby first tried the price argument when it found a little known brand of white margarine selling on one day last September in one El Paso store at a 30 cents differential (excluding all taxes and costs) over a yellow margarine (brands not specified). But a check of grocery ads throughout Texas for that week showed an average differential within brands of only 10 to 13 cents (many retailers did not even charge the tax). Mr. Davis' survey does not refer to Texas.

Mr. Davis alludes mysteriously to a foreign element in margarine. He tries to connect this with Unilever in the foreign margarine field and their Jelke Co. in this country. Mr. Davis took this right from the butter testimony before Congress, too, where the name of "Unilever" was brought up to scare domestic oils producers. But on page 237 of the Senate hearings the Lever firm claims only 4 or 5 percent of American margarine production, and none of this from foreign oils. Mr. Davis' fears of Unilever are probably not matched by his fears of the large butter-making firms in this country, three of which control 21 percent of production (Federal Trade Commission).

Finally, Mr. Davis brings up the you'll-be-fooled bogey. Again he goes to the butter lobby for a survey—this time made of restaurants in Arkansas. There it was found that about two-thirds (of a hundred covered) served margarine instead of butter. This reflects on the enforcement of the Arkansas law requiring notification to consumers when margarine is served but has no real connection with the basic right of consumers to have margarine yellow—properly labeled and stated. The butter alternative is not remedial—the butter people want yellow margarine prohibited in interstate commerce (which would not help the Arkansas eating places situation at all). But the butter interest wants margarine prohibited not to protect you or me but so the price of butter will go up.

Mr. Davis concludes with the usual butter theory that butter has some preemptive right to yellow color. This, although much if not most butter is artificially colored. In demanding sole right to yellow color, the butter industry demands a monopoly. But, actually, antimargarine laws are a monopoly of the worst sort—special privilege legislated in their special interest.

In this connection every Ohio citizen should know how the butter line really goes. A year ago the butter interest proclaimed as it had for 62 years that only Federal antimargarine taxes and license fees would protect the consumer, save the dairyman's income, etc., etc. Last fall, under pressure of public opinion, this line was changed. Taxes and fees should go, it was said, but yellow margarine should be prohibited. Then, in March, the House Agriculture Committee at Washington reported out a bill to repeal the taxes but prohibit yellow margarine only in interstate commerce. This absurd happenstance has been the butter line ever since, although the restrictive provision was cut out by vote of the House of Representatives and voted down by the Senate Finance Committee.

Mr. Davis and the butter interest are not presenting the true picture. They are trying to scare farmers and consumers. Their object is to keep the out-of-date special privilege they've had too long in antimargarine laws.

PAUL T. TRUITT,

President, National Association Margarine Manufacturers.

UNIVERSITY OF MICHIGAN LIBRARIES

The Western Tradition

EXTENSION OF REMARKS

OF

HON. ROBERT C. HENDRICKSON

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, June 16 (legislative day of Thursday, June 2), 1949

Mr. HENDRICKSON. Mr. President, on April 23, just before the recent illness of my distinguished colleague from New Jersey [Mr. SMITH], he had the privilege of attending the annual convention banquet of the American Society of Newspaper Editors at the Hotel Statler. The guest of honor on that occasion was Sir Oliver Franks, the British Ambassador, who made a most significant speech on the subject The Western Tradition.

In this speech, the Ambassador discussed the significance, as he saw it, of the preamble to the North Atlantic Treaty, which reads as follows:

The parties are determined to safeguard the freedom, common heritage, and civilization of their peoples.

Because of the relevancy of this address to the consideration by the Senate of the ratification of the North Atlantic Treaty within the next few weeks, on behalf of the Senior Senator from New Jersey I ask unanimous consent that the address in full be published in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE WESTERN TRADITION

When I wondered what I should talk about in the few minutes tonight, I reflected that you would have had your fill of news and policies and problems, their possible solutions and the objections and advantages thereto; you would have had all the news. So I thought that I might perhaps, remembering that I was speaking to editors, talk a little bit about ideas.

I want to do that because, for once, it enables me to play truant or, if you like, to revert to type. I want to do it, too, because in the last 2 or 3 weeks, I found myself wondering about ideas and I should like, if I may, to tell you what the course of my thoughts have been.

One of my teachers at Oxford was always telling me that the Owl of Minerva took wing as the shadows of evening were falling. What he meant to say was that action normally precedes reflection.

That has been true in my case. For some months I was engaged in discussions that preceded the signing of the Atlantic Pact. That took place, as you know, nearly 3 weeks ago. Since then I have found myself wondering about one element in that pact we signed. That element is in the preamble. It is the second sentence of the preamble and, if I may, I will read it to you. That sentence says that the parties "are determined to safeguard the freedom, common heritage and civilization of their peoples, founded on the principles of democracy, individual liberty and the rule of law."

What I have been asking myself at intervals since the date of the signing of the pact is: Why did we put that sentence in? We all thought it important. We were all clear that it should go in; that it recorded something relevant to our purpose at that time and that these matters were significant in our lives. But what was it that we wrote in? What is this western tradition that we sum up in those words?

I have been thinking about that and I want to tell you the rough analysis that has occurred to me. I do not know whether you will agree, but at least I would like to put it before you. The western tradition means to me, I think, two factors, their interrelationship and the consequences of that interrelationship. We all know in general terms what this western tradition is. We know that it is one of the most violently expansive and explosive things that the world has ever seen; that in 3 or 4 centuries it has had its impact on every continent in the world; that there is no great civilization not affected by it; that it is still in process.

We know that it had its roots in Jerusalem, in Athens, and in Rome; but we know, too, that like all living things the roots are not its total explanation, any more than the parents are the explanation in full of the various talents, vagaries, and qualities of the child.

We can look back and trace characteristics; we can see inherited aptitudes; but the western tradition is something substantial in itself.

What are these factors, their interrelation, and what are their consequences? The first factor (I am going to use, if I may, old-fashioned names) I am going to call the material factor. The western tradition involves techniques, material skills, exemplifying man's insight into nature, control over nature, understanding of nature, to which no other civilization knows any parallel.

Let your minds drift back 300 years. Men had the control of fire. They knew the use of the wheel. They could make hand instruments out of metal. We have found energy in coal, in oil, in electricity, in atomic power. We have harnessed that energy to all the machines of the modern age and with the machines we have tamed continents. We have erected our great cities. We have put into every ordinary home endless conveniences never thought of before—conveniences of life, which save labor, making things more comfortable, and less difficult. That is the material factor.

Suppose that factor were the only element in the western tradition. Then it would be true that all our energy and all our activity would be devoted to the multiplication of things to the satisfaction of the desires which we had from time to time, so that in the accumulation of possessions we should fulfill our destiny.

If that were true (and by a false abstraction I ask you for a moment to think of it as if it were true), then we should be materialists; we should believe that all that there was in life lay in the relation of man to matter. Out of that sort of relationship only could come the satisfaction of living as our inventive skill and applied techniques developed the means.

If we carried our theory a little further, we should see that what the idea generated was power; that power was served by expediency; that in such a life there was no room for concepts like right or wrong, true or false, beautiful or ugly; that nothing reigned except power, the power that the exploitation of these natural skills could yield. If we ever erected a state on those terms, we should find it would be a power state. Once, at least, in western tradition, that abstraction came true. Hitler's Germany was such a state, a power state, not treating those peoples who lived around its boundaries as neighbors, but looking on their territories as opportunities for exploitation, looking on their peoples to be used according to expediency or, according to expediency, to be discarded and destroyed.

That is an element in our tradition, an element of power over the material world exploited to a degree never dreamt of in all the history of man until our countries on both sides of the Atlantic developed this part of our lives.

But there is a second factor, a different factor not relating to man and his control over nature, but relating instead to man's insight and understanding of man.

Going on with my old-fashioned terminology, I will call that the spiritual factor in Western tradition. It goes a long way back. You all know what I mean when I speak of it. Its central concept is freedom, which it opposes to the necessity and the expediency of matter. It stands for the dignity of the individual. Its ultimate roots are religious. It has broadened out into that valuation of the individual which has expressed itself in equality before the law, in equality to vote, in the common membership of all the many social and political institutions of our countries.

This factor is the factor of reason. This element in Western tradition believes that there is a life in which the intellect is not simply served by material gains, that there are reasonable activities—the pursuit of science for its own sake, the pursuit of arts and literature, the pursuit of philosophy, the pursuit of religion—things which are worthy and dignified in their own sakes, things which we practice and which adorn the society in which they occur and ennoble the individual whose activities they are.

This is another factor in our Western tradition. What is the interrelation of these two factors? How do they interact? In our tradition, they interact, it seems to me, in two ways. All through the history of the Western tradition, there is a continuous effort, at times successful, at the assertion of the primacy of the spiritual factor 'n relation to the material, an assertion that power can be used, made rational by the spirit, that freedom can control the necessities of nature, that all the rich discoveries of men in the material world can and should be used for the wider spread of a rational life worthy of the dignity of creatures possessing reason, born in freedom and capable of absolute values in their activities and work.

That view has always struggled to the surface. May I illustrate it. You will excuse a reference to my own country. It came into my mind simply because it is part of my experience.

In 1940, for the one time in my adult lifetime, my country stood in absolute danger. The future and the existence of my country was at stake. At that time we had a great leader, Mr. Churchill, who spoke to the British people. He wished to touch a chord which would rally them at that time. You know the words he used. He did not talk about comfortable things; he did not talk about material satisfaction; he mentioned no bread or circuses. He said, "Blood, sweat, and tears." Those words have meaning if there is something to appeal to for which we use the words loyalty, devotion, self-sacrifice, a sense of right, a sense of duty. He got his response. He appealed to the primacy of the second factor in the western tradition, one which all the countries in the western tradition share and have, but which shows up in times of crisis with this electric clarity.

Then there is another element in this relationship. These two factors are always in tension; they are always balancing one against the other—the victory of reason over the material possessions that come into our hands, their rational ordering, their morality, is never complete.

Every year, every decade, our conquests over nature extend. Every year and every decade the problems that they present in

terms of morality, in terms of society, multiply. We have to stretch ourselves again and again so to alter our society that we hold both these factors together and, holding them together, yet maintain the primary of the one.

That is my picture of the essence of the tradition, but what are the consequences? First of all, there is one very obvious consequence. That is the kind of democracy that we on our side of the Atlantic and you on yours have today. Unless these factors interacted we could have no such form of political life. For we have very widespread suffrage, as wide as all adults—men and women alike—and that involves something. It involves a certain level of literacy; it involves a certain standard of life; it involves a certain ability to decide; it involves a reasonably rapid and accurate service of information and news; it involves the dissemination of responsible opinion. Without these things, political democracy, as we know it, could not flourish.

After all, the democracy of Athens was the democracy of a relatively small club, a superstructure, a fairly frail superstructure on the great nameless slave society beneath.

With us it is different. It is the advance in material skill and achievement we have made that has rendered possible that higher standard of living, that has made the tools by which we learn to read and write available to all, that has made the very tools of your trade accessible.

All these things come from the material side, but their use is on what I call the side of the spiritual factor. We owe to the interaction of these factors our political life today. We owe something else to it. The idea of progress is not strange to us. We tend to take it for granted as a natural element in our thinking, something which we believe happens even though, from time to time, we are jolted in our belief. Yet it is a very new idea, barely 200 years old. And think of the ages of mankind before 200 years ago! If you go back to classical times, what do you find? If you read your Plato and your Virgil, where is the golden age of man? Where does he project his hopes, his fears, his aspirations? In the past. The past is always the golden age from which the present comes by derivation and deterioration. We look back with a sigh, but we do not look ahead with hope.

That was the classical view and, even when you came later on to Rousseau, the view was still the same. If you want to find the ideal society, look back, not forward.

How have we come to think that we should look forward? How have we come to think that the future means hope, that there is improvement, that we can make things better? By the interaction of these two factors. Because the material goods we have do multiply from year to year and because upon the whole we have been able in terms of that other factor of our western tradition to turn them to our use as free, moral, reasoning beings to work out, in part in fact, in part in hope, the framework of a better and a more satisfying life.

To us, therefore, the idea of progress is real and gives us a basis for our life and for our effort, and we owe it to the interaction of these two factors of our western tradition. It is something which no one outside the tradition has ever had. By it we believe that we are at least in part masters of our fate and masters of our destiny, that we are not compelled to comply with the inevitable, that we can guide our own ships even though there are storms that we cannot foretell and heavy seas that we cannot control.

We can contribute something in that sense. It falls on the side of freedom: the idea of progress has meaning and significance.

Then there is a third consequence. In our tradition we value persons; we think of them as individuals and not units. We value their diversity; wish to appreciate their different talents; wish to see them develop in their individual pursuit of life, liberty, and the happiness of each, not by standardization but by bringing out what each has in him that is different, peculiar, and rare.

Because of that, because we are diverse, we have to have in our society some point, some clear point, of authority, some point to which loyalty is due, some point to which obedience can be given; otherwise, we might fall into anarchy; we might not know how to order our affairs.

It is no accident that there has grown up in the western tradition, through the interaction of the two factors in the tradition, national sovereignty, the reign of nation-states. They have commanded the loyalty of millions of men and women as has nothing else yet in this world. That is true on my side of the Atlantic. I believe it to be true on your side of the Atlantic.

These nation-states, although they sometimes develop evil tendencies and do evil, are by no means wholly bad. In them are embraced all the traditions of loyalty that men have to great societies wider than themselves. They mean very often the framework and the cradle of a language, a literature, a culture. They stand for freedom hardly won; they stand for independence and liberty gained with difficulty and in struggle. These are not cheap things and yet they are enshrined in nations and national sovereignty and they spring from the western tradition.

These are the things that I thought of when I looked back on these words written into the preamble of the pact. And when I thought about it, there seemed to me to be one or two things to say. One of them is this: If what I have said is true at all, the tradition, the western tradition, that we have inherited, live by, and try to improve, is dynamic through and through. There is no point at which a society framed according to its ideas, built according to its practices, is finished. There is no end to change, to alteration, and to modification.

We believe in progress; we accept the reality of improvement; therefore, we can never sit back; we can never say our job is done; we can never look for a life of frictionless ease.

Our life in the western tradition must be a life of activity, a life in which we continue to build what we have inherited from our fathers.

That is to me not a dull, not a deadening, but an inspiring thought. It is inspiring because I believe that the primacy of the spiritual element, that freedom of the rational, moral man, which we have asserted more or less through the centuries, gives an aim and a dignity and a purpose to life; it gives worth, too, to the activities that the attempt to hold the factors of our tradition together imposes on every country which acknowledges it.

Then again, I wonder whether we are right when we sometimes say, "Wouldn't it be better if we could wipe away these nations and these national sovereignties?" It may be so. I am not sure. I sometimes think we might go further and in the end faster if we were willing to take the good that was in them, if we were willing to say, "Let's use rather than destroy; let's train rather than discard; let's adapt rather than do away with." If you could use all the loyalties that are summed up in these nation-states, working toward a wider unity in which they could merge bit by bit that sovereignty which they have inherited and prize, you might achieve something that, being in the long line of tradition, would last and endure and be real progress.

But, if you sweep away the centers to which the loyalty of people attaches, is it certain that your short cut will not be a blind alley? I don't know. But in the limited experience which I have had in Paris, in the conference which called into being the Organization for European Economic Cooperation, it seemed to me that there was a possibility of progressing by gradualism, progressing where you used what you inherited, without discarding it, to build a better future; where the idea of unity in Europe was real and where you forwarded it by approaching functionally these different problems of the sovereignty of nations, finding matters of genuine common concern, using our reason to hammer them out and finding agreed policies which all present could adopt and carry out.

That is not an ignoble thing to attempt. It may not produce a rapid, full bloom, but, as the plant grows, it may grow into a stately tree, and I wonder whether, given our tradition, this method of training and molding and merging may not in the long run be better than the alternative of quickly discarding and perhaps missing something good in what you have left behind.

These are the things that have floated through my mind in thinking about that sentence in the Atlantic Pact. I feel there is one more thing to be said and that is this: We of the western tradition live in a world girded by people of other civilizations and other traditions. They are already powerfully affected by elements in our tradition. There is a wave of nationalism spreading through the Middle East and the Far East in large part due to their contact with us. There is an avidity in the world for our material skills and for all they bring, our techniques and our technology, and yet, if all that is taken, they have not taken what matters most. Perhaps they don't need it. We certainly cannot impose it. But at least we can say this: The western tradition is not the tradition of a closed club. It is not the tradition which does not welcome new members. It stands open to all who are likeminded and, in that sense, it is jealous of none and exclusive of none.

It seems to me important that we who inherit the tradition should keep the membership wide open. I believe that what we stand for, this curious combination of reason and power, the refusal to believe that the relations between men or states can be dealt with wholly in terms of power, the feeling that it is in the combination of the two, in the control of power by reason that progress is possible, conveys a message and a mission for the world, but in terms of reason, in terms of persuasion.

It is not an accident that in the last 25 years the western tradition has twice attempted to set up a world organization after its own heart and idea. The League of Nations was an attempt to superimpose over power politics reason, persuasion, and freedom. And it fell.

The United Nations is another such venture. It springs right out of our tradition. It springs out of the refusal to believe that the relations between nations, the relations between countries, can ever be satisfactorily dealt with if the criteria of power and expediency alone are primary. And, therefore, it tries to add the primary element in western tradition—reason, values, and standards, assemblies for discussion where men may meet, may discuss and have the opportunity to agree.

These are not small things to which to be committed. We have this dynamic tradition. It is our business to carry it on.

That is my picture of what this sentence stands for. I wish to put it to you because, if it is true, it at least gives a purpose in life and a meaning to all that one does.

Basing-Point Legislation

EXTENSION OF REMARKS
OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, June 16 (legislative day of Thursday, June 2), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the RECORD two articles by W. K. Kelsey which appeared in the Detroit News of June 8 and June 11. The articles have to do with the basing-point legislation, and more particularly with the amendments offered by me in the Senate, which would continue to give small business the protection of the decision in the Standard Oil case. The articles are well-reasoned, and state the absolute necessity of maintaining the amendments referred to.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Detroit News of June 8, 1949]

THE COMMENTATOR

(By W. K. Kelsey)

An act, by no means the final act, in a drama of vital importance to the future of this country, was played last week in the National Senate. The issue of this drama will determine whether the United States shall have free competition in business, or become a socialist state.

In saying this, the commentator is raising no imaginary spook to scare the reader. What he means is that if monopolies are permitted to drive free enterprise to the wall, they will be the masters of the American people. This the American people will not endure. Rather than be the slaves of monopolies, they will take over those monopolies and run them through the Government. And that will be socialism.

Background: The Sherman Act, passed in 1890, forbade combinations in restraint of trade, and was directed against the monopolies then existing or in process of formation. It was far from effective.

In 1914 the Clayton Act was passed and the Federal Trade Commission was created, with power to investigate and put a stop to all forms of unfair competition, such as were being used by big business to gain control of industries.

In 1936 this act was given additional teeth by the Robinson-Patman Act, more explicit in defining unfair competition.

Would-be monopolists hired the best legal brains to get around these statutes, but the Government also had astute lawyers, working for far less money. In round after round, in recent years, the monopolists have lost out in the Federal courts, as one after another of their schemes was found illegal.

BIG BUSINESS BRINGS PRESSURE

Recent court decisions involving the basing-point system of fixing prices, the quoting of identical delivered prices through the absorption of freight rates, and discrimination in prices in favor of one group and against its competitors, brought big business screaming to Congress for relief.

The cry was that business no longer knew what was legal and what was not. It demanded that Congress legalize the basing-point system and the absorption of freight rates. It put pressure on smaller industries to back up this demand. Senator WAYNE MORSE, of Oregon, exposed its propaganda methods in a Senate speech last week.

Now every legal expert who is familiar with these matters (and there are many in Congress) knew that the FTC had been carrying out the laws; that the courts had supported its interpretations of the statutes; and that the monopolists were trying to put one over on Congress and the people. But the uproar in Washington was terrific, and it was impossible to determine how many Members of Congress were being taken in by it.

If Congress were to let down the bars as big business demanded, it would be pilloried by the people as soon as they understood what had been done. But if it did nothing, it would be pulled, hauled, buttonholed, pursued, and made miserable by the plausible agents of big business.

So Congress was in a mood to duck the issue temporarily. Bills were introduced in both Houses to provide for a period during which the Clayton and Robinson-Patman Acts would not be construed to interfere with the basing-point system, selling at delivered prices, and absorbing freight rates, if these practices were continued for the purpose of engaging in competition in good faith in any and all markets. Meanwhile Congress would try to work out a definite act.

The monopolists licked their chops. They had one foot inside the door. The good-faith clause meant nothing to them if they were allowed their price-fixing practices. If Congress could not agree on a definite statute, the moratorium could be continued till kingdom come.

THE MORATORIUM ABANDONED

But the little people began to be heard from. Their associations got busy. The CIO, with its staff of experts who keep their eyes on the ball, pushed into the game. And despite the fact that committee hearings in Congress were packed with defenders of Big Business, and great numbers of petitions circulated by its agents among the ignorant and fearful poured in, it became evident to the wiser Senators that the moratorium bill was not going to pass without causing uproar and scandal.

So these Senators conferred, and May 31 Senator O'MAHONEY, of Wyoming, introduced a substitute measure to define what business might legally do, thus killing the proposed moratorium.

There is no doubt of Mr. O'MAHONEY's sincerity. During his 15 years in the Senate he has fought to protect small business. But there were loopholes in his hastily constructed bill, and when debate was continued June 1, LONG, of Louisiana, and KEFAUVER, of Tennessee, pointed them out. They insisted that the bill would permit practices such as that which the Seventh Circuit Court of Appeals found illegal recently in *Standard Oil* v. *the FTC*.

In this case it was shown that Standard had granted a lower price to certain wholesalers than it was charging its tank-wagon customers, which permitted those wholesalers to cut retail prices at gas stations which they controlled.

Said the court: "The petitioner (Standard) had given a club to its wholesalers which they passed on to their retailers to bludgeon their competitors. This is what the FTC is trying to stop, and it is toward the elimination of this evil that the cease-and-desist order is directed."

For if the practice were allowed, the big oil companies could use it to force the independent retailers out of business and take over complete control of retail sales.

After Mr. LONG had raised the point, and Mr. KEFAUVER had driven it home, Senator O'MAHONEY confessed that the matter had never been called to his attention. He then accepted a Kefauver amendment that the test of fair price shall not be "good faith" so much as the effect on competition.

Then Mr. KEFAUVER obtained another amendment, changing an indefinite definition that would have given lawyers much play, to a definite one already recognized by the courts.

WRIGGLING OFF THE HOOK

The measure was passed the same afternoon by a voice vote. Thereupon the Senate jubilated; it had got itself off the hook. Mr. O'MAHONEY thanked five Democrats and two Republicans by name. Senator WHERRY, the Republican whip, said the bill was a step in the right direction.

But the Senate's clarification was a defeat for big business. It means simply this—that a company may quote delivered prices, and absorb freight rates, if it acts independently. But if it engages in collusion with other companies in fixing prices, that's illegal—which is what the FTC and the Federal courts have been saying all along.

The bill now goes to the House. Representative WALTER, of Pennsylvania, second member of the Judiciary Committee, is dubious about the principal Kefauver amendment. But if Representative WRIGHT PATMAN, of Texas, can swing his fellow southerners, the measure is likely to pass.

[From the Detroit News of June 11, 1949]

THE COMMENTATOR

(By W. K. Kelsey)

The House Judiciary Committee is apparently all set to report the bill passed June 1 by the Senate to legalize, under certain conditions, sales at delivered prices and absorption of freight charges by the seller. But it intends to report it without the amendments introduced by Senator KEFAUVER, of Tennessee, and accepted by Senator O'MAHONEY, who introduced the compromise measure adopted by the Senate.

On Tuesday, a subcommittee of the Judiciary Committee, headed by Representative FRANCIS E. WALTER, Pennsylvania, Democrat, approved the O'Mahoney bill after striking from it the Kefauver amendments. This action was taken after hearing only two witnesses—Senator O'MAHONEY and Assistant Attorney General Herbert A. Bergson.

Now, the Kefauver amendments were written into the Senate bill during the debate on the floor, in which it was pointed out that without these amendments the bill would open the door to practices prohibited by the Federal Trade Commission, whose cease-and-desist orders in these matters have been upheld by the courts.

This facts makes puzzling the statement made by Representative WALTER to reporters: "We are going to make it clear in our report to the full committee that this legislation does not affirm powers which the Federal Trade Commission has presumed to assert." He made no reference to the fact that this presumption has passed the test of the Federal judiciary.

Elimination of the Kefauver amendments has so embittered those who for years have carried on the fight to protect the small-business man that many of them, who were satisfied with the bill as it passed the Senate, are ready to demand, if they can get a hearing in Congress, that the Judiciary Committee bill without those amendments be defeated.

Their argument is that the measure, if passed, will give big business powers it does not now possess to harass, curb, and even ruin small business. Under recent court decisions, big business does not have these powers. "Let the situation remain as it is," says small business. "The court rulings are clear and do not require legislative interpretation, particularly an interpretation that hurts our interests."

THE KEFAUVER AMENDMENTS

What has been going on is not easy for the general public to understand. In fact, it was not easy for Senator O'MAHONEY to get what Mr. KEFAUVER was driving at in his amendments. Mr. KEFAUVER explained it thus:

"If A is a large consumer and is buying something from B at, let us say, $10 a ton, and he is charging all the small customers—X, Y, Z, L, M—$15 a ton, C can come along, even though he is at a distance, and absorb freight and sell also to A at $10 a ton. If the Federal Trade Commission tried to prosecute C under the Clayton Act, the fact that B was charging $10 a ton in his sales to A would be a complete defense. That is, the showing that another seller was charging the same price would be a showing of good faith under the language of subsection B" of the bill introduced by Senator O'MAHONEY.

Senator KEFAUVER continued: "When B happens to have been selling A at $10, and C comes along and does the same thing, whereas they are selling to their small customers at 50 or 100 percent more, that is going to put the little fellows out of business. I do not think that competition which may have been established for the purpose of putting these little fellows out of business in the first place should be considered good faith. I think it takes away whatever protection there may be to small business. It takes away a remedy the FTC can now enforce."

And he cited the cease-and-desist order of the FTC against the Standard Oil Co. in such circumstances, which last March was upheld by the Seventh Circuit Court of Appeals.

Senator O'MAHONEY replied that there was no doubt that subsection B would have the effect described by Senator KEFAUVER, and he welcomed Mr. KEFAUVER's amendment to protect the small-business man. The Senate passed the bill with the changes suggested by Mr. KEFAUVER.

PROTECTION FOR SMALL BUSINESS

It looked as if small business would thus keep the protection it now possesses under the law as interpreted by the courts. But no sooner had the bill reached the House than Representative WALTER announced that the Kefauver amendments would not be accepted. Later he claimed to have support for his position from the Department of Justice and FTC itself.

Assistant Attorney General Bergson showed Tuesday that Mr. WALTER indeed had the support of the Justice Department which, after the FTC has won the Standard Oil case, now is apparently eager to throw away that advantage. He may also have obtained the consent of some members of the FTC, but if so, they have not taken the advice of their counsel who won the victory in March.

To put it briefly, the "clarification of the situation" demanded by big business with so much clamor is not merely a matter of making definitions, under the bill reported by the Walter subcommittee, but a changing of established rules for the benefit of big business. Which is why big business is satisfied with the O'Mahoney bill without the Kefauver amendments, and why those amendments must be eliminated, in the interests of the chain stores, the big oil industry, and others against whom the antitrust laws are directed.

Is it any wonder that those who have battled for years to protect the little fish from the big ones are throwing up their hands and crying: "Better no law at all than one without the Kefauver amendments?"

PRESERVING COMPETITION

Those who would toss out the Kefauver wording—aimed at preventing "discrimination which would successfully lessen competition"—say that competition must and shall be preserved. What competition? And on what level?

Nearly 20 pages of the CONGRESSIONAL RECORD of June 1 are devoted to Senator TOBEY's presentation of the manner in which, under the basing-point system, competition was not preserved, but prevented.

The argument that business "doesn't know where it stands" under the decisions of the Federal courts is absurd. It knows exactly where it stands, and it doesn't like the position. When the steel industry abandoned the basing-point system, didn't it know where it stood?

When big business raises no cry against the O'Mahoney bill without the Kefauver amendments, but fights those amendments to the death, they must be important—extremely important. So they are, in the Commentator's estimation. They make all the difference between a bad bill and one that will continue protecting small business from the boys who are aiming at complete industrial control of this country.

Capitalistic Communists

EXTENSION OF REMARKS
OF
HON. CLYDE R. HOEY
OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, June 16 (legislative day of Thursday, June 2), 1949

Mr. HOEY. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Capitalistic Communists," written by Walter Winchell and published in a recent issue of the Charlotte (N. C.) Observer.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BROADWAY

(By Walter Winchell)

CAPITALISTIC COMMUNISTS

It takes millions to keep subversive machinery humming. The activities of Communists cannot be brushed off as a penny-ante proposition: The poison they manufacture has an expensive price tag. Communists here may pose as devotees of the downtrodden and curl their lip at capitalists, but the ironic fact is that the Red set-up is big business. Communism could not be in a position to destroy the United States without the aid of United States dollars. Cut its financial pipe line and native communism would wither and die. It has been estimated the party's income per annum exceeds $10,000,000.

Oddly enough some of the chumps who top the Communist sucker list are well-heeled Americans. For one reason or another they have poured millions into the Red treasury. Communist Earl Browder once publicly confessed that many affluent people here have contributed to the upkeep of communism. Naturally, he refused to mention names. The Communist Daily Worker has received financial support from several wealthy dowagers. Their names: Ferdenanda W. Reed, Anna W. Pennypacker, and Susan H. Woodruff.

The recently published the Whole of Their Lives (Scribners) reveals: "Credit for coining the slogan for the Communists' unemployed campaign, "starve or fight," must be given to a widow, a Communist who inherited millions from her husband. Left childless, she induced the head of the New York Communist Party organization, who was a member of the Central Executive Committee and the husband of one of her secretaries, to have an affair with her. Part of the connubial deal involved generous contributions and large loans to the New York organization, which was badly in need of money.

The same book declares Phillip J. Jaffe is a leading Communist money-man. He has contributed many thousands of dollars for Red activities—also his time and energy. And who is Phillip J. Jaffe? He is a prosperous greeting card manufacturer. Ironically enough, he has handed financial aid to atheistic Communists via profits earned by selling Christmas cards.

Corliss Lamont has also opened his pocketbook to Communists. He has never made any secret of his Communist sympathies. Recently he accused the United States of starting the cold war with Russia and insisted the Soviet Union has followed a peace policy ever since it was founded. Incidentally, Lamont was cited for contempt by the Un-American Activities Committee in 1916.

Corliss Lamont is the son of the late Thomas W. Lamont—who was J. P. Morgan's partner.

One of the most lucrative sources of income for Communist causes has been the Garland fund. It was concocted by Charles Garland (of Boston), who inherited $2,000,000 and contributed it for the support of numerous radical movements. Much of the fund's money has been used to back Communist publications. The Daily Worker got a $57,000 chunk of the loot.

One of the directors of the Garland fund is the current chief of the Communist Party—William Z. Foster.

Make no mistake about it—Communists are wily punks. They have managed to transform many labor unions into gold mines for the CP. When they sink their hooks into a union, a Communist is first put in charge of the organization's treasury.

And it isn't long before union members are asked to contribute to seemingly worth-while causes that are usually handled by Communist fronts. Exactly how the coin is spent is seldom explained to the suckers. This is a $1,000,000 racket.

The amazing extent of Communist financial operations here can be gaged by this fact. The accountant for the Un-American Activities Committee once examined 43 accounts of the Communist Party and affiliated or subsidiary groups. He later testified that the total deposits in these 43 accounts amounted to $10,164,730.

On February 15, 1941, a Satevepost article noted that "51 percent of an organization called International Publishers is held by the Communist International, and the rest by A. A. Heller."

Heller is an alleged American who made a fortune during World War I and has footed the bill for various Communist publications.

William Montgomery Brown was an unfrocked Protestant Episcopal bishop who died in 1937. At that time the New York Times reported that "Brown left between $300,000 and $450,000, and this amount was earmarked for the advancement of Marxism."

P. S.: The Daily Worker got the money.

The only thing that rings true about Communists is the gold they seem to attract. They are past masters of fund-raising gimmicks. They have even set up sumptuous apartments on Park Avenue and hold swanky parties there. While the champagne is guzzled and the caviar gulped, wealthy guests are asked to make contributions. You'd be surprised how many well-heeled "dopes" are pushovers for this pitch.

Communists here have always loudly denied that they get hand-outs from Moscow. That's a lie. Stalin started the Communist Party in the United States with a $50,000 grant. And Moscow has continued to pour money into this country—while Russians starve. For propaganda and espionage ac-

UNIVERSITY OF MICHIGAN LIBRARIES

tivities in Washington alone Russia has spent over a million a year. And it's still tossing dollars around like confetti. Arthur M. Schlesinger, Jr., one of the Nation's leading historians, pointed out in a mag article that the native Communist Party has received funds from the Soviet via courier.

Proof that the Communists have plenty of coin was revealed recently when newspapers reported the current trial of Communists is costing the Reds more than $10,000 a week for legal defense.

This reporter has often emphasized the importance of exposing the financial supporters of subversives. Yet very little has been done about them. If the un-American Activities Committee is really anxious to battle communism here it should launch a thorough probe of its moneybags. They can't stand publicity. That's why the lists of financial contributors to anti-American outfits have always been one of their big secrets. Let's have the names and facts. And why doesn't the Treasury Department make a complete check of their income-tax returns? The time to do something is now.

It would be one of the most bitter ironies of history if the Communists destroyed the United States with the help of our own money.

The FBI Records in the Coplon Case

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, June 16 (legislative day of Thursday, June 2), 1949

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "FBI Urged Coplon Case Be Dropped in Order To Guard Confidential Data," by Constantine Brown.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THIS CHANGING WORLD—FBI URGED COPLON CASE BE DROPPED IN ORDER TO GUARD CONFIDENTIAL DATA

(By Constantine Brown)

The FBI and its Director, J. Edgar Hoover, are under severe and emotional criticism because the defense attorney in the espionage trial of Judith Coplon, former Justice Department employee, succeeded in making public records of that agency containing the names of prominent people.

This could have been avoided had Attorney General Clark, the immediate chief of Mr. Hoover, ordered the prosecution to drop the case. The FBI is reliably reported to have advocated such a step rather than reveal names and places it has kept through the years as a confidential matter to which only the President and his Attorney General have access.

Investigations of the security agencies of this country—the FBI, the CIA and those of the Army and Navy—are painstaking. Much material is gathered before the final estimate on an individual is put in black and white and a "verdict" about his case is reached. Then the Attorney General must decide whether the individual should be prosecuted. In the case of those patient and protracted investigations all kinds of reports are gathered for the purpose of screening and sifting.

APPLIES TO ALL PROBES

This applies not only to the loyalty cases but to all FBI investigations. In the case of the notorious Al Capone and others of his ilk—some of whom eventually had to be prosecuted on charges of income tax evasion and not for other crimes they had committed—long and complex investigations took place. It is not beyond the realm of possibility that had a judge issued at Capone's trial a decision similar to that of Judge Reeves, names of some prominent persons who had been in contact with Capone might have been read in court. There would have been then as now no wish on the part of the investigators to smear such people.

The FBI, which is charged with domestic security involving treason and subversion, considers these no different from the other crimes it is charged to present for prosecution on the Attorney General's orders. The investigating routine has not and cannot be changed. Yet a wave of criticism and denunciation of cloak-and-dagger methods has been hurled at Mr. Hoover and his agents because it happens that in the preliminary investigations the names of a number of prominent people in art and science have come to the fore. Some of them had been connected—innocently it is presumed—with organizations which the Attorney General has listed publicly as subversive. The FBI could do nothing but look into the cases of such persons and gather for sifting all the evidence that was available.

STAVISKY CASE RECALLED

This method is not peculiar to our own FBI but to all such services in the western democratic nations. Few people will remember the spectacular Stavisky case in France in 1932 when this unsavory financier was finally uncovered not only as a dishonest individual who had robbed widows and orphans but also as a foreign agent.

For some reason or other there is a violent outcry against all security agencies in this country whenever the name of a scientist is mentioned as a "doubtful character."

Because a person is a distinguished man of science it is assumed that he must be, by definition, a good security risk although there are instances showing that some of them are active members of Communist parties or outright traitors. Thus, M. Joliot-Curie, a distinguished French physicist, is openly a member of the Communist Party, while Dr. Raymond Boyer, an equally distinguished Canadian scientist, has been sent to jail for 2 years by the Canadian courts for having betrayed secrets from his laboratories to Soviet agents.

The fact that an individual happens to be a scientist cannot serve as a shield against any investigation and suspicions, particularly in these days when American scientists especially have in their hands the most vital secrets of the Nation's defense. The security services of this country would be sadly derelict if they did not place such persons on the same level as other citizens.

American Aid to Europe

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Thursday, June 16 (legislative day of Thursday, June 2), 1949

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by George Sokolsky relating to American aid to Europe, from the Washington Times-Herald of this morning.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THESE DAYS

(By George Sokolsky)

The final 1948 report of the Economic Cooperation Administration has this to say:

"In the fourth quarter of 1948, aggregate industrial production in western Europe regained its prewar level and the volume of exports attained a postwar peak. Much of the expanded output has been channeled into investment and exports.

"As a result, the standard of living of the growing population is generally much below prewar, and the supplies of some foods and other consumer goods are still inadequate.

"The expansion of exports combined with the restriction of imports to less than the prewar volume has enabled western Europe to make some headway in closing the gap in its balance of trade."

Nevertheless, sizable trade deficits remain. But it is quite difficult to understand what ECA really is doing. The Marshall plan did not guarantee any country a total return to prewar conditions, nor did it assure any people that their standard of living would be precisely what it was before the war.

All it did was to promise that out of American beneficence a helping hand would be given some of the nations that had suffered dire consequences during the war.

The Marshall plan did not agree to underwrite socialism in England, nor did it propose to safeguard France against the consequences of an inability to govern itself effectively. It simply promised to give them some aid.

There has been a long series of such promises, each being advertised as the last one, each costing the American taxpayer huge sums of money, and each ending in the preparations for the next request, demand, promise, and payment.

It started at Bretton Woods in 1944; it moved on to the British loan for $3,750,000,000; it went on to aid in Greece and Turkey; then came the Marshall plan and ECA. Now we have the North Atlantic Pact and the proposal to arm our former allies.

The theory behind all this is that if we do not put up at least $5,000,000,000 a year, our allies will all become Communists, that they will immediately join the Federation of Socialist Soviet Republics and that we shall be isolated by our own diplomacy.

In a word, the course of events has forced us to buy our friends, and the friendship is of such a nature that unless we continue to pay for it, we shall lose it. It is a bought marriage, existing constantly in the shadow of annulment.

Perhaps it is cheaper to do it this way than to go to war. Certainly, a war would cost more than $5,000,000,000 a year; it would cost more than the at least $20,000,000,000 which relief, aid, and the Military Establishment put together now cost.

Therefore, this may be a way out of our difficulties. But what guaranty do we have that after we pay this insurance or blackmail or whatever you call it, we won't get war anyhow? If we do get a war, the money we spend would all be wasted.

And obviously, if we are forced to spend all this money in Europe and let the Russians conquer Asia, as we have let them conquer China, then we are wasting our money, because China counterbalances whatever gains we have made in Europe.

All of this is indicative of only one fact, namely, that the United States is still improvising its foreign policy and paying cash as the only means for giving the appearance that each improvisation works.

From an American standpoint, it is only possible to establish the success of any program and that is that the program has terminated in our stopping to spend money to

aid nations which should be on their feet by now, and that when the aid ceases, we still have allies and we are not at war. Less than that means that the program has failed.

And there is another point to consider, namely, that we are being drained to restore Europe, but what provision is being made to prevent us from collapsing under that heavy drain? The so-called Fair Deal is no provision, for that only means throwing more good money after bad.

The Worcester, Mass., Industrial Development Plan

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1949

Mr. DONOHUE. Mr. Speaker, I consider it most timely to call to the attention of my colleagues the industrial development plan being carried out in my home city of Worcester, Mass., and which could be profitably emulated in all American communities.

This plan was initiated and is sponsored by the local chamber of commerce, under the direction of its president, Mr. Everett F. Merrill, a distinguished citizen of the Commonwealth and one of this country's most able business executives.

On May 17 last, Mr. Merrill explained this project in a speech, in Boston, before a convention of members of the New England Daily Newspaper Association.

In his extended remarks, Mr. Merrill pointed out that the venture was based on an economic study of the city and its smaller industries, as well as the larger ones, conducted by the chamber of commerce in 1943.

He stated it was decided, from the study, that the outstanding feature of Worcester's economy, upon which to concentrate as the best source of future development, was the presence in the city of some 300 manufacturing companies employing less than 50 persons. Therefore, the industrial development plan emphasizes a program of facilitating the growth and promotion of small industries by providing them with skilled engineering counsel in the fields of production, sales, transportation, and foreign trade.

Under the plan, which was made possible by almost tripling the dues income of the chamber of commerce, the Industrial Bureau Division was enlarged by the addition of four engineers and supplementary personnel.

The more than 300 Worcester companies, employing fewer than 50 workers each, along with their bigger brethren, are getting vital technical advice that ordinarily would be far out of their financial reach. This original cooperative industrial engineering idea is paying real dividends in Worcester and is worthy of wider study and adoption.

Mr. Merrill and his associates are to be congratulated in formulating a community service that will, undoubtedly, extend its beneficial influence throughout the industrial development of the United States.

I am pleased to include a summary of Mr. Merrill's address to the Newspaper Association representatives.

THE WORCESTER, MASS., INDUSTRIAL DEVELOPMENT PLAN

The Worcester industrial development plan was the result of a survey made in 1943 which covered 1 year of research, going back over the past 40 years.

This survey developed the fact that we had been slipping industrially for about 20 years and that the South and Southwest had been gaining. Apparently we had become complacent and, as you know, when complacency sets in, progress stops.

From the survey we realized that Worcester would be faced with a chronic shortage of 10,000 jobs in the postwar period which would mean thirty to forty thousand people on relief.

The question was how could we make 10,000 jobs and the obvious answer was industrial development. In view of the fact that newspapers, like all other industries, live off pay rolls, it became our duty to try to create 10,000 jobs.

Very fortunately, in 1907 George F. Booth, publisher of the Worcester Telegram and the Evening Gazette and one of the most civic-minded newspapermen in America, was instrumental in bringing together the board of trade and several other industrial and mercantile groups which were operating at that time under one head and this group was organized as the Worcester Chamber of Commerce. For this reason Mr. Booth can be termed "the father of our chamber of commerce."

It was decided that if we were going to create these jobs, it must be done through our local chamber. In other words, we were the ones to develop the necessary tools for this industrial development program.

The usual method of hiring salesmen to buy or steal industries from other communities was what we termed "external development." We wanted no part of this because we found from experience that it would not work.

Therefore, our plan would be "internal development." Our study revealed that Worcester had 500 industries, 350 of which employed less than 50 people, and we found that practically every industry in our city started as a very small company. The Norton Co. started as a two-man shop on Water Street. The American Steel & Wire started as a one-man blacksmith shop.

The question to be answered was: Why did some companies grow fast while others continued to remain small—and the answer was lack of management know-how. Therefore, it was up to the chamber to furnish this management know-how.

This would be done by a staff of trained consultants consisting of the following: (1) Engineering production, (2) sales, (3) foreign trade, (4) transportation.

These services would be furnished free of charge to everyone, whether they were members of the chamber of commerce or not.

It was estimated that we would need $80,000 per year to put this project into operation. At that time the chamber budget was only $60,000 per year. In the fall of 1945 we put on a 1-week drive to increase our revenue by $80,000, or a total of $140,000.

Conservative New Englanders do not support the chamber of commerce easily but we had something to sell. In 1 week's time we had collected $83,000 and we immediately put to work the four consultants who we hoped would do the job for us.

Has Worcester's industrial development plan worked? Yes; it has worked exceptionally well. At the peak of wartime production, Government figures showed 91,000 employed; the last figures we have show approximately 90,000 employed.

Worcester has added 118 new industries, employing about 3,000 people, with an annual pay roll of $5,658,000. All except one industry are Worcester men and Worcester money.

We were able to accomplish this because we first found out the facts and then went intelligently about creating these jobs. It has worked well for us and we have every reason to believe that it will continue.

Middle East Problem

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1949

Mr. MULTER. Mr. Speaker, I commend the following article by Marquis W. Childs, which appeared in the New York Post of June 10, 1949, to the attention of my colleagues:

MIDDLE EAST PROBLEM—NEW PALESTINE FLARE-UP PREDICTED BY BUNCHE

(By Marquis W. Childs)

WASHINGTON, June 10.—No one knows better than Dr. Ralph Bunche, the skilled United Nations trouble-shooter, that the present peace in Palestine is no more than a temporary truce so long as certain causes of friction exist in the explosive Middle East. That conviction is behind a confidential report Dr. Bunche made after his return from his successful mediation of the Palestine war.

There can be no permanent peace, he reported, until some solution is found for the problem of the 700,000 to 800,000 Arab refugees who fled from their homes during the war. These refugees are now being cared for with UN funds in temporary camps that are seriously overcrowded.

The same conclusion was reached by George McGee, new Assistant Secretary of State for Middle Eastern Affairs. McGee has just returned from a month in the Middle East, much of his time having been spent in a study of the Arab refugees and what to do about them.

A plan is being worked out, as yet carefully shielded from publicity, to apply President Truman's now famous point IV to the problem of what to do about the Arab refugees. Point IV in the President's inaugural address, it will be recalled, proposed to apply America's advanced technical skill to retarded regions in order to raise living standards.

Trygve Lie, Secretary-General of the UN, made a speech the other day intended to prepare the way for a point IV plan for the Middle East. He was speaking at the University of Chattanooga in Tennessee and he took as his theme the great achievements of the Tennessee Valley Authority and the urgent need for the same approach in the impoverished Arab countries. Referring to point IV and the presence of the refugees on the borders of Israel, Lie said:

"The interests of the new State of Israel, the newest member of the United Nations, coincide in respect to economic development with the interests of the neighbors with whom she has been in conflict. Lasting peace in Palestine—and in the whole Near East—cannot be achieved by any possible political settlement alone. It will require a comprehensive economic development plan that will harness the waters and other resources of the region for the benefit of all

UNIVERSITY OF MICHIGAN LIBRARIES

the people living there in the way that TVA has done for the people living in this valley."

Lie urged that with boldness and the best speed possible the valleys of the Jordan, the Tigris, the Euphrates and the Nile be developed with hydroelectric, irrigation, and flood-control projects. A somewhat similar proposal came from the American Zionist Emergency Council in a memorandum prepared by Eliahu Ben-Horin urging the extensive development of Iraq as a home for the refugees.

A political issue arises here. Israeli officials until recently opposed the return of Arab refugees to communities within Israel from which they fled, making an exception for broken families.

The Arab countries insist that the refugees be returned to the villages from which they came. The deadlock might be broken by the kind of speedy action to restore the fertility of desert valleys that Trygve Lie called for.

But here, of course, you come up against politics in the United States. At the thought of going to Congress for a point IV appropriation, which would either be part of a UN fund or spent directly under American supervision, State Department officials look unhappy.

The time is short. In August the fund now being spent to maintain the Arab refugees will be gone. Then at the very least a new relief fund will be necessary.

Memorial Day Address of Brig. Gen. Julius Klein, Past National Commander, Jewish War Veterans of the United States

---

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1949

Mr. JAVITS. Mr. Speaker, there is appended hereto the address of Brig. Gen. Julius Klein, past national commander of the Jewish War Veterans, the Nation's second oldest veterans organization, delivered on the occasion of the fifty-fourth annual Memorial Day services at Temple Emanu-El in New York on Sunday, May 22.

The story of Brigadier General Klein's career is a saga of the opportunity our country offers to its talented youth. Brig. Gen. Julius Klein, who was educated in Berlin, Germany, joined the United States Military Mission in 1918. He distinguished himself as war correspondent, was a newspaper editor and a motion-picture executive with RKO and Universal Pictures. He headed an investigation into activities of subversive elements in Middle East which resulted in action against the German-American Bund by the United States in 1933.

In World War II, General Klein was activated with the Thirty-third Infantry on March 5, 1941, and later commanded 10,000 troops in the active theater of the South Pacific and the Philippines. He was appointed special assistant to the then Secretary of War, Judge Robert P. Patterson, and left the active service in 1946. He was cited for bravery in the South Pacific. His decorations are many—Brig. Gen. Julius Klein was awarded the Soldier's Medal for Heroism by the President, and also received the Bronze Star Medal, Legion of Merit, French Legion of Honor, and commendations from Admiral William F. Halsey, Lieutenant General Richardson, and Generals of the Army MacArthur and Eisenhower. At present he is commanding general of the One Hundred and Ninth Antiaircraft Brigade of the Illinois National Guard.

Typical of the many expressions of regard that Brig. Gen. Julius Klein received upon his retirement as national commander of the Jewish War Veterans was this telegram from Gen. Dwight D. Eisenhower:

> I join the National Convention, Jewish War Veterans, in paying tribute to Brig. Gen. Julius Klein whose distinguished service merits the respect and honor of all Americans.

Vice President BARKLEY, then a Senator, congratulated General Klein on "the most valuable contributions he has made for the general welfare and national security during his long and distinguished tenure as national commander."

In addition, messages of congratulations on his retirement came to General Klein from General MacArthur, Gen. Omar Bradley, Lieutenant General Eichelberger, Senator Brooks, of Illinois, Louis B. Mayer, Senator Robert A. Taft, of Ohio, Mayor Rokach, of Tel Aviv, Israel, Mayor Kennelly, of Chicago, Senator Baldwin, of Connecticut, Attorney General Tom Clark, and Governor Green, of Illinois.

The address follows:

ADDRESS BY BRIG. GEN. JULIUS KLEIN

Our mission has not yet been accomplished.

The peace is under attack. The security of free peoples is uncertain.

We honor today the long, immortal roster of Americans who fought for these blessings. We pay them our tribute in this house of worship which stands in peace and dignity because of the sacrifices made by men of every creed in order that all of us may continue to live in freedom.

But threats to this—and other free institutions of our beloved country—have not been banished from the earth. As never before in our history, they need again to be made safe from aggression beyond our shores and from attacks within our borders.

None of the Americans to whom we pay tribute today fell as an aggressor. They fell only as liberators. We must remember that in the days ahead. We must remember it when those in our country who have failed to heed the lessons of the wars of our lifetime cry out that we are seeking only to militarize our youth.

America today does not need—nor does she seek—to establish the largest standing military force in the world. She needs only a defense establishment strong enough to discourage assault upon us—strong enough to convince any potential enemy that America is a self-reliant Nation whose people can only be dealt with on a peaceful basis of mutual understanding and respect.

For us in America, diplomacy is a relatively new art. We had no diplomats to defend us when we undertook to gain our liberty 170 years ago. We gained our freedom because our men, women, and children formed themselves into a fighting army. Our statesmen came to us later—after victory had been won by our citizen soldiers.

The history of the years that followed shows clearly that whenever our diplomats have failed to overcome the hostile designs of foreign statesmen bent on achieving their ends by forceful means, we had to rely upon our armed forces to train and develop our citizens into a fighting force strong enough to preserve our existence. Up to the present moment, we have been able to make allies of time and space because of the two oceans that separated us from aggressors to the east and west. But these allies are being taken from us. They are rapidly becoming casualties of science. With every hour that passes they are being overcome by the world's military laboratories which are now pouring out great quantities of jet- and rocket-propelled weapons capable of spanning oceans and continents at incredible speeds.

We can count upon time for only one more effort in our behalf. It can render only one more service to our security and our freedom if we call upon it now. We American veterans know that the lack of 1 hour of adequate training in time of peace can mean the loss of an American soldier's life in time of sudden emergency. We remember that one day after the attack on Pearl Harbor, there were barely enough men and weapons in our armed forces to defend a single port on our West coast against any well-coordinated attack the Japanese might have made. We remember that on the second day after Pearl Harbor, our military authorities were seriously considering the evacuation of some 3,000,000 American citizens from the cities of the Pacific coast. We were spared this terrible ordeal. Because the faithful—though neglected—cadres of our Regular, Reserve, and National Guard forces performed miracles of training under emergency conditions, we were able to wage global war successfully against enemies who had trained and equipped themselves for years for one purpose—to wipe our form of government off the face of the earth.

We paid a tremendous price for victory. In terms of money, we shall continue to pay for years to come. But the dearest cost of all was the lives and sufferings of our comrades. Let us never forget that peace and security are not commodities to be bought at bargain rates. They are luxuries, and their price has been on the rise since Cain went to war against Abel. I cite only two figures. World War I cost us more than 364,000 of our fellow Americans in killed, wounded, and missing. World War II exacted from us nearly a half-million in casualties.

Just before we gathered for these memorial services, we heard of the death of that great American—James Forrestal, former Secretary of Defense, who died earlier this morning. His death is as truly a war casualty as the deaths of tens of thousands of our comrades who died in battle.

History will record that Jim Forrestal's long hours of unceasing effort as Secretary of the Navy, contributed immeasureably to our success in World War II. His strenuous efforts since the end of World War II and especially since his elevation to the office of Secretary of Defense in effecting the unification of our armed forces, leaves our Nation forever indebted to him. In these memorial services, today, we have one more noteworthy comrade to honor.

No, peace doesn't come in free samples. It cannot be purchased in large, economy-size packages. It can only be purchased by courage, by faith, by unity of purpose and effort. These were the primary weapons Americans took with them into war. We must take them up again if we are to secure the peace. We must call upon those we have elected to guide our destinies to give affirmative evidence to the world that we are prepared to cope with any threat to law and order. We must remain alert at home to prevent any threat to our internal security by forces

that would divide and weaken us by pitting class against class, race against race, religion against religion.

Twice in this century, our country has given without stint of its men, its labor and its industry in order that the human rights and dignities we cherish for ourselves might be shared by all other peace-loving peoples.

We have been the arsenal of democracy in war. With the end of war, we have converted that arsenal into a reservoir of humane and generous aid—not only to those who fought by our side—but to the sick and hungry people of governments that were our enemies.

Today American pilots risk their lives to fly food and medicine to the priority bombing targets of yesterday. Our seamen sail the oceans with cargoes of mercy instead of materials of destruction. And our peacetime Army is manned by a soldier who is studying the art of how to live with his neighbor as well as the science of military defense.

Today it is true as never before that our country bears a major responsibility for aiding the physical and economic recovery of nations that want to remain free. In seeking to carry out that obligation, we have answered the opposition of powerful and ruthless forces alined against us by adoption of the European recovery program. To those who disagree with our belief that Government was created to serve the people, we have shown with the European recovery program that we will not be swayed from a basic concept of our way of life since our Republic was founded. And to show that we cannot be swayed from this program, our Congress is now studying adoption of the North Atlantic Pact in order that we—and those governments who believe in freedom as we do—may reserve the right to come together in mutual defense if one of us should come under attack.

With these measures, we can demonstrate to the world that we understand our obligation to maintain the peace. For peace is a byproduct of security. The list of nations and peoples who have learned that lesson is long. It stretches through all the pages of human history.

We pause today in tribute to all the brave men who have died so that mankind may one day conquer fear and hatred, bigotry and oppression, for all time.

It is for us who have survived this continuing war to move forward until this great mission has been completed.

German Bishops on War Crime Trials

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, June 16 (legislative day of Thursday, June 2), 1949

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "German Bishops on War Crime Trials," published in the Christian Century for June 15, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GERMAN BISHOPS ON WAR CRIME TRIALS

When Senator JOSEPH R. MCCARTHY, of Wisconsin, withdrew from the current Senate investigation into the Malmedy trials, that malodorous case gained an ill repute. Senator MCCARTHY is a former marine who has no interest in coddling guilty Germans. He became convinced, however, that the proceedings before the Senate subcommittee are being pointed toward another whitewash of the Army, and after saying so publicly he refused to continue in the proceedings. American Christians, whose consciences are very uneasy over this whole business, will be interested to learn that about the time Senator MCCARTHY was making his protest, Bishop Theophilus Wurm, of Stuttgart, gave the American press associations a blistering statement on the one-sidedness and the problematic character of the methods used in the war crime trials. The aged leader of German Protestantism, in commenting on the denials made in Washington that torture was used to extract confessions from the Germans accused of the Malmedy massacre, simply said: "Never will the people of Schwabisch Hall, who in the nights heard the cries of pain of the tortured beyond the prison walls, be made to believe that these investigators were servants of justice and not servants of revenge." At almost the same time Bishop Otto Dibelius, of Berlin, president of the German Evangelical Church Council, was quoted in the press as saying that "as Christians we refuse to recognize the Nuremberg verdicts as justice, but we have to accept them, as a defeated people, as acts of reprisal imposed by the victors." German Protestantism contains no more distinguished leaders than these two bishops. Their devotion to democratic ideals, their abhorrence of nazism and all its works, has been amply proved. When they talk like that about the justice the Army authorities have been dispensing in Germany, it portends a moral revulsion at the war crime verdicts which, within a few years, will be world-wide.

Graybeards and Black Eyebrows

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. KLEIN. Without making any concessions in my long-held position that this Congress should repeal the Taft-Hartley Act in its entirety, reinstate the Wagner Labor Relations Act, and then proceed to consider reasonably and conscientiously any amendments which may be shown to be in the public interest, I wish to bring to the attention of the House and of the country a trenchant editorial from the New York Post Home News of Wednesday, June 8.

Under consent, I am inserting the editorial in the RECORD, as follows:

REASON AND RITUAL

There is a fighting chance for repeal of the Taft-Hartley law and enactment of equitable labor amendments at this session of Congress.

The prospect that reasonable men may find a reasonable solution to the threatened deadlock has enraged John L. Lewis and the Communist labor forces who are staging another revival of their intermittent love affair with him.

The National Association of Manufacturers is similarly disturbed by the possibility of an honorable settlement.

Mr. Lewis roars "sell-out" at Messrs. Murray and Green. Their offense, it appears, is that they have worked with enlightened Senators in both parties in an attempt to find a compromise legislative formula—rather than invite total defeat on an intransigent line.

The Communists naturally applaud Mr. Lewis' words.

And the NAM statesmen cry "sell-out" at any legislator who is prepared to concede that the Taft-Hartley law is less sacred than Magna Carta.

All this may seem painfully confusing, but it should not be. For what we are witnessing is simply a new effort by the dramatic irresponsibilities on the extreme left and right to thwart the flexible democratic process of reconciliation. In a curious way the NAM die-hards and the Communists share a nostalgia for the era of jungle warfare on the labor front.

Lewis, a wrathful compound of conservative economics and Communist tactics, personifies the unity of the two extremes.

But as the Senate debate begins it becomes increasingly clear that there are decent and rational compromises that men of good will can find if the country supports their efforts; the plant-seizure proposal symbolizes this trend.

In a sense the underlying problem has been to resolve two deep insecurities.

One is labor's historic fear of injunctions, a fear justly acquired in bitter decades when the phrase "injunction granted" epitomized the oppressive use of police power on the side of corporate tyranny.

The other is a widespread popular belief that a democracy must have an ultimate protection against strikes that genuinely threaten the national welfare.

Most contemporary essayists like to labor the second point and ignore labor's point. They romanticize the extent to which a law can assure continuous production if the punctuation is sound and the phrases well turned. Our own view is that the right to strike, like the right to voice unpopular opinion, is fundamental to democracy; that the discomforts caused by strikes, like the unpleasant sounds created by uncongenial orators, are part of the minimum price we pay for the larger freedoms we enjoy.

But we concede the validity of the fear that at some moment in some critical national hour a national strike could not be light discounted. We share the growing belief that plant seizure is the soundest formula for dealing with such strikes, if drastic profit limitations can be imposed; otherwise, it could become a device by which management transfers its labor problems to Government and continues business as usual.

All the clashing rhetoric points to this compromise. It is not the whole story of the labor debate; but it is a vital chapter. Political maneuvers may obscure the issue. The doctrinaires on both sides will protest that they have been sold out; their creeds thrive on unresolved conflicts. They want to be permitted to slug it out for another year while democratic society suffers the usual fate of an innocent bystander. We see some small signs, however, that in this debate reasonable men may no longer be viewed as Washington's lunatic fringe.

A House Vote on Housing

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1949

Mr. MULTER. Mr. Speaker, the following editorial which appeared in the New York Times of June 16, 1949, is a

UNIVERSITY OF MICHIGAN LIBRARIES

complete answer to those who are urging opposition to the housing bill on the basis of the latest argument that Government must retrench and economize. We should have long since learned that this Government will not retrench and economize where the health and welfare of its people are concerned.

A HOUSE VOTE ON HOUSING

Whether or not it can be construed as a preliminary victory for housing legislation, the democratic process has certainly been served by the Rules Committee surrender to permit the housing bill to go to the House floor for open debate and a vote next week. On June 7 the committe had voted, 7 to 5, to table the bill, in spite of the fact that the Banking and Currency Committee, which had primary jurisdiction, had reported out the bill by 14 to 7 on May 12. Now the Rules Committee, responding to pressure from the House leadership and in part, perhaps, to public opinion, has reversed itself and cleared the measure by a vote of 8 to 4. An anti-bottlenecking rule passed by the House early in the present session also had a salutary effect on the committee.

Now housing can be discussed on its merits. We can expect that some spurious arguments will be advanced, and some that are sincere, even though ill-founded. Some House Members who have been against housing all the time, or have paid lip service to it on a yes-but basis, will not find that they are against the housing bill because they are for economy in Government. Let us examine this argument.

The Rules Committee asked the Budget Bureau for a report on costs of the housing bill. The reply was that Federal subsidies involved over a 40-year period would cost actually $9,000,000,000 to $10,000,000,000, instead of the full $16,000,000,000 authorized. So the outlay by the Government would run at most $400,000,000 a year and, on the Budget Bureau's estimate, not more than $250,000,000 a year.

We do not view this as an inconsiderable amount of money by any means. We have steadily advocated governmental economy when exerted wisely, and we believe it especially desirable under present circumstances of uncertain business prospects. However, the impact of this housing bill will not be felt, at least to any considerable effect, on the fiscal year just ahead, so that it cannot add to the immediate need for a tax increase which it is desirable to avoid. If a period of growing unemployment is ahead of us, a housing construction program will provide jobs in the area of greatest usefulness to the public. Slum areas in cities, which this bill would help to clear, yield far less than their proper share of local taxes and absorb municipal services far beyond their proper due. Thus we will be substituting subsidized housing for subsidized slums, to the general benefit of the public, and these are gains that offset, even to some extent financially, the cost of Federal subsidies.

House Members, particularly Republicans, who suddenly find that the popular cry of governmental economy is their favorite reason now for being against public housing will forgive us if we recall the House action June 1 on pensions of $72 a month for veterans of 65 years of age and over. The House passed this bill by a vote of 365 to 27, thus rushing headlong into a commitment of governmental expenditure of $65,000,000,000 over the next 50 years. In favor of this bill, and blithely forgetful of economy at that moment, were 138 Republicans, as well as 226 Democrats.

Only 18 Republicans and 9 Democrats voted against the pension bill. Among the Republicans voting for this expenditure of well over a billion dollars a year for the next 50 years was one Representative MARTIN of Massachusetts, who, as House Republican leader, is leading the fight against the housing bill on "economy" grounds. "I am in favor of housing," said Mr. MARTIN recently, and before his vote on the pension bill. "But it is like a lot of other things. If you don't have the money you have got to do without them for another year. I very seriously question whether we can embark on any new spending ventures."

To the 365 House Members who voted for a $65,000,000,000 veterans' pension we say that the public will be somewhat skeptical of an "economy" explanation for voting against a $10,000,000,000 housing bill which has the superior advantage of being in the public interest, which could not be said of the pension bill.

What's the Deal Between United States Steel and German Steel Cartels?—Old Friends Meet Again

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks, I wish to include an article which appeared in the summer issue of the magazine published by the Society for the Prevention of World War III, 515 Madison Avenue, New York City:

OLD FRIENDS MEET AGAIN

After having announced the "history shaking" plan for the internationalization of the Ruhr, which was supposed to herald a new era of peace and security, the occupying authorities got down to practical tasks by reappointing Hitler's old supporters to control the steel industry of the Ruhr.

For months the American people had been bombarded with all kinds of promises that never again would the heavy industries of the Ruhr be controlled by the men who were Hitler's partners in war and crime. But all that noise was designed to cover up the real plans which had been worked out behind the scenes.

The allied authorities have finally accepted the 12 Germans who are to run the iron and steel industries of the Ruhr. Among them you will find a sprinkling of so-called democrats and others whom the occupation authorities have admitted are "innocuous." They are supposed to give the democratic touch to the whole scheme. They provide the window dressing to soften the shock for those who are trying desperately to reconcile their anti-Nazism with the "goings on" in Germany today.

But tear away this window dressing and you will find that the real managers of the German steel industry are indeed Hitler's fellow travelers and staunch supporters. For example, take the case of Herman Dinkelbach, who was among the 12 appointed to run the steel industry. We have exposed this gentleman in other issues of Prevent World War III, but it is not out of place to remind our readers that for 30 years Dinkelbach was the financial brains of the German steel trust, Vereinigte Stahlwerke. Believe it or not, the British employed him as a trustbuster. Mr. Dinkelbach "without regrets" admitted that he was a very substantial financial contributor to Hitler's SS. Moreover, he had been a member of the Nazi Party way back, before most German industrialists thought it prudent to link their names with the "Paperhanger." Dinkelbach is today the biggest name in German steel and because of the high respect which he commands, the Allied authorities very obligingly and meekly accepted him.

Another gentleman who has been appointed to the trusteeship is one Guenther Henle. In 1940, Henle became the chairman of the Kloeckner Steel Combine, which of course played a very important role in Hitler's war plans.

Dinkelbach and Henle are joined by Karl Barich, a bigwig in the Rheinisch Westphalien Electrical Co., a public utility network covering western Germany from the Dutch to the Swiss border. This company, incidentally, is closely tied up with the notorious Deutsche Bank, one of the chief looters of occupied Europe. The Deutsche Bank launched its piratical raids under the direction of Herman J. Abs, another Nazi favorite. As a matter of fact, Barich at one time worked for the Nazi Price Control Administration. In speaking about the Deutsche Bank, another one of its fair-haired boys, Gotthard von Falkenhausen, has also been appointed as a trustee.

Finally, there is Herbert Mondon. He bossed the steel plants in Silesia for the Herman Goering Steel Works. This is the crowd that is going to bring a new era of peace and economic well-being to Europe and the world. Who has reason not to be satisfied?

The Allied authorities at the behest of Herman Puender, chairman of the German bizonal executive committee, put their stamp of approval on these men. Puender is nobody's fool. After all, he served as a lieutenant colonel in the German Counter Propaganda Service of the German General Staff during the war. He worked in division III-H. This outfit was concerned with preserving Nazi morale and ideology among the German troops. Thus, as one can see, by Puender's appointments, he most certainly knows how to preserve Nazi morale and ideology.

Now what are these steel barons going to do as overseers of German steel? It is not very hard to predict, if one consults United States documents on how these steel tycoons operated after World War I.

Some will say that that was past history, but is it? The London Economist replies as follows: "The industrial leaders in the Ruhr are in general the men who helped Hitler; one of their first reactions . . . has been to seek to form cartels to maintain prices and their attitude to trade union cooperation has been reactionary in the extreme.

This authoritative journal then asks: "Is there no cause for alarm when the revival appears to be recreating under the Allies' eyes, the old unrepentant Germany of cartels * * *." Indeed, there is cause for alarm and the victims of this ruthless power in Europe are not at all complacent. Though they are closer to the scene of the crime, its effects are inescapable for us as well.

Just who is responsible for the unfolding of this new tragedy? Who has forced the hand of our government to accept law No. 75 which lays the foundation for the rebirth of the German cartel network? Undoubtedly German propaganda has played a great role in this matter. They launched a pamphleteering campaign in this country which even managed to take in a few members of Congress. But they are not alone in this enterprise. They have found aid and comfort among individuals whose business concerns have had close financial tie-ups with German steel.

When Mr. George Wolf of the United States Steel Corp. surveyed the German steel

industry last year, he came home with tales of how important it could be. He did not say for whom. Mr. Benjamin Fairless, president of the United States Steel, publicly endorsed the Wolf report and admitted that it was amazing how much steel capacity remained intact in Germany. Now, Mr. Fairless, who has some 30 years' experience in steel, is not as naive as all that. Doesn't he know that as far back as 1945 Congress revealed to the American press that in the western zone of Germany alone the steel capacity was upwards of 20,000,000 tons—greater than any of her neighbors? Surely Mr. Fairless, a practical businessman whose company has had dealings with German steel in the past, was not asleep during the last 3 years.

When asked what the Wolf report contained, Mr. Fairless unassumingly declared that it was confidential. This report is now under lock and key in the office of Mr. Paul Hoffman's ECA. Yet Mr. Hoffman has been prodding our State Department to abrogate agreements on the level of German steel production. No doubt he received his inspirations from this report. These agreements on the level of steel production for Germany and reparations had been for some time basic objectives of American foreign policy. If the foreign policy of this country is the direct concern of the people, then why are they kept ignorant of the Wolf report, which has a direct bearing on our foreign policy?

The United States Steel Corp. has more than a finger in the German pie. Having been able to influence American policy with respect to German steel production, they have also managed to take over the Allied Steel Commission which is to have over-all direction in the German steel industry. Four of the five Americans appointed are members of United States Steel—William J. Brinkerhoff, Werner P. Naumann, Ronald Clark and Ian F. L. Elliott. Mr. Elliott is the representative for United States Steel in Europe. At one time he fronted for the British iron and steel federation in the International Steel Cartel, another brainchild of the Dinkelbachs. Mr. Elliott should be especially useful because of this connection.

Another Elliott—Prof. W. Y. Elliott, of Harvard—has been very useful to German steel interests. One of the many ways he tried to influence the "powers that be," was through a memo which he recently wrote for a congressional committee. Believe it or not, the main point in Professor Elliott's memo was the advocacy to expand present steel production in Germany and Japan as the primary means to avoid inflation in the United States.

If any of our readers can figure this one out, we will tell it to Professor Elliott.

In addition, the head of the ECA mission in western Germany is Norman H. Collison. The United States Steel has been a client of his law firm. Thus we are back to the "good old days." Things have hardly changed. The American people are expected to endorse this new marriage of the international cartelists, though President Truman has publicly announced his opposition to the reestablishment of German cartels.

This tragic picture can be of little comfort to the people. They have been asked to support a billion dollar armament program to strengthen American security against future Pearl Harbors. But the genesis of the first Pearl Harbor goes back to the days when the German cartelists were strangling free trade throughout the world and throwing monkey wrenches into American productive enterprise. It was not so long ago that our war effort was seriously jeopardized by these unholy arrangements. Just how our present security requirements can be squared with the reemergence of this cartel network is a question which has yet to be answered.

Extension of Veterans' Readjustment Benefits

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. KLEIN. Mr. Speaker, under consent, I am inserting in the CONGRESSIONAL RECORD the text of an address made by me over radio station WLIB in New York City last Monday evening in support of extension of veterans readjustment benefits. Following the end of the text I am including also the language of my bill H. R. 4621.

The address is as follows:

I want to start out by saying that it is a good thing for the Congress and for the people of the United States and for the Jewish War Veterans that there are public-spirited leaders like my friend, Nelson Levitt, who started battling for extension of readjustment allowance to veterans when most people were not even aware that time was running out.

For almost a decade our country has not had to worry about people getting jobs. We met the challenge of total war with nearly total mobilization of our manpower and our womenpower.

We looked ahead to the transition period. We passed the Full Employment Act, we prepared skeleton programs for public works on a massive scale should there be a sudden sharp recession.

As it happened, demands of dammed up purchasing power and American aid in foreign rehabilitation kept our factories spinning and our workers on pay rolls.

At the same time, to help the 16,000,000-odd men in the armed services make the change from war to peace, and to protect them and their dependents, we passed the National Service Life Insurance Act, the Vocational Rehabilitation Act of 1943, and the GI bill of rights.

So far the Government has paid out about $7,000,000,000 under the educational benefits; about $800,000 for vocational training, and about $3,500,000,000 in the readjustment benefits of the GI bill of rights. By way of contrast, the World War I bonus payments cost about $3,800,000.

Tonight we are talking about the provisions of the GI bill of rights which, under certain fairly easy conditions, gave a former serviceman of World War II a chance to draw $20 a week for 52 weeks if he could not get a job or if he lost the one he had.

As you can see, it was a lot like unemployment insurance. The benefits did not have to be drawn on in consecutive weeks. It was a cushion against possible unemployment.

Now here is a peculiar thing about the readjustment benefit title of this act. It runs out just five weeks from now, on July 25, 1949.

That is 2 years after the close of the war.

All the other special laws for veterans have a longer life.

The time limit for benefits under the vocational rehabilitation act is July 26, 1956.

The provisions of the life-insurance act and of the various disability acts are continuing.

The irony is that this year, for the first time since 1941, there are fewer jobs than there are workers. We have not been able to open up new jobs fast enough to take care of the new labor force, and in some sections there is definite unemployment and displacement of steady wage earners.

For thousands upon thousands of the most deserving veterans this is the real transition from war to peace.

The men who have benefited from the $3,500,000,000 already paid out were largely the young fellows who had been inducted into service before they had ever held a job. It is only natural that some deliberately sponged on Government bounty; most of them quite legitimately had a little trouble getting jobs because they had no training.

The story now is different.

The veterans running into joblessness today are the older, settled men who walked straight from the demobilization centers into jobs, and disdained the opportunity to draw their readjustment benefits; or they are the men, also family men, who went into vocational training or back to school, and now are looking for jobs, with wives and children dependent on them, at a time when jobs are scarce and growing scarcer.

These are men who served their country well in peace as in war.

That is the first and best reason the effective date of the act should be extended.

Another good reason is the cushioning effect the payments will have on business conditions.

We all hope, and I believe, that the process we are going through is only a leveling off process.

We hope that we are not facing a depression, or even a recession, and we are going to do everything that intelligent people of good will can do to head off any economic trouble.

One of the things we can do is to extend the 52–20 law right now.

My colleague and good friend, Congressman WALTER HUBER, of Ohio, was I believe, the very first to introduce a bill to extend the act.

His bill is a simple extender making no changes in the benefits.

I want to make it clear at this point that if the Huber bill is the best bill which can be brought out of committee I shall support it and vote for it. Hearings will open soon on a similar bill in the Senate. In the House no hearings are scheduled, and I have been given to understand that the chairman is opposed to any extension.

Every national veteran organization except Veterans of Foreign Wars has asked for extension; VFW will bring it before the next national convention. The CIO also has endorsed it.

The American Veterans Committee has gone even farther, and expects a special committee studying the subject to make public in 2 weeks a startling report on unemployment among veterans. As you know, the Jewish War Veterans has been in the forefront of the fight for extension.

Now, it so happens that I am one of four Members of the House who has introduced a bill to extend the effective date of 52–20; but my bill goes a lot farther, for reasons that I think everybody should think about.

When the GI bill of rights was passed, we were still living in a prewar economy as far as the cost of living was concerned.

Thanks to President Roosevelt's insistence on adequate price and rent controls, we had virtually no wartime inflation.

Five years ago, under such conditions, $20 a week for 52 weeks seemed like a lot of money.

Twenty dollars a week today is just about the same as $10 a week in 1944; and employment may be dropping, but the cost of living is not.

Furthermore, although provision for dependents was made in the servicemen's pay acts, in the educational and vocational benefits sections, and almost everywhere else, the present law doesn't add a dime for a man's wife and children.

I think we will all agree that as long as there are young people in love and anxious

UNIVERSITY OF MICHIGAN LIBRARIES

to start families, there are going to be babies, and I can see no reason to penalize the man raising children for America.

Therefore the bill I have introduced not only extends the life of the act to July 25, 1951, but also would, if enacted, provide for modest increases in weekly payments, for a longer benefit period, and for extra money for each dependent. A dependent is defined as having the same meaning as in the income-tax laws.

The number of my bill, in case you want to ask your own Congressman for a copy, or ask him to support the bill, is H. R. 4621, and the title is "A Bill To Extend the Servicemen's Readjustment Act of 1944."

My bill would stretch the weekly payments out to 104 weeks; it would strike out the discriminatory antilabor clause in the present act; it would raise the weekly payments to $30; and it would give an additional $5 a week for each dependent.

In the case of a self-employed veteran the maximum benefits would be increased to $150 a month, with $20 a month for each dependent.

Otherwise, the present restrictions would not be changed.

I think my bill is fair and drawn to fit present conditions, and I am hopeful it will get serious and earnest consideration immediately.

H. R. 4621

A bill to extend the benefits of the Servicemen's Readjustment Act of 1944, as amended, and for other purposes

Be it enacted, etc., That title V, chapter VII, section 700 (a), of the Servicemen's Readjustment Act of 1944, as amended, is further amended to read as follows:

"CHAPTER VII—READJUSTMENT ALLOWANCES FOR FORMER MEMBERS OF THE ARMED FORCES

"SEC. 700. (a) Any person who shall have served in the active military or naval service of the United States at any time after September 16, 1940, and prior to the termination of the past war, and who shall have been discharged or released from active service under conditions other than dishonorable, after active service of 90 days or more, or by reason of an injury or disability incurred in service in line of duty, shall be entitled, in accordance with the provisions of this title and regulations issued by the Administrator of Veterans' Affairs pursuant thereto, to receive a readjustment allowance as provided herein for each week of unemployment, not to exceed a total of 104 weeks: *Provided*, That no such allowance shall be paid for any period for which he receives increased pension under part VII of the Veterans Regulation 1 (a) or a subsistence allowance under part VIII of such regulation."

2. Title V, chapter VII, section 700 of the Servicemen's Readjustment Act of 1944 is hereby amended by adding a new subsection (d) to read as follows:

"(d) This title shall be effective until July 25, 1951."

3. Title V, chapter VIII, section 800, of the Servicemen's Readjustment Act of 1944 is hereby amended by striking out subsection "(b)" thereof, by striking out the words "(c)" and "(d)" and inserting in lieu thereof the words "(b)" and "(c)", respectively.

4. (a) Title V, chapter IX, section 900 (a), of the Servicemen's Readjustment Act of 1944 is hereby amended by striking out "$20" and substituting in lieu thereof "$30, and an additional $5 for each dependent,".

(b) Title V, chapter IX, section 902 (b), of the Servicemen's Readjustment Act of 1944 is hereby amended to read as follows:

"(b) Upon application by the veteran showing in accordance with rules prescribed by the Administrator, that he has been fully engaged in such self-employment and that his net earnings in a trade, business, profession, or vocation, having been less than $150 in the previous calendar month, the veteran shall be entitled to receive, subject to the limitations of this title as to time and amount, the difference (adjusted to the next highest multiple of $1), between $150 and his net earnings for such month. In addition, the veteran shall be entitled to receive $20 per month for each dependent."

5. Title V, chapter IX, of the Servicemen's Readjustment Act of 1944 is hereby amended by adding a new section 903 to read as follows:

"SEC. 903. As used in this chapter the term 'dependent' shall have the same meaning as defined in the internal-revenue laws of the United States."

6. This act shall take effect on the first day of the first calendar month next succeeding its enactment.

Let's Tell the People

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1949

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include the following recent editorials from the Olean (N. Y.) Times-Herald and Binghamton (N. Y.) Press:

[From the Olean (N. Y.) Times-Herald of March 5, 1949]

WELL, WHY NOT?

Representative KENNETH B. KEATING, the forthright Congressman from Rochester, N. Y., believes that the Government should tell the people what it is doing with the money they pay in for social security.

Years and years ago, when this social security scheme first was promulgated, this newspaper made the assertion that the cash that was contributed from the pay rolls of the people was not being held in a special fund, to be used for just one purpose—social security payments—but was being turned helter-skelter into a general hopper and was being used for any old purpose that the Government saw fit to utilize it for.

That statement brought protests from various Government officials; but they didn't receive much satisfaction.

For the facts remained. Oh, yes; the Government did put in what amounted to I O U's for the money. But the money was spent just the same; and only the I O U's remained.

Tons of water have passed down the river since then; but the indiscriminate spending of the social-security money still goes merrily on.

And Mr. KEATING thinks there is something not quite according to Hoyle about it.

"Let us discontinue the practice in the Government of collecting money for one purpose and using it for another," he urges, "or, if we are going to follow that questionable practice, let us tell the people who put up the money, frankly and openly, what we are doing with it."

Well, that's fair enough, isn't it?

But it isn't likely. American employers and employees now have built up an accumulation in the past 12 years—hold your breath—of $10,700,000,000; yet as Representative KEATING says, the money just isn't there.

It has all been spent—with the exception of the insignificant amount of $150,000,000.

Let's get that matter of the I O U's clarified; and let Mr. KEATING do the clarifying:

"This money, collected from the working people of this country and their bosses over a 12-year period, has simply been spent for other purposes through the device of substituting Government bonds in the trust fund for the hard-earned dollars and pennies which people thought they were paying for future benefits."

The Rochester solon admits, of course, that the Government bonds in the funds are as good as the Government itself; but he points to the big joker in the deck.

"The only way that benefits can be paid," he says, "is by selling those bonds, making new appropriations, or tapping future pay rolls still more to raise the cash."

Representative KEATING adds another interesting observation.

It should not be required, he said, that funds more than necessary to meet operating expenses and normally anticipated benefit payments, should be held in cash.

"It is not the method of administering the fund, but the failure to fully inform the public to which I object," he declares.

"Staggering sums have been collected from pay envelopes to run the Government on the pretext and representation to workers that this was an insurance fund."

The plain fact, friends and neighbors, is that when and if that $10,700,000,000 is needed, the money will have to be raised—some way, somehow—all over again.

Which isn't in accordance with Grandma's ideas of running things.

And maybe it isn't in accordance with yours; but nothing will be done about it unless there is a public demand that something be done about it.

How far Representative KEATING will get in his move—his remarks were made on the floor of the House this week—must remain to be seen.

But at least he has performed the service of bringing home to us once again the fact that we Americans are a remarkably complacent people. Maybe, that is a providential circumstance.

[From the Binghamton (N. Y.) Press of March 9, 1949]

YES, TELL THE PEOPLE

Representative KENNETH B. KEATING, of New York, believes the Government should tell the people what it is doing with the money they have paid in for social security.

During 12 years a social security "fund" of $10,700,000,000 has accumulated. Actually this "fund" exists only as Government I O U's, for the money for the most part has been spent, and payments out of the "fund" will have to be derived from new tax revenue. As Representative KEATING points out, the Government's I O U's are as good as the Government itself. Nevertheless, it's true that the "fund" many believe exists, does not exist.

Another matter not to be ignored in discussion of security in social security is long-term devaluation of currency. For more than 100 years, prices on average have gone up in the neighborhood of 20 percent each decade, meaning that the buying power of the dollar steadily has declined.

Government spending currently in prospect suggests an enormous further long-term depreciation of the dollar. If future benefits are not related to dollar purchasing power, how much real social security will be provided? If the purchasing power of the dollar is not stabilized, then the taxes taken should be invested in something that would rise in terms of dollars in ratio to the depreciation of those dollars.

If the Government cannot meet this economic problem, then it should not propose a social security it cannot create. The social-security program as it is now set up can bring only cruel disillusionment.

Washington Home Rule

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1949

Mr. MILLER of California. Mr. Speaker, the Louisville Courier-Journal on Friday, June 3, 1949, published an editorial entitled "Congress Should Grant Washington Home Rule."

On June 4, 1949, Marquis Childs touched on this same subject in his column, Washington Calling, as it appeared in the Washington Post.

These two pertinent articles are included herewith:

[From the Louisville (Ky.) Courier-Journal of June 3, 1949]

CONGRESS SHOULD GRANT WASHINGTON HOME RULE

Municipal affairs in Washington, D. C., are piddling in comparison with the issues Congress now faces. Yet for the past few days the Senate has been forced to set aside the Atlantic Pact, repeal of the Taft-Hartley Act, and proposals for housing, health insurance, and educational aid, in order to consider a bill aimed at relieving them of responsibility for District affairs. This bill would give residents of the District of Columbia the right to elect their own local officials and school board.

It would give to approximately 900,000 citizens the rights and duties of citizenship inherent in the Constitution. This alone would justify passage of the bill, for it is clearly a violation of the spirit of the Bill of Rights to deny some measure of representation to citizens. It would also improve the present haphazard system of city government, by making city officials responsive to the voters.

Most important of all, it would relieve Congress of its duty as an unwilling city council for Washington. Members of Congress who have seen the present system admit they have neither the time nor the intimate knowledge of local affairs to do justice by residents of the Capital.

There is a minority objection to home rule. Some citizens oppose it because they say it would increase their taxes. Others object to the fact that it would give Washington Negroes the right to vote on city affairs. This latter group was represented in the Senate by southern Senators EASTLAND, of Louisiana, and JOHNSTON, of South Carolina, who tried to amend the bill to prohibit any change in Washington's existing racial segregation laws without the approval of Congress. The Senate, in defeating the amendment, must have noted the inconsistency of its authorship by men who last year championed Dixiecrat opposition to interference by Congress in home management of racial matters. We trust the House will also ignore this opposition and pass a bill which is long overdue.

[From the Washington (D. C.) Post of June 4, 1949]

WASHINGTON CALLING

(By Marquis Childs)

HOME RULE FIRST

For Secretary of State Dean Acheson, tied up in a diplomatic poker game with the Russians at the Paris Conference, the news from home must be somewhat disturbing. He must feel as though a long arm from Washington had reached over his shoulder to take out of his hand some of his strongest cards.

The Senate has put off consideration of the Atlantic Pact until after action on a labor bill, which is certain to provoke a great deal of debate and parliamentary skirmish. More serious, Majority Leader SCOTT LUCAS suggested in an interview that it might not be possible in the present session to consider the proposal to send American arms to the Atlantic Pact countries.

While President Truman said the contrary—that Congress would find time to consider the arms proposal—the damage had been done. The strength from which Secretary Acheson was leading was weakened.

Watching the Congress, you sometimes get the feeling that even the best-intentioned men are trying to evade the difficult decisions of our difficult age. There seems to be, at times, a dogged determination to put first things last.

But the Senate the other day took a step toward unloading some of the cumbersome excess baggage out of the past. With very little debate, by a voice vote, a bill was adopted giving a considerable measure of home rule to the District of Columbia.

The connection between home rule for the District and the Paris poker game may not at first be apparent. It is nevertheless a very real connection. Both in the Senate and House, in committee and on the floor, a fantastic amount of time is taken up with the small details of governing a city of less than a million population.

For example, the Senate took 4 days to consider whether or not the District of Columbia should have a sales tax. That seems almost incredible when that Chamber is so bogged down that Majority Leader LUCAS indicates civil rights, health insurance, and other vital parts of the Truman Fair Deal will not be considered at this session.

A Senate subcommittee has been plagued with the problem of the District dog pound. Fanatical antivivisectionists are pushing a bill that would deprive medical schools in Washington of animals essential for research. So for several days Senator MARGARET CHASE SMITH, of Maine holds hearings on whether the pound is clean and whether the dogs are happy there or whether they should be sacrificed to science.

Chairman of the Senate District Committee, and in effect mayor of Washington, is Senator J. HOWARD MCGRATH, of Rhode Island. But MCGRATH has so many different jobs that he can give comparatively little time to this assignment.

Most of the burden of pushing through the home-rule bill has been carried by Senator ESTES KEFAUVER, of Tennessee. Ably and skillfully, KEFAUVER has kept the issue down to the essential beginning of giving the citizens of Washington the right, within limits, to self-government.

Contrary to advance rumor, the southerners in the Senate wisely decided against any effort to filibuster the home-rule measure to death. Their apprehension is over the question of segregation in the Nation's Capital, and the reports had it that they meant to put a segregation provision in the bill.

That would have made a mockery of home rule, for obviously one of the motives is to give Washingtonians a chance to decide for themselves how they will manage their own affairs. Essentially, Washington is a conservative city with a strong southern flavor, and Washington voters would not be likely, at least in the immediate future, to upset present patterns.

From the point of view of the Nation, the question is not whether Washington is to get the right of the vote and therefore, perhaps, a fairer and more equitable government. As important as this may seem to those who live here, the issue for every American is in clearing away some of the road blocks that holds Congress back.

If the home-rule bill could be got out of a subcommittee dominated by men who oppose the idea, it would quickly go through the House. This would be one constructive step from a lagging Congress that would help other Congresses in the future to keep up with urgent national business. It is a small but important step toward putting first things first.

One Example of Lobby Pressure

EXTENSION OF REMARKS
OF
HON. TOM STEED
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1949

Mr. STEED. Mr. Speaker, I desire to call the attention of the House to a recent attack made on me by a Mr. E. J. O'Connor, who calls himself the executive vice president of the Associated Industries of Oklahoma. I am reprinting herewith a letter this man wrote to certain persons in my congressional district and the text of his letter speaks for itself.

I know every Member of Congress resents this sort of thing as bitterly as I do. I am advised that this same man has written other letters about other Members of the Oklahoma congressional delegation.

In his letter he refers to his inability to cause me to vote as he thinks I should. In this connection I think you ought to know that this man has never even given me the benefit of his advice, so he is in no position to say I have been unfair with him. And, after reading this letter, I want to assure this House that this man never will have any influence with me. I trust all of us can find a more fair, decent, and better source of advice in the discharge of our duties than the sort of thing exhibited here.

I think this letter shows better than my words how low some people will stoop to gain their ends. I think this sort of thing ought to be stopped. That is why I am making this information known to the House.

ASSOCIATED INDUSTRIES OF OKLAHOMA,
Oklahoma City, Okla., June 2, 1949.

Mr. W. P. WOOD,
Wood & Co., Shawnee, Okla.

DEAR MR. WOOD: We are encountering great difficulty in persuading Congressman TOM STEED to the idea that he was elected by the votes of a majority of the people in the Fourth District, other than the limited minority constituting the labor vote.

He has been a problem child largely because of his position on the House Labor and Education Committee and many times in critical matters his has been the deciding vote in that committee, and invariably it has been antibusiness.

As you know, the Taft-Hartley repeal bill is back in this committee, and also the revision of the wage-hour law is being considered by this committee. Both of the measures vitally affect Oklahoma industry and the best information we are able to get from our Washington contacts is that STEED may have the deciding vote in that committee as to whether or not they report out good or bad legislation. The time is here to urge you to renew your efforts in prevailing upon

UNIVERSITY OF MICHIGAN LIBRARIES

STEED to consider the rights and needs of everyone in his district, and to that end we strongly suggest that you contact his personal friends, his campaign contributors, and if possible get some of your employees to write him that they would like to have the labor legislation reported out that does not endanger their jobs or seriously affect the economy of his district. The two most important groups that could be persuasive would be the campaign contributors, and your employees, and perhaps a banker or two that have had some transaction with him in the past, but in any event, please lend all the help you can in straightening out his thinking on these labor matters. Your help in this matter may be the clincher, inasmuch as it appears to be that close; however, it's going to require an extraordinary effort to change him around and the seriousness of the situation in our judgment warrants such effort.

Let us know the results please, whether favorable or unfavorable.

Very truly yours,

E. J. O'CONNOR,
Executive Vice President.

Are We Coddling Socialism Abroad, Too?

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Thursday, June 16 (legislative day of Thursday, June 2), 1949

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Are We Coddling Socialism Abroad, Too?" written by Fred I. Kent and published in the June 1949 issue of the magazine Banking.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARE WE CODDLING SOCIALISM ABROAD, TOO?

(By Fred I. Kent)

(Mr. Kent, a director of the Bankers Trust Co. of New York, and long prominent in banking, had extensive experience in handling the problems of financial reconstruction after World War I. He served, at various times, as financial adviser to the American Ambassador to Great Britain, as deputy governor of the New York Federal Reserve Bank for organizing an international exchange control, as Director of the Federal Reserve Board's Division of Foreign Exchanges, as financial adviser to the director of sales of the War Department, and as organizer of a plan that saved the Austrian people from starvation. He was also on the Organization Committee of the Reparation Commission and was a member of the Commission's Finance Committee. Other services included conferences in Europe that eased Franco-German difficulties and laid the foundation for the Dawes plan of reparations.)

The purpose of the Marshall plan or Economic Cooperation Administration is beyond reproach. Nevertheless, this huge project is not beyond question as to advisability. There is a grave question as to whether the beneficiaries of the ECA can recover as going nations as quickly and effectively under such a system of huge gifts as they could under a program that required greater effort on their part and a program that penalized socialistic practices such as nationalization.

It is very doubtful whether we are doing the British a favor or whether we are creating a situation which will make it more difficult for them for years to come by giving them huge funds that enable a socialistic government to lead the people to feel that its methods are bringing the British nation out from under the burdens left by the war.

In speaking of socialization abroad, we are not unmindful of certain socialistic trends in this country. However, the people of the United States have not yet had, and it is hoped they never will have, a sufficient taste of nationalization of industry to appreciate what it means. They do not know that nationalization carried on within even a few industries necessitates Government spending and regulation which reach deeply into the individual lives of the people and prevent them from exercising normal rights of human beings and individual intelligence. These are necessary if people are to obtain the highest degree of betterment in living.

The bureaucracies which carry on nationalization find, as they proceed in their work, that they are obliged to control a vast series of activities which spread through the whole economy. Just a few instances in the British situation show this conclusively. For instance, the farmers in Britain have been prohibited from picking or selling small green onions. Then the bureaucracy felt that it must explain what it meant by small, and this is the regulation that resulted: "Diameter shall be construed as meaning the maximum diameter of the bulb measured at right angles to the axis through the bulb and shoot." The onion must be 1¾ inches in diameter and if a smaller one is sold, the farmer is liable to fine or imprisonment.

The Board of Trade produced an edict that metal discs be attached to the horns of pedigreed Angus bulls being exported. Later the order was amended; it required instead that the horns be branded. Then it was revoked * * * the board discovered that Angus bulls have no horns.

A carpenter at Bath gave up his job and applied to the Labor Exchange for other employment. He was told to go back to the job he had left or he would have to go to prison for 3 months or pay a fine of £100. The Ministry of Food tells the British people what to eat for breakfast, lunch, and dinner through its rationing. A man in Jarro laid a garden pavement without a license. He was acquitted, however, of crime because he explained that a government official had told him "no license was needed if the cement was applied, not by trowel, but through a watering can."

The Ministry of Health controls the repairing of homes. Not more than $50 annually can be spent for repairs to a home. Any additional expenditure requires a special permit, which takes weeks or even months to obtain.

The Ministry of Fuel determines who may drive an automobile and where they can go. The Ministry of Agriculture has the last word on who can kill a pig and when.

A farmer may be taken off his own land if the results of his labor do not please the bureaucrat who inspects it. A short time ago there were some 25,000 rules and regulations that the British people were obliged to follow, but this total has undoubtedly increased largely since.

On July 1, 1948, a socialized medical service was established by the British Socialist Government with the statement that medical service for all "would be free." During the first 8 months of its operation, the cost exceeded the original estimate by $234,000,000, but it was not free, as the Exchequer collected the sum from the British through taxes and all had to pay directly or indirectly. Under the arrangement the services include medical doctors and dentists, hospital treatment, maternity and child welfare, home nursing, spectacles, dentures, deaf aids, artificial legs, and drugs, and medicines. Those who are bald, if men, are given wigs and if women, transformations. As things have developed under this system, there are not enough doctors, enough nurses, enough hospitals, enough dentures, enough clinics, and there are not enough wigs. It is also understood that wigs can be refurbished once a year at a cost of $10.

The status of a doctor as a confidential agent of the patient was to be maintained, so the government said, but under the rules and regulations all privacy has been eliminated, even though the Ministry of Health, in one of its leaflets, made the following statement: "Your dealings with your doctor will remain as they are now, personal and confidential." However, in one of the statutory instruments under "terms of service," the practitioner has "to keep records of the illnesses of his public patients and all his treatments of them in such form as the Minister may from time to time determine and to forward such records to the local executive council." This council is made up of lay persons who are, of course, the neighbors and possibly the next-door neighbors of some of the patients. The doctors feel that the state, in thus acting, is causing them to break the Hippocratic oath which they take upon getting their degrees as doctors.

In large areas each practitioner is allotted 4,000 patients, but in the small areas the "clientele" may run as low as 2,500. Inevitably, under such conditions, the time of doctors must be taken up by those with unimportant disabilities to such an extent that doctors cannot be available for all emergency cases. The whole thing has become a totalitarian sort of development and, unless it can be stopped in some way, it is going to require secret police to take care of the situation, particularly as malingering has already set in, and hypochondriacs are legion.

At present a big fight is being made by the government to nationalize the steel industry. Should this occur, owners of the steel organizations stand to lose a very large part of their investments through the activities of the government, which, in effect, is rigging the market for steel shares. This is done by depressing them first through the threat of nationalization, then by demanding that dividends be cut, and further by ignoring the pledge made by the government that new capital could be put into the steel business. This has operated to prevent proper rehabilitation.

If the steel business is nationalized, the owners will receive securities of the British Government at the market, when the government takes over on a compulsory basis, that will unquestionably be greatly below real value.

It is truly amazing what a government is willing to do to its citizens, while at the same time making regulations to prevent them from doing constructive things that good business management would provide because business people know that otherwise the enterprise might be put in jeopardy.

The purpose of pushing through the nationalization of steel is very evident from the remarks of one of the Socialist Members of Parliament who said during a debate: "Once we have nationalized steel we shall have broken the back of capitalist control of industry in Great Britain and its domination forever. If that happens, whatever party is in power, we shall be a socialist state."

It would be well for the American people to commit this statement to memory so that if they allow our Government to go into the steel business they will know just what it will do to our country.

Naturally, those in the world who are opposed to the private-enterprise system are fighting it in every way that is open to them.

In carrying on the fight they have taken a position opposing any agreements that the United States might require before providing funds for, say, Great Britain. These include possibly a provision that ECA funds could not be used for furthering nationalized industries or that such funds would not be provided if the steel industry were nationalized. Such statements say, in effect, that we have no right and that we must not demand that other peoples guide their economies as we do. Further, that we are being imperialistic if we try to lead other countries into carrying on the private-enterprise system.

Actually, such statements would be unwarranted even if we did make demands of this nature. The money that the United States Government is allotting to foreign peoples is only available from taxation taken from American citizens. Under the law if the ECA believes that any allocations would further nationalization of British industry and would not, therefore, accomplish the purpose for which they were intended—that is, the rehabilitation of the British economy—the ECA would not be justified in allocating such funds. Should the administrator take this position, the British Government would be entirely free to go on with its nationalization and refuse to accept the funds from the American Government.

There is no reason whatsoever why the American taxpayer should pay to further nationalization in Great Britain if he believes it would be harmful to that nation and unfortunate for his own country. It just does not make sense. If conditions were turned about, can you imagine any foreign Socialist or Communist advocating that his country give funds to the United States to further the private-enterprise system?

NO FUNDS FOR NATIONALIZATION

It is clearly in the interest of the British people, as well as in the interest of the people of the United States, for the ECA to advise the British Government that under the law creating the ECA the allocation of funds which directly or indirectly act to further nationalization in Great Britain cannot be allowed. It is entirely possible that such a stand taken by the ECA would be welcomed by the British Government as well as by the British people. The British dilemma is increasing day by day due, in important part, to the nationalization that has already been accomplished, and that which is in process of being undertaken. It does not seem possible that those in the British Government fail to realize that they are in a dead end and that they cannot get out of it without dropping nationalization.

The Atlantic Pact may change the methods that should prevail between the United States and the countries included within the ECA.

There is not the slightest doubt but that the sums allocated by the ECA in the first year of the plan have been far greater than they needed to be. More might actually have been accomplished for the nations concerned on smaller advances from the United States. Lessening the responsibility of the governments and the people of these countries by giving them too much has been most harmful.

Recovery following war, regardless of the degree of destruction that has occurred, is dependent more upon the constructive activity of the natives of the country than upon anything else. The only true purpose of the ECA was to supply such things as were necessary to enable foreign nationals to resume constructive activity. This meant, in the first place, food so that they could live and work and, in the second place, such raw materials as were needed for them to work.

RECOVERY INTERFERENCE

Everything furnished these nations beyond such requirements has interfered with recovery instead of helping it. Extraordinary efforts are required to rebuild a war-torn country, and in the interest of the individuals themselves they must feel this responsibility. It is better for their mental health, their physical being and for their rehabilitation. Everything that is done for a people under the stress of recovery from war that breaks down the necessity for them to strive with all their power is debilitating mentally and physically.

Spiritual rejuvenation is essential to the rebuilding of the life of a people under adversity. This comes about in large part through the inspiration of accomplishment. As the people follow the improvement in conditions which their work brings about, it re-creates their powers of resistance to discouragement and it makes for happiness that cannot come through having life made simple for them by others.

When a people become soft through coddling, every false promise, whether based on so-called ideologies or not, becomes attractive. The menace of communism is undoubtedly greater than would have been true if the United States under ECA had confined its giving to those particular things which make it possible through hard work and very hard work for people in the nations concerned to rebuild their own minds and bodies while restoring their own countries. As conditions got better, little by little a great national spirit would have arisen that would have created forces for right in the world that could not have been blighted by false promises.

However, we have in the United States, with the best of intentions, overreached ourselves and have given to the European countries amounts far in excess of those needed to meet the requirements, and now we have the question before us as to how best to go on from here.

OPPORTUNITY IN ATLANTIC PACT

The Atlantic Pact shows us the way. Because of this pact, if it is made effective, we will have assumed a character of obligation that makes it essential that we provide a minimum of military production that might be required in case of war. This opens the opportunity for the ECA to cut drastically its allocations and other aids to foreign countries. This can be accomplished without increasing the strain upon the peoples concerned if it is done intelligently. With the cooperation of the peoples involved, the supplies of all kinds which they have been receiving, but can now provide for themselves, could be stopped.

Where food does not exist in sufficient quantities but can be earned through the effort of those needing it, it can be supplied. Where raw materials required to enable the people to utilize their time in the interest of themselves and their country are needed, they can be given. But no final recovery is ever going to be effected if the ECA does not promptly limit itself to the allocation of minimum essentials.

In carrying out the program we have been giving the governments goods which they have, in turn, sold to their people for the moneys of their countries. These moneys have then been made available to the governments to do things which their people should have done. They have enabled some governments to go on with some deficits and prevented them from striving to bring their financial houses in order. Bureaucracies have been built up that are self-destroying. The United States should have no more part in helping to build up bureaucracies in other countries than it should have in helping to build up bureaucracies in our own country. It is just as important to break down such bureaucracies that have already been built up in other countries as it is in our own.

We have apparently overlooked this fact entirely and have seemingly been trying to spend what we have legislated to spend instead of trying to spend to accomplish the rebuilding of strong peoples, which is possible only in a nation where its citizens are willing to work and obtain happiness through accomplishment.

In the United States we have undertaken a system of rehabilitation of broken down human beings that in its success has proved beyond question that similar processes must be used if the world is to succeed in the reestablishment of the spiritual strength without which no nation can rise above its difficulties. This process is one under which every patient, no matter what parts of his body may have been lost to him or rendered useless, is taught to utilize what he may have left to earn his living and give himself a full life. The patients who come out under this treatment take their part in their communities in a wonderful way.

When people, because of war, are afflicted with mental turmoil, they need work and purpose to get out from under it and the opportunity to receive the inspiration that comes from accomplishment. It is clearly our duty in the United States, therefore, if we would really be helpful, to exercise great intelligence and careful judgment and act only in ways that will reconstruct the minds of those involved. Otherwise we will surely delay recovery and develop a world where dissatisfaction prevails, while at the same time we are destroying our own resources.

Bearing all of this in mind, there would seem no question but that we must, in the interest of all countries and of the United States, bring within bounds the relief which we extend.

If we are to do this successfully, the ECA must reduce its expenditures and lean over backward to keep within the terms of the law which created it.

German Cartels

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial that appeared in the very conservative Alexandria (Va.) Gazette under date of June 7, 1949.

In recent weeks there have appeared numerous articles and editorials throughout the Nation protesting against the perpetuation of German cartels. During the war we had promised to the German people and to all the people of the world that the German war barons and junkers would be driven out of business forever, and that the German cartels would be busted up. This pledge was given by President Franklin D. Roosevelt and was wholeheartedly supported by President Harry Truman, who as a United States Senator had achieved fame as the Nation's great trust buster.

The German cartels were the huge monopolies that strangled democratic life in Germany and turned the whole nation into a war machine. Hitler himself and the vicious thugs around him owed their jobs to the support of the cartelists. During the war no one dared to say a good word for the German

UNIVERSITY OF MICHIGAN LIBRARIES

cartels, but after the war ended it took a year and a half of military occupation before a law ordering the dissolution of the cartels was passed, in February 1947. A decartelization branch was set up composed of 150 people, and a plan was made ready for the breaking up of the Henschel Co.—this was the company that produced tanks and other weapons of war. I. G. Farben and other cartels were slated for dissolution. Then something happened—the decartelization branch was suddenly cut in strength from 150 people to about 25 in number. The decartelization policy was scuttled, and the heavy guns of the military government were turned upon the American trust busters who were to carry out the decartelization policy. It was then that Richardson Bronson gave the famous oral order which set aside the decartelization program. Upon receiving this oral order, 19 of the most courageous American trust busters signed a memorandum addressed to General Clay asking for clarification. Instead of receiving clarification, they were fired. I herewith submit the memorandum:

OFFICE OF MILITARY GOVERNMENT
FOR GERMANY, UNITED STATES,
Berlin, Germany, APO 742, March 13, 1948.

Subject: Decartelization policy.
To: The Military Governor, Office of Military Government for Germany, United States, APO 742, United States Army:

1. On March 11, 1948, Mr. Bronson called a meeting of all the members of the decartelization branch and read excerpts from a memorandum which he said you had approved and had been approved in principle by the State Department. This memorandum announced a new policy for decartelization. In the opinion of the members of the staff it virtually repeals the decartelization law and contravenes the July 15, 1947, directive. We asked Mr. Bronson to furnish us copies of this memorandum and he refused. Therefore, many members of the staff prepared memoranda and we herewith respectfully submit a composite version for whatever clarification you might consider necessary.

2. Mr. Bronson stated that your orders were as follows:

(a) No deconcentration action is to be taken against enterprises in the capital-goods or heavy-industry field but only against enterprises having monopolies in consumer goods.

(b) No action is to be taken against vertical integrations.

(c) The only standard to guide our future proceedings is a rule of reason.

(d) No action is to be taken against Henschel, although the Bipartite Decartelization Commission had found it to be an excessive concentration within the terms of law No. 56, and no action is to be taken against VKF.

(e) Enterprises against which no action is contemplated are to be officially given a clean bill of health soon.

(f) Violations against trade-practices provisions of law No. 56 are to be pursued and eight such cases against now unknown companies are to be submitted by May 2, 1948.

3. It appeared to be the unanimous opinion of the staff of the decartelization branch, or at least no contrary opinions were expressed, that the order given by Mr. Bronson excludes from decartelization action the principal group of monopolistic enterprises which the law says must be eliminated. We do not believe that such amendatory restrictions should be made except by either repeal or drastic revision of the law itself. The law does not draw any distinction between capital-goods industries and consumer-goods industries. On the other hand, it is our view that monopolies in the capital-goods industries are far more frequent and more repugnant to the purposes of the law than are concentrations in consumer-goods industries. The effect of such an amendment, we believe, would be to leave the fundamental concentrations of economic power intact while engaging in little more than harassing attacks on the smaller companies. This, of course, aside from being in contravention of the law would tend to make its enforcement unpopular and completely ineffectual.

4. We also think there are very serious objections to giving immunity to vertical integration since the law makes no such exceptions; we believe that to give a clean bill of health to subjects of investigation is contrary to all established principles of law and law enforcement; and we think that being guided by a rule of reason rather than standards in the law offers many obvious dangers.

5. Since it is inevitable that such a new policy, given only by verbal instructions, has produced a state of demorialization throughout the staff we respectfully request that you give us a clarification.

6. It is of importance to add that no solicitation was made in behalf of this memorandum. The following members of the staff are among those who voluntarily asked to join in this expression.

Johnston Avery, Francis W. Laurent, John J. Barron, Charles Rotstein, R. R. Rathbun, David Denson, Charles C. Baldwin, Alexander Sacks, Fred Levy, Irene Ball, George J. Stanger, Samuel L. Kobre, Henry Heymann, Charles A. Dilley, Virginia M. Marino, Kathryn R. Beaty, Clifford A. Russell, Harry Gabermann, Leslie Grant.

(Copies to: Hawkins, Bronson.)

Last December a special investigating committee headed by Garland S. Ferguson of the Federal Trade Commission was sent to probe the decartelization program. Alexander Sacks, one of the trust busters, gave a full and honest report to the committee, and as a result he was not only fired, but must stand trial for disloyalty to his superiors, which was nothing more than opposition to the procartelization policy of the military government.

The report of the Garland S. Ferguson investigating committee was suppressed for 5 months. When the report was finally made public it revealed that not a single German combine or monopoly had been eliminated during the 4 years of American military occupation. The committee report laid the blame primarily on General Clay's three top officials in charge of the decartelization program: Lawrence Wilson, economic adviser; Philip Hawkins, deputy economic adviser; and Richardson Bronson, chief of the decartelization branch. The report said that the advisers were "not in sympathy with the decartelization program and did nothing to insure its enforcement." One of the three committee members, Samuel C. Isseks, attached to the report a separate recommendation that Wilkinson, Hawkins, and Bronson should be fired.

The report said General Clay substantially modified in March 1948 the original decartelization orders issued by President Truman, but it made clear that it believed the principal blame should be attached to his three subordinates. The committee members emphasized that outside of the decartelization program they believed that General Clay had performed an outstanding job in Germany. The report was signed by Garland S. Ferguson, A. T. Kearney, and Samuel S. Isseks.

Now, Mr. Speaker, it should be the interest of all of us that these American trust busters like, Alexander Sacks, and the others who were sincerely engaged in carrying out the orders of Franklin D. Roosevelt and President Truman to decartelize Germany be given a clean bill of health, and that those who had opposed the program be removed from their jobs. Millions of innocent lives have been sacrificed in two world wars that can be charged directly to the German war makers, the barons, the junkers, and the cartelists. We cannot permit these men and the cartels to be restored to their former power.

The editorial from the Alexandria Gazette follows:

GERMAN CARTELS

In their administration of the affairs of Germany, particularly in that part of the country which they occupied, did the Western allies—the United States, Britain, and France—succeed in destroying the infamous German cartels. Or are they in process of being broken up to such extent that there will not be a nucleus left upon which they may be reestablished. In operation they are a threat to world peace and a menace to the industrial interests of this country.

The American people have a right to know their present status, and if they have not been broken up, they should be. Among American officials who should be in a position to know the situation with respect to these huge monopolies there is a wide difference of opinion. A report to the Secretary of War by an investigating commission declares that not a single German monopoly has been broken up to date. General Clay, the American military commander in Germany who has just retired from that position where he is accredited with having done a good job, denies the charge made by the commission. He says that these trusts have been smashed in a big way and in proof of his statement he offers the record to show the break-up of the I. G. Farben chemical octopus, 6 big banks, and 26 steel and coal companies.

Mr. Lawrence Wilkinson, economic adviser to General Clay takes a position differing from that of his former chief. He expresses the belief that the breaking up of the German trusts would retard Germany's recovery.

A while before the end of the late war it was clearly seen that Germany would be defeated, there was much discussion in this country as to the character of treatment that should be accorded her after peace. Former Secretary of the Treasury Morgenthau advanced the suggestion that Germany should be reduced to an agricultural nation which would preclude her from again developing military strength. Many thought that would be too harsh treatment for the German people, and that to enable them to recover economically from the wreckage into which Hitler had plunged the nation, Germany should be allowed to retain a limited number of her industrial plants. It may be, however, that Mr. Morgenthau was right, especially if there is danger of the revival of the German cartels.

It is not particularly surprising that Mr. Wilkinson should entertain the view that order should be restored so that industries could again produce profits for investors. That is in accord with his line of thinking. He is a brother-in-law of Maj. Gen. William

H. Draper, who in private life is a member of the banking firm of Dillon, Read which lent large sums of money in Germany after World War I. The cartel enterprises were th: recipients, and it was their funds which enabled Hitler to build up his monstrous military machine and supplied the sinews of war. General Draper was one of the authors of a report which proposed mild treatment of German monopoly. This sort of thinking is not appropriate from the standpoint of a nation that proposes to deny German industrial monopolists a chance to set the world afire with another war.

The breaking up of German monopolies is a matter of highest national consequence to the United States. To disperse their power should be a fixed objective of American policy, and it should be entrusted only to representatives of the Government who believe in it.

At this point I also wish to include a letter which appeared in the Daily Compass:

CARTEL CHALLENGER FACES TRIAL WHILE CLAY IS CALLED HERO

DEAR EDITOR: While General Clay is accorded a hero's welcome in New York, while General Clay receives the key to the city and a free meal at the Waldorf-Astoria, and while General Clay gets a free ride up Broadway, a military government employee in Frankfurt is being taken for a different kind of ride. On May 25, Alexander Sacks will stand trial for "Disloyalty to his superiors," disloyalty to the procartelist military government which was headed by Gen. Lucius D. Clay.

I spent 3 years in Germany and Alexander Sacks was a personal friend of mine. I think of the irony in labeling such a man as Alexander Sacks "disloyal." I think of the rotten, dirty, unfair deal that he's getting, and wonder how the man who signed the court-martial order can be presented to the people as a hero.

Is it disloyal to expose the revival of the I. G. Farben combine of the Henschel and VKF cartels? Is it disloyal to expose the idiocy of allowing big-wig Nazis to be set free to run their potential war machines again? Is it disloyal to show the folly of a procartel policy backed by General Draper, Laurence Wilkinson, Philip Hawkins, and Richardson Bronson? If all this be disloyal, then all of us are traitors for decrying General Clay's commuted sentence of Ilse Koch, the Bitch of Buchenwald.

Mr. Sacks has been General Clay's personal target since the day that 19 brave men and women of the military government decartelization branch publicly objected to the order to keep their hands off the heavy-industry cartels. In a meeting with General Clay and the 19 people, Mr. Sacks pointed out the economic reasons for abolishing cartels. Our military governor for Germany stood up, turned to Mr. Sacks, and said: "I did not come here to be lectured to." He then strode out of the room.

No matter who sabotaged the United States anticartel policy, General Clay was fully aware of the events that were taking place under his command, and as such, partial blame should be placed upon his shoulders.

It's high time that we wake up to the facts, high time that we stop persecuting such men as Alexander Sacks, high time that we stop g: ing a hero's welcome to a man who ignored common sense and the basic laws of economics in the administration of the German cartels.

In conclusion, may I offer my congratulations to Howard Watson Armbruster for his series of articles in your paper. It's unfortunate, however, that so many punches were pulled. Why not try to get a story directly from Mr. Sacks? I'm sure he'd be more than happy to oblige.

MELVIN LONDON.

NEW YORK, N. Y.

I also wish to include an article which appeared recently in the New York Post Home News, entitled "Crack-Down Is On Foes of Cartels:"

(By Ernest Leiser)

FRANKFURT, May 20.—Gen. Lucius D. Clay, former United States military governor of Germany, acted in direct opposition to the Army Department when, on the eve of his departure for home, he reopened the proceedings against a military-government official for criticizing that body's asserted failure to break up German industrial trusts in the American zone, that official charged today.

Alexander Sacks, former member of the military government's decartelization staff, now employed in its democratization branch, accused the military government of illegal proceedings in seeking his dismissal.

Sacks said he had just learned that on May 13 Gordon Gray, Acting Secretary of the Army, had notified his lawyer, Wendell Berge, former United States Assistant Attorney General, that the case against him had been definitely closed.

"However, General Clay on May 14 ordered the case against me reopened," Sacks said.

He made no attempt to deny that he had sharply criticized a number of military-government officials for failure to implement the United States Government's policy on deconcentrating the giant trusts in western Germany. That criticism was made in testimony to the investigative committee headed by Garland S. Ferguson, of the Federal Trade Commission, which probed the decartelization program of the military government here last December.

"The military government has not questioned thus far, and I doubt if it ever will question, the accuracy of my criticism," he pointed out. He noted that the Ferguson committee report has confirmed the charges against a number of Clay's aides.

Sacks said that as a loyal public servant, he felt he could not have acted otherwise than criticize the decartelization policy when called on to testify before an official body. He remarked that he had left the decartelization staff before the initial attempt last January to discharge him.

The proceedings were then dropped on orders of Secretary of the Army Royall, and he was fully reinstated, Col. James Duke, military-government personnel officer, told him then that Clay disagreed with the order, and was filing an appeal from it.

Sacks has been ordered to appear before a military-government grievance board hearing next Wednesday. "I have been given only 9 days' advance notice," he said.

Anti-Semitism

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1949

Mr. MULTER. Mr. Speaker, the following which appeared in the New York Post of June 6 and 7, are the first two of a series of articles by Max Lerner. I commend them to the attention of my colleagues:

NEW DRIVE AGAINST JEWS OPENED IN UNITED STATES

(By Max Lerner)

Do you know that within 10 days a national convention will be held in Illinois which will seek to mobilize and unite in a single holding company all anti-Semitic groups in the country?

This is one of the things I have come across in doing some digging on the condition of anti-Semitism today. The question I put to myself was this: What is the balance sheet of anti-Jewish hatred in the world, 4 years after the end of a war against racism and religious bigotry?

I have tried in this series of columns to set down a straight-forward and honest answer. The problems are not restricted to one part of the world only: you have to look at America as well as Russia, at eastern Europe as well as Israel. And you have to keep your mind clear of cant and of special pleading.

The problem of anti-Jewish racism in America falls into three issues. One is: How strong is it as compared with 4 years ago? The second is: What kind of propoganda and other hate-material do the anti-Semites have at hand as clay to shape to their purposes? The third is: What organizations are fanning the flames of racism?

On the first question—the strength of anti-Semitism—nobody knows the answer clearly. The last election cast doubt on the capacity of the polls to measure even so simple a question as whom one would vote for. The quantitative measuring of the attitudes toward Jews or Catholics, Negroes, labor, or the other debated questions in our society is much more delicate and much harder. No figures are reliable.

The belief, however, of those who have studied the available figures carefully is that anti-Jewish attitudes are quantitatively about as bad as they were at the end of the war.

The greatest force behind anti-Semitism during the 1930's was the strength of the Fascist governments which served as the focal centers of anti-Semitic infection. Every time Hitler made a speech, every time he won a diplomatic victory and the shadow of his power moved on, the shadows of anti-Semitism in America deepened. Every time the Nazis massacred and burned a group of helpless Jews in central or eastern Europe, Jew-haters everywhere felt the elation of the beast of prey getting ready for the kill.

At the end of the war the focal centers of racist infection—in Germany and Italy—were in ruins. Anti-Jewish propaganda in America suffered a serious blow.

After every war one expects the postwar tensions to increase racist hatreds. Added to that, almost everyone feared there would be a serious depression in America, and whenever men are hungry and jobless their hatreds increase. Fortunately for American democracy the depression did not come as expected, although there are some signs of it now.

But racist hatreds feed on whatever comes to hand. The old lies have been revived, and new ones have been fabricated. The purveyors of hatred still brush up the big lie which portrays the Jews as performing the miracle of running both big finance capitalism and communism; columnists still single out the names of Frankfurter, Lilienthal, Keyserling, when they attack the socialism of the Fair Deal; the same columnists still accuse the bitterly antitotalitarian labor leader, David Dubinsky, of being totalitarian. And there are still the same dismal parrotings as of old about the Jews as cowards in war, when not only their record in every American Army but now the impressive military achievement of the Israeli Army gives it the lie.

But new tensions have arisen. The hunt for subversives has cast the Nation into a hysteria. Whenever, among the various names of the suspects in the quest for disloyalty a Jewish-sounding name appears in the press, the anti-Semites pounce on it as fodder for their hatred. This despite the fact that the Jew has always been in the end

UNIVERSITY OF MICHIGAN LIBRARIES

a victim of totalitarianism, sometimes from the start it. chief victim—and knows it.

Finally there is the biggest and most dangero : lie of all—the "double allegiance" charge, with which I shall deal in my next column.

It is well known that there have long been numerous crackpot and fanatic racist groups scattered through the country. Thus far they have not succeeded in building a unified organization or agreeing on a single fuehrer. Ten years ago, in 1939, ex-Gen. George Van Horn Moseley seemed a likely candidate to unite Bundists, Klansmen, Silver Shirts, Coughlinites, and the others, and weld together such fledgling leaders as Joe McWilliams, Robert Edmonson, George Detherage, and Gerald L. K. Smith. But Moseley made a fool of himself before the Dies committee and his boom petered out.

Last year there were two attempts to unify the extreme "nationalist"—that is, anti-Semite—groups. One was a conference of pro-American Nationalists, sponsored by Andrew B. McAllister and George E. Hornby, which talked of forming a united nationalist front. The second was Gerald Smith's convention of the National Christian Party, at St. Louis, which nominated Smith for President and at which Moseley turned up again as a speaker. But Smith didn't get on the ballot in a single State.

Last week in Philadelphia two anti-Semitic groups got together to lay plans. Present were W. Henry McFarland, Jr., of the National Action League, and Conde McGinley of the Loyal American group. They announced that they would hold a national convention at Hinckley, Ill., on June 15-17 and make another attempt at the elusive one big union of anti-Semitic and racist groups.

It has proved a will-o'-the-wisp. But it may not be forever.

PHONY DOUBLE ALLEGIANCE ISSUE

(By Max Lerner)

The most dangerous item in the hate campaign being conducted now against the American Jews by the "nationalist" anti-Semite groups I described in yesterday's column is the charge of double allegiance.

It is a phony charge. But let's look into its history, and some of its predecessors.

The big issue used to be whether the Jews were fighters or fellows better at talking than fighting. During the early stages of the Palestine war, some of the American Jews were worried at the support that Israel was receiving from the Jewish community here. They expected the Israelis to be licked badly in the war, and they didn't relish the backwash this would create in the muddy waters of anti-Semitism here.

I say to them now as I said then: Even if it were a matter of risking their own skins, the American Jews had to help the Jews of Israel in their crisis of life and death with material and moral support. As it turned out the risk would have been greater the other way if the support had been withheld.

The fabulous fighting qualities of the Israeli Jews electrified the world—Christians and Jews alike. Everyone likes a fighter and a winner. The Jews had for centuries been fighters, but they had also been victims and losers against their enemies. Now they silenced even the dullest-witted critic on that score.

As I have observed Americans in the past year in traveling around the Nation, I cannot say that anti-Semitism has decreased. It has not. The Jews are still hated by bigots and racists. But with a difference. The hatred used to be mingled with contempt for their weakness. It is now mingled with admiration for the fighting strength they have shown. Qualitatively that is a big difference.

But a new myth has arisen to take the place of the myth of cowardice. It is the myth of double allegiance. Unfortunately it is not the professional anti-Semites alone who spread it. Some of the leaders of the Jewish community play into their hands. They are sensitive to the possibility that all American Jews might be charged with being hyphenated, owing emotional allegiance not only to America but also to Israel.

Their way of answering it, as in the case of some of the members of the Council for Judaism, is to attack the Zionist fanatics and dissociate themselves from them. Their intentions are good, but the result is to underscore the charge of the anti-Semites that most Jews are fanatics and owe double allegiance. They even quote Jewish sources.

What is the truth? The truth is that the anti-Semite will change his tune with the times, but retain his hatred. The great cry of the racists against the Jews used to be that they were "queer," "clannish," "outsiders." It used to be that when an anti-Semite wanted to gibe at a Jew he said: "There goes a man without a country." Now he points to the Jew and says: "There goes a man with two countries."

Perhaps this is progress. But both gibes are lies. The Jew has always wanted to be part of the nation he has lived in, only to be rebuffed time and again by those who hated him. He was never in his mind a man without a country. Nor is he now a man with two countries.

On the score of political allegiance, there can be no question about it. The American Jews feel allegiance only to America. And he is happy, as the Zionists have again affirmed, to let Israel be run by the Israelis. But just as American Catholics rightly have a sense of kinship with Catholics all over the world, so American Jews have that sense of kinship with Jews elsewhere. Their enthusiasm for Israel is intense because what Israel has done has helped restore their pride as Jews, and remove from their hearts the terrible fear that they will always be doomed to be victims. But it is the bond of a common religious and historical community, not a political bond.

"All decent interests are in harmony," someone has said. This applies to the interests of American Jews as unqualified Americans and as members of a world Jewish community. So far from feeling himself split by any conflict of loyalties the American Jew for the first time is fulfilling himself as an American and a Jew, and feels himself becoming a whole man.

Willard Seventy-Fifth Anniversary

EXTENSION OF REMARKS

OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1949

Mr. WEICHEL. Mr. Speaker, transportation has been one of the outstanding achievements in making America great, especially the pioneering of the railroads throughout the Midwest. Railroad transportation throughout our country has not only made it great in time of peace but has preserved it in time of war. The Baltimore & Ohio Railroad in World War I as well as World War II was an important link of our national defense and the community of Willard, Ohio, with its ever faithful attention to duty helped to keep this great link of transportation in efficient running order, and I want to congratulate the Baltimore & Ohio Railroad and the citizens of Willard on the seventy-fifth anniversary of the founding of the town of Willard and this division of the Baltimore & Ohio Railroad.

Under leave to extend my remarks, I include the following news items from the Willard Times, of Willard, Ohio:

DIAMOND JUBILEE WAS BIGGEST CELEBRATION IN TOWN'S HISTORY—FOUR DAYS PACKED WITH INTERESTING EVENTS, FORTY TO FIFTY THOUSAND ESTIMATED ATTENDANCE

Willard's 4-day diamond jubilee which closed Sunday afternoon was the greatest celebration in the history of the town.

The gala event gloriously marked the close of the third quarter century since the Chicago division of the Baltimore & Ohio Railroad was extended on westward, with the consequent founding of the town at what has become one of the most important terminals on the B. & O. system.

The unexcelled program which filled almost every hour of the 4 days, the B. & O. historical exhibit, the two wonderful parades, fireworks displays, sports events, the midway, and other attractions brought to the town the largest crowds ever here for any occasion.

Ideal weather all 4 days contributed to making the celebration such an outstanding success.

In a large degree, a homecoming as well as a celebration, the diamond jubilee brought back to Willard hundreds of former residents, as well as being attended by large numbers from surrounding towns and communities.

The diamond jubilee committee anticipated twenty-five to thirty thousand people would be attracted, and reports are that the estimate was too low. Between forty and fifty thousand is believed more nearly correct.

BIGGEST DAY

The largest crowd was on hand Saturday afternoon and evening, Baltimore & Ohio day. Thousands lined the streets for the grand jubilee parade, and later heard President R. B. White's address at the YMCA Park. Myrtle Avenue was such a mass of people Saturday evening that progress through the midway was slow. Parking space blocks away from the main section of the town was completely taken by visitors who had come to the city to enjoy the festivities.

President White spoke in the highest praise of the town and the committee which promoted such an outstanding celebration. That all of the B. & O. officials here especially enjoyed the event and the special recognition of the railroad's part in the history of the town was evident from their many expressions and interest shown.

Thursday, June 2, the opening day, was railway labor organization day, with the program designed to emphasize labor's part in industry. The luncheon was in honor of George M. Harrison, grand president, International Union of Railway and Steamship Clerks, the main speaker for the afternoon, and local shop craft and union representatives.

The celebration was officially opened at 10 Thursday morning by the firing of aerial bombs, a band concert at the speakers' platform at the YMCA Park, presentation of the large golden key by Mayor Ray A. Snook to J. E. Wise, master of ceremonies, and the address of welcome by D. W. Gates, superintendent of schools.

OHIO DAY

Friday was State of Ohio day, when the luncheon honored State and local officials and addresses were given in the afternoon by Don H. Ebright, treasurer, and Robert Moulton, director of commerce, of the State of Ohio. The Bowling Green State University swimming and diving team participated in the aquacade in the evening at the swimming pool.

Saturday was Baltimore & Ohio day with special honors paid President White and other railroad officials. Mr. White's address was a high light of the afternoon program.

The junior parade with hundreds of children taking part was a main feature of the Friday morning program, and the grand jubilee parade a colorful pageant in the program for Saturday afternoon.

On Sunday, church homecoming day, many visitors helped fill auditoriums of churches for the morning services, and in the afternoon two outstanding addresses were heard at the special church day union service at 3 o'clock in the high-school auditorium. The speakers were Bishop Grant D. Batdorf, Cincinnati, of the Evangelical United Brethren Church, and Rev. Dr. Ignatius T. Kelly, pastor of St. Louis Catholic Church, Toledo.

Mansfield's One Hundred and Sixty-fourth Fighter Squadron of the Air National Guard flew aerial escort and gave a flying exhibition overhead during the parade Saturday afternoon.

SAW EXHIBIT

Nearly all visitors spent time looking over the B. & O. exhibit, which depicted the development in railroad transportation during the past 120 years and hundreds boarded the special train which left the station each morning for a sightseeing tour of the new railroad yards here. People were thrilled by the daring performances of the Marions, aerialists, twice each evening and the fine fireworks displays at 11 o'clock each evening. These were free acts provided by the committee. The midway of the Gooding Co., of Columbus, was above the ordinary with the latest rides, shows, and clean entertainment, and was devoid of the usual rowdyism of most carnivals.

The sports and other events at the city park drew large crowds and furnished fine entertainment.

A much appreciated feature of the celebration was the window displays of Willard merchants and business places. The old pictures, relics, and ingenious collections were a constant source of interest to the visitors and people of the town.

SUPERINTENDENT GATES GIVES JUBILEE WELCOME SPEECH—KEYNOTED BIG 4-DAY SEVENTY-FIFTH CELEBRATION

Because of the fine welcoming address of Supt. D. W. Gates of the Willard schools so fittingly launched the Diamond Jubilee Thursday morning of last week, it is printed in full, as follows:

"For the past several months the planning committee of the diamond jubilee has been working diligently to make this celebration a success. Although I am not a member of this committee, I have been assigned the pleasant duty of welcoming you, and the thousands of other persons who will visit Willard in the next 3 days. At this time, I would like to name the members of the planning committee: John Wallace, chairman; Raymond Clark, Robert Hamilton, Frank Jarres, Harry Jump, and Ray Snook.

"I am happy to see so many young people present this morning. They will have the responsibility of planning the centennial celebration in 1974.

"Naturally the people who attend the diamond jubilee will fall into two classes—those who will visit Willard to be entertained, and those who have deep-rooted ties in this community.

"For those who are seeking entertainment, the next 2 days will be crowded with activities—the B. & O. exhibit depicting 120 years of progress in railway history, the midway on Myrtle Avenue with its many attractions, parades, contests, banquets, and speeches.

"Today is Railway Labor Organization Day, tomorrow is State of Ohio Day, Saturday is Baltimore & Ohio Railroad Day, and Sunday is Church Homecoming Day."

PROUD OF THESE

"We trust that our visitors will take time to admire our city building and modern business section with more than 65 retail stores; our 7 established churches; the most modern railroad yards in the world; our municipal light, water, and disposal plants; our 33 acres of beautiful park, recreation grounds, and swimming pool; our 40-bed modern and complete first-class hospital which will soon have an addition.

"Our first-grade high school accredited by the State department of education and the N. C. A. of C. and S. S.

"Our very complete county library of over 20,000 volumes with six branch libraries; Celeryville with its 10,000 acres of peat muck which makes it the garden spot of Ohio; the Pioneer Rubber Co. which employs nearly 500 persons, the world's largest manufacturers of balloons and surgical gloves; the most modern airport for a city of its size in Ohio; the Railways Ice Co. with facilities to manufacture 120 tons of artificial ice daily; the Ideal Laundry which serves Willard and seven nearby villages and cities; the Willard United Bank with branches in North Fairfield and Greenwich; the railroad YMCA which has been serving railroad men for 43 years.

"We are justly proud of our city's possessions. We want you to enjoy them with us.

"For those who have deep-rooted ties in this community there will be the meeting of old friends—renewed acquaintances and the visiting of familiar landmarks. This is one of the really great joys of life.

"Since that memorable day in 1872 when T. J. Frazier and Robert Henderson, engineers in the employ of the Baltimore & Ohio Railroad, set the stake in the middle of the tracks of the S. M. & N. lines (only a few hundred yards from where we are now standing) to build a railroad west to Chicago, Willard was destined to become a city."

MANY GRADUATED

"In the past 75 years countless thousands have been employed here. Many have reared their families in Willard. More than 2,000 persons have been graduated from Willard High School. In fact, with the graduation last night of the class of 1949, 2,019 young men and women have received diplomas from our high school. Other thousands have attended school here and formed friendships which still exist.

"Working for a railroad means transferring and moving. Many will return here during this celebration.

"To these the diamond jubilee will be a joyous homecoming.

"You have just witnessed the presentation of the key. That presentation is a symbol that each visitor has a share in that key and that this city's facilities will be open to you.

"Welcome to the diamond jubilee."

TIMES PRINTS ADDRESS GIVEN BY PRESIDENT R. B. WHITE IN FULL—INFORMATION IS OF SPECIAL IMPORTANCE TO THIS B. & O. TOWN AND RESIDENTS

The enlightening address of President R. B. White, of the Baltimore & Ohio Railroad, given Saturday afternoon at the diamond jubilee is printed in full because it is believed that all Times' subscribers will want to read it.

President White pointed out that the railroad paid in wages to its 1,314 employees here in 1948 the total of $4,441,524.72, was Huron County's largest taxpayer, and that the railroad invested $264,000,000 from 1939 to 1943 in improvements, including $29,000,000 since 1941 in Willard and within a radius of 75 miles.

His address not only dealt with the B. & O. but with other forms of transportation and the kind of competition the railroads must meet. His address follows:

"Mr. Chairman, city officials, honored guests, members of the Baltimore & Ohio family, ladies, and gentlemen, Willard's diamond jubilee committees have dealt generously with the Baltimore & Ohio. The official letterhead of the celebration shows B. & O. locomotives as the symbols of the dates that are being celebrated today. A balloon-tacked steam engine represents the year 1874 and a streamlined Diesel represents 1949. The liberal use of the B. & O. colors of blue and gold in your decorations recognizes the important part our railroad has had in the development of your community. We are pleased, also, that you selected a setting on our property and bordering so closely to the right-of-way as a focal point for this celebration.

"His Honor, Mayor Snook, and other Willard citizens visited me in Baltimore last January to discuss their plans for this celebration. They were assured of our desire to cooperate. Among other things they asked that our exhibition train of historical equipment be stopped here for the period of the jubilee. It was on that account that they graciously agreed to make today, June 4, Baltimore & Ohio Day, as it is necessary for the exhibition train to be in Chicago on June 6. These exhibits are to play an important part again this year at the Chicago Railroad Fair in the impressive transportation pageant, Wheels A-Rolling."

MENTIONS FAIR

"Some of you visited the Fair on Baltimore & Ohio day last summer. This year Baltimore & Ohio Day will be August 20. We are planning to run special trains and I hope that many citizens of this community can make the trip, including such Baltimore & Ohio employees as can be spared from their duties. It was a fine fair last year and will be even better this year.

"Another gratifying proof of the B. & O.'s place in this community is found in the May 26 issue of the Willard Times, which was devoted largely to your jubilee. I wish to thank the editor of this paper, Mr. Earl S. Frye, for his many references to the Baltimore & Ohio and also to congratulate him on the all-around fine character and content of this issue.

"It is a real pleasure for me to be here today, and may I say the same for the other members of the B. & O. official party who have come from Baltimore and other cities. When you held your fiftieth anniversary in 1924 I was general manager of the New York properties of the B. & O. and did not have the opportunity to come here. But Mr. Daniel Willard, for whom your city was named in 1917, and whom I succeeded as president of the B. & O. in 1941, was here with other officers of the company and addressed you.

"Mr. Willard was a great citizen, as well as a great leader, and was an inspiration to those who were closely associated with him. His career will continue to be an inspiration as long as he is remembered.

"It has been a source of great satisfaction to me to follow Mr. Willard, whom I knew so well and so greatly admired. He developed many principles and policies on the Baltimore & Ohio, especially in the field of employee and public relations."

PRAISES JENKINS

"I wish now to pay tribute to another man, a long-time resident and benefactor of your community. I refer to Mr. R. R. (Railroad) Jenkins. He entered the service of the B. & O. here as secretary of the YMCA on March 1, 1909. He is the oldest secretary in point of service and also of age of any connected with the YMCA in the United States. He will be 83 years old on June 21 next, and is still going strong.

"I realize that there are many in this audience who are not B. & O. employees or members of their families. Yet the B. & O. is such an important factor in the lives of most of the people here that you will understand why I wish to talk to you primarily about the railroad situation. It might be pointed

UNIVERSITY OF MICHIGAN LIBRARIES

out, for illustration, that we had an average of 1,314 employees at Willard with an annual compensation of $4,441,524.72 in 1948. For the same period, in Huron County, including Willard, the annual compensation was $4,558,531.80. That is a pretty sizable amount of money to distribute in any community, and I am sure it has had much to do with the prosperity of your city.

"The B. & O. is also a big taxpayer. In Huron County, including Willard, B. & O. taxes in 1941 were $55,661, but in 1948 had been increased to $67,764. The last available figures from the Department of Taxation of Ohio indicates that the B. & O. pays almost 7 percent of all the taxes collected in this county.

"The first train between Chicago Junction, as Willard was then called, to Chicago, operated on November 23, 1874. It gave the B. & O. entrance to what has become the greatest railroad center, and one of the greatest traffic-producing centers, in the world. It also gave us a through route on our own lines from Baltimore, on the east coast, to Chicago."

FIRST TRAIN

"The rapid development of railroad transportation is strikingly illustrated in the B. & O.'s exhibition train now on view here. One exhibit is the pioneer horsecar. It hauled excursionists from the old Mount Clare station of the B. & O. in Baltimore as early as January 1830. And cars of this type, horse-drawn, were advertised in the Baltimore American of May 21, 1830, to begin operation three times a day, each way, between Baltimore and Ellicott's Mills, Md., on May 24 of the same year.

"This pioneer car and the B. & O.'s Tom Thumb locomotive of 1829, the first locomotive built for a railroad in this country, show the first steps taken to create what is now the greatest continental railroad system in the world. And the progress made in the physical equipment of the railroad in the intervening 119 years is forcibly illustrated by the beautiful modern coach on this exhibition train. An even further development, namely, the Diesel-electric locomotive, is now a familiar sight to the people living along the line of the B. & O. And when you see one of the long four-unit Diesels passing through Willard it is well to remember that it cost the B. & O. about a half a million dollars.

"Over the 120-year life span of American railroads, more than $30,000,000,000 have been spent for their construction and equipment. And seldom has there been greater difficulty in the securing of new money for improvements than now. The reason is not hard to find. The earnings which the railroads have been permitted to make have been so small, relatively, that investment in railroad properties and improvements has had little appeal. Even so-called rich railroads have been unable to sell new stock at par. Investors have found more profitable opportunity for the employment of their money in other industries.

"Yet the need for new investment in railroads is as great today as it ever was. Indeed, it is greater than ever before because the railroads now face unprecedented competition from other forms of transportation."

BIG SUM

"It is estimated that the Baltimore and Ohio spent $400,000,000 in improvements in the 20-year period between 1910 and 1930. Investors looked with greater favor upon railroad prospects during that period than they do today although most of that investment was borrowed money.

"Little new money was invested in the B. & O. in the early 1930's. The money was neither in hand nor could it be borrowed. It may, however, surprise you to know that in the ten-year period, 1939 to 1948 inclusive, the Baltimore and Ohio has invested more than $264,000,000 in improvements. About $90,000,000 of this was spent in improvements to roadway, and about $174,000,000 was spent in new and improved equipment, largely locomotives and cars.

"A substantial part of this improvement program was paid from the relatively good earnings resulting from the peak business handled during the war years. An even larger part, however, was borrowed, largely for the purchase of new equipment, on a partial payment plan. Here, not having funds available for outright purchase we made a down payment. And we agree to pay the balance in installments. Not until these are completed do we get title to the equipment.

"The people of Willard have reason to know of the B. & O. improvement program, since substantial sums have been invested here since 1941 on new facilities. The investment includes yard improvements, the automatic car retarder installation, Diesel freight locomotive facilities, new storage tanks and new and improved interlocking plants.

"Within a radius of 75 miles of Willard, more than $29,000,000 has been spent on improvements since 1941. The largest of these is the new dock facility at Toledo, constructed jointly by the B. & O. and the New York Central, and the second largest is the new dock facility at Lorain. In Chicago new yard and terminal improvements have been made as well as substantial improvements to line of road on the Chicago division."

BETTER POSITION

"The Baltimore & Ohio Railroad is in a better position today to attract and handle business than ever before in its history. We can run our trains safer, faster, and more efficiently. We can give better service and keep our operating costs in better control, despite the fact that our wage and material costs during the past year were higher than ever before.

"We have no choice in this matter of improving the property so as to bring about better service and greater efficiency. We are constantly faced with the competition of many strong railroads in our territory and, in addition, the competition offered by the common carriers of the highways, inland waterways, and the airways.

"Our problem, however, would be relatively simple in meeting the competition of our rail competitors. Nor would it be too difficult to meet other competition were it not a fact that a large part of the operating costs of the common carriers on the highways, the airways, and the inland waterways are paid for by the taxpayers through Government subsidies.

"No method of inland transport has ever been discovered that is more efficient than the railroads. Nor, in my opinion, is it likely to be discovered. The entire record of American railroading is one of increasing efficiency. Year after year, decade after decade, service has been improved and charges for that service, generally, have been lowered as related to the charges for other services and commodities. I have pointed out that the first regular rail passenger service in American began on the B. & O. on May 24, 1830. This was between Baltimore and Ellicott's Mills, 26 miles for the round trip. The charge was 75 cents. Now it happens that a round-trip ticket today would cost just about that much. But the service today is much safer, more comfortable, and faster. And it should be remembered that in 1830 fresh eggs could be bought at 5 cents a dozen and a good suit for $5."

CHEAPER TRANSPORTATION

"Railroad people have every right to be proud of their industry. The faithful, old steam locomotive uses only a glass of water and a handful of coal to haul a ton of freight 1 mile, and a Diesel uses only one teaspoon of oil to perform the same task. The railroads are now paid about 1¼ cents to move a ton 1 mile. No other type of land transport is nearly as economical—if all the real costs of providing the service are included in the rate. No other type of land transport has even remotely approached railroad efficiency in handling the mass movements required by modern civilization.

"In doing their job, the railroads as private enterprises stand on their own feet without any Government subsidy whatever—nor do they want any. It is of vital importance to America's future that they continue to do so. Every competitor of the railroads is subsidized by the American taxpayer in one form or another. Trucks and busses, river barges, ocean shipping, and air lines all are dependent on the taxpayer for their continued operation. They should be made to stand on their own feet, pay their own way, and pay taxes comparable to the railroads. If this is done there will be no hidden costs paid by the taxpayer and we will have no trouble meeting competition, regardless of its type. As taxpayers you should insist at every opportunity that this be done. We should have all forms of transportation the public requires and that their patronage on a fair-rate basis will support. The railroads ask only for equality of opportunity.

"Of all the subsidized competitors of the railroads, inland waterways are a glaring illustration of inefficiency and waste. The people of this community and State have a vital interest in knowing the facts in this connection because for many years a determined effort has been made by special interests to promote the Lake Erie-Ohio River Canal, in large part through the State of Ohio. You may depend upon it that in the long run this would cost the taxpayers a great deal more than they could ever get out of it, and only the special interests backing it would benefit."

CITES EXAMPLES

"A typical illustration of what the advocates of inland-waterway improvements call, erroneously, 'cheap waterway transportation' is the Ohio River.

"I cite this because it is an important waterway. The tonnage moving over it is heavy. It is not by any means as costly to the taxpayer as some of the other inland-waterway developments of the country. But it is bad enough from the viewpoint of the taxpayer and the railroads.

"The Ohio River from Pittsburgh to Cairo is 981 miles. The Government has poured more than $226,000,000 into its improvement, or at the rate of more than $231,000 per mile.

"In contrast, the investment in railroad roadway, tracks, bridges, and other fixed facilities averages about $60,000 per mile. And, of course, the rail route from Pittsburgh to Cairo is only two-thirds as long. It can handle just as much traffic as the Ohio River, and handle it faster, and handle it every day in the year.

"You may have seen pictures in the newspapers during recent years when the Ohio River has been frozen for weeks at a time. Traffic couldn't move. Shippers then quickly turned back to the railroad, and they expected it to be there, ready to serve. And it was, reliable and dependable as always.

"No thinking person will regard it as fair for the railroads to be obliged to maintain their facilities in the public interest every day in the year, in part to provide for shippers who only use the facilities when the river is frozen up, or is too low or out of commission for some other reason, such as the oft-recurring floods.

"Of course the reason shippers use the Ohio waterways and other improved inland waterways of the country is because their costs of shipping are subsidized by public taxation. For the average ton of freight shipped 1 mile on the Ohio the taxpayer puts up about one-quarter of a cent. The

tax-paying consumer gets nothing for his money. The cost to the consumer of goods moved over the Ohio River is no less than had it moved by rail. The profit goes to the relatively few shippers who are equipped to use this and other waterways. It is the taxpayer who, in the last analysis, pays this profit."

TAXPAYERS PAY

"Time permits only bare mention of the competition of the airways. You must know that practically all of the airports are built by public tax money, and that many of them are operated in varying degree the same way. Services such as navigational aids used by the air lines are also paid for by the Government.

"And that is not all. The Government further subsidized airplane service in the transportation of United States mail. While the railroads carry 94 percent of the mail, they actually receive less in pay than the air lines receive for carrying the remaining 6 percent of it. And remember the railroads are one of the Nation's largest taxpayers and, of course, a part of their taxes are used by the Government to pay this subsidy.

"This is unfair competition and it seems especially unfair to railroad people because the paying of so large a part of their capital and operational costs out of public taxation makes it possible for the air lines to reduce their rates for passenger travel to levels approximating those of first-class passenger travel by rail. And, what is more, advertise this fact. This makes people believe that air travel is as efficient from a cost viewpoint as rail travel when, obviously, such is not the fact.

"All good Americans have the utmost admiration for the amazing development of air carriers, both passenger and freight, and for the tremendous job they did during the war. But we want to keep our feet on the ground when it comes to comparing the cost of airborne traffic with the cost of rail traffic. It is difficult to find out the cost of building a great modern airplane. Yet we know that a manufacturer of big cargo planes recently made a contract with the Government to build 37 of the most modern types at a cost of $22,000,000. That represents a cost of about $600,000 per unit. For about the same amount the B. & O. could purchase a freight train of 60 cars, hauled by a Diesel locomotive of 3,000 horsepower. The maximum load of the plane would be 30 tons net cargo. The minimum load that could be hauled by this freight train on our line, except on a few mountain grades, would be about 1,150 net tons, or more than 30 times as much tonnage as the maximum capacity of the plane."

NEED RAILROADS

"General Hoyt S. Vandenberg, Chief of Staff, United States Air Force, speaking in commemoration of Army Day on April 6, 1949, in Baltimore, said: 'Lest anyone think that the advent of air transport has made land transport obsolete, it may be well to remember that for every man who travels a mile on our air lines in this country today, 10,000 men travel a mile on our railroads.'

"The most serious form of subsidized competition which the railroads experience, however, is that of the common carriers of the highways. And it is clear that the people of the country as a whole are becoming more and more aware of how serious it is to them because of the way it affects them as taxpayers and owners of private automobiles. Indeed, the truckers' organization alert most of us to this problem by their constant demands for greater privileges. Hardly a meeting of a State legislature passes without the introduction of bills designed to permit bigger trucks with heavier loads to operate on our public highways. There has also been afoot for some time a movement designed to take away from the States altogether the right to set limits on the sizes and weights of highway vehicles and place it all in the hands of the Federal Government. I do not believe any of you want to see this happen.

"In State legislative meetings held this year some new bills introduced by trucking interests have been defeated. Others have passed. There is only one thing of which we may be sure, namely, that the common carrier trucks will continue to demand more and more use of the public highways and that if their demands are granted the results will hurt both the railroads and the national well-being.

"Despite the almost unanimous protest of State public road officials against increases in the sizes and load limits of trucks, such proposals are constantly being made. In addition to the demands the trucking interests are making for greater privileges on the public highways, press reports indicate clearly that there is an organized flouting of laws and that the overloading of trucks and trailers is a common practice. You must all be familiar with what is going on in this respect in your own State."

MANY VIOLATIONS

"In the first 3 months of this year, 1,150 cases of truck weight violations were reported by the State Roads Commission in Maryland.

"In 1946 the State of North Carolina, with only six inspectors observing overloaded trucks on its highways, collected $501,751 in fines for overloading. This total went up to $608,681 in 1947, and to $708,209 in 1948. Furthermore, the General Assembly of the State this year increased the penalty which could be ordered paid by overweighted trucks, outside of court, from $3 to $10 per 1,000 pounds.

"Similar violations of truck weight laws are noted generally. The people of the country are becoming increasingly aware of this. They recognize that truck weight laws have been passed for the protection of the highways which they have paid for. They do not relish seeing violators of these laws destroy their highways. Furthermore, owners and operators of private automobiles know from their own experience the hazards, inconveniences and unnecessary costs created by the huge freight trucks which, they encounter on the highways.

"This is a question affecting the well-being of the country and all its citizens.

"No one questions the fundamental need of an efficient railroad system for this country in peace and war. We remember that 90 percent of the intercity freight and 0.98 percent of organized troop movements were carried by the railroads during the last war. No other form of transportation could have possibly taken on this load, and there was no other form of transportation to take it. It has been clearly proven this Nation cannot function without its railroads, and until a way is found to get along without them they must be kept strong. To weaken them would be disastrous.

"We have a good cause. We have no apologies to make. We are proud of our accomplishments. In fact, we have performed so long and so well that the public takes for granted a continuance of railroad service. We must now have a full understanding of the real facts of the situation and what is being done with the taxpayers' money.

"I believe that we are making steady progress to that end and I urge you to join me in that effort.

"Surely, the great American railroad system has been more responsible than any other single element in our economy, save agriculture, for the great development of our Nation. It is as essential today to national well-being as ever, and deserves universal support and equality of opportunity.

"I appreciate the cordial welcome which we B. & O. people have received from our friends of Willard today."

Inflation Is Not Prosperity

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1949

Mr. SHAFER. Mr. Speaker, for years I have been warning the people of my district and the people of America to expect more and more inflation as a result of the New Deal and Fair Deal policy of frittering away the people's hard-earned money both at home and overseas.

I have been saying that the kind of inflation against which I warned was not synonymous with prosperity. That is a fact which many New Dealers and a lot of muddled economists of both parties have been forgetting. The history of Italy and of other nations in all recorded history where there has been disastrous inflation has proved that inflation and prosperity were not synonymous.

So it was with more than casual interest I noticed the other day a report from the United States Department of Commerce commenting on the fact that, at the very same time general business was falling off and unemployment was increasing, prices were rising at the consumer lever. It is a fact. After a drop of only 3 percent in the cost of living, extending over a period of 5 months, the cost-of-living index last month turned upward again.

In other words, we, the people, are finally beginning to see how the shoe of inflation really pinches. We are experiencing the inevitable results of the causes the New Deal has espoused so long.

As this inflation picks up more and more, comparably, the American people will see that something is wrong with the theories about our tariff policies, and the give-away and throw-away policies of the present political administration.

Mr. Speaker, 2 years ago, I stood in the well of this House and declared that 1 year from then there would be higher prices, directly attributable to the lend-and-spend policies of this administration. A year ago I predicted that we were headed for economic stresses and strains and that prices would get higher. I said at that time that some day, inevitably, the fruits of the trees being planted by the New Dealers would be apparent to all who would look. Now, those fruits are becoming more and more apparent.

Today, unemployment is increasing. I hold in my hand an Associated Press report, dated June 7, 1949, in which it is reported that national unemployment jumped 273,000 in May, hitting a new postwar peak of 3,289,000. As we all

UNIVERSITY OF MICHIGAN LIBRARIES

realize, this is not a true picture, because there are millions of men who technically are employed but are working only 1 or 2 or 3 days a week.

I do not predict a depression of the kind that came to this country as a result of the stock-market collapse. There were few good things one could say about such a depression as we used to have in the olden days. But one is that they bore within themselves their own cures. As prices went down and as adjustments took place, the economy stiffened, and, if left alone, headed back upward. But during the last depression we saw the New Dealers enter the picture with their fake cures. They pretended to cure the depression, but, as every statistic proved, they never did. Finally, the war cured the depression that began in 1929. It would have been over long before had the New Dealers not come into the picture with their grandiose ideas of spend and spend.

I do predict, for the years ahead, a very bad future for the American people unless we change our leaders. These leaders have only one cure for every ill. They are quack doctors with only one medicine—spend and spend and spend. Presented with a new and unusual kind of depression, such as the one that now is coming upon us, they do not know what to do. They suggested Government ownership of the steel industry to get more production. Now, they suggested Government ownership to be sure that steelworkers will have jobs when a fall in steel production appears. In other words, the same old cure for diametrically opposite ills.

They want to get control, of course, not only of the steel industry, but of every industry. They are collectivists at heart. Since the people, for the most part, cannot look ahead annd see what these New Dealers are seeking to do, it is my duty as a Republican to expose their aims to the people.

What is going to happen, economically? You are going to see unemployment continue to increase. You are going to see the Government budget unbalanced for year after year, thus further depreciating the value of your dollar. You are going to see prices stay high, due to the very effects of the New Deal. Wages are stratified. Wages cannot come down. Costs of doing business are more or less stable. In industry after industry and on farm after farm, you will hear the plaintive cry: "Our volume of business is going down, but we are strapped to the same high cost position."

As we have to replace roads, barns, homes, and other capital improvements and structures that were built back under the old price level, we will see that taxes—local and State particularly—will go up and up and up. This is necessary because of the high prices brought on by New Deal policies from the very first of the Roosevelt administration and continued right down until today by the New Deal party in power.

Yet, we will strangely see, in the midst of these high costs and high prices, more and more unemployment. Fewer men are able to go into business, because the cost of starting a business has become prohibitive. Thousands of small businesses now operating on the borderline will go into bankruptcy. The rate of business failure is picking up more and more. Yet, the Federal Government will see to it that money is plentiful, for the politicians who got into this mess will not want to see money get scarce. That is how you explain the billions in savings in the savings banks, insurance companies, and other institutions throughout the Nation. It will not be a fast process. Unemployment will pick up little by little. It will go on for years and years. Yet, prices will remain high.

Who, then, will pay the price for the follies of the New Deal? The very men and women who thought they could vote themselves into economic heaven by voting for the New Dealers. The poor widow on a pension. The social-security recipient. The millions who have jobs in little industries that are going broke. They are going to feel the result of the economic sins practiced by their leaders so long.

Mr. Speaker, I do not like to pose as a prophet of doom, but I challenge any man here to bring up this speech a year from now, or to go back and to reread the speeches I delivered a year ago or 2 years ago on this subject. We are heading into the shoals of economic trouble because of the long-continued economic fallacies of the New Dealers and the Fair Dealers.

The Republican Eightieth Congress tried its best to change the trend. It lowered Federal expenses and it lowered taxes. It tried to prevent business from being placed in an economic strait-jacket from which neither our private enterprise system nor our free, representative government could ever again obtain its freedom.

You will see prices for houses go higher a month after the administration rams through the new so-called Federal housing program. This is not a Federal housing program at all. It is a taxpayers' housing program. Every dime spent by Uncle Sam will come out of the jeans of farmers and laborers and businessmen throughout the Nation and used for the benefit of the lucky few who get to occupy one of the swank new homes or apartments to be erected at Government expense. This program, if enacted, will cause prices of lumber, bricks, building materials of all kinds, to go up almost immediately, thus causing the prices of new homes to go up, for Uncle Sam, as is well known, is a profligate spender once he gets started. There you will have more inflation. But the program will not create a single new bricklayer, a single new carpenter, nor will it make those carpenters and bricklayers now employed work for less. In fact, they will be demanding more. That is the way we are going, under the New Deal.

There is a better way, Mr. Speaker. The people still can awaken and arise and see the error of their ways, politically. They can vote into office men who are determined to stop the constant drain on the taxpayers of this country to feed, clothe, furnish with motion pictures, and all the luxuries of life, the peoples of other nations abroad. They can vote into office men who know that one word—work—and work by every American, and that alone, can rebuild this United States and make it into a nation of happy, peaceful citizens. The people can vote into office men who will vote against any laws that put the heavy hand of government on the necks of more and more Americans, whether on farms or in business or in factories. The people can vote into office men who are determined to give the people a chance to work out their own salvation, not come with tincups, kotowing to bureaucrats and asking for hand-outs for medical services, free homes, or any other charity.

The people are waiting for us Republicans to tell them what every red-blooded, loyal American wants to hear—that the Government will stay out of business, attend to its own business, and let the people of this country run their own lives insofar as this is consistent with public safety and the protection of the public against shysters and crooks.

Unless the people do heed the lessons of history and turn from the New Dealers who have fastened themselves upon the backs of the people, this Nation can never dodge a long, steady slide into inflation, accompanied by widespread social unrest, unemployment, bewilderment and chagrin and, finally, a social revolution. It is tragic that there should be any possibility that the people would take such a road, but that road lies ahead if they continue to vote for demagogues whose sole aim is power and the emoluments of office, not service to the Government and maintenance of our precious way of life.

Truth-Giving Press Called Peace Builder

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1949

Mr. HAGEN. Mr. Speaker, under permission heretofore granted, I wish to include in the RECORD an address, Truth-Giving Press Called Peace Builder, delivered by Gardner Cowles in Minneapolis May 26, 1949.

The Minneapolis Star and Tribune are owned by John Cowles, Gardner Cowles, members of their families, and employees. The company, of which John Cowles is president, has just dedicated a new building, which is one of the most modern newspaper publishing plants in the world.

Incidental to the dedicatory services, Gardner Cowles, who is chairman of the board of the Minneapolis Star and Tribune Co. as well as publisher of Look and Quick magazines and the Des Moines Register and Tribune, delivered one of the principal addresses to some 600 businessmen of the Twin Cities and Minnesota. His excellent address, which was printed in the Minneapolis Morning Tribune of Friday, May 27, follows:

TRUTH-GIVING PRESS CALLED PEACE BUILDER

(Following is the complete text of the address of Gardner Cowles, chairman of the

board of the Minneapolis Star and Tribune, and president of Look magazine and of the Des Moines, Iowa, Register and Tribune, at the second civic dinner of the Star and Tribune dedication program at the Radisson Hotel Thursday night.)

As you may know, I am close to the Minneapolis Star and Tribune as an officer and a substantial stockholder. But even though I sometimes kibitz from New York, I am not a worker on the staff day after day. So I know you will forgive me for speaking first tonight a few words of the pride I feel for the Minneapolis papers.

The Star and Tribune are good newspapers—honest newspapers. I am sure any competent newspaperman would agree to that. And that fact is mighty important to Minneapolis. Superior newspapers help build a superior community. We know that an outstanding college or a great university lifts the culture and stimulates the thinking in a city and a State. So better newspapers can contribute much to the education, to the civic consciousness, to the business growth, to the general welfare of the community through the years.

While serving this community, the Star and Tribune have, in my judgment, developed an outstanding news and editorial staff. They also have built competent and vigorous management. These are important facts to remember as the new building is dedicated this week. The building is important only to the degree it serves. It will help the staff develop even greater newspapers through better working conditions and better facilities. And I sincerely believe that in the decade ahead, the Star and Tribune will build for themselves a record of achievement and service of which the whole upper Mississippi Valley will be proud.

MUST KEEP JUDGMENT

But as we think ahead to the work that will be done here, we are conscious that as persons, as newspapers, we are part of a great Nation. And this Nation, part of the free half of one world, faces a half world that is not free. Although this raises fundamental problems that must be solved, we need not be afraid. True, the prophets of doom have just about turned America into a crowd of nervous, neurotic Paul Bunyans. But we can face the future with confidence and optimism. We can if we remember our strength. And if we keep our judgment.

If we are to have good judgment, we must know what goes on. This was well emphasized by Bernie Baruch, a wise, hard-headed, kindly elder statesman, who loves to quote his saying: "Every man has a right to his own opinion, but no man has a right to be wrong in his facts." And that, I think, spotlights the major reason the American people are having such a struggle making up their minds on a policy toward Russia and communism. They have had, and are having, such a hard time learning the facts.

Without facts, it is difficult for Americans to believe that 14 men in the Kremlin are determined to cause a revolution in the United States. We can't appreciate why they feel an American revolution, and the chaos which would result, is so important to their welfare.

I speak feelingly on this point because in the fall of 1942 I accompanied Wendell Willkie to Russia and sat in the Kremlin when he talked with Stalin. I heard Stalin say, with much emphasis, that he had no real interest in territorial expansion. Nor was he interested in the world-revolution thesis of the Marxist philosophy. He said that when the war ended, all he wanted was to rebuild Russia. Then he could give the people some of the things constantly promised, ever since the revolution in 1921, to raise their standard of living. Stalin impressed me then as sincere and honest on this basic position; no Russian expansion, no world revolution.

After my return from that trip, I went around the United States speaking and writing that we would have no serious problem with the Russians after the war. I suppose I will never know whether Stalin was insincere in his talks with Willkie, whether he later changed his mind—or whether he may no longer be sole master of Soviet policy.

It's natural, perhaps, that the American people want a quick and easy solution of the Russian problem. But I don't think there is any such solution. I am afraid the problem will be with us for many years. Russia is a growing, vigorous nation. It is rich in resources and is just learning to flex her muscles in an industrialized world. Even if her Government were not Communist, I am afraid her expansionist dreams would persist.

PROBLEM TO LINGER

So we may have the Russian problem for years. That probability brought a comment from Winston Churchill just a few weeks ago in New York. I heard him say that the United States will have to learn to live with a Russian problem just as England has lived with a Russian problem for more than 140 years. You will recall that Czar Alexander the First marched with the Russian Army into Paris in 1814 when Napoleon collapsed. The main question of the peace conference that followed—the Conference of Vienna—was how to get Russia out of Europe.

During much of that troubled period from 1815 to 1865, Lloyd Palmerston was Foreign Minister or Prime Minister of England. And he made this significant observation: "Russia is always expanding as much as the apathy or timidity of her neighbors will permit."

You remember that Russian expansion also brought some of the most bitter words ever spoken by Teddy Roosevelt at the time of the Russo-Japanese War: "If the Russians go on as they have gone ever since I have been President," he said in 1905, "they are hopeless creatures with whom to deal. They are utterly insincere and treacherous; they have no conception of truth."

Now, of course, the expansion aims of Russia are a dark thundercloud on our horizon. Just how much I realized only last week when I spent an evening with Gen. Bedell Smith who recently returned from 3 years in Moscow.

He feels it is dangerous for us to hope that the death of Stalin, a palace revolution or other internal troubles will halt the Soviet drive to expand. And he emphasized what a foothold Russia has today in Europe; in 1803, one out of seven Europeans were Russians. In 1900, one out of four were Russians. Today, one out of every two people in Europe are Russians or are people living under a government taking its orders from the Kremlin.

If the Russian problem is going to perplex us for years, we obviously need allies. Along with the Atlantic Pact nations, we can look to Germany. Winston Churchill told a group in New York that America must forget her bitterness toward the Germans—difficult as that is after two world wars. And he made a lot of sense.

"After all," Churchill said, "why do you knock down a man except to pick him up in a better frame of mind?"

Churchill's feeling about German is sound, I think—just as I think history will record that his war strategy, which did not always prevail, was prophetically sound. And now his pleadings of today for a real coalition of the free peoples to form a new and adequate balance of power against an expansionist Russia and the infiltration of communism is, I think, the right way to avoid world war III.

COMMON MAN'S TASK

But this balance will be hard to hold. For on one thing alone do all men agree who have been dealing with the Russians: The men in the Kremlin are tough realists. They are not starry-eyed opportunists. They will not provoke a new world war if the array of strength against them is overwhelming—as it can be if the free half of the world unites.

This, although oversimplified perhaps, is the power-politics side of the problem. But there is a much more complex part of the struggle. And because it is complex, it is usually inadequately described as an ideological war between communism and democracy. Yet, it is really a good deal more than that. It concerns basic concepts of social progress, political organization, and human relationships. It poses such fundamental questions as: How can the material lot of man be improved while retaining freedom? What are the social requisites of freedom? What, after all, is freedom worth?

As we consider the framework of freedom, we realize that a profound change has occurred in human affairs in the last 50 years. This change is the result of three great social developments: Nearly universal suffrage or the right to vote, popular education and the perfection of techniques of modern mass communication. The net result has been a transfer of unprecedented power to the masses. Great groups of men and women, acting together, have learned ways to make their potential power effective. As you might expect, these unaccustomed powers are being abused in many quarters. They can terrify you and make you despair. But I think we had better face up to the fact that the common people are in a commanding position the world over. They will not be displaced short of dictatorship. So the future of freedom is really now in the custody of the common man.

If I am right that the preservation of freedom has become a charge of the common man, then it follows that the common man must acquire knowledge equal to his new responsibilities.

Real knowledge, of course, is too often a rare thing. We pride ourselves on the literacy of the American people. But it is a primitive literacy measured against the need for knowledge and understanding in our complex society. To what extent, for example, does the man in the street have any real awareness of these factors: The requisites of popular rule and stable self-government; how justice is administered; the importance of maintaining law and order? To what extent does he realize the significance in our economy of private initiative, of the sustained flow of venture capital? What does he really know about the importance of high productivity on the part of labor, of the profit motive as a prime mover in any free, competitive system? To what extent does he see the inescapable connections between collective freedom and individual honesty, tolerance, charity, courage, and honor? These are matters of understanding. Without understanding, people are ignorant—and through sheer ignorance can lose their freedom.

The only answer to ignorance is education and more education. And I mean more than just the formal education in more and better schools, colleges, and universities. I mean more adult education, more public forums, more discussion groups. But above everything else, I mean better newspaper and magazine editing, better news and discussion and debate programs on the radio. And I mean the use of the powerful new medium of television to make the people understand and think. Too much thinking nowadays goes on in a bath of noise, because life is so busy, so complex. This noise and the complexities of life are leaving the common man appallingly confused and misinformed.

DISCIPLINE NEEDED

Such confusion and misinformation bring me to my basic point: Knowledge alone is not enough. Freemen must learn self-discipline or freedom cannot be preserved even in an educated United States. I ask these questions: Can men and women who are ex-

UNIVERSITY OF MICHIGAN LIBRARIES

sentially free be taught to subordinate their individual interests to the well-being of all? If in possession of power, can they see the necessity of exercising it for the common good? Can they be led to show generosity toward the less-privileged and courage in the face of frustration and failure?

This concept of discipline is crucial with us. For the present world conflict is essentially a struggle of fundamentally opposed social disciplines. The discipline of the dictatorship is forced, regimented, ruthless, utterly demanding, built on fear. The discipline of the free or democratic society is built on hope and aspiration, on the promise of greater hapiness and well-being. It is a discipline that must be responsible and self-imposed. Without this sort of discipline, our democratic way of life is doomed to self-destruction.

Self-discipline and responsibility are corollaries of freedom in our society. Yet in recent years, it seems to me, we have talked too much about freedom and ignored what goes with it. We have had the Atlantic Charter of the "four freedoms." We need an additional Atlantic Charter covering the responsibilities and disciplines required of a freeman if his society is to remain free. Soon we must begin to persuade the common man that he has obligations of responsibility and self-discipline. Otherwise his complacency, apathy, ease, and excessive self-interest will ruin even America.

In the light of these problems of power politics and the war of social disciplines, let us look at our strength. And, believe me, our strength is fantastic. For example:

On the average, productivity has increased in the United States almost one-fifth every 10 years since 1850. Today, with 6 percent of the population and 7 percent of the land, we are literally supporting the world. Or, to put it another way, with roughly one-fifteenth of the population of the world, with one-fifteenth of the natural resources, we are producing one-third of all the goods and services in the world. And that is the final test of the efficiency of our system.

With such efficiency and strength, why do we spend so much time talking about the defects in our system? Perhaps we foolishly expect perfection. Yet one expert, Prof. John Jewkes, the great critic of socialism and author of Ordeal Through Planning, recently said: "It is fertile source of disenchantment to expect that there ever can be a perfect and ideal economic system combining absolute justice, complete efficiency, no waste, and no need for readjustment. That is true of a free economy as of any other. Some unemployment there will be, although I believe that we now have financial techniques which, sensibly and courageously used by statesmen, can prevent the evil of mass unemployment.

"Some waste there must be so long as consumers change their minds and technicians improve methods of production. Some inequality there ought to be if incentives are to be powerful enough to keep the system going. And as it seems to me, some monopoly is inescapable in the nature of any economic system. I am sure the right defense of the free economy is not to deny these things, but to point out first that such weaknesses can be kept within tolerable limits; and second, that most of these evils are much intensified in a collectivist society. The neurotic pursuit of unattainable tidiness in a real workaday world can well be left to the planners."

FALLACIES FILL AGE

Jewkes is right. Our system will never be perfect. But unfortunately so many of our people are so badly educated and informed on economics that they are in danger of thinking the millennium can be found in socialism or communism or the welfare state—whatever it be called. I am constantly amazed to see young and old, innocent and sophisticated, conservative and liberal, all bitten in some degree by the belief that, in some way, the state should and could order all the economic affairs of its citizens as a good housewife orders the affairs of a happy household. Truly, this is the age of economic mysticism.

One mystic belief that so many are indulging in right now is the silly notion that any problem can be solved by Federal spending. They think Federal spending will solve inflation or deflation, pensions, housing, education, medicine, health, unemployment, or what have you. I think the height of ridiculousness was reached when the Federal Treasury, in 1948, spent more money to support the price of potatoes than it spent to operate and supply the atomic plants at Oak Ridge, Tenn., and Hanford, Wash. And the 1949 potato bill will be almost as bad. All of which shows that in a democracy, particularly in the United States, the pendulum always swings too far.

In spite of our mystical economies, I think as a Nation we have got to make a choice for the next several years. This choice is between adequate armament, particularly air power, coupled with a reasonable but somewhat smaller program of foreign aid, on one hand. On the other hand, a greatly expanded domestic spending program on social security, health, education, housing, and so forth.

Our economy will not stand expanded spending both abroad and at home. If we attempt both, we are headed for disaster. The many domestic welfare projects which President Truman is proposing should properly be shelved until our gifts abroad can cease and when we can safely reduce our military expenditures.

After all, the important thing is to avoid another war and get some real peace in the world. Some of you have heard me use these statistics before, but I think it is well for us never to forget them: The last war cost the world more than $1,000,000,000,000. This is to say nothing of the dead, the maimed, and the broken-hearted by the tens of millions. A trillion dollars would build a comfortable 5-room house for each of the world's families. In addition, it would pay for the common-school education of 400,000,000 children for 25 years. In addition, it would build a $1,000,000 hospital for every community of 2,500 people the world over. When you realize the astronomical cost of war today, any expenditure now is cheap if it helps one little bit to avoid another war.

TRUTH MUST BE TOLD

Our efforts to avoid war have borne some fruit. We have achieved in the last year a great victory in western Europe, although we have suffered a great defeat in Asia. But on balance, I think we are winning out against the Soviets. A real peace is getting nearer.

With peace, the last half of this century can be a golden era for the United States. It can be, if the people of this great land are made aware of the basic truths: that the standard of living can be raised only through greater productivity, and that freedom is secure only where it marches hand in hand with responsibility and self-discipline.

Making the people aware is an educational job all of us face. Better and better newspapers will help accomplish this goal—and find in their work great rewarding satisfaction.

Soviet Anti-Semitism

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1949

Mr. MULTER. Mr. Speaker, the following, which appeared in the New York Post of June 8, is the third and last of a series of articles by Max Lerner. I commend it to the attention of my colleagues.

SOVIET ANTI-SEMITISM

(By Max Lerner)

For the last few months the American press has been raked by angry charges of a mounting anti-Semitism in the Soviet countries, and equally angry defenses of the Soviet position on racism. Typical of the first was Frederick Woltman's series in the World-Telegram. Typical of the second was the series in the Compass by Tom O'Connor.

As I read the two their intensities managed to cancel each other out. The issue is too important to be left to the mercies of rival propagandas. Important, I mean, not only as it affects the fate of Jews in eastern Europe or the fears of Jews in America. One of the facts about anti-Semitism is that its importance has always stretched beyond the Jews themselves as victims, and has become a massive moral touchstone of a civilization. The issue, as this paper put it in an editorial on June 2, is a moral issue that reaches to men everywhere. It sheds light both on the nature of communism as a going system and on the nature of man as a hating animal.

The first thing to do is to separate out the facts from the arguments. With the facts isolated we can weigh the interpretations.

It seems clear that communism has always been hostile to zionism, and while allowing Jewish religious worship and cultural life as it allows all forms of worship and cultural life as such, it has drawn the line there. It has suppressed zionism as a form of religious politics just as it has suppressed political catholicism for the same reason. Even granted the Communist assumptions, the rub lies in where you draw the line between religious worship and religious politics.

For example, I find it a heavy charge—and one I have not seen denied or answered—that Russia has recently suspended the leading Yiddish newspaper in the Soviet Union, along with suspending a Yiddish magazine, dissolving a Jewish organization, shutting up a Yiddish publishing house, and arresting (presumably among others, but the links in the pattern are disturbing) six important Yiddish writers.

These items seem to me more telling than some of the more hotly debated ones. For example, it is hard to draw any firm conclusions from the now famous caricatures against "homeless cosmopolitans." A New York Times writer was clearly way off base when he translated the name Zhid on the portmanteau of the "cosmopolitan" as "Jew" instead of the "Gide," part of Andre Gide's name. The Times ran a brief correction which is always futile. But while this incident sheds a doubtful light on American credulity it does not dispose of the problem of Soviet practices and institutions.

In the Russian drive against "cosmopolitanism" in culture, it seems to be a fact that a large number of those who have been attacked are Jews. Perhaps this is due to the Jew's traditional leaning toward being culturally a citizen of the world, which may apply even among Soviet functionaries. Perhaps it is all again a coincidence, since Jews have been dropping out of power positions in the hierarchy and occupy mainly the cultural posts. But it also fits into the pattern.

Those who argue that the Soviets are innocent point to the clear antiracist clause in the Russian Constitution, and some sharp utterances in the past by Stalin, Molotov, and others against anti-Semitism as a form of cannibalism. But an impressive scholarly study by Solomon M. Schwarz in the June issue of Commentary documents another trend alongside this one.

It shows that there was anti-Semitic hatred even among Communist Party members in the 1920's during the NEP period; that in the 1930's the tension eased but when the

purge trials came many of the victims were Jews in high posts; that the anti-Semitism of the Nazis was attacked in the popular-front period, but ignored (fascism is a matter of taste) during the Nazi-Soviet pact honeymoon; that while it was the Nazis who murdered the Russian Jews in the occupied regions the Russians seemed to lack the moral force to protect them, as the Bulgarians did and some of the people in western Europe; that while the Polish Jews were obviously better off as refugees in Russia than as corpses in Germany, they voted with their feet and left Russia as soon as they could.

Given this pattern of the past, is it unthinkable that one should discern anti-Semitism in the Russia of the present? The attitude of the Soviet bloc has been a forthright and generous one on the diplomatic issues of Palestine and Israel. But foreign policy is always decided by the Russians on grounds of realism as well as principle, and they seemed better informed than we on the weakness of the Arabs and the strength of the Jews.

The internal Communist line in Russia has always changed in response to world pressures. The present cold war seems to demand a tightening of ideological discipline in Russia and a campaign against Jewish cosmopolitans which are unreliable politically exactly because they took too enthusiastically to the earlier line. If the Russian rulers see it thus, they are capable of anti-Semitic practice. They have not shown themselves too tender on other matters.

I put this tentatively, but the pattern is strengthened by what is happening in eastern Europe. Not only have Zionist organizations been dissolved in Rumania and Hungary and Czechoslovakia, but the non-Zionist forms of Jewish cultural life have been gravely impaired. Worst of all, emigration out of Rumania to Israel has been completely stopped, and Jews trying to cross the border have been shot down.

One might call this, as one of the newspaper series does, the wiping out of the ghettos in which the Jews have lived. From a lofty Communist standpoint it may make sense to tell the east European Jew that he must stay put, not to try to emigrate, give up his Zionist dangerous thoughts, and his hopes of getting to Israel, become proletarianized, and help build the new Communist society.

But except in Bulgaria and Yugoslavia the Jews are tattered remnants of larger numbers, who have come to the end of a long road. In most cases they have no land and have been stripped of property and jobs. With the help of the JDC and ORT and American money, efforts are being made (I take this from Prof. Nathan Reich's excellent and dispassionate article, Jewish Life in the Russian Satellites, in the April Commentary) to retrain them and group them in producers' cooperatives. The prospects for this are especially hopeful in Poland. But in Rumania the offices of the JDC and ORT have now been closed.

What does this add up to? The trend is against the Jews both in Russia and its satellite countries. It is an obvious exaggeration to compare these trends, as Frederick Woltman does, to Nazi anti-Semitism. The Nazis killed the Jews. The Communists grant them physical survival, but they are crowding them hard to make them stop being not only Zionists but Jews. That is not murderous anti-Semitism but it is anti-Semitism nonetheless.

It is not mysticism, as some put it, for a Jew to want to remain a Jew, whether under a democratic or a Communist system. Nor is it racism. It is part of cultural inheritance, common memories, common sufferings, and hopes. That applies to others also, but the Jews have purchased their right to be whatever they wish to be too dearly to give it up willingly.

The experience of our time shows that Jews, like other minority groups, thrive best as whole persons under the old democracies of America and western Europe, and the new democracy of Israel. For there is something about a Jew that recoils from a storm trooper and there is something about a storm trooper that hates a Jew.

Federal Aid to Education

EXTENSION OF REMARKS
OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. HAYS of Arkansas. Mr. Speaker, under leave to extend my remarks I include the following statement which I recently made to the subcommittee of the Committee on Labor and Education considering Federal aid to education:

Mr. Chairman, I hesitate to take the time of the committee on a question which has been considered so long and so thoroughly by the people of the United States and by the Congress. However, in fairness to the people whom I represent and in fairness to my vital interest in this issue, I requested an opportunity to submit some facts and opinions on this question. Perhaps no issue before the Congress holds such large opportunities for good in our democracy as Federal aid for education.

I shall avoid further arguments to substantiate what I believe to be an irrefutable fact that Federal aid to education is a matter of great national interest. However, I seek your indulgence for a few statements concerning the principles of legislation which I hope this committee will embrace.

One of the best indexes of potential educational load in any State is the proportion of total population in the age groups 5 to 17 years, inclusive. Practically all children in this age group should be in school, and consequently there is an obligation to support a school program for this group. According to figures from the Census Bureau the proportion of school-age children range from 16.6 percent of the total population in New Jersey to 28.3 percent in New Mexico. Arkansas ranks eighth among the 48 States, with 26.1 percent. The potential educational load in Arkansas is approximately 57 percent greater than it is in New Jersey or New York.

Wealth and income constitute the economic basis of support for all phases of Government. In States where the average level of income is high the people can devote more to the support of governmental functions than they can in States where the average income is low. One good measure of a State's ability to support a desirable program of education, therefore, is the average income per person in the total population of that State. A 1947 study shows that the most wealthy State has nearly three times the per capita income of the least wealthy. In eight States the per capita income in 1947 was over $1,600, in Arkansas it was $710.

Since the ratio of school-age children to the total population varies so greatly among the States this factor must also be considered in determining the ability of a State to support education. The income per child of school age varies more strikingly than the income per capita. In the most wealthy State, New York, the income per child between the ages of 5 and 17 inclusively is nearly four times that in Arkansas. The income per child of school age is more than $9,000 in five States but it is only $2,716 in Arkansas.

With slight variations these are facts which have been before various committees of the Congress for the past 25 years. However, I hasten to assure you that the people of Arkansas have not faced these facts with an attitude of hopeless futility. On the contrary, they have taken decisive steps to improve our educational system. With limited financial resources and a wealth of children it was imperative to provide a more economical school administrative structure. Because of this need and because of the desire to provide educational opportunities extending throughout 12 grades for every child, they adopted in the last general election an act to dissolve all school districts which had fewer than 350 children and annex this territory to larger school districts. This act will reduce the number of school districts in Arkansas from over 1,500 to approximately 400 on June 1, 1949.

While this act will provide a more economical school administrative structure in terms of cost per child, it will actually cost more money because it seeks to provide high school opportunities for thousands of children who have not had a high school to attend. Just to get these children to school will increase transportation costs by approximately $750,000 annually. The additional teachers will require an additional $1,000,000, $500,000 annually even on the present low-salary scale.

The people of Arkansas also adopted a constitutional amendment authorizing the people in every school district to levy by majority vote a property tax in such an amount as they deemed necessary for the support of their schools. And it is reasonable to expect a substantial increase in local school district taxes in the next 2 years. However, a substantial portion of this increase will have to be used for capital outlay purposes if Arkansas is to maintain any semblance of school buildings to house her children.

Just to provide the present limited educational program for a 9 months' school term for all the children of the State would require an additional $7,000,000 annually for current operating expenses. Even with its limited financial resources, the people of Arkansas will provide this 25-percent increase in total tax revenues in order to secure this $7,000,000. But this program is woefully inadequate. It will mean only 50 cents per day per child in average daily attendance. It is simply impossible to provide an adequate school program for this amount of money in any State.

No judgment concerning the effectiveness of any school program or its needs can be valid without considering certain factors relating to teachers. In the economic world we accept as a truism the statement "You get what you pay for." This statement is is not quite true in the area of teaching, but the fact remains that in low-salary schedules we are constantly discouraging competent young people from entering the profession. From 1937 to 1948 the average annual salary of all teachers, superintendents, and principals in Arkansas was increased from $571 to $1,548, but Arkansas continued to rank forty-seventh among the 48 States, even though the percentage gain was the highest of all the States.

Education is a science which requires the special training of those who seek to teach. A majority of those teaching in Arkansas have not had the training we would like for them to have, but what can be expected when teaching pays such low salaries? This situation can never be corrected until teaching pays salaries comparable to those paid in other lines of endeavor requiring similar training and experience. In Arkansas this

UNIVERSITY OF MICHIGAN LIBRARIES

can be accomplished only through Federal aid.

Because of the unmistakable conclusions which the foregoing facts warrant I introduced a bill to provide Federal aid for education, H. R. 1218. This bill is of the general grant-in-aid type of legislation having as its purpose the giving of financial assistance to the States to do a job which is generally accepted as a State function. I do not claim authorship of the various provisions of this bill. As a matter of fact, no single individual or single group of individuals can claim credit for all of the provisions which I have included in my bill. These provisions are the product of years of deliberation by congressional committees and interested individuals and groups. They are the product of expert professional advice and practical school administrative and legislative experience. The bill which I introduced is substantially the same as S. 246, which recently was passed by the Senate and is before the committee now for consideration.

I have given some consideration to the bill introduced by you, Mr. Chairman, H. R. 4643, and I want to assure you that in many respects it is the best Federal aid-to-education bill which I have considered. I particularly like your treatment of Alaska, Hawaii, Puerto Rico, and the Virgin Islands separate from the grants-in-aid to the States. Of course, I am not in a position to pass judgment on the respective allocations to these possessions but I do think that the idea of separate treatment is a sound approach to this matter.

Mr. Chairman, I think your simplification of the formula is excellent. It accomplishes the same purpose as the formula in my bill but it is much better stated. No one can fail to understand exactly how your formula operates. I particularly like that portion of the formula which allocates the full $300,000,000 to the States. I think that any bill passed by the Congress should authorize that full amount, though the budget problem may force a decrease in the appropriation. In my opinion, yours is the only bill before the Congress at the present time which does exactly that.

Personally I am very favorably impressed with the section on judicial review. I would like to see such a provision incorporated in any measure adopted by the Congress. The section of your bill dealing with annual reports is excellent. If any deficiencies appear in your bill, certainly they are not in the direction of making it possible for any Federal officer or agency to exercise any control over our public schools. The overwhelming majority of the Congress opposes Federal control. I, too, am opposed to Federal control of our schools, but it is obvious that there cannot be complete agreement as to what constitutes Federal control. The kind of Federal control to which I am unalterably opposed is that relating to educational policies as distinguished from fiscal policies. On matters of educational policy such as the employment or discharge of teachers, the determination of curricula or courses of study, selection of textbooks, and the like, I think that no Federal officer or agency should be in a position to exercise the slightest degree of pressure influence. On fiscal matters, however, I think that it is not unreasonable for the Congress to include in a Federal aid-to-education bill certain safeguards in order to see that the fiscal objectives of the legislation are adopted and that Federal funds are rigidly devoted to the ends described in the bill.

Since one of the major purposes of the bills now pending before your committee is to equalize educational opportunties by making grants of Federal funds to the States, to implement State and local funds for the establishment of minimum standards for every child it does not do violence to my opposition to Federal control to include in the bill a requirement that the State and local school districts shall not reduce their appropriations for school purposes without receiving some penalty with regard to their participation in Federal funds, nor does it do violence to my conviction to urge that a requirement be placed in the bill that States must provide a minimum expenditure of $55 per child. As a matter of fact, failure to include these safeguards would constitute a disregard of our responsibility as Members of Congress to assure the program success.

Another provision which I have included in my bill deals with a most difficult problem, a problem which is fraught with emotion. This is the problem of protection for minority races in those States where dual systems of education are maintained. There are many varied points of view on this problem. I have given more than a little thought to it, not only in the area of education but in many other areas. I recognize that a problem does exist and further that it does not yield to categorical treatment. This problem as it relates to Federal aid for education has been considered by persons with many points of view and a provision which meets the favor of those holding divergent opinions was incorporated in my bill. This same provision is embodied in S. 246. It is a minimum safeguard for minority races which, in my judgment, should be included in any Federal aid bill. It simply provides that in those States where separate schools are maintained for minority races, such States must adopt a plan of distribution which results in the expenditure for the benefit of such minority a proportion of Federal funds not less than the proportion that such minority in such State bears to the total population of that State. It is my opinion that such a provision is not necessary for the protection of minority races because I believe that a just and equitable distribution of Federal funds will be made in the Southern States. However, this conviction does not lead me to oppose the incorporation of such a safeguard. On the contrary, it impells me to urge the committee to include it in the bill. There are those who are genuinely skeptical of the benefits that Federal aid will provide for the improvement of educational facilities for Negroes. Even though I do not share their skepticism, I respect their sincerity. In deference to their sincerity and in complete reliance on my confidence in the integrity of the people of the South, I urge the inclusion of this provision in the bill which you report.

We've Got Shock Absorbers

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1949

Mr. SABATH. Mr. Speaker, under leave to extend my remarks, I insert in the RECORD the following editorial that appeared in the Chicago Sun-Times under date of June 15, 1949:

WE'VE GOT SHOCK ABSORBERS

Those of us who still remember the early thirties are properly suspicious of Pollyanna stuff about the economic situation.

Right after the stock market crash of 1929, moguls of business and Government began assuring the people that nothing was wrong. President Hoover did his bit with the famous remark about prosperity being just around the corner. It turned out to be a moving corner.

For a while there, it seemed that whenever a big-wig announced imminent recovery, the depression deepened a notch.

We were trying to talk ourselves into prosperity, and it didn't work.

Today the danger is that we may talk ourselves into a depression.

It isn't Pollyanna stuff to look realistically at the differences between our economic situation now and in 1929. The United States News did that this week, and discovered some contrasts that ought to reassure those who are overly gloomy about current trends.

For example: In 1929, the building cycle had run its course, whereas today it is still in the early stages, with many unfilled needs, especially for housing, still to be met.

In 1929, there was no floor under farm prices; today farm income may decline but is unlikely to plumb the depths. Whereas farm mortgages amounted to more than a year's farm income in 1929, today mortgage debt is only one-fifth of farm income.

In 1929, many banks were ripe for failure; today most are in good shape, and their deposits are insured. Then, there wasn't much to prevent a precipitate drop in personal incomes; now, union organization, social services, and Government spending work against a sharp collapse of purchasing power.

Such facts bear out the view that the country today "is well shored against an uncontrollable business slide." Plenty of shock absorbers, both public and private, are available to prevent a recession from turning into a long and deep depression.

What we are going through is a price adjustment, more akin to the 1920–21 recession after World War I. A lot of people—people with money—have eased up on buying until prices come down. When they do come down, the odds favor rapid recovery of business activity.

Don't get us wrong. Any deflation, big or little, can be painful to those involved in it. Any deflation calls for a sharp eye on public and private policies, and swift action to prevent its cumulative effects from going too far.

What can be avoided, and should be avoided, is the creation of a psychology of fear which causes a great many people simultaneously to start acting as if a major depression were right around the corner.

The facts, coolly appraised, don't justify that assumption. Let's hang on to our hats.

NAM Launches New Program To Extend Its Propaganda Campaign Into the American School System—President Truman Quoted

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1949

Mr. PATMAN. Mr. Speaker, I have pointed out to the Members from time to time the fact that big business is using full-page newspaper advertisements in an organized campaign to sell its concepts to the American public. The National Association of Manufacturers has just announced the inception of a new even more insidious method of disseminating big-business propaganda. An article in Labor on June 18, 1949, describes the formation of a new NAM

education department "with the aim of greatly expanding the activities [of NAM] in the field of education." A description is given of extensive plans to reach the pupils in every grade level of our educational system through teacher mailing lists, speakers, films, slides, charts, and lobbyists at teachers' conventions and conferences. It appalls me to think that immature minds are to be subjected to such a pressure campaign as this one.

NAM has great resources for carrying on campaigns such as this excursion into the field of education. And the greater part of this expense will be tax-free. President Truman in one of his campaign speeches described the campaign by NAM to destroy price controls:

The director of public relations of the NAM told how his organization spent a million and a half on newspaper advertising. They sent their own speakers to make a thousand talks before the women's clubs, civic organizations, teachers, another one to 15,000 clergymen, another one to 35,000 farm leaders, and still another to 40,000 leaders of women's clubs. A special clip sheet with NAM propaganda went to 7,500 weekly newspapers and to 2,500 columnists and editorial writers. There never was a more vicious or a better organized campaign to mislead and deceive the American people.

NAM is known to be backed and sponsored by America's industrial giants. These corporations remain in the background and work through front men from smaller companies who are duly impressed with the power and prestige of the big boys. This new NAM campaign to invade our educational system would not have the support of the approximately 6,000,000 common-stock holders in this country if they were given an opportunity to voice their opinions, but this is only another example of the control which the officers and directors of the large corporations have over policy although their collective ownership of stock may amount to as little as one-thirty-third of 1 percent.

I urge every Member to read the following article which appeared in Labor this week, with particular attention to the actual quotes from the National Association of Manufacturers press release:

VAST PROPAGANDA PROGRAM—NAM LAUNCHES BIG DRIVE TO POISON MINDS OF PUPILS—EDUCATIONAL DEPARTMENT SET UP TO PILOT CAMPAIGN; AIMS TO TURN STUDENTS AGAINST LABOR

For years the National Association of Manufacturers has tried to pump its reactionary, antilabor propaganda in the Nation's schools. Teachers have regularly been on its mailing list for so-called background material.

That's only small potatoes, however, compared to the program unveiled this week in the NAM News, the official organ of the association. The NAM gloatingly announced it has established an "education department with the aim of greatly expanding its activities in the field of education."

From now on, the NAM intends to go all out in telling "industry's story to students," Managing Director Earl Bunting informed the employer-members of the association.

ALL SCHOOLS TO BE TARGET

The campaign, he said, will be pressed "in grade and high schools, as well as in colleges and universities." In short, no trick will be missed. Bunting even let it be known that the NAM intends to line up a council of "outstanding educators" to serve as "advisers" in the drive.

"Another top-priority activity of the department," the NAM said, "is in arranging for leading industrialists to tell the story of American enterprise before student assemblies on the campuses of colleges and universities across the Nation.

"This activity is already functioning but will be expanded even further when the new semester opens next autumn."

The propaganda to be fed the students will stress the glories of "free enterprise," NAM style, and "make available informative material concerning the role of industry in the growth of our country."

BORE INTO TEACHERS' GROUPS

Agents of the department are to be at hand at all major conventions and conferences of teachers' organizations in an effort to put over the NAM "line."

Also, the NAM is mobilizing an army of "topflight industrialists and businessmen" who "will take the enterprise gospel to the Nation's students." They are to "offer their services as speakers at student assemblies, graduation exercises and other gatherings of pupils. In all, the NAM said it will try to reach all the 25,000,000 students in elementary schools and institutions of higher learning.

Films, slides, charts, and all sorts of other material will be poured into the schools as vehicles with which to plant the NAM propaganda. The campaign will be lavishly financed, since the NAM has a budget of $5,000,000 a year to work with.

NOTORIOUS NAM RECORD

The high-sounding phrases in the announcement are just cover-ups for the kind of drive the NAM will conduct. Its own vicious record offers the best clue as to type of tactics it will pursu

Ever since it was founded over a half century ago, the NAM has spearheaded campaigns to cripple organized labor and to block every piece of progressive legislation.

After World War I, it led a Nation-wide drive to impose the "open shop." Labor spies, vigilantes, industrial munitions and other forms of terrorism were used in the campaign. Every measure of the New Deal was resisted tooth and nail by the NAM.

The Role of Education

EXTENSION OF REMARKS
OF
HON. LAURIE C. BATTLE
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1949

Mr. BATTLE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an editorial which appeared in the New York Times on Thursday, June 9, 1949.

This editorial is entitled "The Role of Education" and deals with American democracy and communism. I think it is important for every Members of Congress to read this editorial.

THE ROLE OF EDUCATION

The thoughtful and penetrating discussion of the responsibility faced by the American educational system in our troubled world which was published yesterday by the National Education Association is an important document. Through its clear vision and practical common sense, it should wield a vigorous, wholesome influence.

The report cuts through a perplexing underbrush of wide confusion over the question whether Communists should be employed as teachers. It states the role that education should play in the building of intelligent patriotism in our youth. It establishes a reasonable course of action on the teaching about, but not the advocacy of, totalitarian philosophies of foreign nations. It does not flinch from undertaking—in the midst of the great traditional burdens already resting on the school system—a major additional duty of educating the young citizen to help maintain an honorable world peace.

This report is the product of about 6 months' study and discussion by the Educational Policies Commission sponsored by the NEA and the American Association of School Administrators. The commission is headed by Professor Norton of Teachers College, Columbia University, and among its members are such respected leaders as President Conant, of Harvard, General Eisenhower, William Jansen, superintendent of schools in New York City, and O. C. Carmichael, president of the Carnegie Foundation for the Advancement of Teaching.

It approaches with courage and wide scope the problem of what our educational program shall be in the midst of international tensions which are not likely to abate for some years. "On the one hand," says the commission, "stands the political system and ideology which we call democracy, dedicated to the proposition that intellectual freedom is essential to the worth-while life and development of mankind. Implacably opposed to this proposition are the political system and ideology which we call communism." The issue of intellectual liberty appears as the most basic, clear-cut, and persistent difference between these two societies.

The commission evaluates the influence that the United States will have in years to come on world affairs, and decides that what happens in American classrooms "may affect the fate of the world." Teaching that peace is desirable is one thing, while disapproval of war, of any kind, and under all circumstances, is another. Education must teach the ability to distinguish between different kinds of war. We are engaged now in a cold war as the surest and least costly way to insure survival of the Nation and our ideals. It is a defensive war. Our attention to world history should be increased. Our teaching of current affairs requires constant evaluation. Peace through education is a responsibility shared by every teacher.

Schools must develop strong national loyalties, and to develop "the kind of patriotism that is true to the best ideals of America" is a major task. It is not disloyal or naive, though some would try to make it seem so, to teach anything favorable about a foreign nation. To omit such teaching would leave education incomplete, a danger in itself.

So, accurate and objective teaching about the principles and practices of totalitarianism, including those represented by the Soviet Union and by the Communist Party in the United States, is the part of wisdom. But advocacy of such doctrines "should not be permitted in American schools." Principles of the American way of life should be vigorously taught, for there is no better way to combat communism than to show that people can achieve a maximum of freedom and justice and well-being by supporting and bettering American democracy. Meanwhile we try to correct, on the American scene, the discrepancy between what we preach as democracy and the sometimes disagreeable conditions of life as they are.

Finally, members of the Communist Party, should not be employed as teachers. Here the commission grasps, with clarity, the essential reason. Freedom of thought is basic

UNIVERSITY OF MICHIGAN LIBRARIES

to the whole spirit of American education. The Communist Party member is not free to think for himself. He has surrendered that right when he joins the party, "becoming part of a movement characterized by conspiracy and calculated deceit."

Here is a charter that should be in every teacher's hands, to fulfill with boldness, with the pride of speaking in a great cause. We do not expect our hundreds of thousands of teachers to put this charter into practice in their classrooms without making some mistakes. All that we ask is that the mistakes be honest, made in enthusiasm and not in timidity. And of ourselves, the public, let us demand a participation in the democratic process just as vital, free from the hounding of teachers who, though loyal to the best principles on which our Nation was founded and grew great, tremble in many a classroom today at the fear of unjust inquisition and carping, trivial criticism. Surely we can rid our schools of the Communist and the indubitably subversive without paying in that process the far too costly price of losing our most cherished heritage, freedom of thought and expression.

Noted Attorney States That Passage of S. 1008 Will Lead To Return of Basing-Point Price Systems and Monopolistic Evils

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1949

Mr. PATMAN. Mr. Speaker, a letter from Mr. Eugene W. Barr, noted attorney and an authority on the basing-point price system, appeared in the Washington Evening Star for June 15, 1949. Mr. Barr was for many years an attorney for the Federal Trade Commission and was associated with the trial of the famous Pittsburgh Plus basing-point cases. He is a thoroughly capable and well informed gentleman. His views as expressed in the following letter should be carefully considered by the Members of this Congress.

BASING-POINT PRICE SYSTEM SEEN LEADING TO MONOPOLISTIC EVILS

To the EDITOR OF THE STAR:

The enactment of a bill relating to basing-point pricing systems (S. 1008), as rewritten by Senator JOSEPH C. O'MAHONEY, of Wyoming, seems practically certain. Let substantial reasons exist for believing that such an outcome would be a serious mistake, if the antitrust policy is to remain fundamental in the national economy.

The bill, modified somewhat from its form when passed by the Senate on June 1, has been reported favorably to the House Judiciary Committee.

It is of the greatest importance that the Congress and the public understand the character of the pricing systems and of the bill. Little attention was given, in the examination of industry witnesses during the lengthy hearings, to the price-fixing character of these systems, but such character was shown by witnesses for the Federal Trade Commission and for unions and is implicit in the record as a whole.

All these systems are devices whereby each member of an industry makes precisely the same delivered price at each respective destination in the country as every other member makes at such destination. For example, it has been proved that the unit delivered price of cement often runs identical to one ten-thousandths of a cent.

Under these systems no producer makes any price concession to hold the highest nearby net-return market. Everyone engages in an Alphonse-Gaston act of reciprocity with his competitors, each inviting all the others to share his home market with him, on the implied condition that they will share theirs with him.

AT EXPENSE OF CONSUMER

But all this is at the expense of somebody—the quiet, unorganized, uninformed, ill-advised, unprotected chap, the consumer.

When all your competitors will automatically use your base price in selling in your home territory, if you should decide to reduce it, the urge to reduce it reaches the disappearance point. And when, if you should raise your base price, you know that every competitor who wants to sell in your territory will automatically raise his to the same figure when selling there, the hesitancy about raising base prices is much diminished.

A staff writer of the New York Times has estimated that the number of basing-point industries is over 600. This includes nearly if not all the producers of building materials. What this has done to the cost of homes can be surmised.

It must be realized that, insofar as these systems prevail, there is complete destruction of price competition.

What this kind of thing does in bringing about boom prices need not be argued. What it does in retarding the return to the market of buyers driven out by high prices is a matter of history. The last depression was the longest ever experienced in this country, partly at least because the "Blue Eagle" codes carefully preserved high prices through these delivered-price systems.

Whether the O'Mahoney bill if enacted will accomplish all that is intended by its sponsors may easily be doubted, but to those who have followed the legislative preliminaries, there can be no doubt of what their intent is. It is to permit continuance of basing-point systems.

TREND OF COURT RULINGS

The Federal Trade Commission and the United States courts had shown tentative indications that they might apply, in basing-point cases, the principles laid down in several Supreme Court opinions; specifically that businessmen must be deemed to intend the natural results of their acts; and that when all competitors use identical delivered prices at each market, with mutual knowledge that they are doing so, they must be deemed to have an understanding in restraint of trade and in violation of law.

Such an outcome would be sound law and common sense. But this would never do for the industries fixing prices and thus contributing to booms and to busts, and happy over their escape from the American system of price competition.

The O'Mahoney bill is intended to fix it so that they can continue. But they must follow these systems independently. They may all make the same delivered price at any given time and destination with mutual knowledge that each other concern is doing the same; but if they leave no evidentiary trail of overt cooperation, the intent is to place them in the clear as regards the present grasp of both the Federal Trade Commission and Clayton acts.

The measure reflects a notable shift in the thinking of the remarkably able Senator from Wyoming since, as chairman of the Temporary National Economic Committee, he reported to the Senate in March 1941 a unanimous recommendation that "the Congress enact legislation declaring such (basing-point) systems to be illegal."

Neither the obvious intent of the bill nor its text protects the fundamental economic and legal principle of this country that competition shall govern prices rather than either combinations among businessmen or Governmental fiat.

If the Congress permits monopolistic prices we shall drift rapidly into Governmental control and extinguish our freedom in both industry and individual life. Economics and politics in this matter are inseparable. The Congress, without realizing it, is toying with something absolutely basic for our future welfare.

EUGENE W. BURR.

College Textbook Inquiry

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1949

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by the retiring president of Wellesley College:

WELLESLEY HEAD ASSAILS INQUIRY INTO TEXTBOOKS—MRS. HORTON, RETIRING, HITS AT HOUSE INVESTIGATION, DENOUNCES "RED-BAITERS"

WELLESLEY, MASS., June 13.—Mrs. Mildred McAfee Horton, Wellesley College's retiring president, today denounced "Red-baiters and black-haters" and "the fear which permeates our modern age," as she disclosed that the House Committee on Un-American Activities had demanded copies of Wellesley's social-science textbooks.

Mrs. Horton, who was wartime commander of the Navy's WAVES with the rank of captain, told graduating students that she was concerned that the congressional committee members "fear that you have been exposed to dangerous ideas."

"And, of course, you have, in this free market place of ideas," added the educator, who has been president of Wellesley since 1936. She will be succeeded by Miss Margaret Clapp, Brooklyn College historian.

In her valedictory address to students and college trustees, Mrs. Horton quoted General of the Army Dwight D. Eisenhower, now president of Columbia University, as saying, "Ignorance of communism, fascism, or any other police-state philosophy is far more dangerous than ignorance of the most virulent diseases. Who can doubt the choice of future Americans, between statism and freedom, if the truth concerning each be held before their eyes."

"The very existence of this committee," Mrs. Horton said, "suggests a widespread fear."

The House committee wanted to know, she said, not only in textbooks but in supplementary literature, what Wellesley girls have been studying in "American literature, geography, economics, government, philosophy, history, political science, and any other of the social-science group."

"I suppose," Mrs. Horton went on, "this must include the Bible. But it may be unwise to let it be known that you have been allowed to read the injunction to 'love your enemy.'"

The House committee recently sought similar information from many other colleges.

Use of the Water of the Colorado River

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1949

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions:

RESOLUTION OF THE BOARD OF WATER AND POWER COMMISSIONERS OF THE CITY OF LOS ANGELES, ADOPTED JUNE 10, 1949

Re House Joint Resolution 3, Senate Joint Resolution 4, Eighty-first Congress.

Be it resolved, That action heretofore taken by this board recommending to the Congress of the United States the adoption of Senate Joint Resolution 4 and House Joint Resolution 3 is reaffirmed, and this board again respectfully recommends to the President of the United States and the Congress of the United States the adoption of Senate Joint Resolution 4 or House Joint Resolution 3 authorizing a suit in the United States Supreme Court to adjudicate the respective rights of the States of Arizona, Nevada, and California to the use of the waters of the Colorado River; and be it further

Resolved, That the secretary of this board be, and he is, hereby directed to transmit a copy of this resolution to the President of the United States, the Vice President of the United States, the Speaker of the House of Representatives of the United States, and to each Senator and Member of the House of Representatives from California in the Congress of the United States.

SENATE RESOLUTION 32, CALIFORNIA LEGISLATURE, ADOPTED JUNE 10, 1949

Re House Joint Resolution 3, Senate Joint Resolution 4, Eighty-first Congress.

Whereas more than 3,500,000 inhabitants of this State are dependent upon the Colorado River as a source of supplemental water supply from domestic, agricultural, municipal and industrial use; and

Whereas the States of California and Arizona have been unable to agree as to their respective right under the Colorado River Compact and the Boulder Canyon Project Act to the use of the waters of the Colorado River; and

Whereas resolutions (S. J. Res. 4 and H. J. Res. 3) are now pending before the United States Congress which would, if adopted, authorize a suit in the United States Supreme Court to determine the respective rights of the States of Arizona, Nevada, and California to the use of the water of the Colorado River: Now, therefore, be it

Resolved by the Assembly and the Senate of the State of California (jointly), that the action taken by this Legislature in adopting on January 25, 1949, Assembly Joint Resolution No. 10, memorializes the President and the Congress of the United States to adopt Senate Joint Resolution 4 or House Joint Resolution 3 is reaffirmed and this Legislature again respectfully memorializes the President and the Congress of the United States to adopt Senate Joint Resolution 4 or House Joint Resolution 3 authorizing a suit in the United States Supreme Court to adjudicate the respective rights of the States of Arizona, Nevada, and California to the use of the water of the Colorado River; and be it further

Resolved, That the secretary of the senate is directed to transmit copies of this resolution to the President of the United States, the Speaker of the House of Representatives of the United States and to each Senator and Member of the House of Representatives from California in the Congress of the United States.

RESOLUTION OF THE CITY COUNCIL OF LOS ANGELES, ADOPTED JUNE 10, 1949

Re House Joint Resolution 3, Senate Joint Resolution 4, Eighty-first Congress.

Whereas the present and future economy of this city is dependent on the Colorado River as a source of supplemental water supply for domestic, municipal, and industrial use; and

Whereas the States of California and Arizona have been unable to agree as to their respective rights under the Colorado River Compact and the Boulder Canyon Project Act to the use of the waters of the Colorado River; and

Whereas resolutions (S. J. Res. 4 and H. J. Res. 3) are now pending before the United States Congress which would, if adopted, authorize a suit in the United States Supreme Court to determine the respective rights of the States of Arizona, Nevada, and California to the use of the waters of the Colorado River: Now, therefore, be it

Resolved, That the Los Angeles City Council reaffirms all previous action taken by it urging the adoption by Congress of Senate Joint Resolution 4 and House Joint Resolution 3, and again respectfully urges favorable consideration by the President and the Congress of the United States of Senate Joint Resolution 4 and House Joint Resolution 3, authorizing a suit in the United States Supreme Court to adjudicate the respective rights of the States of Arizona, Nevada, and California to the use of the waters of the Colorado River; and be it further

Resolved, That copies of this resolution be air mailed to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Member of the House of Representatives of California in the Congress of the United States.

Hospital Goods Kept in Cold Storage Despite Poland's Needs—Public-Donated Mercy Supplies Left to Rot in Scotland Warehouses

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article written by John Cartwright which appeared in the New Epoch.

I was very much surprised to learn that the hospital equipment which was provided by the Paderewski Hospital Foundation Fund for the relief of the sick and disease-stricken children and people of Poland was still lying around in the warehouses of Scotland. I would not want to charge anyone with inhumaneness and callousness toward the suffering of the war-stricken Polish people. That the situation, however, deserves a thorough investigation goes without saying.

Certainly, if the great Polish pianist and patriot, Ignace Paderewski, were living today there would be no doubt in anyone's mind as to what his desires would be in this situation. Likewise, I am sure that if Mayor LaGuardia, one of the sponsors of the foundation, were living today there would be no doubt about his desires and intentions. I likewise feel sure that Mrs. Eleanor Roosevelt, who also was one of the sponsors of the Paderewski Hospital Foundation, will not hesitate to express her views and feelings.

There are no people in Europe who suffered more from malnutrition, privation, and disease than did the Polish people. Before the war Poland had 30,000 orphaned children. After the Nazis' terrific slaughter of the Polish people, Poland now has 1,500,000 orphaned children. All of these children suffered from malnutrition and disease. Today there is seven times as much tuberculosis in Poland as there was before the war.

No country is so desperately in need of hospitalization and medical supplies. I am sure that the noble and kindhearted people who contributed to the Paderewski Hospital Foundation fund would be unanimous in their desire to see that these hospital facilities and medical supplies are made immediately available to the sick and disease-stricken children of Poland. It just seems inhuman that someone might be deliberately withholding these supplies. No one has the right to play politics with sickness and disease.

The article follows:

HOSPITAL GOODS KEPT IN COLD STORAGE DESPITE POLAND'S NEEDS—PUBLIC-DONATED MERCY SUPPLIES LEFT TO ROT IN SCOTLAND WAREHOUSES

(By John Cartwright)

EDINBURGH.—An article in a national Sunday newspaper has revealed that vast quantities of valuable hospital equipment destined for Poland have been lying in storage in Scotland since 1947. The equipment, subscribed for in America under the Paderewski Hospital Foundation scheme, originally cost some $700,000.

The fact that this material is still here has come as a distinct shock to many people in Scotland who believed that the hospital had been sent to Poland over 3 years ago, and there is a good deal of justifiable indignation at the news of what has actually happened to it. The story is certainly an astonishing one.

So far as can be counted, there are upwards of 1,500 cases of modern equipment. It was a complete hospital with 600 beds, blankets, etc., surgical instruments, X-ray apparatus and four dental outfits officially described as superb. With complete thoroughness nothing was omitted, right down to toilet paper. (It was this paper, bearing the imprint of the Paderewski Hospital, found in Edinburgh, that set inquiring people on the trail.)

All this valuable material is, at the moment of writing, stored in Glasgow, Edinburgh, and some parts of the east of Scotland. It has been well packed—the packing took 4 months—but 150 cases had to be removed from a leaky garage in Edinburgh. It is felt in medical circles that the delicate instruments cannot be stored without fear of deterioration in such a damp climate as that of Scotland; and medicines and drugs, of course, can deteriorate very quickly.

This material has a long history. In 1940, the Paderewski Hospital Foundation was set up (its sponsors included Mrs. Roosevelt and Mayor LaGuardia) and over a million dollars

UNIVERSITY OF MICHIGAN LIBRARIES

were subscribed for the best hospital America could produce. The hospital, costing $700,000 was in the first instance for the use of Polish nationals in Scotland, wounded and sick. Afterward, at the end of the war, it would go direct to Poland where it was considered the need for it would be greatest.

In the meantime, arrangements were made with Edinburgh Corp. by which 1 hospital with 140 beds was made available in 1941. This hospital was the admiration of Scots doctors, but it closed down in 1947. Since that date it, too, has been in storage, the whole storage charges amounting to 40 pounds a month.

In 1945, 6 months after the end of the war, Deputy Foreign Minister Modzelewski (as he then was) and Professor Koskowski, who was deputy director of the Paderewski Fund, met to consider a site for the hospital in Poland. At that time, Poland was desperate for hospital accommodations, medicines, and drugs. The sick and wounded were lying on concrete floors in gutted-out factories. So appalling was the situation that Mr. Antoni Jurasz, a director of the Paderewski Fund, traveled to Poland to arrange for the arrival of the hospital.

A site was chosen at Bytom, in Silesia. Back again in Scotland, in 1947, it was discovered that removal of the hospital seemed to rest with Washington. Mr. Bliss Lane, a former Ambassador to Warsaw and a member of the hospital foundation, had to do with the question, but no agreement could be reached despite Poland's desperate need.

Further investigation shows that, since then, the hospital and all its belongings have been offered to Puerto Rico, South Africa, and elsewhere.

The present position is uncertain. The equipment is ready for shipment at short notice and its destination is believed to be America; but even those in charge state that they have had no definite information.

Many questions are being asked regarding this extraordinary situation. Whence comes the money to finance storage and salaries? Was the hospital offered to the Scottish Department of Health or to the Ministry of Health and was the offer refused? Why has the hospital not been used in accordance with the wishes of the subscribers? And, above all, why has the hospital not reached the Polish people, whom the subscribers to the Paderewski Fund intended it should benefit?

Address of Hon. John W. Snyder, Secretary of the Treasury

EXTENSION OF REMARKS

OF

HON. EDWARD H. KRUSE, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1949

Mr. KRUSE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following inspiring address delivered on Monday, June 13th by the Honorable John W. Snyder, Secretary of the Treasury, at the commencement ceremonies of the Capitol Page School Graduation Class of 1949:

Mr. Trueworthy, members of the graduating class, parents, distinguished guests and friends: At Independence, Mo., recently I participated in a bond drive ceremony by which we sought to recapture some of the spirit that once moved great wagon trains out of that town, bound for the far West. Today all the world knows of that great mass movement and of the vigor and courage of the men and women who made it possible. Stories about it are the content of schoolbooks in every language.

Sometimes I wonder whether those stories about the 49'ers, while very properly emphasizing their vitality and fortitude, don't neglect the skills, training, and preparation which were also devoted to their great effort. Independence was the principal scene of final preparation before the trains were formed. I am sure that care and thoroughness at Independent meant fewer casualties on the Great Plains and in the Rockies, and a better chance of reaching the destination.

It must have occurred to many of us, particularly this year, that every graduating class is another train of 49'ers in many respects. If you thought of yourselves in that connection, you would see yourselves tonight in a wagon camp in Independence, Mo. You have been born and reared in a free and civilized country. You have had its nurture and training—advantages neither cheap nor commonplace in world history. You are about to move out into unfamiliar terrain. That will not be the terrain of an isolated tropical island, which invites the traveler to peace and indolence. But it is and has been inviting to men of other, more ambitious sensibilities. I am sure that you have the same taste for this adventure that Americans had a century ago. If you do, your preparation will have been proved good and your commencement here a happy one.

When people reach that phase of their lives which Independence, Mo., meant to the 49'ers, it is natural for them to reflect on the two views which the world offers them. One is the view of the past—the world of things which are familiar and loved, of experiences past and difficulties surmounted. The other view is that of the future—unknown, perhaps unfriendly and hazardous, but challenging. This is the way I am sure the 49'ers saw it and the way graduating classes always see it.

Let us look together for a few minutes at your past record and the preparation you have made for the venture ahead.

Your life here has been an active one. It has involved preparatory school work of a very high order of merit. This is demonstrated by the imposing college record made by the Page School graduates of past years. It has also involved the ordinary extracurricular activities of high school—both social and athletic. Finally, it has involved enviable service with the Congress and the Supreme Court. All of these demands on you have in the aggregate made an unusally fine training. I sincerely congratulate you on the attainments which this day signifies.

You have had the priceless opportunity to observe closely the machinery of a great democracy working at its highest level. It has been your good fortune to participate in the activities of the greatest legislative and judicial bodies to be found in the world. You not only have received sound training in school; you have also acquired through experience, a wide range of knowledge which it is almost impossible to learn from books. This education, both formal and informal, has trained your minds and broadened your perspectives. It has provided equipment with which you can continue to build wisdom and character and the ability to render useful service in a highly complex world. Of special importance to you, I think, are the values of character, of honor and integrity, which are so fundamental to our Government and our society. Practicing the basic principles of right living which you have learned will earn you the respect and confidence of your fellow men.

I am sure that the education you have received here, and the associations you have enjoyed, have endowed you with respect for the views of those whose beliefs do not coincide with yours. You have seen at first hand that the free discussion of ideas is essential to the shaping of the course of our democracy.

Yes, your education has enhanced your chances for intelligent participation and leadership in public and civic affairs. It certainly has instilled in you an awareness of the vast unsolved problems of this Nation and of the world. I hope that you have been inspired with a desire to understand these problems and to assist others in gaining an understanding. For it is only through an informed and active citizenry that societies and governments can progress.

Let us turn now to another view—that of the future.

With the advantages you have had, and with the interest you have developed for continued study and inquiry, you must accept your full share of responsibility in shaping the affairs of your community and Nation. The greater our opportunities, the greater are the obligations we have for service to our country and to our fellow men. Soon your generation must assume the privileges and responsibilities of government at all levels, a trust which I am sure you will not shirk.

The conduct of government, if it is responsive to its purposes, should have not only the intelligent consent but the vigorous guidance and support of every citizen. Otherwise, the governed in a democracy must bear much of the blame for its shortcomings and failures. Good government is a matter of personal interest, of individual concern. It deserves the active attention of all of us, for "no government demands so much from the citizen as democracy and none gives so much back."

And if democracy should ever fail, and it certainly must not, it will fail through the apathy of the citizen and his indifference to the affairs of his government.

We can be grateful for the fact that we in this country have a higher standard of living and far more advantages than the citizens of any other country in the world. Peace, for which we are striving so diligently, will enable us to make secure and advance the economic and social progress we have made.

Modern industrialism and technology have made us interdependent nationally and internationally. We know that we cannot isolate ourselves from the rest of the world. We realize that disturbances abroad can have a marked effect on our economic and political life here at home.

The United States emerged from the war as the country to which much of the rest of the world looks for hope, for leadership, and for direction. Many of the other great nations were enveloped in the wreckage, confusion, and misery compounded of war. We have taken great steps in assisting them to recover economically and spiritually. This has been done at some sacrifice, but with the full realization that the needs of humanity are intimately connected with our hopes for peace, and that our security, and prosperity are bound together with those of other democratic, freedom-loving nations. There have been serious problems and many differences of opinion as to the means of solving them. Such problems, and others arising in their wake, will continue to challenge all of us. Their solution depends greatly upon the awareness of the American people.

Probably every graduating class looks with some foreboding to a future full of problems which test the best in the mind and spirit of man. It is true today that we are living in an uneasy and far from perfect world. It is certain that life's challenge to the minds and abilities of your generation is not going to be a soft one. But it should be no cause for apprehension or despair that we are troubled by many new and many long-unsolved social, economic, political, and scientific problems. Challenge and opportunity

go hand in hand. If there are difficult questions to answer, there are great achievements to be wrought. This country was built upon the determination to face and conquer difficulties and hardships.

If you are inheriting a great number of difficulties, it should be remembered also that you are receiving the bounty of this Nation. You are being given a priceless heritage that was won by the blood and sacrifices of your forebears.

We are now living in a period which has witnessed great scientific and economic changes. It would be vain for anyone to attempt to prophesy for you the nature or the shape of things to come. No one can tell with any certainty what tomorrow holds. History, for hundreds of years, has mocked those who thought they could divine its course.

In his report to the Congress in 1844, the Commissioner of Patents stated:

"The advancements of the arts, from year to year, taxes our credulity and seems to presage the arrival of that period when human improvement must end."

Since that time more than two million patents have been granted. Since then we have invented the telephone, motion pictures, electric lights, automobile, farm tractors, airplanes, radio, plastics, and television. We have achieved the harnessing of atomic energy. We have developed hundreds of other miracles which even the most visionary once scoffed at as being impossible. Think of the tremendous effect of such inventions and discoveries upon the economic and social structure of civilization.

Today, as was the case a century ago, our Nation is entering a new era of opportunity. The knowledge we acquired during the crisis of war makes us realize that ahead of us lie vast, uncharted fields for learning. Scientists can mark out great areas unknown to the knowledge or understanding of man. No known limits to the discovery of knowledge can be suggested. Many new discoveries, techniques, and processes which exist today have not yet been adapted fully to the needs and the material comfort of society. We know, however, that our advances in knowledge and wisdom have and will continue to increase immeasurably our prosperity and standard of living.

The United States has not reached its maturity. Opportunities for adventure and for individual achievement are greater than ever before. While geographical frontiers have vanished in large part, we have new and more challenging frontiers in science, agriculture, sociology, education, industry, business, government, the arts, the professions, and other phases of human endeavor and relationships. Our civilization is dynamic—it was never less static than now—and great social and economic changes will take place in which you will participate.

Some people fear change, because its unknown implications make them feel insecure. Similar fears were known and conquered by the 49'ers. Seeking a better future for themselves and their families, they blazed the trails for what are now great transcontinental highways; they established what are now great cities. Similar apprehensions did not halt the genius which transformed this country from a predominantly rural to a complex industrial society. The same old spirit of faith, determination, and sacrifice is needed to breach our modern frontiers. We must have the same faith, indeed, which saw the 49'ers through the risks and hardships which they so resolutely faced.

Yesterday's solutions will not fit many of the problems of today or tomorrow. As has always been true in this great land, men of vision are needed who are not mentally chained to traditional approaches. Men are needed who have the imagination and courage and skill to meet and deal with the novel and difficult. Resoluteness of character; the willingness to face up to unpopular issues; the courage, in the face of opposition, to do the hard things which you consider right—these are the sort of qualities which identify a man who towers above the throng.

We should realize and remember that achievement of the things we want from life seldom comes quickly or easily. Most of us have to start and climb slowly. We have to make plans for the future and struggle for their realization. But this is an essential part of happiness—the zest of striving, the stimulation of accomplishment and progression, the pride and satisfaction of achievement.

I again congratulate you members of the graduating class and offer you my best wishes for a happy and worthy life. You are facing unprecedented opportunities and great responsibilities. Your future rests upon you alone. I know you will make the most of it.

It's Mutual, Senator Tenney

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1949

Mrs. DOUGLAS. Mr. Speaker, the House of Representatives may be pleased to consider these four editorials from three excellent California newspapers; the San Francisco News, the San Francisco Chronicle, and the Los Angeles Daily News. These editorials were written in reply to a California State legislator who had condemned these papers because they failed properly to applaud a sideshow he was running.

Under permission to extend my remarks in the RECORD, I include these editorials:

[From the San Francisco Chronicle of June 9, 1949]

IT'S MUTUAL, SENATOR TENNEY

Senator Jack Tenney and his un-American activities committee have divided California newspapers into two general groups. The Chronicle and two other papers have continued to "misrepresent, misreport, and attack" the committee editorially, the report says, while the others cited, including the Hearst newspapers, "have been in the forefront of newspapers representing the finest in patriotism and understanding of America's greatest menace."

It is an interesting distinction; in a sense, we rather appreciate it. Under the law of averages, Senator Tenney must occasionally be right on some points, and we acknowledge readily that he accurately places this newspaper among his critics. But we are not exactly abject about being put there; we wouldn't be elsewhere. So much for our concession as to the rightness of Tenney in that limited area.

We assert, on the other hand, that Tenney is quite without justification in accusing us of "misrepresenting" and "misreporting" the activities and policies of his committee; we regard those statements as hysterical, phony, and politically opportunistic.

And we particularly rise to his backhanded implication that because we have attacked his razzle-dazzle, headline-grabbing, witch-burning techniques, we are unpatriotic and unperceptive of the dangers confronting America.

We are aware of the dangers and the idiocies of communism; several hundreds of Chronicle editorials will attest to that. As a matter of fact, and despite Tenney, we are rather widely regarded, in our own area and throughout the Nation, as one of the more effective forces in the fight against communism.

Our criticism of Tenney has been on the ground that he has persisted in making that struggle needlessly hard. Indeed, we regard Tenney as having contributed more to the Communists than any other one influence in California, excepting possibly some of the hysterical newspapers he extolls. He has helped the Communists in these important respects: By holding up Americans before the world as a pack of frantic old women, afraid of our own shadows; by mislaying the emphasis upon overt Communists and thus distracting attention from the nucleus of sly and expert spies who never seem what they are; and, most importantly, by riding roughshod over fundamental American principles, without which—if we ever lost them—we would be no better off than the helpless hordes of the Soviet Union.

It is beyond the ability of a hysterical mind to perceive what danger to the American people lies in the Tenney policy of fixing a man's guilt by association; the Tenney committee even found cause for suspicion in a lawyer who represents a Communist client. If that policy were followed to its logical end, it would be unsafe to speak to a neighbor for fear he might turn out to be a Communist or the friend of one. We have reminded our readers from time to time that that's how it is in Russia.

It is also beyond the ability of a hysterical mind to understand what danger lies in cutting one group and another off from the citizenry and requiring loyalty oaths of them. The very fact of having, under penalty of law, to reswear allegiance violates the principle of equality before the law and, beyond that, drives a wedge of suspicion between segments of the American people.

Perhaps our main quarrel with Tenney is on the question of what constitutes 100-percent Americanism.

In our opinion, 100-percent Americanism is not established by shouting, "I am a 100-percent American." And, in our opinion, the percentage is diminished to a fraction in the cases of those who, in the stampede to drive Communists to cover, do violence to those principles that give American democracy its flavor, its substance, and its vitality.

The Chronicle will not slacken its fight against communism; it will remain in that fight to the finish. But neither will it slacken its fight for academic freedom, for privacy of thought, for the right of a defendant to representation at the bar of justice, for the rule of law. And for as long as Tenney and his committee continue to menace those freedoms and rights we will go on fighting Tenney and his committee. To do otherwise would be to play the Communists' own long-range game, and there are already too many doing that.

[From the San Francisco News of June 9, 1949]

TENNEY COMMITTEE CONDEMNS THE NEWS

In its 1949 report, just filed in Sacramento, the California Senate Un-American Activities Committee, of which Senator Tenney, of Los Angeles, is chairman, had this to say of the San Francisco News, the San Francisco Chronicle, and the Los Angeles Daily News:

That the newspapers have continued to "misrepresent, misreport and attack" the committee with editorials;

That the newspapers have been characterized "by an almost total unwillingness to cite a single specific criticism or refutation of any specific hearings or reports by this committee, while blithely publishing un-

UNIVERSITY OF MICHIGAN LIBRARIES

truths, half-truths and vague, generalized attacks upon the committee and upon public officials who have supported the committee in its work."

From our files we could produce a complete refutation of the committee's charges. But we don't believe our readers expect or require such a defense from this newspaper.

We have been critical of some of the Tenney committee's activities, and we shall continue to be critical of any committee or group we deem guilty at times of violating the basic liberties of the people.

[From the San Francisco News of May 31, 1949]

WILL LOYALTY BILLS ACCOMPLISH PURPOSE?

State Senator Jack B. Tenney was quoted as saying the other day that he knows what he is doing in urging legislation to require loyalty oaths of public employees and lawyers. No doubt the senator knows what he would like to accomplish by this kind of lawmaking, but we wonder if he actually can know just what the ultimate effect will be.

His purpose, commendable enough, is to purge governmental ranks of Communists. To accomplish it he would have all public employees, with some exceptions (legislators, for instance) swear they do not belong to any party or organization that advocates overthrow of the United States or California by force and violence. The oath would be taken annually. And no employee could receive his pay until he had sworn.

School teachers would be under further compulsion not to each communism, nazism, or fascism with intent to indoctrinate pupils with preference for any of these ideologies.

Lawyers, the only nonofficial group Senator Tenney thus far has included in his oath-swearing segment of the population, would have to declare (as the bill originally was written) they have never belonged to a subversive party or organization.

"Organization," in the sense used in the bills, means any group designated by the Attorney General of the United States as subversive.

Will these precautions keep Communists out of Government and the schools and the legal profession? It would be naive to think so. Communists subscribe to a doctrine which teaches that any means are legitimate that accomplish the Communist aims, even lying. If a Communist were planted in a Government office to spy or to disrupt the procedure, or just to be there when the time came to make trouble, he would not shrink from taking any kind of an oath in order to stay there.

Will annual oaths of loyalty make Government employees any more loyal? Or is it possible the oath will become so commonplace as to have little meaning? Indeed is it not likely a feeling of contempt might be engendered by the practice in time?

The principle of law that Americans cherish and respect is the tenet that every man is presumed innocent unless and until proven guilty. There is an uncomfortable implication in the Tenney bills that a man is to be considered disloyal until and unless he takes an oath to the contrary once a year. Is this presumption in accord with the fundamental protection of innocence guaranteed to every citizen?

The question with which these considerations leave us is this: Will the Tenney bills gain the end sought by their author, or is it possible they may result in more harm than any good that may come of them?

We believe the legislature should take great pains to weigh them in the light of long-range public interest and avoid reaching conclusions about them under the influence of contemporary hysteria.

[From the Los Angeles News of June 11, 1949]

ONCE AGAIN, THE REDS

Let's get this straight: The Daily News and this writer believe that communism, as it exists in fact, is a dangerous world conspiracy, out to destroy the United States Government. It's chief exponent is Soviet Russia.

Communism, like a trap, is baited with ideals, promises, clever phrases and distortions. There is a particular bait for each individual; if a man is having hard luck financially, communism will punish the man who had good luck and solve the problems of the loser; if he feels that he is being discriminated against because of race, creed, or color, communism will be the great equalizer; it will exalt him and destroy his enemies. Communism will end injustice and solve all problems.

So the promises go. Each is a bait calculated to trap the individual.

Communists are trained to become agitators, confusers, and troublemakers. When the hard core of the Communist Party entered the United States, it found a virgin field for operations. No people anywhere in the world—except perhaps in Great Britain and, for a time, in France—so enjoyed, or for that matter, so abused, freedom of speech, freedom of the press, and freedom of action. The clever Communists took advantage of these freedoms and used them for their own sinister purposes.

No sane, thoughtful American citizen could view objectively the state of affairs that has prevailed in the United States—especially during the last 17 years—without realizing that Communist activities have permeated many of our most sacred institutions, and, if allowed to remain active, will destroy them.

A democracy is slow to take action and, by its very nature, lacks the efficiency and the thoroughness of a dictatorship.

The Federal Government and many of the States undertook to combat the Red menace through democratic processes. Un-American activity agencies were established and undertook to ferret out, expose, and, wherever possible, throw out Communists and their fellow travelers.

California, like many other States, has its un-American activities committee.

Because we believe that such a committee is indispensable to the welfare of the State and should be supported, we repeat what we should have said before in this column: We believe that our un-American activities committee, as directed by its chairman, Senator Jack B. Tenney, not only has failed to serve the purpose for which it is intended but has been used more effectively than any other governmental institution in the State of California to aid, assist, and develop communism in this State.

Since the congressional Un-American Activities Committee more than 10 years ago linked Jack Tenney with radical left-wing movements in California and so found in its investigations, there was and is justifiable suspicion that he could be actively working for the Communist Party.

I do not, however, think that Jack Tenney is the master mind for the Reds. I think he is a political opportunist who is playing with fire and has what amounts to a moronic concept of what fire can do.

My view is that he was a Red during the depression when he thought that being a spokesman for the Communist element would advance his political fortunes, and that he switched over when he saw a great light and believed that he could get farther on the other side.

What Jack B. Tenney thinks and says, however, is one thing; what he does is another.

The service that Jack Tenney is rendering the Communist Party in California follows precisely and exactly the Communist line. There is a phrase for it—it is called reductio ad absurdum. That means reduce a thing to absurdity and you destroy it. The Communists want to destroy all un-American activities work—not only in the National Capital but in California. They know they cannot destroy it through straightforward opposition and so they use a political trick that has been successful down through the centuries: Make it absurd and it will die.

In plain words, what the Communist conspirators want is to have as many prominent, decent citizens named as Communists as possible.

Let's take a concrete example: The San Francisco Chronicle. Here is a newspaper that is regarded as one of the best edited in the United States. It has long served as a conservative, constructive journal. It has the respect of hundreds of thousands of citizens in San Francisco and elsewhere.

The Communists would pay handsomely to be able to say to the people in San Francisco: "You have read and followed the Chronicle for many years. You believe in it. Well, see here, the un-American activities committee, headed by Jack B. Tenney, now implies and reports that the San Francisco Chronicle is on the Communist side. Now how do you explain that? If communism is good enough for the Chronicle, it must be good enough for you. Join up."

Or take another example: The San Francisco News. This is one of a chain of newspapers owned by the Scripps-Howard organization. As far back as I can remember, the entire chain has been part and parcel of the American way of life in every respect.

The Communists would like to say to a prospect: "Now you see that according to Jack Tenney and his un-American activities committee, the San Francisco News is helping the Communist cause. Well, if people like that see something worth while in communism, it is good enough for you, isn't it? Why don't you join up?"

The Communist Party and all of its publications have printed more derogatory articles about me than perhaps any single newspaperman in California, notwithstanding which the Los Angeles Daily News continues to receive the strong and faithful support of hundreds of thousands of readers in Los Angeles.

If the Communists could say to a prospect: "According to Jack B. Tenney and his un-American activities committee, the Daily News does not support anticommunism," they would have gained an important objective.

Jack B. Tenney now makes that statement possible.

No one can read the list of men and institutions who have been included by Jack Tenney in his un-American activities reports without being appalled that he has taken his high position so lightly; that he has apparently been a willing tool in the hands of the Communists who want nothing more than to confuse the public by "authenticating" such a list.

Even his apologists explain that he considers his un-American activities committee as a club that he can use to collect campaign contributions and political endorsements. If an individual or newspaper refuses to endorse him for office, he is in a position to say: "I will see that you are mentioned adversely in the report of the Un-American Activities Committee."

Whether he does this with malice or forethought, I do not know. Perhaps he has a moronic blind spot and is unable to see how perilously un-American such activities really are.

In any event, the State of California cannot afford to have an irresponsible opportunistic firebrand in charge of the most important committee in its government.

Jack B. Tenney should be removed as head of this committee and a man who understands the words "United States of America" should be put in his place. And the sooner, the better.—M. B.

Oil Imports

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1949

Mr. BECKWORTH. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letters:

DEPARTMENT OF THE INTERIOR,
BUREAU OF MINES,
Washington, D. C., June 7, 1949.

Hon. LINDLEY BECKWORTH,
House of Representatives.

MY DEAR MR. BECKWORTH: I take pleasure in sending you the following remarks with reference to the article in the Fort Worth Star-Telegram of May 29, 1949, that you attached to your note dated May 26.

During the period of rapidly growing demand for petroleum that terminated toward the end of 1948, the market readily absorbed production from United States fields at progressively higher record rates (at advanced prices) and in addition sharply increased imports from foreign sources. There seems to be rather general agreement that domestic production was at or very near to maximum rates during most of 1947 and 1948. Hence, expanded imports were required to avoid very severe shortages.

With the beginning of 1949 an abrupt decline in the demand for petroleum developed, as reflected in statistics of the United States producing and refining industry. Under this condition there is little doubt that the influence of imported oil has been felt, particularly in Texas which has absorbed the major part of the decline in demand. Imports have declined but are still materially greater than they were in the early postwar period. In States other than Texas and the Pennsylvania grade-producing area, the income of crude-oil producers and royalty owners has suffered relatively little because production rates and crude prices at the wells have not changed greatly.

We believe that the indicated demand for oil in the late months of 1949 will be significantly above current and recent rates and that Texas oil will regain much of the recent loss.

We agree, however, that the maintenance of conditions in the United States that will cause a continuation of active exploration and development of petroleum reserves is essential to the national interest. Such a program can provide the means of achieving again a productive capacity within the United States sufficiently in excess of current needs to serve as an effective safety factor in the event of a future war. The attainment of this objective will be influenced, of course, by future policy of the Government with respect to imports of petroleum.

Your clipping from the Star-Telegram is returned herewith.

Sincerely yours,

THOS. H. MILLER,
Acting Director.

THE SECRETARY OF THE INTERIOR,
Washington, June 14, 1949.

Hon. LINDLEY BECKWORTH,
House of Representatives.

MY DEAR MR. BECKWORTH: I was glad to receive the copy of the editorial, Oil Imports Rising to Danger Level, from the Fort Worth Star-Telegram, which you sent me on June 1.

The keynote of the editorial is in the last paragraph, I think, where it is stated that the danger from oil imports is in halting or severely curtailing the constant search for and development of our oil resources.

The Railroad Commission of Texas has released information which shows that through June 4, 1949, there were 197 new oil discoveries in Texas as compared with 131 in 1948; gas discoveries totaled 50 as compared with 27; oil-well completions in 1949 totaled 3,671 as compared with 3,000 last year; gas wells totaled 307 as compared with 258; and drilling applications 6,220 as compared with 5,847. The commission also has stated that new oil-well completions in Texas add about 35,000 barrels per month to the daily oil allowable, which gives us another measure of the extent of new oil finding in Texas.

Although the current output of Texas crude oil is substantially below that of last winter, it is good to note from the figures of the railroad commission that the search for oil continues in Texas at a rate well ahead of last year.

Sincerely,

WILLIAM E. WARNE,
Assistant Secretary of the Interior.

Government Reorganization

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1949

Mr. MILLER of Nebraska. Mr. Speaker, I am pleased to know that the conferees have finally come to an agreement upon the procedure to be followed in the bill to give the President powers to reorganize the executive branch of the Government.

I think the compromise we have before us this morning is excellent. I take a rather dim view of proposals that may be presented by the bureaus. You know it is not easy to take $3,000,000,000 off the Federal pay roll, because that would mean in the reorganization, the elimination of three or four hundred thousand Federal employees. Mr. Speaker, these are pay-roll votes and bureaucracy will fight fiercely to grow larger instead of smaller. I personally expect to support every phase of the reorganization plan which will bring efficiency to government.

I spent a few days in Nebraska this last week, and I found that the people in my district have three things uppermost in their minds.

One was for economy in government which included adopting the Hoover reorganization plan and implementing it with necessary legislation to cut out the overlapping, inefficient bureaus in government.

They are nearly 100 percent against the Brannan farm program. They feel it means regimentation and controls which they abhor. I expect to take some time in the next few days to deal further with this subject.

They are anxious that a labor bill be passed which would be in the interest, not of big business and big labor leaders, but in the interest of the public and the man in overalls who must work to make a living for himself and family.

Radio Service to the Great Lakes Region

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1949

Mr. POTTER. Mr. Speaker, as a member of the Committee on Merchant Marine and Fisheries and as the Representative of a Michigan district bordered by three of the Great Lakes, I am well aware of the need for radio service to those who make their living on the Lakes and to those who enjoy unexcelled boating in the vacationland that is Michigan.

WJR, Detroit, in my State, renders an exceptionally fine weather service, one not only of prime importance to listeners in homes in Michigan and nearby States but a special daily marine weather service to the thousands of seamen who make their living on vessels plying the Great Lakes.

WJR is a clear-channel station; therefore, it is protected during the daytime from interference from other stations, and at night it is the only station to operate on that frequency, 760 kilocycles, anywhere in the United States and North America. With its clear channel, it is able to reach beyond greater Detroit, to the rural and sparsely settled areas which otherwise would have little or no opportunity to receive the innumerable benefits of radio—weather and market information, news broadcasts, and entertainment.

Under leave to extend my remarks, I would like to include in the RECORD the following statement on WJR's clear-channel marine weather service, plus letters of commendation from the United States Department of Commerce, the Detroit branch of the United States Navy Hydrographic Office, the physics department of Denison University in Ohio, and several others from grateful sportsmen:

Every sailor must know two things at all times—where he is, and what kind of weather he can expect. This vital information must be his whether he be aboard a Great Lakes freighter, a commercial fishing boat, or a private yacht. On March 4, 1946, WJR established a complete farm weather report and forecast direct from the Detroit office of the United States Weather Bureau. It was soon found that many sailors and commercial fishermen were making extensive use of this weather data despite the fact that these broadcasts were not designed specifically as marine reports. The reason for this was two-fold. First, and foremost, the Goodwill Station's clear-channel signal and extensive coverage; second, a great majority of boats and ships are equipped only with broadcast receivers. In view of this, three

UNIVERSITY OF MICHIGAN LIBRARIES

series of marine weather reports were instituted: One, a complete report at 12:06 a. m. each day Sunday through Saturday; two, the farm weather report at 6:40 a. m. Sunday through Saturday (broadcast by U. S. Weather Bureau personnel direct from the Detroit office of the Bureau) was expanded to include specific hydrographic information; three, marine weather material was incorporated into a news program 5 to 5:15 p. m. Monday through Friday.

To insure complete coverage of weather data needed by lake seamen, an inquiry was made by WJR from Weather Bureau experts, the United States Navy Hydrographic Office, and the sailors themselves to determine what exact information was needed and what would be the best form for its broadcasting. As a result, the broadcasts were set up as follows:

12:06 a. m. report: A complete forecast for Lakes Huron, St. Clair, and western Erie, including expected weather, wind direction and velocity; prevailing conditions at selected stations from Sault Ste. Marie to Cleveland (weather, wind direction and velocity, barometer, temperature, and dewpoint); storm warnings (when indicated).

6:40 a. m. report: Forecast for Lakes Huron, St. Clair and Erie, including expected weather, wind direction and velocity; the present Detroit barometer reading, temperature and dewpoint; storm warnings (when indicated).

5-5:15 p. m. report (as part of news program): Lake forecast, including expected weather, wind direction and velocity; present wind direction and velocity, temperature; storm warnings (when indicated).

This series of broadcasts represents one of the most far-reaching coverages of marine-weather information of any commercial radio station on the Great Lakes. That these reports are filling a vital need for lake sailors and fishermen has been verified by a number of responsible sources. The United States Weather Bureau has commended WJR on the extensive effects of the broadcasts. The United States Navy Hydrographic Office has indicated them to be of great value to marine traffic on the Great Lakes. Representatives of Great Lakes yachtsmen have expressed the manifold benefits derived from these reports by the hundreds of small-boat sailors they represent. Private individuals continually inform the Goodwill Station of the importance of these broadcasts to them.

Just as thousands of mariners on Lakes Huron, St. Clair, and Erie use compass, lights, and beacons to give them their position, they depend on WJR's clear-channel voice to bring them the other portion of information—the weather—which they must have for safe navigation.

WEATHER BUREAU,
UNITED STATES DEPARTMENT
OF COMMERCE,
Detroit, Mich., May 13, 1949.

Mr. HARRY WISMER,
General Manager, Radio Station WJR,
Detroit, Mich.

DEAR MR. WISMER: Through courtesy of Station WJR, the Weather Bureau in the Detroit area is enabled to give what we consider an outstanding service to the public of Michigan and surrounding areas. The broadcast direct from our office on Mr. Wells' program at approximately 6:40 each morning enables us to not only inform the public of forecasts, but also to give spot weather conditions over a considerable area and a general picture of the weather map, which enables our many listeners to visualize the current situation and formulate plans for their activities.

These broadcasts are designed primarily for the benefit of agricultural interests and from comments received both by your station and our office, it is apparent they constitute a real service covering a large area. Owing to magnitude of industrial and maritime interests concentrated in this area, there has been a popular public demand for the inclusion of material and forecasts applicable to needs in addition to those of agriculture, and we have been permitted to broaden the scripts to cover, insofar as possible, all types of interests in the community.

In addition to this direct broadcast, your station is also providing an excellent service to small-boat owners and fishing interests through a special broadcast of spot weather information and lake forecasts on a program given at 12:06 a. m.

These special broadcasts, together with the frequent inclusion of local and State forecasts as a part of all news broadcasts, and the special distribution of lake warnings when issued, are indeed furnishing weather information vital to the economy and safety of many thousands of listeners. The value of such service cannot be overestimated.

Very truly yours,

W. W. OAK,
Meteorologist in Charge.

BRANCH HYDROGRAPHIC OFFICE,
Detroit, Mich., May 16, 1949.

Mr. HARRY WISMER,
General Manager, Radio Station WJR,
Detroit, Mich.

DEAR SIR: Your attention is invited to page 90 of the May 13 issue of the Notice to Mariners relating to the Great Lakes which corrects the WJR entry in the Great Lakes Radio Aids in accordance with your requests.

I would also like to inform you at this time that these broadcasts are providing a service to yachtsmen and the fishing interests that otherwise would not be available without great expense to each of these small-boat owners, since these weather broadcasts and warnings can be received on any standard receiver in areas that a station of less power than your 50,000-watt broadcasts would not be received.

These broadcasts are furnishing information vital to the safe operation of not only pleasure craft, but to the small craft of the fishing industry as well and such services cannot be valued too highly.

The services of this office are always at your disposal in matters concerning navigation on the Great Lakes.

Yours very truly,

G. K. COWLES,
Lieutenant (Junior Grade), United States Navy, Officer in Charge.

DEPARTMENT OF PHYSICS,
DENISON UNIVERSITY,
Granville, Ohio, December 13, 1947.

Mr. MARSHALL WELLS,
Station WJR, Detroit, Mich.

MY DEAR MR. WELLS: Just a note to tell you how much we in Granville, Ohio, appreciate and use the weather information and forecast portion of the 6:30 to 7 o'clock portion of the morning program from WJR, and what a good job Don Comstock and his associates do in giving us the kind of weather information we like and are unable to obtain from any other station.

We like details of the locations and probable movements of the warm and cold fronts and high- and low-pressure areas over this and adjacent portions of the United States and Canada as well as the other existing conditions. Weather maps usually reach us about a day and a half late, so your morning information really brings us up to date on the weather and fills a big gap. It is used by many air-minded persons in this vicinity having their own planes and by students in flight training courses here at Denison University.

Your weather details are transferred to a mimeographed blank map of the northeast portion of the United States and placed on the bulletin board for general consumption. You may be interested to know that our weather customers are quite numerous and that our physics department bulletin board is now one of the most popular on the campus.

Thanks again to you and Don.

Cordially yours,

RICHARD H. HOWE,
Instructor, Flight Training.

DETROIT RIVER YACHTING ASSOCIATION,
Grosse Pointe, Mich., May 12, 1949.

Mr. HARRY WISMER,
General Manager Radio Station WJR,
Fisher Building, Detroit, Mich.

DEAR SIR: Now that the 1948 yachting season is getting under way, I feel it is a good opportunity to express the gratitude of some 10,000 yachtsmen in this area who have benefited by the weather broadcasts of Radio Station WJR.

The Weather Bureau forecasts, broadcast by Station WJR several times weekly, surely have prevented many dangerous and hazardous boating trips.

Our yachtsmen cruise and race to practically all sections of Lake Huron, Erie, and St. Clair. These yachting enthusiasts are good sailors and depend greatly on such conveniences as your radio station's weather forecasts to ensure them a safe passage from one harbor to another. The racing sailors pour over weather maps and glue their ears to their ship's radio to hear Station WJR give out the latest in weather reports. I know this to be a fact from personal experiences and have discussed this fact with many sailors.

Radio statiton WJR is the only local station that radio receivers can pick up while out on Lakes Huron and Erie. Your signal is always clear and strong.

The yachtsmen of the Detroit River Yachting Association are loud in their praise for this fine service your facilities provide. We hope for your continued success and hearty cooperation.

Very truly yours,

KENNETH P. LEIPPRANDT,
Commodore.

Flag Day Address of Hon. W. Kingsland Macy, of New York

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1949

Mr. MARTIN of Massachusetts. Mr. Speaker, under permission to extend my remarks in the RECORD, I include herewith the address of the Honorable W. Kingsland Macy, of New York, at the Flag Day exercises of the Patchogue Lodge, No. 1323, Benevolent and Protective Order of Elks, Patchogue, N. Y., on Sunday, June 12, 1949.

Representative MACY, after paying his respects to Exalted Ruler Mengel and thanking County Clerk Hughes for his friendly words of introduction, paid high tribute to the Benevolent and Protective Order of Elks for their outstanding work in publicly honoring year after year Old Glory, the emblem of our Republic, and highly commended those participating in the Patchogue flag celebration: The American Legion, the Veterans of Foreign Wars, the United Spanish War Veterans, the National Guard, the scouting

organizations, the participating members of the clergy, Rabbi Cohen, and Reverend Crosset who has already officiated, and Father Walsh who closed the ceremonies, not to omit favorable mention of the music program rendered by the military band and the fine rendition of our national anthem by Mr. Gracy.

His address follows:

All over America on June 14 the Stars and Stripes will be flying but if we do not identify ourselves for a moment at least with the flag of this day, the day shall have failed of its purpose. Pomp and circumstance have their places and it is meet that we especially mark the calendar of the year for flaunting and honoring our colors. Exhibiting the flag, though attended by the blowing of bugles, the parade of uniforms and even battle insignia, is not enough. The flag, both as patrimony and a personal possession to be passed on to future generations, must have individual meaning for you and you, and for every citizen of our land.

We celebrate our birth as a Nation on the Fourth of July in a manner replete with firecrackers and fusillades of resounding crashes reminiscent of the roistering and lusty days of the Liberty Pole. On the Fourth it is as if we were celebrating our corporeal body, but on Flag Day, we think not of defiant gestures to tyrants, to victory won by valor and blood; on Flag Day it is as though America were celebrating its spirit.

When Walt Whitman, of Huntington, wrote I Celebrate Myself, he listed what he believed were his assets and liabilities; he examined his conscience and strove to aline himself and the world. On Flag Day America might well do the same; might well do it severally and individually.

What of our moral fiber, its strength and weakness; what of our place in the world? What accounting on our inheritance? What of our husbandry and stewardship? What of our shaping of the future for our sons, and our sacred trust to those men who made the Fourth of July our day of exultation? What governs us—the letter or the spirit of the Constitution? What controls our public men—desire to pander to the popular, or conviction that right must be made to prevail?

First as to our moral fiber, we know it to be sufficiently strong to hold us together and of such enduring quality that time alone will not ravage it. Unwatched, however, it could become forage for ideological rats and do-gooder mice. While godless Communists and Fascists gnaw away and do-gooders merely nibble to make cozy little nests of expediency, both destroy, and it behooves us well to remember that in the Constitution we have an alert and ever-watchful cat.

If my allegory seems frivolous, I do not intend it so, for in this figure of speech that built itself as I thought on the word "fiber," there is my abiding and growing belief that in our Constitution with its great Bill of Rights, we have a vigilant guardian of all that America represents, was, is, and can be.

Five years ago when I had the pleasure of speaking at the Elk's Flag Day ceremonies in Brooklyn, while our country was still toiling in war, I spoke of our Constitution then and said that under it our Government has given "more health, welfare and happiness to a larger number of people over a period of years than any other in the world." I recently had those remarks reprinted in the CONGRESSIONAL RECORD and am sending them out along with an interesting article by Mr. Morton Pennypacker, our county historian, telling the story of the John Hulbert flag. This Bridgehampton flag of red, white and blue, with stars and bars, antedates Old Glory and I truly believe inspired George Washington to commission Betsy Ross to make a Star-Spangled Banner. Should there be those here who do not receive a copy in the mails within a week or so, I shall be glad to send one of these history-filled documents upon request. I shall also be pleased to have such of you as desire them—and so long as my supply I have with me holds out—accept a copy of an excellent illustrated story of our Bill of Rights, recently prepared and sent to me by Lyttleton B. P. Gould.

We of America have had, by and large, a good life and I do not wish to appear before you as a prophet of doom. We Americans are not instinctively attuned to tragedy. As a people we are buoyant, expecting the best. We have a joy-of-living look about us that one does not find on the faces in enslaved countries. I like to believe there is in us the embodiment of laughter and that our resilient good humor is the steam valve on the pressure cooker that our melting pot has become. At any rate, humor is a characteristic we are rich in having, and undoubtedly an incalculable asset, provided that in the cultivation of the lightsome, we do not neglect developing and treasuring the sound and the serious. If we substitute the slang phrase and the wise-crack for considered thought and words of wisdom; if we picture life as merely "a bowl of cherries," and bury the spiritual under earthy layers of materialism, the energy and dollars we spend for educating and serving the public will have been wasted indeed.

Today perhaps more than in any other modern period, things are evaluated by size. Bigness seems beautiful; it represents better business and better bureaucracy; colossal becomes supercolossal. It is the crass objective toward which the assembly line is geared in this accelerative age that does all things in a rush and looks upon the careful and diligent as dolts. That sort of impatience which manifests itself in unthinking hurry, was responsible for the downfall of the German Weimar Republic, for the rise of fascism, and ultimately for World War II, in the wake of which we are still floundering toward unarmed peace.

Despite the uncertain world picture, at a glance here on this June afternoon everything seems more or less normal though somewhat disorganized, but then it is only the long view that shows the turning and direction of the road. This is, I say most earnestly, the time to take the long view, and it might be rewarding if we were to recall the handwriting that appeared on a wall at the feast of Belshazzar for people whose only wish was to eat, drink and be merry. I can only wonder how many of us would heed if some skywriter in this more modern age were to appear in a plane upon the blue and write in filmy mist made to seem substance, "Mene, Mene, Tekel, Upharsin," or even the words, "Praemonitus, praemunitus," forewarned, forearmed.

The virtures of patience, forebearance, and tolerance are admirable, but there are times when anger instinctively arouses us to do in inspired wrath what we slothfully condone in more dispassionate moments. The capacity for public indignation is at a low ebb, and perhaps this is because we dissipate our grievances in headlines, vilifying someone or other in a newsprint trial not much fairer than the medieval trial by fire. So much energy is expended in shouting that there is none left for action, but unless strength comes from somewhere to keep us from departing from principle, we shall be lost indeed.

Men from the days of Zoroaster have concerned themselves, creed by creed, with the dual forces of good and evil, and man's movement toward good ethics has been a process slower than evolution. If we do not bestir ourselves about ethics, if we lose awareness of our relationship to God and build a purely material civilization, we may all know surfeit of creature comforts but at what a price! Few of us today have sufficient time for reflection, so fast does the current of events move—especially is this true of Congressmen, but as one such, and your duly chosen Representative I feel that respect for the fundamentals is the one saving rock to which an elected official can cling when in doubt about the direction in which to swim.

Our forefathers had what might be termed civic integrity and when the Constitution and the Bill of Rights were framed and voted, they were paternalistic in the highest sense; they were concerned with assuring unto men the true necessaries—freedom and justice under law.

Not even the most observing and insensitive among us can have failed to notice and feel a trending toward some modification of our concept of government • • • a newer form of paternalism that would make it government's duty to see that we are spoon-fed from the cradle to the grave? Are we divesting ourselves as individuals of the responsibilities of individuals? If so, we will soon be hard put to reconcile this overextension of government with the thoughtfully circumscribed intent of our founding fathers.

What has brought about this new notion of government's function? Is it increasing numbers, the close of our geographic frontiers, economic complexity, or the immigration of ideas from old and tired countries without potentials of expansion?

America has unlimited potentials, right here within itself. We do not need paternalism or socialism. We need social betterment, yes, through judicious aid to the handicapped and helpless, but the only form of paternalism we require or want in essence is that form which motivated the creators of this Nation and set the flag we honor today to flying so gloriously.

Artists Equity

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1949

Mr. PLUMLEY. Mr. Speaker, friends of mine, as to whose 100-percent loyalty as American citizens there can be no question, certainly not in my mind, feel aggrieved at certain statements which have appeared in the RECORD concerning the Artists Equity Association; to which remarks they take exception.

They insist they have a right to their day in court before the forum of public opinion as it is reached by the CONGRESSIONAL RECORD.

With this statement I agree. Therefore I sought to obtain some information relative to the subject matter of their complaints, in order that they might be assured their "day in court."

Under permission heretofore granted I am therefore including the following letter from Hudson D. Walker, executive director of Artists Equity Association:

ARTISTS EQUITY ASSOCIATION,
New York, N. Y., May 6, 1949.

DEAR REPRESENTATIVE PLUMLEY: I am happy to have the opportunity to write you about Artists Equity Association in response to your request.

We believe that any organization which seeks the support and confidence of the American people, owes them, and their elected representatives, a full and frank disclosure of its objectives, its methods of operation and its program.

UNIVERSITY OF MICHIGAN LIBRARIES

Acting on that conviction, I am pleased that you have taken the trouble to seek me out for relevant information about Artists Equity. Be assured that the association, which has already made its program and activities as widely known as possible within our limited means, will be happy to furnish any additional material you may desire.

The formation of the association has been condemned in some quarters, regrettably on the floor of the House of Representatives, as a novel and dangerous departure from the traditional pattern of American social and economic organization. It has been alleged that the participation of artists, without regard to their personal political beliefs, in an organization formed to better their economic and artistic position is an alien practice, foreign to American concepts.

The criticism and condemnation of the association is not in accordance with the facts.

The organization of persons in the professions, united by a common interest, for the advancement of their own and the general welfare, are an established part of our national life. The most cursory study of history discloses that the organization of professional persons—lawyers, doctors, teachers and almost all of the other professions—is almost coincidcnt with the founding of the Republic. The activity of such groups, as well as the activity of such organized groups as labor, farmers, and businessmen, has had profound and beneficial effects essential to the functioning of our democratic society.

Experience has taught the artists of this country that they cannot discharge their obligations to their calling and improve their general welfare as individuals. They have found it necessary to band together, much in the same way as have writers, musicians and actors. The Artists Equity Association, formed by leaders in the profession during March 1947, in organization and basic approach was modeled after the Author's League of America. We sought, and continue to seek, ways and means to bring about the kind of economic security for artists as has been attained for writers by the Author's League.

Our membership takes no cognizance of either the political or esthetic views of its members. These matters we feel to be beyond the scope of the association. It is not now, nor do I believe it ever will be, considered the province of the association to control the political thinking of its members or to impose any official artistic approach. The sole qualification for membership in the association is technical competence to the degree that the applicant is engaged in the art on a professional basis and has had proper recognition.

Despite the effort made to brand the association as an organization engaged in activities outside of its stated economic purpose, its only concern since its inception has been to do those things which, in the opinion of its membership, will serve to further their economic well-being and to bring about a wider appreciation of the graphic arts by as large a section of the general public as possible.

It is impossible in the confines of this letter to give you in detail the scope of the work of the association. However, a few highlights may be of interest.

The association has paid considerable attention to a reexamination of the relationship of the artist to the dealer, exploring such aspects of the relationship as equitable commissions, representation, frequency of exhibits, and the pricing of art to the buying public.

The association is also much concerned with the relationship of the artist to the museum. While the association is concerned with the immediate benefits for its members, it also believes that there are long-range objectives which should be pursued with equal vigor. It wishes above all to help American painting and sculpture to achieve its fullest development, and to that end, feels that a constantly enlarging audience is of first importance. Because of this, the association has instituted a program designed to stimulate the exhibition of contemporary painting and sculpture in the museums of the country. The response of directors and curators to this program has been extremely gratifying, the directors of the major museums of the country having agreed to participate in a joint program with the association to the end that contemporary painting and sculpture will be seen by a wider audience than heretofore.

Another problem of great concern to the association has been the improvement of the economic situation of the artist. The average annual income of the professional artist in this country is shockingly low. While the long-range objective of the association is to increase the artist's income through a wider distribution and sale of his product, in the meantime the association has established a welfare fund to try to meet some of the acute emergency problems which must and do arise.

These are but a few of the major objectives of the association. In addition, it supplies counsel on such matters as copyright law, reproduction fees, professional ethics, and related matters. As clear from the foregoing, the association is primarily and exclusively a professional association devoted to improving the economic situation of its membership. I want to stress again that the association has no political affiliation or political intent. Correspondingly, we do not feel it to be our right to attempt to interfere in the political or aesthetic affairs of our membership. We have operated on the principle that these matters are exclusively the concern of the individual.

On behalf of the officers and members of Equity, I wish to express our gratitude to you for the opportunity of making this statement.

Sincerely yours,

HUDSON D. WALKER,
Executive Director.

Accompanying the above letter was enclosed an informative statement, which follows:

STATEMENT

Twice during the month of March, Representative DONDERO, of Michigan, spoke at length on the subject of contemporary American art. On March 11 he charged that an art exhibition held at St. Albans Naval Hospital in Queens, N. Y., was used for spreading left-wing propaganda among the disabled veterans. On March 25, Mr. DONDERO accused Artists Equity Association, an organization of professional painters, sculptors, and graphic artists, of being a radical organization.

I wish to take this opportunity of bringing to your attention some findings of fact, because I believe that such attacks are dangerous to cultural development in this country. In these times of stress we should nurture and protect, rather than attack and disrupt, creative workers in cultural fields.

Artists Equity Association is a national, nonpolitical, esthetically nonpartisan organization representing the professional artists of America. It was formed in March, 1947, to further the economic interests of American artists and to give strength and effectiveness to their united voice. Any resident of the United States of America who is a painter, sculptor, or graphic artist whose work has been accepted in a major exhibition, or who has a recognized dealer in the fine-arts field, or who has a one-man show at a recognized gallery, is eligible for membership.

The organization of persons in the professions, united by a common interest for the advancement of their own and the general welfare, is an established part of our national life. The most cursory study of history discloses that the organization of professional persons—lawyers, doctors, teachers, and almost all of the other professions—is almost coincident with the founding of the Republic. The activity of such groups, as well as the activity of such organized groups as labor, farmers, and businessmen, has had profound and beneficial effects essential to the functioning of our democratic society. Experience has taught the artists of this country that they cannot discharge their obligations to their calling and improve their general welfare as individuals. They have found it necessary to band together, much in the same way as have writers, musicians, and actors. That the association has a great appeal for artists is evident by its growth. On April 30, 1947, membership was 300; on April 30, 1948, 875; and on April 30, 1949, the membership exceeded 1,400, representing 38 States of the Union.

The importance of artists in our day is best expressed by the words of Dr. Raymond Fosdick, former president of the Rockefeller Foundation, in the Foundation report for 1941:

"And particularly must we rely on the humanists—the historians, the philosophers, the artists, the poets, the novelists, the dramatists—all those who fashion ideas, concepts, and forms that give meaning to life and furnish the patterns of conduct. It is they who really construct the world we live in, and it is they who, with sensitive awareness to human perplexity and aspirations and with the power of imaginative presentation, can speak effectively to a distracted world." Consideration of the artist's role in such a light makes his survival individually and collectively in our society of paramount importance.

Looking a little more closely into the economic environment of our artists, I wish to quote some of the figures compiled by Miss Elizabeth McCausland in 1945 and published in her article, Why can't America afford art? in the Magazine of Art for January 1946. Five hundred leading artists were sent questionnaires, and about 40 percent replied. Of these, 44 percent of those reporting "depend largely or entirely on incomes from other sources than art." She further stated "that for these 200 painters and sculptors, with an average of 4 years devoted to an art education, and an average of 20 years devoted to the practice of their professions, such a costly long-term social investment of time, study, skill, and creative energy brought back just this much in worldly goods: An average total income for 1944 of $4,144 and an average art income of $548. Such was the economic picture in a year of high incomes."

In answering the question, "How does the artist live?" Miss McCausland reported that 42 percent of the painters and 53 percent of the sculptors teach, 32 percent of the painters and only 6 percent of the sculptors do commercial art, and only 2 percent of the painters and 3 percent of the sculptors have an independent income. Other jobs to which artists turn include framing, apartment management, beauty shop management, museum curatorships, production, and printing. I quote these to indicate the economic pressure under which our artists work, all of which means that they must devote creative time and energies to noncreative jobs. This involves a great cultural loss to the Nation, both now and in the future.

Against this background of economic insecurity, Artists Equity Association was formed solely to help artists economically, and you may be interested to know specifically just how it is accomplishing its ends.

Several years ago the fellows of Saybrook College at Yale University commissioned a portrait by an artist who subsequently became a member of Equity. Through misunderstandings, changes in personnel, and an incomplete contract, the artist had received no payment of any kind from the college when he brought the matter to the attention of Equity. Equity was able to effect a satisfactory settlement by the payment of $1,000 to the artist and the return of the portrait. Inasmuch as Equity charges no commissions to its members for such collections, the settlement was net.

Similarly, Equity was able to recover over 50 works of art recently for nearly as many artists, not all of them Equity members, from a dealer who had held them in storage for more than a year. The individual artists had been put off endlessly, but Equity was able to recover their work at no cost to them.

Artists Equity was influential in having Pepsi Cola pay a rental fee to artists for their work, which the company borrowed and circulated throughout the country. Equity was also consulted by the Wildenstein Gallery in New York in connection with the Hallmark Franco-American competition which is being run by the Hall Bros. Co. of Kansas City. The Hall Bros. Co. agreed to the $100 fee, an increase in some of the prizes, and a royalty arrangement on any reproduction of these paintings for Christmas cards. Likewise Equity was instrumental in getting Life magazine to agree to pay for reproduction rights when an artist's work is used in feature articles. Please note that all of these last-mentioned activities with commercial sponsors have helped all artists, not merely Equity members.

Last year Equity Fund, a separate charitable coporation, was established to increase the use of art in America and eventually to have funds to help needy artists. It has received the sponsorship of many museum directors, collectors, etc., and it, too, will benefit all artists of every esthetic category through stimulating the formation of local art centers throughout the country.

Free legal advice has been given members by Artists Equity's exceedingly competent attorney. One artist, for instance, had a dispute with a large Canadian shipping magnate over a commissioned work. He refused any payment, but Equity's lawyer was able to make a settlement at no cost to the member. In the case of Alfred Crimi, in which a church covered up his murals with whitewash, Equity's lawyer acted as amicus curiae in the case to help establish a precedent for the rights of artists under such circumstances. Equity now is active in a move to have certain murals installed in the Salina, Kans., post office. These murals were painted on the Government program, and installation was delayed due to the war. It has been further delayed by antagonistic elements who have kept them from being put up, although the artist's contract called for their placement.

Equity is concerned with relationships with art galleries and has drawn up a list of terms and conditions to be embodied in any agreement with a gallery. It is also committed to help artists without galleries to get a hearing.

Equity has cooperated with the museums of the country in working out mutual problems. This was emphasized on May 19, 1949, when Hudson Walker, executive director of Artists Equity Association; Robert Beverly Hale, of the Metropolitan Museum, and William M. Milliken, director of the Cleveland Museum, spoke on the joint problems of artists and museums at the annual meeting of the American Association of Museums at the Art Institute of Chicago. A panel discussion followed, and it was the consensus that artists and museums can work together to their mutual advantage.

Returning to the subject of Mr. Dondero's March 11 attack on modern art. He intimated that the showing of contemporary art in the Naval Hospital at St. Albans, Queens, N. Y., was in some way identified with left-wing activity. Interestingly enough, the great national magazine, Look, sent their reporter and photographer to the exhibition and published on March 29 a very favorable article, based on this exhibition, on the good that could come to our injured veterans through the showing of contemporary art. I suggest that anyone who is interested look at this article, which shows the condition of the patients and the type of work shown. Look Magazine can be taken as a very impartial witness to the good such exhibitions might do for disabled veterans throughout the country.

May I reiterate my initial premise that only in a democracy can art remain free and creative, and in preserving our democracy we must preserve freedom of expression for our artists. Any other course leads us to the brink of totalitarianism.

Housing

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1949

Mr. DAVIS of Georgia. Mr. Speaker, I present herewith a title by title analysis of H. R. 5085 which I introduced on June 9. It is a bill to provide for slum clearance, low-rent housing, housing for veterans through veterans homestead associations, for housing research, for farm housing, and for the disposition of war housing.

TITLE I. ASSISTANCE TO STATES FOR THE ACQUISITION AND LEVELOPMENT OF SLUM LAND

This section presents a plan under which a beginning can be made to clear the slums of the Nation under what are believed to be sound principles. It deals with the question of slums in a manner that recognizes that they are a problem within themselves and that a plan to deal with them should not be one which makes the question simply a feeder for public housing. The two problems are separate and distinct and should not be connected.

The declared slum lands are, under this title, put to their highest and best use without having any preconceived preference for housing, and its administration is placed under the Federal Works Agency which is the agency of the Government which has for years handled such matters as this for the Government. The slum c earance title of H. R. 4009 places its administration under the Housing and Home Finance Agency. I believe this is a serious mistake. The responsibility for the success of this program should not be placed under an agency which has the direct supervision of public housing.

Under the provisions of this title of H. R. 5085 the Federal Works Agency deals only with the States and the States in turn deal with the cities and counties of the States. I consider this sounder procedure than that provided for under H. R. 4009 under which the Federal Government deals directly with local agencies. This preserves the principle of local self-government and States' rights.

Under this title of H. R. 5085 the Federal Government makes loans and grants to the States to be used by the States to acquire slum property for redevelopment for its highest and best use. Land so acquired may be devoted to commercial or industrial uses, housing, parks, playgrounds, or appropriate public uses as determined by a redevelopment plan. The land is sold at a reasonable price with due regard for the new use thereof.

The Federal Government may lend the State an amount equal to the estimated value of the land when cleared.

The State and the Federal Government shall each pay in cash one-half of the difference between the cost of acquiring and clearing the land and the price at which it is sold under the redevelopment plan of the area.

The plan set forth in this title of H. R. 5085 is only intended to cover slum areas where housing and other conditions are substandard. It does not contemplate the use of the funds available under the title for the purpose of building housing in vacant suburban areas as is permitted under H. R. 4009. This title of H. R. 5085 provides that families which are dispossessed by reason of the acquisition and clearance of the lands under the title shall be given immediate accommodations in any Federal low-rent housing project receiving Federal subsidies, or otherwise such dispossessed families shall be provided with rental assistance for a reasonable period.

No land shall be acquired under the title except after open public hearing held after due notice, nor shall any land acquired under the title be sold or otherwise disposed of except after such public hearing.

There is authorized to be appropriated to the Federal Works Agency the sum of $350,000,000 to be used for the purpose of the act with the provision that not more than 20 percent of the funds shall be expended in any one year and not more than 10 percent shall be allocated to any one State. Funds received in repayment of loans, pursuant to the title, shall be covered into the Treasury as miscellaneous receipts.

Attention is called to the fact that the Government is not committed to expenditure of any money under this title of H. R. 5085 until it is appropriated by the Congress, while under the slum-clearance provisions of H. R. 4009 the Government is committed to the expenditure of $1,000,000,000 which is provided by direct loans from the Secretary of the Treasury without any approval by Congress.

The slum-clearance provision of H. R. 4009 is contained in title I of that act. That title authorizes loans for the cost of purchasing land and preparing it for redevelopment.

The loans under H. R. 4009 are made only to local public agencies. This means, as a matter of fact, that these loans will be made to local housing authorities which are the agencies through which all public housing in the country is built and under this plan all housing provided under that bill would probably be siphoned into public housing. These

UNIVERSITY OF MICHIGAN LIBRARIES

loans may be for 40 years and are repaid in such manner as the Housing and Home Finance Agency prescribes.

The administration of the section is placed under the direction of the Housing and Home Finance Agency. As I have stated, I do not believe this is sound administration.

That title of H. R. 4009 not only includes the clearance of built-up slums but also under section 102 (b) it includes development of land which is "open or predominantly open."

The Administrator may advance funds for making surveys and plans for these projects and such advances may be repaid out of any funds which become available to such agency for the undertaking of the project.

The money to make loans and grants under this title of H. R. 4009 is obtained by loans made to the Administrator by the Secretary of the Treasury through the issuance of bonds under the Liberty Loan Act. In this way Congress is completely bypassed and the bill itself commits the Government to a definite financial responsibility of $1,000,000,000, while the funds provided by H. R. 5085 are limited to $350,000,000 and are not available until appropriated by Congress.

In addition to these loans, under H. R. 4009, capital grants can be made by the Federal Government for two-thirds of the cost of all projects in any one local public agency as against half of the cost under H. R. 5085. The obligations issued by the Secretary of the Treasury covering grants under this title under H. R. 4009 may total $500,000,000 and are made directly by advances from the Treasury and are not subject to the jurisdiction of the appropriation committees of the Congress. Under this title of H. R. 4009 the Administrator may enter into agreements to pay annual sums in lieu of State or local taxes and there is a provision that not more than 10 percent of the loans and grants authorized may be made in any one State. The total commitment of the United States under title I of H. R. 4009 is $1,500,000,000 without action by Congress, while the maximum amount authorized to be appropriated under H. R. 5085 is $350,000,000.

TITLE II. HOUSING FOR FAMILIES OF LOW INCOME

This title of H. R. 5085 amends the Internal Revenue Code by inserting therein a new section 124A which provides for accelerated authorization deduction for tax purposes in the case of rental housing certified by FHA to be built for and limited in occupancy to persons of low income.

The low-income feature of such housing is made possible, in addition to the savings arising from such accelerated deduction, by requiring that such certificates may be issued by FHA only where the locality has agreed to freeze taxes upon the project, for a period of at least 10 years, at the present level of taxes upon the land. Such real-estate-tax abatement is an established device provided in many States under various State laws for encouraging lower rentals by private construction, among which are New York, New Jersey, and Massachusetts.

In order to assure that the project shall be available only to families of low income, it is provided in H. R. 5085 that no certificate shall be issued under this section except upon agreement of the beneficiary thereof that tenants, to be eligible for admission to the proposed project, shall be certified by the appropriate agency in the locality as either in an income bracket qualifying them for public rent assistance, or of such low income as to be unable to pay economic rents for their housing. To assure compliance with the conditions of the certificate, the FHA can revoke a certificate at any time if the conditions and specifications under which it was issued are not met.

A taxpayer constructing a rental-housing project, with respect to which a certificate has been issued by the Federal Housing Commissioner, may at his election deduct for tax purposes amortization at the rate of 10 percent a year over a period of 10 years, in lieu of the deduction for depreciation presently provided in the Internal Revenue Code. Revocation of the certificate by FHA terminates such accelerated amortization deduction privileges.

The taxpayer may elect to take the accelerated deduction by so stating in his tax return.

The various terms used in this title are defined. The term "rental housing facility"—with respect to which certificates of necessity are issued by FHA under this section—is stated to mean any dwelling unit or units held for rental purposes the construction, alteration, or remodeling of which is begun after July 1, 1949. Alteration or remodeling means the provision of one or more additional units.

There is a technical provision which covers cases in which property is held for life with a remainder over to another person. In such cases the tax deduction is computed as if the life tenant were absolute owner.

These are technical amendments to various sections of the Internal Revenue Code to effectuate the purpose of this title.

This section gives to families of veterans and servicemen preference in occupancy of projects assisted under this title.

TITLE III. VETERANS' HOMESTEAD ASSOCIATIONS

This title of H. R. 5085 amends the Servicemen's Readjustment Act of 1944 as amended to provide the following new sections:

SECTION 511. VETERANS' HOMESTEAD ASSOCIATIONS

Section 511 authorizes the Administrator of Veterans' Affairs, on the application of five or more veterans, to grant charters in nonprofit veterans' homestead associations for the purpose of acquiring or constructing housing for sale or rent at actual cost to veterans. Such associations would be authorized to borrow money from the Administrator of Veterans' Affairs at an interest rate to be determined by the Administrator with the approval of the Secretary of the Treasury. Loans to the associations would be repayable to the Administrator on either a short-term or long-term basis. Long-term loans would be amortized over a period of 40 years if the housing constructed or acquired is held by the associations for rental to veterans, or over a period of 32 years if such housing comprises multiunit structures to be sold or held on a cooperative or mutual ownership basis. The associations would be empowered to construct single-family dwellings, either urban or rural, for sale to individual veterans, but individual purchasers would be required to finance such purchases through local financing institutions, and the associations would be required to apply the proceeds of such sales upon the indebtedness of the association to the Administrator. Where units in multiunit structures are sold or held on a cooperative or mutual ownership basis, the associations would be permitted to finance the cost over a 32-year period. Veterans purchasing single-unit housing from an association could obtain loans guaranteed by the Administrator under title III of the Servicemen's Readjustment Act amortizable over a 32-year period.

The estimated cost of units to be constructed or acquired by an association could not average more than $10,000 per unit, and the associations would be compelled to sell or rent such units at prices reasonably representing the cost to the association. The associations would be regulated and supervised by the Administrator of Veterans' Affairs. Approval would be denied for the purchase or construction of units in excess of local veteran demand, or involving a cost found to be too high locally in comparison with the current price or rental of similar units.

Membership in associations would be limited to veterans of World War II and each association could otherwise prescribe its own bylaws defining eligibility to membership in the particular association. Each veteran desiring to become a member would be required to deposit $100 with the association and to file with the Administrator an affidavit to the effect that he is not a Communist and does not belong to any subversive organization.

The net incomes of associations would be exempt from Federal taxation and State and local taxing authorities would be precluded from imposing any taxes upon associations greater than taxes imposed in the locality upon similar nonprofit corporations (similar authority now exists for Federal savings and loan associations). Associations would, however, be required to pay normal property taxes. Associations could be dissolved or placed in receivership by the Administrator, if necessary, by suit in the Federal courts. Upon dissolution of any association the net assets of the association remaining after payment of its obligations would be covered into the United States Treasury as miscellaneous receipts. An Advisory Council is provided to assist the Administrator of Veterans' Affairs in the execution of his duties with regard to the association. Authority to charter associations and to make loans to them would expire July 25, 1957.

It is expected that an association will actually undertake its construction through private building contractors, but that through the award of firm contracts, the elimination of speculative

profits, the cut-back or recapture of contingency margins, the advantageous financing, the land-development grants, and the elimination of sales expenses, the net cost to the association of each unit constructed will be substantially lower than the price of any comparable units which could otherwise be made available to veterans. Once completed, the monthly carrying cost or rental of the individual units, due first, to the lower initial cost, and second, to the longer repayment periods in conjunction with low-interest rates, will be substantially less than veterans could obtain under either existing facilities or those contemplated by other pending legislation. Prior review and approval by the Administrator of each project proposed by an association will insure against unwise or unsound activity. Annual audit of the associations' accounts and records will, with other proper regulatory and procedural requirements, supply needed safeguards to assure against improvident or inefficient operations.

Under section 513 of this bill an appropriation of $250,000,000 is authorized to provide funds for loans under the above section 511.

SECTION 512. GRANTS FOR PUBLIC FACILITIES

Section 512 is intended to offset the present scarcity and high cost of improved land. It authorizes the Federal Works Administrator to aid State and local governments or associations by 50-percent grants for streets, water and sewer, and other similar facilities wherever the Veterans' Administrator finds such community facilities necessary for effective use of the housing provided under section 511 of the bill. Subsections (c) and (d) contain safeguards to assure that the public facilities will conform to local standards and will be adequately maintained, as well as that the veterans and their families will receive the benefits extended. Where the grant is made to an association, the bill provides for the transfer of the completed public facilities to the appropriate local government.

This section will substantially lower the first cost of the home as well as the annual assessments and other charges usually imposed on home owners for public facilities. It will also assure that these vital facilities are ready to serve the veteran when he moves into his home.

An appropriation of $50,000,000 is authorized for the purposes of this section.

TITLE IV—HOUSING RESEARCH

This title of H. R. 5085 declares it to be the policy of the United States that matters of pure research, looking to improved techniques, be separated from purely operational functions. Responsibility for technical, economic, and statistical research in the housing field is placed within the Department of Commerce, leaving responsibility for operating statistics and matters of technical and economic operations with the present operating agencies of the Housing and Home Finance Agency.

Provision is made for the establishment in the National Bureau of Standards, within the Department of Commerce, of a housing research unit for purposes of technical research, looking to reductions in housing construction costs. Such unit is broadly authorized to undertake such research in cooperation with other agencies of the Government, with State or local governments, educational institutions or non-Government research and technical organizations. It may make contracts for technical research for work to be done by such cooperating agencies, such contracts to extend for a period not more than 4 years from their date. For that purpose, it is provided that unexpended balances of appropriations so obligated by contract may remain outstanding on the books of the Treasury for up to 5 fiscal years.

The existing operations of the Bureau of the Census and of the Construction Division of the Bureau of Foreign and Domestic Commerce (both of which Bureaus are within the Department of Commerce) which have over a period of years produced economic and statistical data important to the building industry are expanded. These existing Bureaus would be authorized to undertake studies looking to increased production, reduction in cost, and improvement in methods of construction and marketing of housing.

The appropriation of sums necessary to carry out research under this title are authorized.

TITLE V—FARM HOUSING

Financial assistance under this title of H. R. 5085 is limited to farm owners who can demonstrate that they have not the resources and cannot obtain credit to provide themselves, their operating tenants, and sharecroppers with "decent, safe, and sanitary" dwellings and related facilities.

Loans for dwellings on adequate farms: Where he finds that the farmer can be expected to repay the loan, the Secretary may make 33-year loans at 4-percent interest, on the security of the owner's equity, without stated limit as to amount.

Loans for dwellings on potentially adequate farms: Where he finds the owner does not have sufficient income to repay the loan but might be expected, as a result of following a plan of farm management, to have sufficient income within a 10-year period, the Secretary may make loan as described in section 401, and make the owner annual contributions for 10 years in an amount equal to the interest and half the principal payments due within that period.

Other special loans and grants: In cases where the provisions of neither section 403 or 404 would work out, the Secretary may make loans or grants or combinations thereof, for the purpose of farmhouse repair and improvement—but not new structures—not in excess of $1,000 for any one dwelling or $2,000 to any one owner, of which not more than $500 on any one dwelling may be an outright grant. Repayment terms on the loan portion follow section 402.

Technical services and research: The Secretary may provide free architectural services in connection with the provisions of the title.

The Secretary is to prepare estimates of farm housing needs and to correlate and recommend proposals for executive and legislative action.

Preference is to be given to veterans in the distribution of benefits under this act.

Local public agencies and committees: The Secretary is to utilize the services of local housing authorities or county committees of farmers in carrying out the provisions of this title.

The Secretary is to set housing standards as a basis for administering this title. This section also sets forth the Secretary's legal powers and responsibilities in executing its provisions, including authorization to compromise claims against borrowers.

Loan funds: Through use of the public debt procedure, loan funds are provided as follows: An aggregate amount of $325,000,000, of which not more than 20 percent shall be loaned or expended in any one year, and not more than 10 percent in any one State.

Contributions: Pursuant to section 503 are authorized up to a limit of $15,000,000.

Appropriations are authorized to cover payments or obligations issued under section 510, the contributions made under section 503, the interest due on obligations issued by the Secretary, an additional $60,000,000 for grants under section 504, and such other amounts necessary to carry out the provisions of this title.

TITLE VI. DISPOSITION OF WAR HOUSING

This title of H. R. 5085 deals with the disposition of the permanent housing accommodations constructed under the provisions of the so-called Lanham Act—Public Law 849, Seventy-sixth Congress—as amended, and Public Law 781 of the Seventy-sixth Congress; Public Laws 9, 73, and 353 of the Seventy-seventh Congress; and Public Law 140 of the Seventy-eighth Congress. The bulk of this housing was constructed under the so-called Lanham Act and is generally referred to as Lanham Act permanent housing. The job of constructing this needed war housing was assigned by statute to the Federal Works Administrator but on October 14, 1940 was transferred to the Federal Public Housing Agency pursuant to Executive Order 9070 of February 24, 1942. The Federal Public Housing Agency has continued to exercise jurisdiction over the management and disposal of this housing until the present time. This title is almost identical to H. R. 3492, Eightieth Congress, which passed the House June 18, 1947.

According to a 1947 report of the FPHA—see House Report 414, Eightieth Congress, first session—the Government constructed approximately 78,113 permanent buildings of which 30,783 were designed for single-family occupancy, 35,072 were designed for two-family occupancy and the remainder or 12,289 were designed for occupancy by more than two families. These 78,113 buildings provided permanent housing accommodations for approximately 166,615 families. Later tabulations indicate there were several thousand other perm-

UNIVERSITY OF MICHIGAN LIBRARIES

anent buildings bringing the total number of permanent units up to 191,116.

The buildings constructed for one or two families present no disposition problem. They can and should be sold for individual owner use. The so-called multifamily buildings contain an average of 5.3 dwelling units per building. These multifamily buildings will prove attractive for purchase by an individual or by a few families joining in cooperative ownership of the building.

According to the directory of the Federal Public Housing Authority the development costs of the 166,615 permanent housing units were approximately $743,296,000 or approximately three-fourths of a billion dollars. This development cost includes both the cost of the site acquisition and the development of the projects. The average cost per housing unit was approximately $4 461. The cost of operation, maintenance, and expense are met out of rental income from the properties. According to the fourth annual report of the National Housing Agency for the calendar year 1945, the net income after such expenses for this type of dwelling averages about $13 per month per unit or an annual income of approximately $26,000,000. It is assumed that these figures would also apply to the thirty-odd thousand units reported in the later tabulations.

The intent of Congress with reference to the disposition of this housing is clearly expressed in section 4 of the Lanham Act, as amended. In this act Congress provided as follows:

> It is hereby declared to be the policy of this title to further the national defense by providing housing in those areas where it cannot otherwise be provided by private enterprise when needed, and that such housing may be sold and disposed of as expeditiously as possible: *Provided*, That in disposing of said housing, consideration shall be given to its full market value and said housing or any part thereof shall not, unless specifically authorized by Congress, be conveyed to any public or private agency organized for slum clearance or to provide subsidized housing for persons of low income: *Provided further*, That the Administrator may, in his discretion, upon the request of the Secretaries of War or Navy, transfer to the jurisdiction of the War or Navy Departments such housing constructed under the provisions of this act as may be considered to be permanently useful to the Army or Navy.

The Federal Public Housing Authority has not, nor now shows any intention of, complying with the clear intent of the Lanham Act to sell and dispose of these properties as expeditiously as possible. Despite the provisions of the Lanham Act prohibiting the transfer of any of these properties for subsidized housing use unless approval of Congress is obtained, the Federal Public Housing Administration has already taken off the market for possible transfer to communities or local-housing authorities for low-rent use, more dwelling units than it has actually sold. Up to April 30, 1947, the FPHA has withdrawn 120 projects involving 32,486 units from sale and reserved them for transfer to communities or local-housing authorities for low-rent use if Congress approved of such transfers. These projects after 4 years are still reserved for such transfer even though Congress has not been requested to approve such transfers.

Illustrative of the policy of the Federal Public Housing Agency in this regard is the fact that they have reserved many more units for transfer to communities and public bodies for low-rent housing than they have actually disposed of. Moreover, of the 24,535 units sold a large bulk of them consisted of structures not suitable for low cost public housing projects. Of the 191,116 permanent units which the Agency has had under its jurisdiction since the end of the war it has disposed of 51,558; 24,535 were sold, 6,654 were transferred to the Navy, 7,965 were transferred to the Army and Air Force, 69 were transferred to War Assets Administrator, 6,508 are listed as lease cancellations, and the balance of 5,935 consist of all other types of disposals, including fire and demolition.

The record of the Agency speaks for itself and is one which justifies Congress in transferring the disposal program back to the Federal Works Agency who originally had such jurisdiction prior to Executive Order 9070. After 4 years the Agency has actually sold less than one-seventh of the total housing it had under its jurisdiction at the end of the war. On the basis of its present record it will take the Agency about 30 years to effectuate the whole disposal program. If the Congress permits one agency to disregard its specific obligation then other agencies are likely to follow suit. If for no other reason the Congress should transfer this disposal program to the Public Works Administration to prove that Congress intends to have its policies carried out by the executive agencies. This bill provides for veterans' preference in the purchase of these housing accommodations, and I believe that this is some of the most reasonably priced housing that the veterans of World War II will have an opportunity to purchase at this time. These housing accommodations were constructed in the early war years prior to the material increase in building costs, and will be offered for sale under the provisions of the bill at a price which reflects their reasonable value on a long-term economically sound basis, and not the present high market cost for housing accommodations. These properties are eligible for FHA insurance of 90 percent of the appraised value, on a mortgage up to 25 years. In the bill it is provided that the Federal Housing Commissioner shall supervise the appraisal of these properties because I have complete confidence in his judgment and administrative ability in the field of residential appraisals and mortgage insurance.

The bill (H. R. 5085) provides that these permanent housing accommodations shall be sold for cash; that is, the proceeds of the sale will return cash to the Treasury. The veteran purchaser can obtain his financing of the purchase price through FHA insurance. Or he may obtain such financing through a GI loan. These methods of financing provide the means by which the veteran can readily acquire these housing accommodations at a low price on the current high market.

Address by Hon. Clinton P. Anderson, of New Mexico, at Commencement Exercises of St. Lawrence University

EXTENSION OF REMARKS
OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Friday, June 17 (legislative day of Thursday, June 2), 1949

Mr. ANDERSON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address entitled "The Amazing Interlude," which I delivered at the commencement exercises of St. Lawrence University at Canton, N. Y., on Sunday, June 12, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Soon after World War I had closed with the proclamation of an armistice, a novel appeared on the bookstands. It was entitled "The Amazing Interlude." The story dealt with the way war grips us and produces its miracles, with the fashion in which people who may have lived in unexciting and often unimpressive circumstances find themselves caught up by currents that blow freshly and fiercely across the earth—people who see their hitherto plain selves cast for the moment into figures that strike the eye. Here is the way the author tells it:

"The stage on which we play our little dramas of life and love has for most of us but one setting. It is furnished with approximately the same things. Characters come, move about, and make their final exits through long familiar doors. And the backdrop remains approximately the same from beginning to end. * * But now and then amazing things are done on this great stage of ours. Lights go down; the backdrop, which has given the illusion of solidity, reveals itself transparent. A sort of strange fairyland transformation takes place. Beyond the once solid wall, strange figures move on—a new mise en scene, with the old blotted out in darkness. The lady, whom we left knitting by the fire, becomes a fairy and meets the prince. Adventure, too; and love, of course. And then * * * the lights go out, and it is the same old backdrop again, and the lady is back by the fire, but with a memory."

That story of amazing interlude was repeated again and again in the lives of American service men and women, both in the world war of a generation ago and in the one just concluded. They came from strange corners of our land, knew their hour of greatness and glory, and frequently when the conflict ended, returned to familiar paths and quiet lives.

Have we a parallel in the current widespread interest in education? This June the colleges of this country will graduate a record number. If we look back to 1940, we find about 216,000 receiving college degrees. Four years later, due to the war, the number had dropped to 141,600. That, of course, was only a temporary set-back. Once the armed conflict had ended, our young men and women swarmed again to campuses all over the land. By 1947, the crop of graduates climbed to 240,000, by 1948 to 319,000, and this year it is estimated that 338,000 diplomas will be awarded, an all-time high.

What about this record harvest that is going on today and is in progress on every other campus throughout the Nation, the harvest of young minds grown from the seedbed of democracy, nurtured in the climate of freedom, maturing in the sunlight of truth?

Surely we have no more important harvest. And the fact that it is diffused over hundreds of educational institutions need not blind us to the problems involved in its utilization.

Personally I must express at once my pleasure in the size of the crop. During the years that I was dealing so closely with farmers, I found that many of them were worried as the war neared its end over the possibility that surpluses might quickly develop in wheat, corn, and cotton. Do we look at our educational plants and feel that a like surplus may develop in doctors, lawyers, and dentists? Do we ask ourselves if all of the crop is really needed? Do we wonder if there are to be more graduates than there are places of opportunity? Have we come to the point which agricultural leaders reached some years ago, when they decided that it might be better to plow under every third or fourth row and try to steady the market by a more limited harvest?

I want immediately to put myself on the side of those who believe that the market for educated minds is not overcrowded in this country, who believe that not too many college graduates are being turned out, who believe that education still has its responsibilities and who want to see this harvest of diplomas grow rather than be restricted.

I know what that means in pressure on classrooms, dormitory space, and laboratory facilities. But these problems of physical needs which rest on the consciences of the men and women directing our educational institutions are not the only educational problems in our land today. The very number of these graduates indicates that they themselves may have difficulties as they leave school and find the going harder than it was for those who have gone out in the past few years. One of our national magazines summed it up only a few weeks ago by saying, "College graduates, job-hunting, are to find the pickings slimmer this summer. Good openings are getting hard to find. Employers are getting more and more choosey as the biggest graduating classes in history enter the 1949 job market."

Will these graduates encounter disappointment? Will the going be rough? Will they conclude that college training has not paid off? If so, will their experiences tempt the next generation of high-school seniors to put less emphasis on further formal education? In other words, will the universities of the land see this blaze of interest in education die down, the fairyland fade out and the old familiar backdrop reappear—a quiet campus designed to give the thoughtful mind a proper atmosphere for meditation?

To me the happenings of the last generations have materially altered the course which many young people will follow as they start their professional lives. Your grandparents grew up in the days of the giants of industry when men were stretching bands of steel across the continent, were building financial institutions almost overnight, were developing new cities and new factories and putting into the service of the American Nation labor-saving devices powered by steam and electricity. Not for a moment would we forget the great heritage left us by those people who observed the mechanical revolution in England, transplanted a section of it to our shores and gave us the engineering marvels which harness energy in every corner of our land and create a productivity the like of which the world had never imagined.

We are the inheritors from their great genius. We enjoy the opportunities which they created. On the foundations which they laid we were able to enter this last great war without the best guns, the best tanks, or the best planes, far behind in the knowledge of radar and with no start whatever toward the creation or use of atomic energy. But the training of American minds and the skill of American hands had so expanded the possibilities of invention and improvement in this country that we came out of the war 4 years later with the finest guns, the stanchest tanks, the fastest planes, with the greatest knowledge of radar and with the only productive skill in the field of atomic energy.

You inherit that, but with it some complications. As you go from this school into your career, you will find it more difficult to be an empire builder in 1949 than if you had followed the trail to California as a forty-niner a century ago. There are some road blocks in the way—the prior appropriation of the field by others, the greater size at which industries must be launched in this day of sprawling corporations, and, if you are trying to build a fortune, the restrictive operation of income- and inheritance-tax laws.

But there will be opportunities nonetheless, worlds of infinite beauty and reward, careers that will surpass those great moments in our national heritage when men and women have been privileged to lift higher the religious, cultural, professional, and commercial values that have made this country great.

Who knows today the limits of beneficial use in atomic energy? We see its principle now associated with an instrument of destruction. You are to be the guardians when nuclear fission becomes an agency of good. You will direct the commissions and man the laboratories when its exploding power will lift burdens from the backs of mankind. I envy you that long look down the years that will let you watch the unfolding of the atomic era and at the close of your lives will let you look back upon the emergence of new and amazing manifestations of that power just as we of another generation have watched the forward rush of the automobile, the telephone, the radio, and that combination of telephone and radio that we know as television.

But before nuclear research means much to any of us its use for destruction must be brought under control. To a great degree the same processes that are employed in the building of an atom bomb must become common knowledge if atomic energy is to be harnessed so it can propel trucks, drive locomotives, fly airplanes, and be as a servant to those who inhabit the earth. But before there can be control of the atom bomb there must be agreement among nations and it must come quickly. If you have talents in the field of political science, here surely is an area where your talents may find employment.

When I think of the proposals to build a St. Lawrence seaway, to harness the floodwaters of the Missouri River and spread them at more proper seasons across the old Northwest Territory, to use the sweet waters of the River Jordan to irrigate three-quarters of the million acres and thereby permit Arabs, Christians, and Jews to find that plenty which could permit them to live together in harmony in Palestine—then I know that the day of opportunity for the engineer is just dawning.

But I recall that new types of energy may mean new styles of machinery, new modes of transmission, completely different composition of our cities, a relocation of industrial plants. I wonder how we will ever accomplish it all. It will take trained minds and strong bodies if we do not fail.

This rush for education is, therefore, no interlude. We are not going back to the old life. He will not be satisfied with a world economy in which there is not enough to eat, not content with our Nation unless it accepts the responsibility that a disordered world seems anxious to press upon it. To take a line from The Devil and Daniel Webster, it can be truly said that "we have sown freedom over this earth like wheat" and we are not going to be afraid of the harvest. Similarly we have been spreading wheat over the world for freedom, 500,000,000 bushels of our wheat from the past harvest, 400,000,000 bushels from the current one. We have tried to remove the pressures of hunger to permit a choice in type of government. That is a first step, but your whole lives will see this endeavor go on—perhaps with different tools but with like goals.

You do not face a world of idleness. It will not be easy, this plastic surgery to uplift the face of old Mother Earth to conserve its covering of topsoil and utilize the last acre-foot of water to find food for a steadily expanding population, this strengthening of unity among nations through United Nations and a score of its agencies to the end that aggression may be curbed and order may be restored. It will be glorious work, but it will not be easy.

May you strengthen yourselves with the words of Tom Paine: "If there be trouble, let it be in my time, that my children shall have peace."

Increased Pay for Postal Employees

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Friday, June 17 (legislative day of Thursday, June 2), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by G. M. Higley, legislative representative, Central Pennsylvania Postal Employees' Council, of Harrisburg, Pa., in support of Senate bill 558 and Senate bill 1772.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT IN SUPPORT OF S. 558 AND S. 1772 BY G. M. HIGLEY, LEGISLATIVE REPRESENTATIVE, CENTRAL PENNSYLVANIA POSTAL EMPLOYEES COUNCIL, HARRISBURG, PA.

Regardless of the many statements made recently on the air and in the press, the cost-of-living index has dropped only about 5 percent from the all-time high of last August. In fact, the index is approximately 8 percent higher now than the figure given by the Bureau of Labor Statistics at the hearings before the Post Office and Civil Service Committee last January.

Postal employees were having a hard time trying to make their salaries reach last year, and they still are. Since last year more postal workers have found it necessary to cash war bonds, borrow from the credit unions, and to send other members of their families, including their wives, to work to provide sufficient income for necessary household expenses.

On behalf of the Central Pennsylvania Postal Employees Council, of which I am legislative representative, I endorse S. 558 and urge its early favorable report and enactment. I should also like to endorse this bill as secretary of local 1566, National Federation of Post Office Clerks, of Harrisburg, Pa.

During these hearings this subcommittee will consider, among others, S. 1772, introduced by seven distinguished members of the Post Office and Civil Service Committee. As

UNIVERSITY OF MICHIGAN LIBRARIES

you gentlemen know, this bill will correct some of the inequities under Public Law 134, and I will briefly state some of my reasons for the early enactment.

At the outset, I would like to request that S. 558 be substituted for section 4 of S. 1772.

Suppose we consider the amendment that will eliminate the lowest or first four grades. This would give some badly needed help to our veterans of World War II who make up a large majority of this group. Men making from $2,550 to $2,850 certainly cannot provide properly for their families and themselves in these days of high prices. These men have served their country and only expect a reasonable break to establish themselves economically.

When Public Law 134 was enacted in July 1945 the older employees did not get credit for all their past service. This was eminently unfair to many men who have spent a lifetime in the service of the United States. Let us see how it works: A new employee entering the postal service can reach the top grade in 26 years which is not too soon. Under the provisions of this bill all employees can reach the fourth longevity grade in 22 years and in addition all previous service will count which will correct the bad situation under existing law. This will only be fair and just to many employees who now have as much as from 25 to 45 years service but can never reach the top grade.

For many years now postal employees have been receiving 15 days' vacation and 10 days' sick leave while the rest of the Government employees have been enjoying 26 days' vacation and 15 days' sick leave. We in the postal service feel that we are also entitled to the same leave privileges. Not long ago in a report to Congress the Civil Service Commission stated that they had no objection to granting the additional leave privileges to postal employees. This is only fair and should have been done long ago.

I should like to include two quotations regarding the postal service which I feel are very pertinent to this general subject. The following is an excerpt from the speech of the Honorable JOHN C. KUNKEL, Eighteenth District of Pennsylvania, before the Eastern States Postal Employees Conference, held in Harrisburg, Pa., Saturday, February 14, 1948:

"In particular reference to postal employees, the only universal service in the United States today is the postal service. Few people realize that. Millions of citizens do not have electricity or telephone or telegraph facilities or, even transportation. The United States mail goes everywhere, and under all kind of conditions at all times. By the same token, the postal service is the one way in which everyone comes in contact with the United States Government. I have never kown a group who were so uniformly polite and considerate."

Congressman KUNKEL is a distinguished member of the Banking and Currency Committee of the House of Representatives.

At the same conference, Senator FRANCIS J. MYERS, the distinguished majority whip of the United States Senate, said:

"Your excellency of service and devotion to duty are the most effective lobbying activities in your behalf. When your representatives come before Congress, they find the good will has already been created for them by the rank and file back home in every post office and in the postal service. That does not mean that you have always gotten from the Congress the things that you want and have a right to expect, or gotten them promptly enough when you did get them. The delays in acting upon employee benefits of all Government employees, including the postal employees, and sometimes the postal employees, have at times verged on the tragic side."

Postal employees are happy to know that the Members of Congress and the American people are appreciative of their efforts to render the best possible service.

The postal service has a tradition dating before the adoption of the American Constitution. We employees are anxious to maintain and if possible, improve on this record of service. It will be a little easier if we are free from the worry of making an inadequate salary provide the necessities of life for our families.

It has been a privilege to file this statement with the gentlemen of this committee and I again urge the prompt enactment of S. 1772 with the salary provisions of S. 558. Thank you.

Respectfully submitted.

G. M. HIGLEY,
Legislative Representative, Central Pennsylvania Postal Employees Council, Harrisburg, Pa.

Food Problems and Farm Programs

EXTENSION OF REMARKS
OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, June 17 (legislative day of Thursday, June 2), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Food Problems and Farm Programs," delivered by the Senator from Vermont [Mr. AIKEN], at the fiftieth annual convention of the National Association of Retail Grocers, Chicago, Ill., on June 12, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FOOD PROBLEMS AND FARM PROGRAMS

Food problems are as old as the world itself, and farm programs are not much younger. If we go back into the centuries, we will find that price ceilings, production incentives, allotments, quotas, and penalties were all tried hundreds of years ago. Both support prices and penalties made their appearance in the United States about 300 years ago.

So, the subject which I am talking about today can hardly be called a new one.

Only 90 years ago, about 80 percent of the people in the United States were engaged in the production of farm commodities and about 20 percent of the people were engaged in industry, commerce, and other professions.

Today, the situation is reversed. Eighty percent of the people live off the farm while only about 20 percent of our citizens are now engaged in the production of food and fiber.

But, with this reversal of population, we find the country in far less danger of going hungry than it ever was before. Not only is food more plentiful than ever, but the housewife is actually spending a smaller portion of her dollar for food than she was even a generation ago.

Thirty years ago about 37 percent of the wage earner's dollar was spent for the purchase of food. Today, only about 33 percent of the worker's dollar goes for food. This comparison of percentages, however, does not tell the whole story.

If the consumer would be satisfied with the kind of food bought 30 years ago, the percentage of cost would be even less than it is now.

Instead of buying flour and corn meal from a barrel and lard from a tub and vegetables only in season and meat that had to be cooked for several hours, the housewife now buys a good share of her food all ready for the table.

The green salad is chopped for her and is available every day in the year, along with tomatoes, lettuce, and other fresh vegetables.

The ham is precooked and almost ready for the table, while frozen foods of about every description are ready to eat a few minutes after being thawed out.

When the housewife goes shopping today she buys not food alone. She buys cook service and maid service with it and all for a lower percentage of the dollar than she used to pay.

What a contrast there is, in the methods of buying food, as between today and a quarter of a century ago.

I was raised in a small town where the cracker barrel meant much more than a philosophical term. Not only was it the source of supply for our Sunday evening cracker-and-milk diet, but it literally provided a forum seat for the town's loitering philosophers.

In the store where my family used to do most of its trading, the cracker barrel was located at such a distance from the old coal stove that only the most unerring and expert chewers of "Mayo's dark" could be depended upon to hit the hole in the old isinglass front.

Romantic, yes; sanitary, no, and a very, very great contrast from the modern grocery store with its shelves and neatly packaged goods, its bright lights, its cleanliness and a general atmosphere which makes shopping for food more the nature of a pleasant outing.

Keeping pace with the improvement in processing and merchandising methods has been improvement in production methods on the part of the farmer.

Many crops that a generation ago were produced by hand or team labor are now produced almost wholly by mechanized methods.

Improvements in varieties, in fertilizers, insecticides, fungicides, and weed killers have also enabled the farmer to produce more with less labor than ever before.

While science has met the problem of how to produce enough to meet our needs, it has created another problem of what to do with our overproduction.

In the early thirties when consumer purchasing power dropped, farmers were paid by Government to destroy their surplus production. Obviously, this method of meeting the problem was not popular with those who were going hungry in the cities.

It was back in the early thirties too that Government officially first recognized the necessity for maintaining farm purchasing power in order to maintain our national economy.

When the price of wheat dropped to 30 cents and the price of corn to 15 cents a bushel on the farms, our national economy became well-nigh paralyzed.

It was only when Congress decreed that the price of corn should not be less than 45 cents a bushel that national recovery began.

This was the beginning of modern farm support-price programs.

In 1938, the Triple-A Act was passed which provided support for basic farm commodities at a level ranging from 52 to 75 percent of parity.

This support, however, could not be given until the price of the commodity dropped to 52 percent or the supply reached a burdensome level.

In other words, it was designed to help the farmer after he got into trouble.

Soon after this law was enacted, the war came on.

Surpluses of wheat and cotton, accumulated by the Commodity Credit Corporation under the price-support program, disappeared and our problem became one of getting an adequate production rather than one of meeting surplus conditions.

In order to induce the farmer to produce more and to enable him to acquire facilities necessary to increase his production, Congress made mandatory a support of 90 percent of parity—92½ percent in the case of cotton—for the six basic commodities—corn, wheat, cotton, rice, tobacco, and peanuts—and also for 12 other important farm commodities known as Steagall commodities.

Under wartime legislation, the Government was authorized to increase this support when necessary to get adequate production and in fact the Department of Agriculture did maintain support prices of much higher than 90 percent for several commodities.

As a result of this incentive program, the agricultural production of the United States was stepped up about 35 percent.

This was sufficient to provide for our own domestic needs, the needs of our armed forces and those of our Allies, and helped to meet the needs of the deficit food areas of the world during and after the war.

This wartime incentive program was to run for the duration of the war and for 2 years thereafter. The "2 years thereafter" expired on December 31, 1948.

Recognizing that something had to be done to keep the bottom from falling out from under farm prices, both Houses of Congress in July 1947 authorized their Committees on Agriculture to study the situation and to report their findings and recommendations to the Congress.

Frankly, the committees of the House and Senate did not see eye to eye and the resulting legislation approved on the last day of the Eightieth Congress is of a hybrid nature.

In order to get its long-range program of flexible price supports adopted, the Senate had to agree to the House insistence that the high wartime supports be continued for 1 year more, or until January 1, 1950.

It is this incentive of wartime prices for 1949 crops that has induced heavy overplanting this year, and which, barring abnormal weather conditions, will add greatly to our already heavy surpluses of some commodities.

I don't blame any farmer for taking advantage of a last opportunity to produce at wartime prices, but I do maintain that the accumulation of huge surpluses as a result, will in the long run, react to his disadvantage.

The long-range farm program, which is the Senate part of the Agricultural Act of 1948, is an effort to keep the farmer out of economic difficulties rather than to help him after he gets into trouble which was the purpose of the 1938 act.

The 1948 act is an effort to put farm support on an income rather than a commodity price basis. Its authors believed that the farmer's over-all income is more vital than the unit price for a particular commodity.

This act points toward the conversion of more farms to an animal industry, thereby providing a wider market for surplus grains and putting the American consumer on a higher dietary level.

It provides a formula which fixes minimum levels below which the Secretary of Agriculture cannot go in providing supports for basic commodities. He must fix the support level between this minimum and 90 percent of parity unless the national security demands a higher support level.

The act provides for the support of nonbasic or perishable commodities at a level to be determined by the Secretary ranging up to 90 percent of parity.

It is intended, however, that the Secretary shall support the prices of the more important nonbasic commodities, such as meats and dairy products, at a level comparable to the support given to wheat, corn, cotton, and other basic commodities.

The Senate believed that the production of farm commodities and the stabilizing of farm incomes could be controlled to a large degree through raising or lowering the support level rather than through strict and arbitrary Government controls emanating from Washington.

The over-all aim of the Agricultural Act of 1948 is to assure an adequate supply of food and fiber to prevent collapse of farm purchasing power, to guarantee the farmer a decent living and to keep him free. Although production controls are provided in the 1948 law, they are to be used only temporarily and in emergencies.

When the farmers of America lose their freedom through the permanent application of Government controls and penalties, there will be little hope left for maintaining democracy in America as we now know it.

Let me tell you a little more about this Agricultural Act of 1948.

It is not a Republican law, as some critics have indicated. It is a bipartisan law. It was developed as far as possible from the heat of a political campaign and partisan politics never entered into our deliberations.

The Agriculture Committee of the Senate, comprised then of seven Republicans and six Democrats, unanimously approved this legislation. President Truman also urged its approval by the Congress. The Senate voted for it 78 to 3. Is that partisanship?

To clinch the matter, both the Republican and the Democratic national conventions adopted resolutions standing unequivocally for flexible farm price supports which is the foundation of the 1948 act.

Since the law was drawn on a nonpartisan basis, with the full cooperation of the United States Department of Agriculture, and since the flexible support provision of the law was supported by all major farm organizations, including the Farmers Union which now opposes it, there was no reason to believe that new basic price support legislation for agriculture would be required for some time.

On April 7 of this year, however, Secretary of Agriculture Brannan appeared before the Joint Agriculture Committees of the House and Senate and presented what was publicized as a new program for agriculture.

Immediately after the presentation, the program was broadcast and publicized under the auspices of the Democratic National Committee and thus the welfare of the American farmer and the food supply of our urban population was tossed head over heels into politics.

Farmers throughout America are very properly resentful of making a political football out of their economic welfare.

As a matter of fact, the Brannan program, as it has come to be called, follows closely the provision of the long-range Agricultural Act of 1948, which does not take effect until January 1, 1950.

The public can scarcely be blamed for thinking a brand new plan was being offered in view of the fact that the long-range part of the 1948 law is not yet in operation.

The Brannan program has since been implemented by a bill to put its provisions into effect. This bill, which the Secretary sent to the House and Senate for introduction, did not, however, have the approval of the Bureau of the Budget.

The Secretary's program contains only three radical departures from the Agricultural Act of 1948. But these three departures spell the difference between life and death for a free agriculture.

These are (1), and I quote from his bill, "conservation and good land use practices as prescribed by the Secretary, may be required as a condition of eligibility for price support."

This provision very obviously would give the Secretary the right to prescribe the manner in which each farmer should use his farm, what crops he should grow, and how they should be cared for.

The second provision of the Secretary's program which departs from the 1948 act is the placing of a limitation on the amount of production per farm which would be eligible for price support.

This recommendation has some merit because it is not healthy for our Nation to have small groups acquire whole counties thereby depriving several hundred families of the right to hold ownership in, and to make a living from, our land resources.

The weakness of this recommendation lies in the fact that it would penalize the more efficient areas and the more efficient farmers inevitably resulting in an increased cost of over-all production.

The third departure of the Secretary from the 1948 act lies in the level of support.

While the 1948 law provides that the Secretary must fix the support level somewhere from 90 percent down to a minimum provided for by a formula in the act, his new program would require support for 10 major farm commodities at 100 percent of parity, or "income-support standard" as he now chooses to call it.

One hundred percent of parity would represent such a satisfactory income to any farmer that only immediate, complete, and permanent controls could prevent overproduction to a degree which we have not yet experienced.

If a 90-percent guaranty has resulted in plaguing us with a huge overproduction of certain commodities and has already resulted in the obligation of several billion dollars of Government funds since last July, I leave the cost of 100 percent support to your imagination.

Mark this, however, I am in favor of farmers getting their full share of our national and per capita income. I want this income to come through their own organized efforts and not through depending on Government to provide the principal market.

A support price level should normally be just below a fair market price in order to encourage conversion to the production of commodities most needed to encourage the production of commodities in areas best suited for their production and to encourage the development of new markets and new uses.

Dependency on Government will inevitably result in subservience to Government.

On the face of it, the Brannan plan guarantees to farmers a satisfactory income.

One hundred percent of parity today represents cost, plus a substantial profit for wheat, cotton, and many other farm commodities.

This guaranty cannot fairly be confined to agriculture alone, nor controls be confined to agriculture alone.

There has been much talk about letting perishable farm commodities find their own price level in the market and then reimburse the farmer for the difference between the market price and the support level.

Evidently the Secretary contemplates a much wider use of this provision of the 1948 act than the Eightieth Congress did.

We intended it to be used sparingly and carefully, for there are cases where use of payments in supporting prices would save money.

We never intended it to be used as a means of bringing about a general reduction in consumer prices.

If this is the purpose the Administration contemplates using this provision for and succeeds in doing so, it may necessitate re-

UNIVERSITY OF MICHIGAN LIBRARIES

storing price ceilings in order to insure that low farm prices will be translated into low consumer prices.

A guaranty of 100 percent prices to farmers, plus assurance of low costs to consumers might well result in bringing the OPA in again through the back door.

Let us not forget that the President has several times within the past few months indicated his desire to have Congress grant him the power of stand-by price controls.

For what purpose does he desire price control powers in the face of falling prices?

If it is desirable to make surplus foods available to low income people at prices within their means, and I believe it is, then I say let that food be made available in an orderly and nonrestrictive manner through the normal channels of trade.

Let us guard against the disruptive forces which created so much havoc in the fields of distribution and marketing during the depression years. I refer, of course, to the political distribution of food. I for one still believe that the distribution of food can be handled better by those who know the business than by all the professional politicians put together.

In spite of the fact that it takes a smaller percentage of the wage earner's dollar to buy food today, it is nevertheless true that the farmer is receiving a smaller portion of the consumer's dollar than he has for several years.

You grocers are being partly blamed for the widening spread between farmer and consumer.

Actually, increased labor costs, increased transportation costs and improved processing methods are eating up much of this increased spread. These are sticky costs and will not come down much under normal circumstances.

As a matter of fact, the distribution of food has probably never been handled as economically and efficiently as it is today, if we take increased quality and better services into consideration.

Better methods of producing better commodities should be the aim of the farmer—better methods of processing and distribution should be the aim of processors, distributors and retailers.

Better understanding of each other's problems should be the aim of all.

It is only through cooperation of producer, distributor, consumer, and Government that our intricate economy can operate effectively and remain strong. I mention Government in this connection because Government, it if fulfills its responsibilities has a useful and proper function in this day of rapid communication and fast travel that has brought nations and the people of the world into close contact with each other.

No nation can isolate itself or its problems in a world of jet propulsion and guided missiles. An economic set-back in any area, or in any major economic group, cannot be contained in that area or confined to that group. It will spread inevitably across state and national boundaries. So national governments in the family of nations occupy much the same role now that local governments used to occupy in the days of slow travel and retarded communication.

While our Government has inevitably become big government, it should never occupy such a dominant role in our day-to-day lives that we would ever—on a permanent basis—be dependent solely upon Government for our economic welfare.

Government should not undertake, or be expected to undertake, to do for the rank-and-file citizen what he, through individual initiative or group enterprise, can do for himself.

The American farmer is endowed with the tradition of wholesome self-reliance. That tradition as a basic attribute of democracy must be preserved.

No segment of the population of a nation can make its political voice effective in the control of government if it permits government to exercise rigid control over the economic destiny of the people.

America stands as the best remaining bulwark of freedom of enterprise in the world today. It stands as a stalwart example of democracy.

It is our responsibility to keep it that way.

We have been dealing with food problems and farm programs for a long time. We have made progress in both of these related fields. We must maintain the progress that has been made.

In fulfilling its responsibility in our way of life, Government should lay dawn the rules of the game of free enterprise; it should insure that competition shall remain free and unfettered; it should provide assistance for the needy and the sick; it should protect the welfare and integrity of the individual; and, above all, it should guarantee that paternalism shall not become the dominant spirit of this Nation.

We are faced with the challenge of continuing to adapt our farm programs to the pattern of our democratic processes rather than to embark upon the course of changing Government to meet the pattern of an illusionary farm program.

There are certain fundamental attributes of democracy that we hold dear above all else. Among these are liberty, justice, and freedom to think and act.

Let us make sure that these ideals of the founders of our Nation shall never be sacrificed on the altar of economic or political expediency.

United States Policy Weakened by Favoritism

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, June 17 (legislative day of Thursday, June 2), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "United States Policy Weakened by Favoritism," written by Edgar A. Mowrer, and published in the Philadelphia Inquirer of June 13, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES POLICY WEAKENED BY FAVORITISM

(By Edgar A. Mowrer)

American foreign policy under President Truman is obviously at its most vigorous since James Monroe.

Yet everybody can see that there is still room for improvement. Nobody in Washington can quite swallow the contradiction between containing communism in Europe and allowing it virtually a free hand in Asia. Apparently it is a personal matter. As such the President can remove it when he chooses.

There are other bugs in our foreign policy that are anchored in the American constitutional structure and traditional practice.

Several of these are on the surface today.

The most spectacular was the recent effort made by Senator WALTER F. GEORGE, of Georgia, to limit the President's constitutional powers to send the armed forces of the United States wherever he believes them necessary.

GEORGE has been in the Senate since 1922. One might expect him to be familiar with the American Constitution. Yet during the discussion of the North Atlantic Pact, he learned for the first time that whatever the Senate says, the President will still be free to send Americans in uniform anywhere. He can even commit them to an international conflict.

For the President derives this right, not from any treaty but straight from the American Constitution. He might presumably promise that he would make no use of his right. He could not legally renounce it if he chose.

This lesson was recently demonstrated by Senator HOMER FERGUSON, of Michigan, in a remarkable address to the Ohio State Bar Association in Dayton, Ohio, last May 13. FERGUSON pointed out that—contrary to the prevailing belief—the North Atlantic Pact is not the second, but the eleventh defensive military alliance in time of peace made by the United States.

He showed that while Congress alone has the power to "declare war," the power to "make war" belongs to the President.

Another cause of confusion in American foreign policy is the administration practice of making some international agreements by treaty, others by Executive agreement. The first need the consent of the Senate. The second do not.

A third rattle in the foreign policy gear box comes from the House of Representatives. The Constitution knows nothing of any such claim. The tradition that finance bills must originate in the House of Representatives is, however, being used by Congressmen as a wedge for sticking their noses into international policy.

Finally, President Truman himself is not innocent of throwing sand into his own policy. He has reverted to the ancient American practice of allotting diplomatic posts abroad on a basis of friendship or political contributions.

So long as the United States had no world-wide policy it did not much matter if an inexperienced stock-market gambler represented us in one capital and an ousted State governor in another. But today every American diplomat abroad commands an outpost in a political struggle whose stake is nothing less than human freedom. The best and most experienced students of world affairs are none too good.

Many of these can obviously be found in the highly trained American Foreign Service. But President Truman dislikes stripe-pants diplomats.

So first he filled the diplomatic posts with internationally green generals and admirals who thought in terms of all or nothing. Then he began to auction off (the phrase is not mine) embassies to businessmen even more innocent of diplomatic experience.

Now—a climax—he apparently contemplates filling vacant posts in Europe with agreeable but untutored ladies who love the Trumans and the Democratic Party.

There is every reason why qualified women should represent our country abroad. If Mr. Truman had picked Dorothy Thompson or Anne O'Hare McCormick or Helen Kirkpatrick or Dorothy Fosdick, he would deserve congratulations. For these four are more familiar with the diplomatic jungle than most men.

But to pick for the two militarily most exposed capitals in free Europe—Oslo and Luxemburg City—a pair of amiable Democratic women who may not know Kamchatka from Kandahar, is to deal frivolously with American foreign policy.

Propaganda and the Law

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Friday, June 17 (legislative day of Thursday, June 2), 1949

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Propaganda and the Law," published in the Washington Evening Star of April 21, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PROPAGANDA AND THE LAW

The Department of Justice has come a cropper in its first criminal prosecution under the much-heralded Federal Regulation of Lobbying Act.

A year ago the Justice Department obtained an indictment against the United States Savings and Loan League. According to some administration propagandists, this organization practically has the Congress in its pocket. But when the indictment had to face the test of court challenge it was found to be fatally defective.

After hearing arguments, Judge Edward M. Curran ruled that one count was so vague that it was meaningless, and that the two others failed to charge any crime. In other words, either the Department of Justice did not know how to draft the indictment properly, or it lacked the evidence upon which to base a charge that would stand up in court.

Judge Curran's ruling, of course, is not a final one. The Justice Department has the right to seek a new indictment, or it may elect to proceed in some other way. In any event, it will be interesting to see what is done.

There is a ring of phoniness about the campaign against the lobbyists. For years almost every group of any consequence that is for or against a particular piece of legislation has engaged in what is loosely described as lobbying. But this administration saves its invective for the business lobbyists. The labor lobbyists, for instance, can threaten and browbeat Congressmen in their campaign for repeal of the Taft-Hartley Act without drawing a word of complaint from the administration. The same thing goes for any other pressure group whose aims happen to coincide with those of the party in power. It is only when some business lobby raises its head that the propaganda artists would have us believe that the foundations of the Republic are being eaten away.

Fortunately, however, it is one thing to shout from the housetops, something else to make a case stick in court. And this is why it will be interesting to watch the future course of the complaint against the Savings and Loan League.

General Marshall

"One of the Greatest Americans of All Time."

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1949

Mr. CANNON. Mr. Speaker, under leave granted to extend my remarks in the CONGRESSIONAL RECORD, I include the proceedings on the occasion of the dinner in honor of Gen. George C. Marshall, former Army Chief of Staff and former Secretary of State, on the second anniversary of his speech at Harvard University, given by the Chiefs of Mission of the 16 countries, members of the Organization for European Economic Cooperation, at the Carlton Hotel, Washington, D. C., Sunday, June 5, 1949:

REMARKS BY MR. WILHELM MUNTHE DE MORGENSTIERNE, THE NORWEGIAN AMBASSADOR, ON BEHALF OF THE HOSTS

It is rather characteristic, I think, of our guest of honor that, when 2 years ago today General Marshall spoke at Harvard University, the official bulletin of his Department modestly referred to his speech as "remarks by the Secretary of State."

Seldom, if ever, I believe, have any "remarks" led to such positive, far-reaching, and amazingly quick results.

We all remember what the free world faced in June 1947. As General Marshall said in the first sentence of his speech: "I need not tell you, gentlemen, that the world situation is very serious." Yes, it was very serious, indeed.

Yet, I do not think, in spite of the rather clear intimations of General Marshall's speech, that the world realized its full implications. The problems were too complicated. The solution suggested was too unfamiliar, too vast—and generous. Perhaps even today it is not possible to gage fully what the Marshall plan means to the free world. It may be that only in the perspective of history will we realize to what extent the European Recovery program has been a decisive factor at one of the fateful crossroads of human destinies.

What among other things placed the Marshall plan on such a high level, was the fact that—like another great American plan, the UNRRA—it was offered also to countries which ideologically—which in their conception of freedom and popular government—were far removed from the western world. It was a hand stretched out to any European government willing to assist in the task of world economic recovery. It was something rare in the annals of humankind: It was something far above frontiers, above mistrust and hate—it was that rare manifestation of a spirit of human interdependence and brotherhood which must come to prevail if the world shall escape indescribable calamities.

As General Marshall said at Harvard University: "Our policy is directed not against any country or doctrine, but against hunger, poverty, desperation and chaos."

The suggested cooperation with the war-torn countries of Europe was not in its inception meant to be an instrument in the so-called cold war. On the contrary, the idea of the Marshall plan was to create such healthy and mutually trustful economic cooperation which is essential to the material and spiritual well-being of all the peoples of the world. It was, indeed, an instrument of good will and peace.

Some countries in Europe, however, turned down the American suggestion, and certain groups in the countries which joined in this great undertaking did everything in their power to sabotage and undermine the Marshall plan. It was this all-out attack on the plan which forced it into the position of a factor in the cold war.

The fundamental idea of the Marshall plan was, of course, that the countries of Europe should do their utmost themselves, and through close cooperation with other European countries, to rebuild their shattered economies. They must make a supreme effort for self-help and mutual aid. The initiative, as General Marshall emphasized, must come from Europe, while the role of the United States should consist of friendly aid in the drafting and carrying out of an over-all European reconstruction program.

I think we can say today that on the whole things have worked out this way. There is, of course, something in Emerson's words, that "all details are melancholy." Perhaps some of our details did not work out entirely according to plan. But let me quote what Mr. Paul G. Hoffman said in a recent speech: "All we can say now is that the progress of European recovery during the last few months has been more rapid than any of us had dared to hope. We have tangible evidence in the form of statistics of increased output in the factories, mines, and farms of western Europe." I could, but I shall not, cite any statistics. I believe that my colleagues from the other Marshall countries will have something to say as to what that plan has meant to their respective nations. Let me only mention—on behalf of my own country—that we do not know what would have happened to Norway without the Marshall plan, or perhaps I should rather say that we know only too well what would have happened. We are accustomed to be self-dependent. We want to continue to be self-dependent—just as soon as hard work and rigorous austerity shall make it possible.

If we try to measure the total effects of the Marshall plan, we should not forget that it has done something more than stimulating and extending production and increasing scant rations. It has given confidence and courage to peoples who had gone through too much to tackle alone the burdens of postwar existence with vigor and hope. And as a by-product, it has been a lesson in economic cooperation among nations which will not be lost, but will, perhaps, prepare the way for that still closer economic and even political cooperation which may hold the ultimate solution of our problems. Let me add one thing which I believe all the 16 of us understand and appreciate deeply: What the American Government and the American people are doing is not being done out of superabundance. It is done, and it is keenly felt, by every taxpayer and every household in this great and generous land.

Today, on this anniversary, we, the representatives of the 16 nations, members of the Organization for European Economic Recovery, have wanted to honor General Marshall—as far as it is possible to do so to a man whom the entire free world delights to honor. In war and in peace General Marshall has been a tower of strength to those who deeply believe in freedom and the decencies of human civilization. At all times he has stood immovably for principle and refused to pull back the frontiers of freedom, democracy, and justice.

When military victory and peace came, General Marshall was still there—realizing that the fight had not been fully won until the fundamental causes for which the free world fought, had been definitely safeguarded—until we had kept faith with those who gave their lives for what they deeply believed they were fighting for. But even General Marshall could not have accomplished what he did if he had not had the unlimited confidence and support of the President of the United States, who at all times so clearly and persistently saw the issues involved in securing peace with freedom.

It was a time in human affairs when the hard-won freedom and the freedoms and human rights of the peoples of the Western World were in deathly danger. How close the free world came to defeat, perhaps we shall never know. The free and liberated nations of Europe were too exhausted alone to safeguard their freedom. America stepped into the breach, and with the Truman doctrine and the Marshall plan saved the free world. That, surely, is bound to be one of the greatest chapters in the history of the unceasing struggle for human freedom.

I am sure that we, the representatives of the Marshall-plan countries, shall always

UNIVERSITY OF MICHIGAN LIBRARIES

consider it a memorable privilege, to have had the opportunity here and now, to say to General Marshall, our honored guest, and to the President, Congress, and people of the United States, that Thank you, which, surely, will be in the hearts of coming generations of our countrymen.

REMARKS BY MR. HENRI BONNET, THE FRENCH AMBASSADOR

No enterprise in the field of international politics can succeed unless there is behind it both clarity of purpose and continuity. These are the two factors which allow one to direct events rather than be directed by them. Thanks to you, General Marshall, there has been such a driving force behind the European recovery program.

After having conceived and carried out with indomitable tenacity the plans which brought about victory, first over the Nazis in Europe and shortly afterwards in the Far East, again you had the vision of the strategy for the winning of the peace. By laying the plans for the recovery of your partners on the other side of the Atlantic, for the salvation of a large area of great democratic traditions, you set a major landmark in contemporary history and pointed out the way of the future, that of an ever closer solidarity between our nations. And I personally shall never forget how charming, friendly, and enlightening was your cooperation in those vital days.

As for my country, I am happy to say today what the Marshall plan means to her. Gradually, we are rebuilding the foundations for a healthy, and later on, a prosperous life. One cannot build on sand. It is on firm ground that we shall, during the coming years, raise the structure of a France which will, as always, work efficiently side by side with the United States for progress and peace in the world.

REMARKS BY BARON SILVERCRUYS, THE BELGIAN AMBASSADOR

Five years ago, between the 5th and 6th of June, a combined operation was launched on the shores of Normandy, that led to the political liberation of Europe—and to victory.

Three years later to the day, when he was Secretary of State, General Marshall delivered, at Harvard University, an address that paved the way for a new combined operation, integrating the same forces of freedom in the promotion of economic liberation and peace.

On this fifth of June, the anniversary of those two dates written in the history of mankind, Belgium heartily joins in paying grateful tribute to the contribution of the United States to this great cause. Outstanding as this contribution may be, and is, when measured in financial terms, its value is best estimated in the opportunity it affords the nations of western Europe to band together and to organize, in the incentive it provides for closer integration and for unity in the future.

To this very purpose the people of Belgium, whom I represent today, are dedicated, determined as they are to uphold the common destiny to which the names of President Truman and General Marshall will ever be attached.

REMARKS BY AMBASSADOR ALBERTO TARCHIANI OF ITALY

To express tonight gratitude and public recognition to General Marshall, in the name of the Government and people of Italy, is for me an honor and a reason for high gratification.

Italy, according to unanimous testimony, is one of the nations of Europe showing evident signs of a speedy recovery under the effects of the progressive realization of the Marshall plan.

The capacity for work and the ingenuity of the Italians (together with their stubborn resistance and reaction to misfortune developed through the centuries) have rendered practical and effective results, through the fraternal aid of the United States organized according to the conception and the initiative of General Marshall.

His name—connected with the supreme events of the war—will also be closely linked with the greatest and most successful plan which represents an unprecedented enterprise of international assistance, encouragement and reconstruction.

Therefore, the historical figure of General Marshall stands out as that of a noble interpreter and a symbol of American comprehension and generosity toward the sister nations of Europe.

Italy—one of them—is happy to express here the most fervent feelings of her people (from the highest officials to the humblest ranks) with a plain and sincere: Thank you.

REMARKS BY MR. HENRIK DE KAUFFMAN, THE DANISH AMBASSADOR

The day of your Harvard speech, General Marshall, is a red-letter day for Denmark as it is for the other countries represented here tonight.

For us Danes it happens to be a red-letter day for more reasons than one. At this moment the whole of Denmark is celebrating the centennial of our constitution that helped to make us one of the freest and most democratic peoples in the world.

On June 5, 4 years ago, a newly liberated Denmark joined the United Nations in San Francisco.

It is Whitsunday. We are also commemorating other events much further back in the long history of mankind when, more than 1,900 years ago, the disciples of Christ received inspiration and strength to carry their faith—the doctrine of mercy—from Jerusalem to the four corners of the world.

In some way all these events seem to me to show the same spirit and the same hope as the Marshall plan; a spirit of understanding, helpfulness, and kindliness transcending class and nation.

I join my colleagues in honoring you, General Marshall, and in voicing the gratitude of Denmark for the American help that justly carries your name.

REMARKS BY AMBASSADOR DENDRAMIS OF GREECE

The 5th of June 1947 is a memorable day in the history of mankind. It is the day when General Marshall, through his plan, gave new life to Europe and new hope to humanity.

These hopes are now being fulfilled. As far as Greece is concerned, I cannot fail to remind you that, 2 months before the above date, the Truman Doctrine enabled my long-suffering country to stay outside the iron curtain.

Without the Truman Doctrine, the Marshall plan, and the sacrifices of the Greek people, Greece would long ago have shared the fate of all the unfortunate countries in the Soviet orbit, and I, myself, would not have the honor to be present tonight to address these few words to you.

REMARKS OF MR. E. N. VAN KLEFFENS, THE NETHERLANDS AMBASSADOR

There are two ways of measuring the importance of the gigantic undertaking of President Truman's administration which, in spite of all attempts to designate it by official symbols like ERP or ECA, continues stubbornly to be commonly known as the Marshall plan.

One way is to look at what has been accomplished in the positive sense, and that, as other speakers have pointed out, is a very great deal.

I should like today to choose the other, the negative way, which consists in an attempt to assess what would be our present condition, had there been no Marshall plan.

The problem is twofold: economic and political.

I am speaking only of my own country.

In the economic sphere, we in Holland were faced in the beginning of 1948 with a very serious economic situation. In the 2 minutes at my disposal I cannot describe how, in spite of all our exertions, that emergency had arisen. Let me say, however, that the specter of a catastrophic reduction in the standard of living haunted all informed minds. Production and consumption levels were both threatened. Even normal replacement of capital goods was menaced. A vicious downward spiral movement of the utmost gravity seemed about to set in, for if production was to be reduced because of fewer purchases abroad, the volume of exports would necessarily dwindle, resulting in turn in further diminishing imports. Food rations would have to be decreased, the level of public health was sure to fall, unemployment and social unrest had to be reckoned with, results obtained through hard toil in the preceding years would be set at naught—in short, an economic and social calamity of incalculable dimensions was at hand.

What this would have meant in the political field was as somber as it was certain. Everyone would have suffered disastrously, except those who, for aims that are not ours, thrive on disorder, national and international. Their opposition to ECA is the measure of their evaluation of its success.

Let me add my salute to the President and General Marshall at this commemoration of an eventful speech. The Marshall plan may be, as some have called it, a signal instance of enlightened self-interest, but we from Holland join with other Europeans who say: "Thank you."

REMARKS BY THE PORTUGUESE AMBASSADOR, SENHOR PEDRO THEOTÓNIO PEREIRA

In certain occasions, as when the cornerstone for a monument is set, it is customary to preserve for future generations some kind of testimony—coins, engravings, or documents, highlighting a great idea or a great deed.

General Marshall, I have recently reread your Harvard speech. Recalling the world picture of that time, and the efforts made by this country to put your ideas into practice, I believe that the United States could hardly have found a nobler and more exacting symbol of their idealism of these days. The Harvard speech reflects much that we find in the American spirit: Christian fraternity, understanding and respect for others, the generous impulse, and an honest and realistic sense to go directly to the root of the problem.

In the files of our Embassy I have the instructions received from Lisbon on that occasion; they brought to the American Government the immediate and willingful support by Portugal to the ideas of the Marshall plan. As a tribute of our understanding to those ideas, it was happily possible not to ask that Portugal benefit from aid in the first year of the plan. Even with some sacrifice, we were thus able to cooperate, within our limitations, so that others more directly affected by the war effort or its sufferings might pass ahead of us. Although, by force of circumstances, our position inside the plan now appears changed, it is still in the same feeling of high appreciation for its universal spirit, that today we join all your other friends, General Marshall, to say, in gratitude and affection, that your enlightening words of 2 years ago will not be forgotten.

REMARKS OF BRITISH AMBASSADOR, SIR OLIVER FRANKS

Britain is proud to join with her neighbors of western Europe to honor General Marshall.

We have known the great leader in war. We have been partners with him in difficult decisions and great undertakings. We saw a man who thought it his privilege to do his duty and who interpreted his duty with courage, steadfastness, and inspiration.

This evening we honor the statesman pioneering in the aftermath of war. It is given to few by one speech to alter the destinies of nations and redress the balance of the world. Two years ago your words changed the course of world events. Help from America, self-help, and mutual help by the free peoples of Europe, have become fact. European recovery is moving forward.

I was concerned in preparatory work in Europe for the Marshall plan: I can bear testimony to the awakening of hope and resolution it brought. I still feel "that the very pulse of the world seems to beat to the surface in this enterprise."

General Marshall, Britain gives thanks to you, to the American Government, and to the American people. We have shown gratitude in our deeds as well as in our words. With your help we are building our recovery.

I end with the words of another Ambassador first used 84 years ago at another Harvard commencement:

"Our children shall behold his fame
The kindly earnest, brave, foreseeing man,
Sagacious, patient, dreading praise, not blame."

(NOTE.—The first quotation is from President Wilson at the Paris Peace Treaty meeting in 1919, and the second is from an ode read by James Russell Lowell at the Harvard commencement in 1865.)

REMARKS BY FERIDUN C. ERKIN, THE AMBASSADOR OF TURKEY

On the occasion of the second anniversary of the speech given at Harvard by General Marshall initiating the European recovery program, it is a privilege for the Ambassador of Turkey to unite the voice of his country to the tribute being rendered here to a great American soldier and statesman.

In my opinion, the Marshall plan incarnates the sublime impetus of an ideal which, setting aside the antagonism of national boundaries, aspires to unite the peoples of the world into one great human family. This is the manifestation of the spirit of a great Nation which, looking beyond boundaries, sees only the human being with his sufferings, his miseries, and his deprivations, and undertakes to do away with these, aiming at the building of a world united under the rule of fraternity, and based on the dignity of man. The Marshall plan is also an undertaking for peace, because in assisting to bolster the economies of the participating countries through self-help and mutual cooperation, it enables them to maintain their free institutions and independence.

Turkey is an enthusiastic adherent to this admirable flowering of international solidarity. The task of providing the Marshall plan countries with food, fuels, and mineral ores, is rendering the attainment of the Turkish development programs laborious, but however hard and difficult this task may be, Turkey, in a spirit of self-denial, is doing her utmost to help to the success of the European recovery program.

General Marshall, who is the very personification of American idealism, has endowed this spirit with magnificent realization. To his country and to him, I bring the gratitude of the Turkish people.

REMARKS BY ERIK BOHEMAN, THE SWEDISH AMBASSADOR

It is a great privilege and pleasure for me, speaking on behalf of Sweden, to associate myself with the representatives of other participating countries in expressing Sweden's admiration and gratitude at the historical initiative taken 2 years ago today by you, General Marshall, in your Harvard speech on initiative that we are tonight commemorating. The sense of responsibility for the world's well-being, the farsighted intelligence, and the determination to put its high ideals into practice, that the United States has demonstrated in sponsoring and supporting, materially and morally, the European reconstruction program, are now in multiple respects showing their blessings in western Europe.

Sweden was not, at the end of the war, faced with the same problems of reconstruction as some other participating countries. Sweden is, however, for its productivity dependent, to a greater extent than most other nations, on its foreign trade. If we shall be able to contribute, as we are able to do in many respects, to the economic well-being of Europe, we need to import a relatively great deal of essential goods. In old days, when there were no soft and hard currencies, we could convert our foreign assets into almost any currency we needed. Our difficulties in the field of foreign trade arose, when that convertibility ceased to exist. In helping to restore, to the largest extent possible, that interchangeability of currencies, the ERP program has already been of the greatest value to Sweden. The loans we receive will be put to the best use possible in Sweden's interest as well as in the interest of the European community. They will be repaid and, through the mechanism of drawing rights opened in favor of other participating nations, the conditional aid that we receive is gradually reimbursed. The task we have set ourselves is to achieve balance in our foreign payments without recourse to borrowing. Through continued efforts and in close cooperation with the other participating nations, we trust that we shall be able to reach that goal.

REMARKS BY MR. CHARLES BRUGGMANN, THE MINISTER OF SWITZERLAND

Your Harvard speech, General Marshall, kindled the hope that the terrible economic crisis, which was the aftermath of the war in Europe, might be overcome. I need not tell you that your words found a strong echo in my country, located in the heart of Europe. Your initiative gave encouragement to the efforts already afoot to help alleviate the effects of the war.

My country, which was spared the ravages of the war, has endeavored ever since the conclusion of hostilities and within the limits of her means and possibilities, to further the reconstruction of the European economy. We have answered your appeal to the European countries to cooperate in the struggle against hunger, poverty, desperation, and chaos by joining the Paris Convention, with the understanding that we would be free to continue the activities we had begun for this purpose. Although Switzerland was not in need of assistance for her own economy, but conscious rather of her obligation to grant such aid to other countries, our people knew very well how closely their welfare is tied to the welfare of Europe as a whole.

We Swiss are deeply grateful to the American Government and the American people for the aid which they are giving Europe. It is for me, as Minister of Switzerland, a special pleasure and honor to express tonight to the author of the European recovery program our thankful appreciation of his generous initiative.

REMARKS OF MR. HUGHES LE GALLAIS, THE MINISTER OF LUXEMBOURG

Acting on behalf of the smallest country represented here, it gives me great pleasure to express to General Marshall the gratitude of the people of Luxembourg for his personal contribution toward winning the Second World War, also for what he has done to bring about the economic recovery of my country and of many other friendly states.

Progress at home has shown remarkable results—for instance, the production of steel, our most important industry—was increased last year by 43 percent over that of the previous year. This would not have been possible without Marshall plan aid which greatly augmented the purchasing power of so many countries, and these beneficial aspects will be felt even more strongly right now with the demand for steel products already slackening.

I started out by saying that I was speaking for the smallest country here represented and I hope my honorable colleague, the Minister of Iceland, will not mind my using that term. As a matter of fact, Luxembourg is in area much smaller than Iceland; however, my friend could possibly argue that his country is the smallest since Iceland has fewer inhabitants than Luxembourg. Let us hope that this question will not disturb the tranquillity of the world, but should it arise, I suggest that General Marshall be asked to act as arbitrator. Until that day arrives, may General Marshall enjoy good health and happiness at his home in the country.

REMARKS OF MR. THOR THORS, THE MINISTER OF ICELAND

To my friend and distinguished colleague, the Minister of Luxembourg, I owe just one remark: Let Luxembourg and Iceland both be great in their smallness, the degree of which will never become an issue, as we in Iceland are also most desirous that General Marshall may continue to enjoy good health and happiness at home for many, many years to come.

Two years ago the general, who had led his army to victory, spoke to the world. This time in his new role as Secretary of State of the greatest and most powerful nation of the world. A representative of an Army and a Nation that twice in our lifetime had come to the rescue of Europe and brought victory to the cause of freedom, in wars where the destiny of free men was at stake. And what was his message? He said:

"Our policy is directed not against any country or doctrine, but against hunger, poverty, desperation and chaos."

General Marshall's words were an expression of friendship, superb vision and unparalleled generosity. They immediately achieved their aim to restore the confidence of the peoples of Europe in the future. The hand of friendship was stretched out by the strongest nation of the world to all European nations.

Has ever any single speech been the source of so much help to so many? History will state that General Marshall's outstanding victory was not connected with his plans of any battle. It was the speech, the thoughts that helped free men win the peace and build the peace.

Iceland, my little country, hopefully and confidently accepted the Marshall plan. We have not been disappointed. We are grateful for this assistance to restore our trade and bring it back to normal. With the fullest confidence and friendship we wholeheartedly will render our small share under the able, efficient, and impartial leadership of Mr. Hoffman and his associates toward the noble aim to achieve restoration and rehabilitation within every country.

REMARKS BY DR. LUDWIG KLEINWAECHTER, THE AUSTRIAN MINISTER

Since the liberation of Austria in April 1945 particular efforts have been made by the United States Government to help in overcoming hunger and despair in my country, which suffered so badly in these last 10 years. UNRRA, congressional aid and the assistance given by the United States Army as well as the contributions and gifts of countless private citizens and voluntary organizations of

UNIVERSITY OF MICHIGAN LIBRARIES

this country, helped Austria to survive the first years of destitution.

But it was left to General Marshall to conceive the idea of self-help and economic cooperation, and to substitute reconstruction for relief. In this second year of the European reconstruction program, rightly called the Marshall plan, Austria—I may say with due reservations—is back on the way to recovery. In spite of the fact that we have to carry the burden not only of occupation armies but also of approximately half a million displaced persons and refugees from other countries, there is a definite upward trend in the figures of Austria's production and trade.

Self-confidence and courage are beginning to return to the Austrian people. The thought that the American people are now definitely assuming their position in world affairs, has inspired new hope in the people of the old world.

As Austrian Minister I may say that the Austrians are extremely grateful for this program of economic cooperation which sprang from General Marshall's famous Harvard speech, and they hope that a solution of Austria's burning political problems may soon allow them to fully reap the fruits of the Marshall plan.

REMARKS OF MR. SEAN NUNAN, THE MINISTER OF IRELAND

It is a great pleasure and a distinct honor for me, as Minister of Ireland, publicly to express the gratitude and appreciation of the Irish Government and people to you, General Marshall, for the opportunity afforded Ireland—an opportunity created by your inspired speech 2 years ago today—not alone to begin the rehabilitation of our own depleted economy, but also to do our part to help our neighbors to recover from the ravages of war, and to keep alight the torch of liberty and democracy in Europe.

The unparalled generosity of the American Government and people in implementing the suggestions made by you, sir, was a gesture of faith in human nature and a declaration of belief in the essential good will of man for man, and in that spirit my government was glad indeed to cooperate to the limit of our ability.

Ireland is neither a rich nor powerful country as far as economic wealth or political power are concerned, but our people do have a faith and idealism based upon the Christian tradition of our nation, and in addition to any material contribution we may be able to make, we know we can, and will, make a worth-while contribution to the betterment of mankind by reason of that living tradition.

For this opportunity, as well as for the assistance your country has given us, Ireland is sincerely grateful.

THE NORWEGIAN AMBASSADOR

I now have the great honor and pleasure to introduce to you the man who, as the Administrator of the ECA, has done such a magnificent job in organizing and supervising this great undertaking. Without the ceaseless efforts, patience, and kindly will to understand and cooperate with Europe, which Mr. Hoffman and his associates have shown, even the greatest idea could not have succeeded: Hon. Paul G. Hoffman.

REMARKS BY MR. HOFFMAN

Mr. Ambassador, Mr. President, General Marshall, your excellencies, fellow guests, only rarely in any generation is an address given which contains an idea so potent that the course of history may be redirected.

It is even more exceptional when an address not only contains such a dynamic idea but also a clear directive as to how its potentialities can be realized.

Such an address was Gen. George C. Marshall's at Harvard University on June 5, 1947.

Ambassador Morgenstierne has been gracious in saying that ECA has administered the Marshall plan effectively. If that is true it is because the activities of ECA have been kept squarely beamed both to General Marshall's basic idea and to the directives for its implementation.

We have concentrated our activities wholly on helping our European partners in their struggle to restore those conditions which give men the opportunity to live in decency, dignity, and freedom. Increasingly we have come to believe that this is the most effective way to bring peace to the world.

We have remembered that General Marshall insisted that if there was to be substance and vitality in the recovery program it must be European in origin and operation. We have kept our role consistent with that concept. The recovery programs of the participating nations have been planned and operated by the nationals of those nations and by their central agency—the Organization for European Economic Cooperation.

General Marshall, the military genius, has an enduring place in world history. But, in my opinion, it is General Marshall, the apostle of peace, through the Marshall plan, who will live forever in the hearts of free men.

ADDRESS BY GEN. GEORGE C. MARSHALL

I am highly honored this evening by the presence of the President of the United States, by the generous expressions of Mr. Hoffman, the leading figure of the recovery program, in introducing me, and especially by you gentlemen—the ambassadorial representatives of the 16 nations engaged in the greatest cooperative effort in history to ake the world safe again, prosperous, and peaceful.

To be your guest tonight, having in mind all that you represent in the history of civilization and in the struggle for freedom today is a very special honor that makes me feel both humble and grateful beyond mere words to express.

In thinking over what I might say tonight the thought occurred to me that you would probably be interested in a first-hand account of the events and conditions which finally led to the statement made by me at Harvard 2 years ago today, which initiated the present recovery program and all that it involved.

Statement recalled

I took over the office of Secretary of State in late January 1947, with a date already set for a meeting of the Council of Foreign Ministers in Moscow in the following March. The Senate of the United States was about to ratify the treaties for the satellite countries which had been finally agreed to by the Council of Foreign Ministers in December of 1946. The next step, so far as we could see, was the completion of the Austrian treaty then being drafted by the deputies of the council, and to reach the basic agreements necessary for a unified German economy and for the conclusion of a German peace treaty.

I went to Moscow with a very sincere purpose of finding agreement with my three associate foreign ministers, if it was at all possible to do so, to bring about a feeling of security for the future along with a reasonable hope of restored prosperity and individual freedom.

After weeks of futile and frustrating negotiations it was apparent that we would not, at least for the time being, be able to organize all of Germany into a sound economic union. Something, therefore, was immediately necessary to meet the desperate situation in Germany and the increasing cost of governing a portion only of the country. A new level of industry was indicated which would be necessary if we were to operate without the participation of the Soviet-controlled zone.

And this meant a new schedule for plant removals on reparation accounts, since more plants would be needed to support the country controlled by us, and, therefore, a new and higher level of industry than had been previously agreed upon by the four allies on the basis of a unified Germany. However, it was late in May of 1947 before this new level could be accurately determined and agreed upon. By that time it was increasingly apparent that our immediate problem was a far wider one than the problem of Germany alone, that a serious situation was rapidly growing up throughout western Europe in general, and that much more drastic action was to be necessary if a serious dissolution of stable government in that portion of Europe was to be prevented.

Special funds needed

To those of us in this country directly concerned in this matter it was evident that special financing by the United States would be necessary in order to break the vicious circle in which the general economy of western Europe was laboring. A situation existed which was beggaring the people and breeding reactions that lead to the development of police states, where the liberties of the individual are lost and the forward march of the civilization of the world is set back to an alarming degree.

It was also apparent to us that mere relief measures would, in the end, be not only futile but would be very wasteful. The United States Government could not embark on such a program. But, given the compulsion of the desperate state of affairs then existing in Europe, there appeared to be a strong probability that the sovereign nations concerned might be persuaded to get together in mutual cooperation to a degree never before reached; which cooperation, with our assistance, would make possible the rehabilitation of the countries involved. It was based on this conception that the suggestion for the action leading to the European recovery plan was made. We felt that this country must not become involved in the initial agreements and recommendations. That was for those nations who were willing to enter into the cooperative effort which is now the basis for the recovery program.

Expectations recalled

I think you will be interested in our expectations as to what would be the response to the Harvard suggestion. You will recall that the suggestion was not limited to any particular part of Europe. We thought that it would be generally accepted in principle though the acceptance might not, in time, be followed by the degree of international cooperation and necessary concessions by sovereign states to be essential to the success of the program and to its acceptance by the United States. Frankly, we anticipated that considerable immediate opposition would be developed against the idea in this country. That this opposition did not make itself apparent for some weeks was due in all probability to the dramatic rapidity with which the European powers concerned rallied to a formal consideration of ways and means. History will give credit to those European statesmen who responded with such energy and vision to the needs of the moment.

It was a matter of serious regret to us in this country that certain nations refused to participate, though it was evident in some instances that their peoples desired very earnestly to do so. Plainly it was not a decision of peoples but of small groups of arbitrary rulers responding to Soviet direction. History will decide how wise or how deplorable was their decision.

What followed is well known to all of us, and some of you here present tonight have been leading actors in the enormous accomplishments of the past year, which in effect have reversed the trend of centuries and, in

the words of Mr. Hoffman, have made more progress than since the days of Caesar.

United States reaction cited

There is one phase of this affair which I think may not be fully understood and appreciated by my ambassadorial hosts, and that relates to the reaction of the American people. You can hardly be expected to understand fully, certainly your people could never completely grasp what is in the mind of a man, say, in Nebraska, regarding the intimate affairs of the people in Europe. He is a long distance from the seacoast that marks the boundary of this country in that direction. And even if he lived on the seacoast, there are many hundreds of miles of deep water between him and the trials and sufferings, the conflicts, and the traditions of the people so far distant.

There is a great difference between reading history and actually living it. For generations, ever since the birth of this Republic, our people have not only felt very remote in distance from Europe, but many of them are descendants of people who fled from Europe to escape the peculiar trials and limitations that fell upon people from time to time in the changing fortunes of that crowded but divided continent. Yet, seemingly in a moment, our American people found themselves in a position of not only the most intimate relationship with western Europe, but called upon to make more and heavy contributions to the welfare of your people.

To me, the impressive fact is that these people of the United States made an overwhelming and unhesitating decision to do their best to bring western Europe back to peace and prosperity. There were, of course, speeches pro and con but the American people rose to the occasion, to that world crisis, and declared themselves partners in the stupendous effort to restore Europe to a level of continuing peace. All participated—cities, towns, women's clubs, and the young people. Even the little children played a valuable part. That was, and continues to be, an impressive demonstration of the heart of America. And so it is hard to view this spirit of helpfulness, of unselfish public action, in the light of the disparagement and defamation that has been heaped upon us through the propaganda of dictatorships in a collection of police states where freedom, as we know it and as the common people of this earth long for it, is lost through the tyranny of a few who completely dominate the many.

Much to be done

There is much yet to be done and it is vitally important to the world that it be done. The recovery program was directed to the renewal of a working economy in the world so as to permit the emergence of political and social conditions in which free institutions can exist. That task is being accomplished. I think and I am advised, that the 16 nations concerned have in general met their estimates, and in important instances have far exceeded them. But these are economic details. We must now see that the political and social conditions are developed to the degree necessary for a continuing peace and prosperity. A feeling of security is essential to the future of Europe and the world. Improved economy helps tremendously to that end, but in the light of conditions as they exist today, that alone is not enough. The Atlantic Pact is significant of the future steps that are necessary to a restored Europe.

I feel that the prompt ratification of that pact is very important to the world, as is a continued and increasing cooperation on the part of all our countries in everything that that pact involves, as well as in the original recovery program.

I am deeply indebted to you gentlemen for the distinguished honor with which you have greeted me tonight, I repeat, it is a high compliment to come to a mere citizen such as I now am. I am very grateful and I thank you sincerely.

REMARKS OF HON. HARRY S. TRUMAN, PRESIDENT OF THE UNITED STATES

We of the United States are grateful to the other nations represented here tonight for honoring George C. Marshall. We are happy to join with them in this tribute to one of the greatest Americans of all time.

The nations represented here owe as much to General Marshall, in war and in peace, as they owe to any one man in the world.

He shaped the victory of the Allies in the recent war to an extent that may not yet be fully realized. He was one of coequals among the Joint Chiefs of Staff and the Combined Chiefs of Staff. Yet by the authority of his character and the quality of his judgment his influence was predominant in developing the strategy that brought complete victory.

Although General Marshall had richly earned the right to retire when the war ended, I asked him to give further of his great talent in the service of his country. His response was generous and complete—the response of a soldier and a patriot.

As Secretary of State in a critical period, he rose to new heights of leadership and achievement. He had been the master strategist of the war; now he rallied the democratic forces for peace. He found the free nations near despair and uncertain of their course.

He restored their confidence.

He revived their belief in the strength and the ultimate triumph of the cause of freedom and democracy.

When our times are viewed in the long perspective of history, I think General Marshall will be more widely remembered for the peacetime effort which bears his name than for his services of the war years, important though they were.

This is because the countries represented here tonight have embarked on a new venture in the history of nations. It is not new for nations to fight together against a common enemy. But it is new for nations to work together, as our nations are working together now, in close economic cooperation, to create a better life for their citizens and to build a lasting peace.

I believe that in years to come we shall look back upon this undertaking as the dividing line between the old era of world affairs and the new—the dividing line between the old era of national suspicion, economic hostility, and isolationism, and the new era of mutual cooperation to increase the prosperity of people throughout the world.

General Marshall will be known as one of those who brought this new era into being. But he would be the first to agree that it is more than the creation of statesmen. It comes from the minds and hearts of the people. Our peoples are united in their determination to work together to deal with the basic problems of human life.

This is the strength of the European recovery program. It was developed in concert and is being carried out by cooperative action. Western Europe is recovering its economic strength. The spirit of self-reliance and democracy is resurgent. Economic recovery is matched by a revival of hope, confidence, and faith in the capacity of people to govern themselves wisely and justly and to build a better world through their own efforts.

We have made real progress up to this time. But the ultimate test still lies ahead. None of us can afford to relax our efforts. I am confident that with mutual devotion to our common cause we shall succeed.

Our great hope for peace and prosperity lies in the developing sense of unity among the free nations of the world. We have learned full well that no nation can live to itself alone. And we have also learned that when the free peoples of the world stand united they are unconquerable.

The United States will continue to dedicate its strength and resources to the building of a peaceful and prosperous world. We will do so in the spirit so well exemplified by this great American we are honoring here tonight.

Dutch Government Commended on New Statement of Policy in Regard to Indonesia

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1949

Mr. SHAFER. Mr. Speaker, the Dutch Government which underwent considerable criticism late last year because of its determined police action in Indonesia, has assuredly made a definite come-back in international relations and for this, in due fairness, it should be complimented.

It is one thing to pursue uncompromisingly a course thought necessary, but it is another to accommodate one's stand and to bend to world opinion.

By this, Mr. Speaker, I do not mean that the policy of the government of the Netherlands has been wholly unreasonable in the past, or that outside forces, working for their own self-interest, have not caused some unfair smearing in our press. Smart publicity on the part of those who wish to monopolize the wealth of the Dutch East Indies has been used. Of this I think we are all well aware.

Since the subject of Indonesia was raised in connection with ECA, a new, and to me, a gratifying development has taken place. A spirit of mutual forbearance and compromise has been exhibited by both parties to the dispute. In addition, more information has reached this country as to the just desserts of each cause. We find that the grip of the American promoter and his pack of publicity men has been loosened on the Indonesians.

A preliminary accord was made under the auspices of the United Nations Commission for Indonesia on May 7. The Commission reported last week that conversations to work out the implementation of this accord had been held in an amicable spirit which seems to augur well for the future. Final agreement is obviously not immediately at hand, but a much more hopeful spirit of settlement is present, vastly improved over the violent times of only 2 years ago.

The armed intervention on the part of the Netherlands has come to an end—and considerable order has been the result. In justice to the Netherlands Government, a great and peaceful people, they acted when they thought that a surgical operation was needed.

The so-called Indonesian Republic, aided by American money, reached out for all the Indies, like Prussia reached for Germany, although the inhabitants of the nominal republic were only one-third of the people of the islands and the supporters were less.

The peaceful and long-range United States of Indonesia, which I am con-

UNIVERSITY OF MICHIGAN LIBRARIES

vinced the majority of the people want, and which involves Dutch cooperation and support, was lost sight of in America. Press agents confused the issue deliberately and fooled a lot of people in the United Nations Assembly and in the Congress.

Last December the Dutch told us that extreme disorder and chaos reigned in Java and that order must be restored for the protection of the Indonesians themselves, who did not want to be ruled by the Indonesians of the republic with their long record of collaboration with the Japanese and later the Communists.

We paid more attention to the press agents than the facts. But now, the chief exponent of the stern pacification policy in Holland has resigned and a new spirit now prevails. We now learn how the Dutch have already given the fullest possible autonomy to large sections of Indonesia, covering at least two-thirds of its vast territories which stretch 4,000 miles or more from end to end. Free governments are in operation there, responsible not to the Dutch, but to parliamentary assemblies elected by the people.

This fact should be broadcast far and wide in justice to the Dutch. They are apparently in earnest and trying to solve a problem of freedom, in an area of the world where communism has just conquered the world's most populous nation—China.

The fall of China points to Indonesia as a possible next on the agenda. The task of the Netherlands Government is not easy in these ominous times. To give deserving peoples full self-government is a problem fit for a Solomon in the twin dilemmas of founding a stable state, which takes time, and the onset of communism which allows little time.

We would be the first to condemn the Dutch if they abandoned these people to communism in the onrush through Asia. Let us be as temperate in our estimate of their task as they have shown themselves over hundreds of years.

We, in this country, do not like colonialism, but we like communism less. Let us withhold mistrust until the danger is past.

In Indonesia we find that people resent being called puppets of the Dutch when they achieve their freedom under the republic forming the United States of Indonesia Government. They practice evolution, not revolution. They are as resentful as Canadians would be were we to consider them puppets of the British.

Perhaps we have paid too much attention to the Republic of Indonesia with which the Dutch did have trouble, partly because the name of the government tends to make people think that it comprises the whole of Indonesia, while, in reality, it covers only part of it and is, by its own statement, destined to become a state of the common government in the future.

Under permission to extend my remarks, Mr. Speaker, I include a statement of the Netherlands Government with respect to Indonesia, as outlined by the Netherlands Foreign Minister, Hon. D. U. Stikker, in his address June 15, 1949, to the American correspondents on tour of Indonesia. It is this position on which I believe the Netherlands Government is to be complimented.

1. Indonesians want independence and the Dutch want them to have it.

2. The Dutch want to see a sovereign and independent United States of Indonesia established before the end of this year, if possible.

3. The Dutch want the new government to be formed under conditions which will permit all the elements in the population to be fairly represented without coercion or domination by armed minorities.

4. The Dutch believe that the majority of leaders of Indonesia want to establish a democratic government which is able to maintain law and order, deal fairly with foreign investors, and promote the political and economic development of Indonesia. The alternative to such a government is chaos and eventual seizure of power by communism.

5. The Dutch believe that the majority of Indonesians want and need the support of western democracies until such a government has had a chance to become firmly established, and until Indonesia's most pressing economic problems have been met.

6. Because of the historical ties between the Netherlands and Indonesia the Dutch are prepared to offer the fullest cooperation to the United States of Indonesia, and have suggested as an instrument of such cooperation a Netherlands-Indonesian Union under which the relationships of the two countries would be defined by entirely voluntary agreement and would be those of equal sovereign powers. Federalists and Republican leaders in Indonesia have agreed to such a union in principle and to attend a round-table conference at the Hague this summer to establish the union and arrange the details of the transfer of sovereignty.

7. The Dutch do not seek any special privileges as opposed to those of other nations in any economic relationship it may have with the future United States of Indonesia.

8. The Dutch believe that the western democracies should view all decisions with respect to the future of Indonesia in the light of advancing communism in Asia.

9. The Dutch believe that western nations should seek ways in which they can help Indonesia raise its living standards, maintain and develop a democratic form of government, and stand as a bulwark of freedom in southeast Asia.

The Committee on Un-American Activities

REMARKS

OF

HON. EUGENE J. McCARTHY

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. McCARTHY. Mr. Speaker, I protest the unwarranted and unauthorized action of a minority of the members of the House Un-American Activities Committee in requiring reading lists from colleges and universities in the United States. Members of the House were given assurance when this committee was reestablished at the beginning of this session that the committee would submit to the discipline of the rules, and that it would not again be a device for publicity seeking, to the discredit of the House of Representatives, and in violation of the American tradition of freedom of thought and of expression. This most recent action grossly violates this tradition, and betrays the assurance given when the House was called upon to authorize the committee. Primary time is approaching. There are, undoubtedly Members of the House who would rather run for office as investigators than run as legislators.

I am including in the RECORD today the statement of Mr. J. L. Morrill, president of the University of Minnesota, and recommend it to the membership:

It is gravely unfortunate that the House Committee on Un-American Activities proceeded as it did in seeking information. The disturbed reaction to its request for textbook lists indicates widespread doubt and concern about what turn its investigations may take. They could harm educational institutions irreparably.

But even though we question vigorously the wisdom or justifiability of the request, as Vice President Malcolm M. Willey has rightly said, we shall furnish the textbook list because this is readily available and because the university will not refuse information to any duly constituted committee of the Congress. The list of reference books, running into the thousands upon thousands, we shall not spend time and money to compile unless it is insisted upon.

So far as I am concerned, I have confidence in the integrity and the good judgment of the Congress, regardless of the activity of any single committee. The Congress certainly will repudiate any serious threat to democratic freedom in general, or academic freedom in particular. I would hope that the House committee, sensing the sounder judgment in which the American people undoubtedly share, will back off from its own questionable course of action, and I hope educational associations in this country will exert every possible pressure to force them to do so.

It is the business of educational institutions to understand and analyze ideas, and to protect freedom by developing an awareness of the dangers to it. They must stand together in proclaiming this fundamental truth.

The best answer to the committee's dubious procedure is in the statement of the Educational Policies Commission of the National Association, which puts communism in perspective and reaffirms the intelligent patriotism of the teaching profession.

The Farm Program

EXTENSION OF REMARKS

OF

HON. CLYDE M. REED

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, June 20 (legislative day of Thursday, June 2), 1949

Mr. REED. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Tough Job Ahead" from a recent issue of the Fredonia (Kans.) Herald, which is one of the representative newspapers of Kansas.

There being no objection, the editorial was ordered to printed in the RECORD, as follows:

TOUGH JOB AHEAD

Yesterday at Des Moines organized labor put its arm about the shoulder of the American farmer and said, in honeyed tones, "Come on baby, let's woo."

If, say labor leaders, if the American farmer can be persuaded into the voting camp

of organized labor, the rest of the world can go its sweet way, for farm and labor will control the world.

It makes sense, but only with a great big "if."

In the first place, no man has yet operated a farm on a 40-hour week, with time and a half for overtime, double time for Sundays and holidays, hospital pay, old-age retirement and 2 weeks off each year for vacation.

It is a queer thing, but the weather doesn't give a hoot for unfair labor practices, and the little chickens, calves, and pigs have to have theirs, whether it's 10 minutes past quitting time or not.

The farmer must work the clock around, it seems, 365 days a year and he looks with no kindly eye on the antics of labor leaders who insist their followers be paid from the time they rise from the breakfast table until they tuck their tootsies under the patchwork quilt at night.

The farmers get no kick out of Wagner act inspectors snooping around to see if their kids go after the cows and thus place their little souls in mortal jeopardy. They want no one around to see that the farm-wife has proper ventilation in the kitchen, a stool to sit on, and a separate toilet from the menfolks. They look on a lot of what labor consider a just due as so much folderol.

It's going to take a lot of educating, and we don't believe it will come in our time.

And on top of that, it is a dangerous practice, trying to inculcate the farm mind with certain labor prerogatives, for if the farmer ever goes on strike a lot of laboring folks are going to have mighty thin stomachs before it is over.

Remember Malmedy?

EXTENSION OF REMARKS
OF
HON. MATTHEW M. NEELY
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Monday, June 20 (legislative day of Thursday, June 2), 1949

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Remember Malmedy?" written by Herbert Pell, former United States Ambassador.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REMEMBER MALMEDY?

(By Herbert Pell, former United States Ambassador)

What happened at Malmedy? Almost everybody has forgotten that name. German SS soldiers massacred Americans who had surrendered to them. In March 1948, General Clay reduced 43 original death sentences in the Malmedy case to 12. The cases of the 12 were once more reviewed by General Clay and some sentences confirmed, others commuted.

After all, what did these men do? They shot a lot of American privates whose names today are forgotten by all but their immediate families, and they now represent that efficiency which may build up in 5 years a prosperous customer in Germany. They are men who will be, as their fathers were, ready to borrow money through big New York banks with which again to buy the products of American factories in which the bankers are interested and set up a new war machine.

Why should we not pardon these men? The profit will come to us; the present leaders of government and of finance will have slipped into their graves before the next war, just as most of the leaders of the United States who sacrificed the hope of peace to elect Harding in 1920 had left the scene before Pearl Harbor.

It has even been suggested that these kindly Nazis who, of course, never were willing to hurt a fly, were actually roughly and discourteously treated while they were prisoners—men who had killed a lot of Jews in concentration camps, who had stolen and raped all over Europe because they had the power to do so, but who apparently had done nothing really reprehensible, were not kindly treated by the American soldiers merely because the American were the companions of the people they had murdered.

Would it not be better to offer these men a reward and an apology, understanding that the country of Goethe and of Wagner (should we or should we not offend them if we said of Heine and of Bach and of Einstein?) cannot really mean to do any wrong, however much appearances may from time to time be against them. Poor deluded fellows, they were fooled by Hitler as their fathers were dazzled by the Hohenzollern and as their sons are preparing to be bamboozled by someone else in the not so distant future.

Our Saviour taught us to pray God to forgive us our trespasses as we forgive those who trespass against us, but he did not say as we forgive the strong for the trespasses that they committed against the weak who have no hope for earthly justice except in the fairness and determined courage of the United States.

Justice, and we can thank God for it, means more in the long run than profits. If all the injured and shattered of Europe who have with such pathetic confidence turned to us are denied justice because of legalism, sentiment, political pressure, or financial gain, we need not be surprised if they turn elsewhere when in the future they want to see their humanity treated as something else than a number in a question of economics.

Put it perhaps more crudely still: fear is a more powerful force than hunger. No amount of wheat, bulldozers, or bathtubs will prevent them from turning away from us when again they need a bastion against brutality.

Long after all human and material hope seemed to have departed, they continued to fight for the hope of justice and for nothing else. Again speaking from the lowest and most selfish point of view, is there any military or business sense in once more abandoning them and reenforcing the argument of the opponents of the United States who say that no one but a fool will trust the fairness and determination of America?

Facts About Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. McGREGOR. Mr. Speaker, as I am not a member of the Education and Labor Committee of Congress, before which S. 246—Federal aid to education—is being heard, I, at this time, am taking no sides as to whether the bill should be passed or defeated. I do feel, however, that full consideration of the bill—both pro and con—should be given.

With this thought in mind, on Thursday, June 16, I inserted in the Appendix of the RECORD a chart showing the cost and benefits to each county in Ohio of S. 246—Federal aid to education. This chart shows that of the $268,083,000, which is the total cost of the bill, Ohio taxpayers will pay $15,629,000, or about 5.83 percent of the entire cost. The amount returned to the State of Ohio, under the provisions of S. 246, is $7,320,000.

The costs and benefits, as it would affect the six counties of the Seventeenth Ohio District, are as follows:

	Cost	Received by county
Ashland	$57,827	$29,426
Coshocton	48,450	31,476
Delaware	35,947	25,327
Knox	56,264	30,232
Licking	101,589	66,100
Richland	203,177	78,031
Total	503,254	260,592

In addition to the costs and benefits derived from this legislation, the big question is "Will our State department of education, our local school boards, and the heads of our local school systems lose their control by the passage of S. 246? Will this bill put the control of our schools in the hands of Federal officials in Washington and further lead us down the road to socialism and statism?

Government Economy

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, June 20 (legislative day of Thursday, June 2), 1949

Mr. WILEY. Mr. President, from all over Wisconsin I have received messages emphasizing the deep concern of the people of my State in the Federal deficit that is looming up. Our people are more aware than ever before that the time is overdue for Federal economy and retrenchment if we are to maintain this Nation solvent.

The Hoover Commission reports represent a bright hope for Federal economy. In addition, Senate Joint Resolution 108, of which I am a cosponsor, and which would cut some two to four billion dollars from the Federal budget, also represents a source of hope for fiscal sanity.

I ask that there be printed at this point two editorials from two newspapers in my State. The first is a terse statement from the Shawano County Journal on deficit financing and the second a brief commentary by the Milwaukee Journal analyzing the increasing trend toward Federal grants-in-aid and pointing out the huge costs that are involved.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Shawano County Journal of June 9, 1949]

DEFICIT FINANCING

The President of the United States has asked Congress to approve a budget for the fiscal year beginning next July of $42,000,-

000,000 to $44,000,000,000. The budget for the year ending July 1, 1948, was $33,800,000,000. Are we going nutty?

Let's face the facts: Tax receipts are falling off. The business volume is slipping. The President stands pat for his tax plan. "We, the People" can't understand all of this.

And apparently the political powers that rule the Nation evidently ignore the fact that we are going deeper and deeper into the hole.

At least one outstanding publication in Washington predicts that the new victory loan drive will not bring enough money into the Government Treasury to meet its financial needs. In short, it is charged that the new bond drive is embarked on an era of deficit financing.

[From the Milwaukee Journal of June 3, 1949]

THE STORY OF TAXES AND AIDS

Year after year, local governments go to State Governments and State governments go to the Federal Government to promote schemes for aids. In recent years, the emphasis has been on Federal aids. The theory apparently has been that, when Uncle Sam carries the burden, the people are somehow spared the costs. The fact, of course, is that, when Washington does the job, costs multiply.

Just look at the matter practically and it will be clear that the farther away is the administration of the money, the more costly the administration is bound to be.

When the Federal Government aids a locality, it does so through a State set-up. Local administration, which must meet Federal standards, costs more than it would if only the locality's own money were involved. State administration, which must also meet Federal standards, adds a considerable item of cost. The Federal administration itself, which must expand to take care of all the 48 States, usually ends by involving literally thousands of employees who take care of literally millions of records.

The end result is that taxes must not only cover the actual costs of doing the desired job of construction, or relief, or security, but must also cover an army of administrators, acres of filing space and tons of supplies.

Federal aid is anything but cheap to the poor local taxpayer. The tax burden on all of us may easily be twice the benefits which flow back to the local projects.

The Work of Paul G. Hoffman Is Appreciated Notwithstanding Impressions Left to the Contrary

---

REMARKS

OF

HON. THURMAN C. CROOK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. CROOK. Mr. Speaker, recently we received a letter edged in black reminding us that the Honorable James Forrestal, a great public servant, met with untimely call to join the bosom of divinity. Perhaps many of the living that have never learned the art of appreciation for service well done, played no small part in hastening his early departure.

While our Nation yet mourns the death of this noble patriot, we, here on Capitol Hill, have experienced an episode that has placed a discouraging burden upon the shoulders of another esteemed public servant, and I refer to no other than the Honorable Paul G. Hoffman, ECA Administrator, who recently, in the Senate Appropriation Committee, was told it would be better for our country were he to resign from his position.

Paul G. Hoffman was never on his knees praying and shedding crocodile tears for the position he now holds, and he is not so attached that it is impossible for him to relinquish his claim when his services are no longer appreciated.

Mr. Hoffman was asked to take over the administration of the ECA and he answered the call at much personal sacrifice. His unexcelled administrative ability as president of the Studebaker Corp. of South Bend, Ind., honesty, integrity of character, lofty ideals, foresight, and broad perspective, linked with profound desire for early European recovery and the building of a superstructure of brotherly love throughout the world reenforced with a just and lasting peace, fully qualified him for the gigantic task which he was called to perform.

Sometimes in our hasty remarks we say not what we mean. A good businessman must have frank opinions. Whenever any man working in the affairs of Government is fearful of facts and desires to classify them as "unduly high pressure," then he should insist on the employment of a puppet rather than an administrator with whom to work.

Sometimes I am stimulated to wonder how we are ever able to secure the services of good, honest, capable, and reliable officials when they know they are ever subjected to criticism and accusations too often designed to defame their name, character, and honorable standing in their home community, State, and Nation.

We of South Bend and the State of Indiana highly revere Paul G. Hoffman by virtue of his splendid business record, integrity, and civic leadership, and we consider recent statements that have shaded and retarded his efforts in the European Recovery Program to be unwarrantable. Further expression of our feeling is disclosed in the following editorial taken from the South Bend Tribune:

HOFFMAN'S POSITION

ECA Administrator Paul G. Hoffman did not commit a crime when he told members of the Senate Appropriations Committee that he would resign if the appropriation for operation of his agency in the 1949–50 fiscal year seemed inadequate to him. In a sense Senator KENNETH MCKELLAR, Tennessee Democrat, was right when he said that Administrator Hoffman attempted to bring pressure on Congress in that statement. It does not, however, appear to be illegitimate pressure.

Administrator Hoffman, who is giving public service at considerable personal sacrifice, is entitled to and has positive ideas about what is needed for ECA maintenance. He naturally does not have a desire to serve as head of an organization having mere token significance. Honest differences of opinion exist about the maximum and minimum responsibilities that this country should assume through the ECA system. Administrator Hoffman should not be accused of sinister plotting, even by implication, for expressing his opinions frankly. Fortunately it looks as if Senator MCKELLAR spoke only for himself when he said that Mr. Hoffman ought to resign.

The Housing Bill

REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. VURSELL. Mr. Speaker, Wednesday of last week my very good friend and able colleague of Chicago [Mr. O'HARA] attempted to answer and refute certain statements I had previously made on June 7 in opposition to the Federal housing bill.

He attempted to convey the impression that I had secured some of the information with reference to the housing bill, and that I had been influenced in my thinking by what he termed the real-estate lobby.

I have been in Congress over 6 years now, and I have never yet been influenced in decisions I make by lobbyists from any direction. This administration, when it attempts to put over socialistic legislation, always cries out against special public interests and powerful lobbies in an effort to give the people the impression that the supporters of the administration are immune from lobbyists and are trying to protect the interest of the masses. In attempting to put over this Federal housing bill, which is shot through with socialism, they are using the same false cry from the President down.

In the years I have been in Congress, I have seldom been approached by the representatives of the big-business interests. I have been lobbied by bureaucratic organizations, left wingers by the hundreds, labor organizations, and various pressure groups time and time again. The national public-housing organization, and Government-paid propagandists are the lobbies really spending large sums of the taxpayers' money in support of this bill.

When people high in Government, and Members of Congress, give our statements to the public which would indicate that lobbyists representing special interests are controlling the action taken by the elected Representatives of the people of this country, they are striking a blow at and doing great damage to our representative form of government.

Mr. Speaker, in Mr. O'HARA'S address of considerable length, he does attempt to make one point worthy of consideration. It is "that I was mistaken when I made the statement that this public housing program, if carried through, would cost the Government a total of $20,000,000,000."

I am quite frank to admit that it is possible that it might cost a little less than $20,000,000,000. However, it is more likely that the real mistake I made was putting the cost as low as $20,000,000,000, because if this project to house 1,050,000 people in the low-income group is put through and completed, the same socialistic planners, having won the first victory, will doubtless come back to the Congress at the next session with plans to expand this legislation to include 7,455,800 families in the 70 percent just above

those provided for in the present bill whose annual earning income is less than $1,600 a year. Anyone must know that if you take care with low rentals the group just under this $1,600 income that this larger group will feel that they are entitled to the same equal treatment. A program to include the latter group, added to the present program, would cost over $100,000,000,000.

Mr. Speaker, fortunately, however, there is that added possibility that this political vote-catching scheme of housing, which is planned to be operated through the setting up of local housing authorities, when analyzed by local groups in the various States who will be called upon to join in its cooperation, will realize that it is so wild and unworkable, so worthless and dangerous to the country, that few local housing authorities will be willing to cooperate. If this happens, the Government may not be able to find such housing authority outlets as would permit the spending of this $20,000,000,000. It is just possible that might happen, and if it does my figures, of course, would be too high.

The bill itself provides and authorizes the expenditure of $19,312,500,000 for the purpose of building 1,050,000 family units, plus unlimited expenditure for research, which will bring the total expense to $20,000,000,000. I have never known a governmental agency set up for the purpose of spending money, as this agency is being set up, that has failed to spend to the limit of its authorization. It will be difficult, with the experience the Congress has had with bureaucracy here in Washington, to convince the Members who must pass on this legislation that they will not spend the entire $20,000,000,000 limit if given the opportunity. If, as they say, it will not require more than $10,000,000,000, they should reduce the amount in the bill at once to that amount.

Mr. Speaker, it will be argued by some Members favoring this legislation, that under the wizardly confusion set up by the bureaucrats in financing these projects, that out of the small-loan provision, some of the money will be paid back.

Let us say that the average rental of apartments in a certain housing authority is $30 per month, but that the real rental to properly amortize such a rental investment should be $60 a month. The $400,000,000 given by the Government to local agencies goes to pay administrative expenses, interest on bonds, the differences in subsidies on rentals, maintenance, and upkeep, along with the small amount the renter pays. There is a possibility that a very small amount of this loan fund may be paid back into the Government, which might amount to 10 or 20 percent. There is a very definite possibility that none of it will be paid back, because you are dealing with a paternalistic Federal Government that generally spends more, or as much as their authority will permit.

In that connection, the gentleman from Michigan [Mr. WOLCOTT], in the hearings before the Committee on Banking and Currency at the Seventy-sixth Congress, upon a similar bill, entered into the following discussion with Mr. Leon Keyserling:

Mr. WOLCOTT. In other words, your annual contribution, according to this example which you are using, is about the equivalent of the debt retirement.

Mr. KEYSERLING. Yes.

The facts are that while we talk about loaning them this money for building the houses, we, on the other hand, through the $400,000,000 a year, are giving them money with which to pay the loans. So in reality, it is not a loan, but a subterfuge.

Mr. Speaker, I am aware that the Bureau of the Budget, hard pressed by the members of the committee for an answer to how much in its judgment this program will cost, has, after the use of a great number of words, estimated it may not cost over a total of $11,000,000,000. This report, when carefully analyzed, shows conclusively that their reasoning is not based upon sufficient facts to justify such an estimate.

I think it would be well in this connection to refer to a report made by the reputable accounting firm of Snyder, Farr & Co., of 1333 G Street NW., Washington, D. C., who, after having made an analysis of this piece of legislation, make the following report:

The direct financial commitments of the Federal Government as specified in H. R. 4009 and detailed in schedule attached hereto, are summarized as follows:

Direct loans and grants, $2,750,000,000; grants and contributions, $16,562,500,000; total direct financial commitments, $19,312,500,000.

In addition to the direct financial commitments, the Federal Government is committed to the expenditure of indeterminate amounts for: housing research (title 3), administrative costs, etc.

Due to the number of government departments involved, and the lack of adequate information on which to base an estimate, no attempt has been made to determine the probable cost of these items.

Respectfully submitted by Snyder, Farr & Co.

G. R. SNYDER.

I think when you add to this estimate that many of the ablest Members of this Congress, who have had a chance to thoroughly study this bill, who are members of the Banking and Currency Committee and the Rules Committee, that it is their contention that the completed operation will cost approximately $20,000,000,000, my statement is justified.

Mr. Speaker, for the information of the gentleman from Illinois, I should like to state that it did not require any lobbyist for or against this legislation to help me make up my mind to oppose it. I opposed this legislation 2 years ago, and I am opposing it now because I know that any time you ask the Federal Government to do a job, that it costs more money than would be required if done by private industry.

I oppose it because it is poltical housing. Were it not for the political aspects of this housing bill, it would not be before this Congress. Were it not tied up with the political possibilities and the political influence, such legislation may have on the masses, who are promised rentals at half price at the expense of the public, this bill would not get a hundred votes in this House.

I oppose it because it is, in fact, using the power of the Federal Government to destroy the great building industry of private enterprise. When the Government destroys a private enterprise, then the Government takes over its functions and that is socialism. This will mean that the Government will socialize the building of homes as it did in France.

I am opposed to this bill because it will take money, through excise taxes and otherwise, from the really poor, like those living on small annuities and old-age assistance, who will not be permitted as occupants in these low-rental buildings.

I am opposed to this legislation because out of the 3,700,000 families, who earn less than $1,000 a year, a special group of 1,050,000 families would get the benefit of these low rentals, while 2,200,000 families in this same category with an income of less than $1,000 a year would have to pay additional taxes for the favored few.

I should like to point out that in the strata of income of families just above this lowest one-tenth I have discussed, that there are 7,456,000 families whose annual incomes are under $1,600. The taxes of this great group of low-income people, again, would be increased as well to give the 1,050,000 low-cost rentals.

If this bill is passed, it would be only justice to the 7,456,000 families to extend this legislation next year to provide them with equal rental opportunities, and that would cost far beyond $100,000,000,000.

If we pass this legislation, there will most likely be a bill presented to the Congress next year by these same planners to take care of this group.

I give you these figures from the Bureau of Labor Statistics to show you what a dangerous mistake we are about to make, in even seriously considering this revolutionary, socialistic program which will destroy the financial solvency of this Nation.

I am opposed to this legislation because it will rob the men and women of their cherished ambition to work and save to build and own their own homes. This legislation strikes another destructive blow at the moral fiber of the American people.

I am against it because it will mean less homes at greater cost, rather than more homes.

Mr. Speaker, the bill in section 2, in its declaration of policy in its first paragraph, holds out a false and impossible promise to the American people when it promises: "the realization, as soon as feasible, of the goal of a decent home and a suitable living environment for every American family." What a false, dangerous, and deceptive hope to hold out to the people.

Everyone knows that the attainment of that goal, physically and financially, is impossible. It is a utopian, deceptive political statement. It has never been the policies of the founders of our Government to make such a guaranty to our people. Such guaranties could not

be kept, if made, and every sensible person knows it.

The American people who are worth their salt, and most of them are and will remain so, unless the moral fabric is further destroyed by the Federal Government promising them everything, still have enough pride that they want to build their own homes like the pioneers who builded their early homes and at times log cabins along the rivers in the early days of this country. And who by their own efforts conquered the plains and builded the greatest nation in the history of the world. If their pride and character had been weakened by such legislation, they would not have succeeded.

If you take away this incentive, as this bill attempts to do, you will strike a terrific blow at the greatest heritage and wealth this Nation has today—that is the ambition, character, independence, morals and pride of the American people.

Mr. Speaker, the gentleman from Chicago in his address before the House, was questioned by the gentleman from New York [Mr. MULTER] as to the selection of tenants for admission to public housing projects now operating in Chicago. His reply, with reference to the operation of public housing in Chicago was as follows:

As is the case elsewhere, there has been good administration of public housing in Chicago, and there has been complete divorcing from politics. No one has even suggested scandal. There has been none.

I think the best evidence to show that my very worthy colleague is not fully informed as to how well or how bad public housing has been operated in Chicago, is to close my remarks by inserting an editorial under date of October 15, 1948, appearing in the Chicago Tribune. When you read this editorial, which gives the facts as to political housing in Chicago, I think you will agree that my colleague was wholly uninformed and that you will further agree that the conditions uncovered in Chicago will be multiplied a thousand times throughout the United States if this housing bill is approved by the Congress:

YOU PAY HIS RENT

The Chicago Housing Authority has notified a photo instructor, earning $8,290 a year, that he will have to move out of one of its projects for "low income" families. His is one of 200 families ordered to move because their incomes exceed the maximum allowed in the projects. All have family incomes exceeding $5,000 a year. One family, with four employed, earns $12,638.

The housing authority's press release says that the 200 families were told "that October will be the last month in their present living quarters." That's real optimism. The authority started eviction proceedings against some other high income tenants a year ago August. They are still living in the projects, while the appellate court decides an appeal in the case.

There are another 2,833 families in the projects whom the authority is making no move to evict, although their incomes also exceed the maximum. They and the 200 families average $3,394 a year. The last average wage reported in Chicago by the State department of labor—for individuals, but not family units—was less than $3,000 a year.

As a Federal income taxpayer, you pay a large part of the rent of the $8,290-a-year photo instructor. Federal subsidies to the projects are calculated to pay off the total building cost, with interest. If you own real estate in Chicago, you pay a second time to provide police and fire protection for this man of means and the schooling of his children, if any. The so-called contributions in lieu of taxes by the Housing Authority are about one-tenth of what taxes would be on property of equal value owned by a private citizen.

All this was done on the theory that it was a public duty to provide housing for people of low incomes. The moment they started building the public housing people announced that, of course, they still couldn't provide housing for people of the lowest income. Now, in Chicago, they report that 39 percent of their tenants have incomes in excess of the very liberal maximums. They accept tenants earning as much as $53 a week, only about $4 under the city average. The Housing Authority warns that it will not be possible to evict the over-income tenants in a month or so. Considering progress to date, the warning is hardly necessary. Actually, the tenants probably couldn't all be evicted if the Authority went at the task in earnest, because of the disposition of municipal judges to ignore the law whenever a chance appears to woo a vote.

There is no reason why a group of 7,680 families, among all of the thousands in Chicago seeking adequate shelter, should have the larger part of their rent paid by other and often less comfortably housed families. If the favored few can't be evicted, they can be required to pay what their apartments are worth.

That is unlikely to be accomplished under the Housing Authority. The projects should be sold to private owners, free of rent controls, so that the taxpayers whose money is tied up in them can salvage as much as possible. Private management, eliminating the social worker fads and frills and the overloaded pay rolls of the public operators could probably make a profit at rents which most of the present tenants could afford to pay.

Veterans' Legislation

REMARKS

OF

HON. JAMES G. POLK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. POLK. Mr. Speaker, I wish to call the attention of the House to a resolution recently adopted by the Mathews-Carter Post, No. 325, of the American Legion of Manchester, Ohio, concerning veterans' legislation.

The resolution is signed by Harold C. Wilson, post commander, and attested by R. W. Poole, post adjutant, and was sent to me by Mr. Oscar R. Howell, vice commander of this American Legion post. It is as follows:

Whereas the present compensation program for veterans of World War I is wholly inadequate, and most veterans of World War I have passed their fiftieth birthdays and are finding it increasingly difficult to compete on the present labor market which demands younger men; and

Whereas many of these veterans are suffering from diseases or wounds incurred in or aggravated by World War I service:

This post resolves that you support with all your energy and integrity any measures designed to relieve financial distress in so many of World War I veterans' lives, and care for them in a manner befitting the valiant service they gave to their country in 1917 and 1918.

HAROLD C. WILSON,
Post Commander.
Attest: R. W. POOLE,
Post Adjutant.

I fully concur in the views expressed by this resolution and wish to call the attention of the House to a discrimination against World War I veterans in the housing bill, H. R. 4009, which limits veterans' preference in low-rent public housing to those who served in the armed services between September 16, 1940, and July 26, 1947—page 30, lines 9, 10, 11, 12.

To remedy this situation I propose to offer an amendment to section 202 of H. R. 4009—line 9, page 30, as follows:

The term "veteran" shall mean a person who served in the air, land, or naval forces of the United States during any war between the United States and any other nation and who shall have been discharged or released therefrom on conditions other than dishonorable. The term "serviceman" shall mean a person who served in the air, land, or naval forces of the Unites States during any war between the United States and any other nation. Deceased veterans and servicemen shall mean men or women who served in the air, land, or naval forces of the United States during any war between the United States and any other nation and who died in service before the termination of such war.

On behalf of the veterans of World War I, I urge your support for this amendment when the bill comes up for consideration in the House.

Utilization of Womanpower

EXTENSION OF REMARKS

OF

HON. MARGARET CHASE SMITH

OF MAINE

IN THE SENATE OF THE UNITED STATES

Monday, June 20 (legislative day of Thursday, June 2), 1949

Mrs. SMITH of Maine. Mr. President, Hon. FRANCES P. BOLTON, the distinguished Representative from Ohio, has written a most thought-provoking article which appears in the June 1949 issue of the American magazine. She writes on a matter that we all should give serious consideration. Her manner of expression is not only courageously direct and intellectually honest but it is arresting and easy reading.

While the title of the article is "Women Should Be Drafted," the article at no point proposes a peacetime draft. It does emphasize peacetime reorganiza- of the women's components of the armed services for adequates preparation.

FRANCES BOLTON'S article is a forward-looking challenge based on findings of experience in World War II. It should stimulate calm, serious consideration of the whole practical problem of how womanpower, as well as manpower, can best be organized on 24 hours' notice in

the event of an emergency. It underscores a slogan of mine, "Don't Wait—Anticipate."

I ask unanimous consent that this article be inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WOMEN SHOULD BE DRAFTED

(By FRANCES P. BOLTON, United States Representative from Ohio)

(Under our present laws, in case of national emergency young American men can be drafted into the armed services on 24 hours' notice. There is no such provision for the drafting of women. All indications are that another war would require the services of women more than ever. If we are to consider revising our draft laws to include girls, the time to decide is now rather than to wait until after an emergency has arisen. That is why we asked Representative BOLTON to express her views on the question.—The Editor.)

In order to win World War II, the United States Army found it necessary to keep 10 soldiers behind the lines for every fighting man at the front. If we should ever become involved in a third world war—a possibility which we are today spending billions of dollars to prevent—military experts say that those 10 men would not be enough to support one combat soldier. Yet we came close to the limits of our manpower in the last war. If we are to be prepared to defend ourselves in the future, we had better get ready, for the first time in American history, to draft women into the armed forces.

This is not war hysteria. We know that preparedness is the best peace insurance. We also know that only the total strength of the Nation mobilized behind our combat troops could bring victory in the technological, push-button warfare of tomorrow. Our total strength is not just the male half (actually less than half) of our population. We shall need fully mobilized womanpower, as well as manpower, in any future emergency. I believe it is time to consider a new basis for selection which will make it possible to draft our young women the same as we now draft our young men: according to their fitness to do a vitally important job—the job of defending America.

The drafting of nurses was proposed during World War II. I made up my mind at that time that such discriminatory legislation was unjust, particularly when the group involved had raised a corps of 57,000 trained women to meet a pressing need. If we are to look at future possibilities realistically, it seems to me imperative that we face up squarely to what total war in an atomic era would mean, and set up such defensive machinery as we can to meet it.

During the course of the last war, some 250,000 American women were in uniform. They served gallantly, but there were never enough of them. Although the War Department tried to recruit 1,000,000 volunteers for the Women's Army Corps, peak strength barely exceeded 100,000. The goal of 1,000,000 was based on urgent requests for Wacs from commanders in the field, who found, once they became accustomed to women in "a man's army," that they couldn't get along without them. They discovered that a modern defense machine needs women's skills as much as it needs men's strength. Had the war continued, military leaders estimated that 1,500,000 Wacs would have been required for an efficient army. Yet few persons had the courage to suggest openly that they should be drafted.

I have heard chivalrous members of the male sex—including some of my esteemed congressional colleagues—express unalterable opposition to any measure which would require their daughters, their sisters, or just women in general, to serve in the armed forces. I am afraid that such gallantry is sadly out of date, and as a woman I find it rather stupid. Why should we imply that American women are not as ready as American men to serve their country? We do not draft our young men because we think they are shirkers, but because selective service is the most efficient way to organize our national strength. I believe that women today are more than ready to assume even these responsibilities of their citizenship.

Most of the arguments against using women in the armed forces should have been settled by the magnificent performance of our Wacs, Waves, Spars, and Women Marines in the last war, and by our Army and Navy nurses in one war after another for half a century. Evidently this story has not been told often enough, however. I still hear it said that women aren't suited to military life, that they can't submit to discipline, that they cost the Government more money than men—and maybe it would just be better for everyone if they stayed home out of harm's way.

General Eisenhower gave the answer very plainly in testifying before a congressional committee in 1947. "For the particular tasks for which the woman is particularly qualified in war," he said, "she is far better than any man in the Army." The general made it plain that he did not consider women merely as pinch hitters in men's jobs. He also testified that disciplinary problems in the WAC were practically nonexistent.

I remember being told once by an Army officer of the old school that it would take at least two women to do the work of one man, so that using them in the services would be an inexcusable waste. Actual World War II experience proved that there are hundreds of essential noncombat jobs in the Army, Navy, and Marine Corps where women make the first team and it's the men who are misfits.

As typists, telephone, radio, and teletype operators, training instructors, dental and medical technicians, cryptographers, and in many other posts, women's aptitudes and usual civilian training make them the natural choice. To quote General Eisenhower again: "The jobs to which women are assigned are performed more efficiently than men do them in the normal case. When you can fill various types of duty with women, you save actually in total numbers."

At the beginning of the war, the Army decided that women could be useful in four jobs: clerk, telephone operator, driver, and cook. Before the end of the war, women were doing more than 200 different kinds of jobs in the Army, and filling some 450 different billets in the Navy. In tasks that demanded patience and concentration, attention to detail, or nimble fingers, the armed forces found that women carried off the honors.

WAC contingents followed our troops to England, France, New Guinea, and the Philippines, working under sniper fire and buzz-bomb attacks. In Italy, WAC telephone operators manned switchboards a few miles behind the fighting front. Army nurses were on the Normandy Beach behind the first wave of troops on D-day. Women were not exposed unnecessarily to danger, however. Although a number of nurses were killed by enemy action, WAC casualties amounted to only 13 wounded, according to Army figures.

Most of our women did not serve under battle conditions. They were to be found mostly in supply depots, hospitals, air bases, ports, and in administrative jobs in various headquarters. At the huge naval communication center in Washington, three-fourths of the personnel were Waves. Women Marines made up 87 percent of the enlisted personnel at corps headquarters. Servicewomen ran hospital laboratories, instructed fliers in navigation and gunnery, operated flight-control towers and radar stations, and even tested rockets for the Navy.

Some 500 young women Wasps served as ferry pilots for the Air Force, delivering combat planes from factories to air bases all over the United States. Although they were doing a highly skilled and hazardous job which released Air Force pilots for combat duty, these girls were never given the recognition nor the benefits of military status.

All this is enough to show, it seems to me, that the armed forces have not only a definite place, but a desperate need, for women. At first, of course, there were veteran Army and Navy officers who stoutly defended their services from the feminine invasion. They were sure that the mere presence of women would destroy efficiency and ruin discipline.

I knew a colonel who had once shared this feeling, and who told me after the war of an experience in a certain headquarters where he had served. "Our nerves had been frayed out for months," he said, "and every time something went wrong we all lost our tempers. Then they sent us two WAC lieutenants. After that we couldn't cuss one another and kick the furniture around when we struck a snag. We had to sit down like gentlemen and work it out. Efficiency went up 200 percent, and I decided right there that every high-level office should have a couple of Wacs around, just to keep the machinery oiled."

I don't think much time need be spent in answering those few gossips who whispered about the character of the young women who volunteered to wear their country's uniform. It may be noted in passing, however, that a similar lack of respect was occasionally shown to American servicemen by civilians, in the years before the draft and the war brought the facts of military life home to everyone. Women should not be in the position of serving their country on sufferance; they should serve as men do—because their country needs them.

A step in this direction has already been made with the passage by Congress last year of the Women's Armed Services Integration Act, which for the first time makes it possible for women (other than nurses) to become a part of the Regular Army, Navy, Air Force, and Marine Corps. Heretofore women were accepted only as a part of our Reserve, or temporary wartime, forces, without the job security or retirement benefits which go with Regular service.

It was recognized by Congress that if we were to keep any sort of professional nucleus of women officers and noncoms in the service, it would be necessary to offer them a permanent career. This professional group is limited by law to 2 percent of the authorized strength of the Regular services, and the act provides as well for a reserve of trained women.

While I am heartily in favor of encouraging women to enlist and earn commissions in the Regular Army, Navy, Air Force, and Marines, this does not solve the problem, any more than the existence of our small corps of career soldiers and sailors does away with the need for selective service for men in time of national emergency. The professionals provide the leadership; they do not provide the manpower. So far as the women's services are concerned, we are creating trained leadership with nothing to lead.

We are proceeding on the prayerful assumption that the right kind of women are going to volunteer and in the proper numbers. Such optimism is not justified by our past experience in wartime nor by the present situation. Today we have fewer than 9,000 women on duty with our armed forces, although at the end of the war every effort was made to hold the women's services together. The Army slowed the WAC demobilization rate below that for men, and the Navy and marines offered their women Reserves the chance to continue on active duty.

Both services asked Congress to allow them to keep women in the peacetime organization. General MacArthur, in Japan, and General Clay, in Germany, stated emphatically that the occupation forces could not get along without Wacs.

The question, to my mind, boils down to a very simple choice: Either we need women in our armed forces or we do not. The hard-won lessons of the war prove that we do and that there is only one way to get them—by a general registration and selective service. Just as our young men from 18 to 25 are being asked—in whatever numbers the armed forces and the Congress deem necessary—to serve for a period of training, so, it seems to me, should their sisters.

I have been told that such a suggestion threatens the future of the family and the very basis of our society. I imagine that much the same prophecies were made when male civilians were first drafted to fight beside professional soldiers. But the fact is that no army in modern times has been raised without resorting to conscription. Great Britain, in the face of her manpower shortage in the last war, drafted every woman between the ages of 18 and 52 for a defense job, yet the institution of the family was not destroyed.

In drafting women I think we can easily guard against any threat to marriage and the home. Much the same rules might apply as those set up to regulate the selection of women volunteers today. Married women and those with dependents are not being admitted to the Regular service, but once a woman is admitted marriage is not considered a cause for her discharge unless it interferes with the performance of duty. A married Wac or Wave who becomes a mother is naturally separated from the service, on the ground that a mother's first duty is to her child.

This is the same common-sense rule which applies to women in business and industry. We think nothing of allowing daughters, when they graduate from high school or college, to work until marriage, and many choose to continue even after marriage. When the babies arrive, the transition from typewriter to bottle warmer is generally made without difficulty.

I think most of us agree, in fact, that a career in the business world, no matter how brief, is likely to broaden a young woman's interests and finally make her a better wife and mother. I believe the average American girl can find similar benefits in the service of her country. In fact, I have known several girls who left home to join the WAC as shy and helpless creatures, and returned a few years later as competent, poised, and completely mature young women—literally women of the world.

One of them had been trained as a traffic clerk with the Air Transport Command, and had flown all over Europe, the Mediterranean, and north Africa in ATC planes. She now has a good job with an air line, thanks to her Army training.

Another, an only child, had lived at home until she was nearly 30. Because her mother thought she was "delicate," she had never been encouraged to work or to marry. She suddenly summoned enough courage to walk out one day and enlist in the WAC. I met this same young person a short time ago, and did not recognize her until she told me who she was. My former "delicate" friend is now a captain in the Regular Army, running an office in the Pentagon Building in Washington with all the poise and efficiency of a trained executive.

These are only two examples, but I know of many others where the special training and discipline of the armed forces, the lessons in tolerance, in leadership, and in the workings of our democratic government have been of greater benefit than a college education. I don't think we need fear that such service will turn our daughters into social outcasts. On the contrary, it is likely to make them better citizens, better workers, wives, and mothers.

One more thing which our World War II experience proved is that we cannot afford to wait until an emergency is upon us, and then improvise a solution. Our first efforts to fit women volunteers into the Army and Navy in 1942 were time-consuming, chaotic, and wasteful. The whole complicated procedure of training, housing, uniforming, and job assignment had to start from scratch, by the method of trial and error.

The selling campaign necessary to recruit volunteers was naturally costly, and not very successful. Women officers who were engaged in recruiting work have told me that under the pressure of filling their quotas, they often accepted enlistments which appeared likely to turn into bad investments for Uncle Sam—women who were joining on a spur-of-the-moment whim, or just to spite their husbands or their parents, and who had no real qualifications for service.

Many of these volunteers managed to adjust themselves, no doubt, but that is beside the point. America deserves the service of her best-qualified citizens in time of national peril, and a thoroughly democratic, honestly administered draft—both of men and of women—is the only way to get such service. We must have the power to choose the fit and reject the unfit.

The method of voluntary enlistment is bound to fail for another reason, namely, that it isn't taken seriously by those to whom it is supposed to appeal. As one young woman told me during the war, "I'd sign up tomorrow if I thought I was needed. But if the Army and the Navy really wanted women, they'd draft them."

Women who did volunteer often waited weeks or months to be called up, and after basic training they waited again before being assigned to duty—all in the midst of a highly advertised manpower shortage. Such delays were inevitable in a program that was being patched together from day to day, without the benefit of planning and foresight. There is no need to repeat the mistake.

Nor is there any need to put ourselves in the absurd position of drafting young men to do jobs which women can do better. It's high time we got over the idea that "women should not have to fight a man's war" when modern war can wipe out the populations of whole cities, including male and female, young and old.

I don't believe in distinctions between the sexes either in their privileges and opportunities nor in their duties. By giving women an equal place in our armed forces, the last exclusively made profession, we shall be opening a new career field to them in time of peace and recognizing their obligation in time of war. When our house is burning down let's revise the old saying that a woman's place is in the home. Let's realize that today a woman's place includes the saving of that home.

Radio Interview of Hon. Homer E. Capehart, of Indiana, by Upton Close

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, June 20 (legislative day of Thursday, June 2), 1949

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a portion of the transcript of the broadcast on Sunday, May 22, 1949, of an interview of me by Upton Close.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

Mr. CLOSE. Senator CAPEHART, of Indiana, who speaks out as a true Hoosier, pioneered in warning us against national bankruptcy when people seemed to think that only a Shylock would oppose spending. Now even our liberal spenders are frightened. Senator CAPEHART, would you tell us just how bad you think the situation is—and specifically, what you would like to see done about it right now, and what you think this Congress could do about it?

Mr. CAPEHART. Maybe the best way to answer your question is to ask each person listening to our voices, this question, and let them answer it for themselves. The question is, How long do you think that you, or any institution, or any company, or any organization, or any government can go along spending more money each day, and each week, and each month, than they take in? Now, that is exactly what our Government has been doing for the past 18 years. They have been spending more money than they have been taking in—in revenues. In spite of the fact, as you all know, taxes are almost to the point where they are unbearable. I doubt very much that even if we increased taxes that we could increase the total revenue which the Government would receive.

Mr. CLOSE. Do you suppose some people think there is a way for Government to get and distribute money without taxes?

Mr. CAPEHART. There are some people who seem to think, Mr. Close, there is no way of doing it. We simply must face the facts—we either balance the budget, we either stay within our income, or we are going to go bankrupt in this Nation. There is no question but what if the Congress appropriates $45,000,000,000—and it looks like they will this year—that for our next fiscal year we will run a deficit, in my opinion, of anywhere from five to fifteen billion dollars. For example we are running a deficit this year of possibly two to two and one-half billion dollars—think of that, during 1949—the most prosperous year in the history of this Nation. In 1949, when business is good—excellent—here we have a Government that is spending more money each day than it is collecting in revenues.

It might interest our listeners to know that up to yesterday, this fiscal year—the one ending June 30, 1949—our Government is out of balance to the extent of $6,000,000,000, in that revenues are $4,000,000,000 short of what they had anticipated, and expenditures are up to $2,000,000,000 over what they anticipated—or out of balance to the extent of $6,000,000,000.

Mr. CLOSE. Constructively, Senator, what do you think could be done right now, since we have gone this far?

Mr. CAPEHART. Congress can do anything it cares to do. The Congress could today if it wanted to, reduce the appropriation by 20 percent, which is the figure I have been talking about all year. My personal opinion is that the Federal revenue for the fiscal year ending June 30, 1950, will not run one penny over $35,000,000,000. Congress could reduce expenditures. The responsibility of doing this is the responsibility of Congress. You can talk about reorganization bills acts, but the one institution that has the responsibility of appropriations is the Congress. As you know, I recommended as strongly as I knew how that we reduce the ECA from five billions five hundred and eighty millions to $3,000,000,000. We would have saved $2,500,000,000. I strongly urged that we reduce the national defense by two and one-half billions—that is five billion—and

then take three billion out of other appropriations—or a total of $8,000,000,000, bringing the budget down to $35,000,000,000. It can be done, it should be done, and we are going to be sorry if we don't do it.

Mr. CLOSE. Do you think the Senate might take some such action in this session?

Mr. CAPEHART. I'm afraid they will not, because up to date we have been unable to get one little penny out of a single appropriation bill. The House of Representatives has increased the amounts carried in either six or nine appropriation bills by a total of approximately $4,500,000,000 more than was spent last year by the agencies for which the appropriations are made.

I am fearful that we are not going to be able to take anything out of the budget unless the people of the United States become sufficiently alarmed over this situation and insist that Congress do it. I feel strongly that they should do it because I cannot think of any greater calamity that could happen to this Nation than to continue to run a deficit in peacetime. We simply cannot stand it. If we are going to maintain world peace, we must maintain a strong economy in our Nation. So I say it is in the best interests of each and every person throughout the United States for our Government to remain strong, balance its budget, and live within its income.

Mr. CLOSE. Thank you very much Senator CAPEHART, for bringing this situation home to our American people. I trust that your rather pessimistic view of what is being done in the Congress will not prove to be the result. I think there has been an awakening going through the Nation. I've been traveling across the country and I notice people are getting very uneasy about this situation. I thank you for helping the people to understand it.

Independent Merchants' Friend, United States Wholesale Grocers' Association, Inc., Warns Against Passage of O'Mahoney Substitute to Myers-Walter Bill Since It Would Scuttle Price Discrimination Laws That Now Protect Home Merchants, and Would Legalize Price Fixing for Cement, Steel, Sugar, and Other Trusts

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. PATMAN. Mr. Speaker, the United States Wholesale Grocers' Association, Inc., through its executive vice president, Harold O. Smith, Jr., in a communication addressed to independent merchants stated, "The Senate on June 1, 1949, passed the O'Mahoney substitute for the language of S. 1008 along with other amendments offered by Senator ESTES KEFAUVER, of Tennessee. This substitute and amendments amount to a new bill which among other provisions drops the moratorium feature of the old bill and would effect permanent delivered pricing legislation. S. 1008 as passed by the Senate was referred to a House Judiciary Subcommittee which further amended the bill. The bill as amended is now pending before the full House Judiciary Committee for action at its meeting on Tuesday, June 21."

In this statement this association, which has always been known as a friend of the independent merchants, warns that the changes proposed will be in favor of chain stores and other large buyers, and asks that the bill be rejected. A quotation on these points is as follows:

In our opinion and that of our general counsel, W. A. Quinlan, the subcommittee version of S. 1008 makes many ambiguous changes in the law which might be so interpreted as to weaken the provisions of the Robinson-Patman Act against price discrimination in favor of chain stores and other large buyers. It jeopardizes the effectiveness of the Robinson-Patman Act and the welfare of all independent merchants, and should therefore be rejected by the full House Judiciary Committee or the committee should give it additional study with benefit of public hearings.

There was, of course, no opportunity for public hearing on the O'Mahoney proposal in the Senate as it was passed by the Senate as a substitute for the provisions of S. 1008, also highly unsatisfactory to the interests of small business. The House Judiciary Committee conducted closed hearings on S. 1008 as passed by the Senate and amended by the House subcommittee but held no public hearings at which trade representatives could testify. Permanent changes in the antitrust laws should not be hurriedly considered and acted on by Congress or any congressional committee.

It is appropriate that this association sound the alarm since it was greatly instrumental in the passage of the Robinson-Patman Act. In fact, this group and the National Association of Retail Druggists, which represents only independent druggists—not chains—are entitled to the major share of the credit for the passage of the Robinson-Patman Act.

A Rhode Island Community Is United Behind Roberts Hirss in His Struggle With Red Tape

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1949

Mr. KLEIN. Mr. Speaker, last winter one of my good friends, Mr. Harry Grossman, of New York, a respected member of the bar and a former New York county commander of the Jewish War Veterans, brought to me as amazing, fascinating, and romantic story of the efforts of Roberts Hirss to reestablish his industrial empire and create new wealth in the United States.

Roberts Hirss was born at Erglos, Latvia, in 1895. Before the war, he was the chief executive officer and, with his wife, virtually sole owner of two textile manufacturing enterprises, Rigas Audums at Riga, Latvia, and Kauno Audiniai at Kaunas, Latvia.

How Roberts Hirss escaped from Latvia, smuggled his dismantled mills out of the country, literally buried them in friendly foreign soil, made his way to the United States, and became an American citizen, is a romance which some day an enterprising writer will use to fill a book, or at least a long magazine article.

UNIQUE MACHINERY DEMANDS UNIQUE WORKMEN

The point of the story here is that by infinite patience Roberts Hirss transported his unique textile machinery to America. In Woonsocket, R. I., he bought the Nyanza mill and started assembling his machinery.

But here he struck the snag with which my remarks are concerned.

Mr. Hirss, in Latvia, was the producer of extraordinary textiles which demanded extraordinary, as I have already called it, unique machinery.

Such machinery demands unique workmen to assemble and operate it.

Roberts Hirss found eight living men who had escaped the Nazi holocaust and the Russian annexation and had, in fact, escaped from Latvia, and were also former workmen of his who knew every bolt and screw in the delicate and complicated machines.

Three of those men have been in the United States for some time; one just entered as a quota immigrant; four others have been in Toronto for almost 3 years while Mr. Hirss has done everything in his power to obtain some kind of official permission to allow them to come in long enough to get his machinery set up and his mill going, offering to post any kind of bond to insure their departure at the end of a reasonable time.

The United States consular officers at Toronto have been adamant.

Not one of these four men has ever filed an application for an immigration visa. Their families are in Canada.

If they could enter the United States, 2,000 people in Woonsocket would go to work at the Nyanza mill.

EFFORTS FRUSTRATED

Mr. Speaker, I should explain my interest in the matter at this point. Mr. Hirss, although his industrial interests are in Woonsocket, is my constitutent, and of course Harry Grossman is my long-time friend.

The Rhode Island delegation has done everything possible.

I myself have exerted every effort.

High officials of the Immigration and Naturalization Service and of the State Department have advised Mr. Hirss and Mr. Grossman that they believe these men could and should enter the United States for a temporary period.

The law gives full discretion to the American consuls, and the American consul in Toronto has determined in his own mind that these men are intending immigrants, and as such may not be allowed to enter the United States on a temporary visa.

Without them, the wheels of industry remain stilled.

SPECIAL KIND OF BILL DEVISED

In cooperation with the Members of the Rhode Island delegation in both Houses and with the Judiciary Committee staff and my own office, a very unusual private bill was devised, which follows closely the thinking of the most influential members of the Subcommit-

tee on Immigration in the way of a principle of selective immigration.

I introduced this bill in the House as H. R. 4604, and Senator THEODORE FRANCIS GREEN introduced it in the Senate as S. 2029.

The texts are identical, and I insert at this point in my remarks the text of the House bill:

A bill to authorize the admission into the United States of certain aliens possessing special skills, namely, Alfred Zorgis, Teodor Egle, Karlis Fogelis, Vasily Kilis, and Aleksanders Zelmenis

Be it enacted, etc., That the Secretary of State and the Attorney General be, and are hereby, authorized and directed jointly to provide for the temporary admission of Alfred Zorgis, Teodor Egle, Karlis Fogelis, Vasily Kilis, and Aleksanders Zelmenis, who are foreign specialists possessing special and unique skills vitally needed for the operation of a textile mill by Robert Hirss, of Woonsocket, R. I.

If, at the expiration of 12 months immediately following the admission into the United States of these foreign specialists, the Attorney General shall, upon application filed with the Commissioner of Immigration and Naturalization by these named aliens, find that such persons have maintained employment with Roberts Hirss, he is hereby authorized and directed to amend the record of such aliens' temporary admission to show admission for permanent residence as of the date of their respective actual entry into the United States.

COMMUNITY UNITED

Mr. Speaker, the Woonsocket community is united behind these bills. I can safely say that the State of Rhode Island is united behind them.

Approving mail is flooding my office and the office of the Rhode Island Members and Senators from business people, labor leaders, and just plain citizens. The newspapers have taken up the crusade in earnest.

Space does not permit me to quote all of the newspaper stories and letters I have received. However, I do wish to present a sampling.

First, I present a letter from Buell W. Hudson, publisher of the Woonsocket Call:

THE WOONSOCKET CALL,
Woonsocket, R. I., June 7, 1949.

Hon. ARTHUR G. KLEIN,
Member of Congress from New York,
Washington, D. C.

DEAR CONGRESSMAN KLEIN: I was happy to learn from Harry Grossman, Esq., the other day that you had introduced bill H. R. 4604, which is a private bill designed to admit four Latvian nationals to this country so that they may work with Roberts Hirss of this city in opening a new industry here.

I have been familiar with this story for some time, and we of Woonsocket are extremely anxious to see Mr. Hirss able to open his plant, provide employment, and produce the unusual and fine textiles possible under his process.

The work is so intricate, as you doubtless know, that without his eight trained executives, he is unable successfully to operate.

I hope that the bill receives a prompt hearing and favorable action on the part of the House and Senate, and I can assure you that whatever you may be able to do to facilitate the passage of this bill will be deeply appreciated.

Yours very truly,
BUELL W. HUDSON, *Publisher.*

The second is a letter from Arthur S. Kirk, secretary of the Woonsocket Kiwanis Club:

KIWANIS CLUB OF WOONSOCKET,
Woonsocket, R. I., June 9, 1949.

Hon. ARTHUR G. KLEIN,
Congressman from New York,
Washington, D. C.

DEAR SIR: The Kiwanis Club of Woonsocket, R. I., at its regular meeting on June 7, 1949, voted to thank you for your efforts in introducing a bill entitled H. R. 4604, providing for the temporary admission of four foreign specialists vitally needed in the operation of a textile mill by Mr. Roberts Hirss, of Woonsocket, R. I.

This is a matter of great concern to the people of this area, and in an effort to secure early passage of this bill, we have also asked Hon. JOHN E. FOGARTY and Hon. AIME J. FORAND, United States Congressmen from Rhode Island, to do their utmost to secure its early passage, and have also asked Hon. J. HOWARD MCGRATH and Hon. THEODORE FRANCIS GREEN, United States Senators from Rhode Island, not only to support H. R. 4604 but to introduce a similar bill into the Senate.

We are sincerely appreciative of your efforts in introducing this bill and it is our earnest prayer that it be passed at as early a date as may be.

Yours very truly,
ARTHUR S. KIRK, *Secretary.*

From the Woonsocket Call of June 8, I introduce the following news story, and I want to repeat and emphasize that I am giving only a small sampling of the letters and news stories available in support of this legislation:

INDUSTRY BOARD ACTS FOR HIRSS—CONGRESS AID SOUGHT TO ADMIT FOUR LATVIANS

In its first formal action since its formation in April, Mayor Parent's industrial commission yesterday pledged its full support to Roberts Hirss in his efforts to bring four technical experts into this country as a necessary preliminary toward beginning the manufacture of fine textiles at the former Nyanza mill.

With this end in view the commission voted to send letters to Rhode Island Senators and Representatives urging them to work for passage of House bill 4604, which would permit the four technicians to enter this country from Canada.

It was voted also to send an identical letter to Representative FRANCIS E. WALTER, of Pennsylvania, chairman of the House subcommittee, to which the bill has been referred.

CITY COUNCIL AID SOUGHT

In addition, the commission decided to request the Woonsocket City Council to pass a resolution urging immediate passage of the bill.

The bill is in the form of private legislation which would make a special exception to the law barring aliens from this country. It would allow only the four Hirss technicians, all Latvians, to enter the United States. They would be permitted to remain as permanent residents upon termination of a full year of service at the Hirss plant.

Operations at the Nyanza mill have been held up because Hirss feels his complicated textile operations cannot be successfully conducted unless a full team of eight key technicians is available to train new help.

FOUR NECESSARY IN PLANT

Four of the technicians were allowed to enter the country, but the remaining four have been blocked in their attempts to come here, because the Latvian quota has become exhausted.

The eight technicians, working as a team, were credited by Hirss as a major factor in the success of his Latvian operations, in which more than 4,000 hands were employed before the war.

The commission meeting was held in the Hamlet Avenue offices of the Diocesan Bureau of Social Welfare. Buell W. Hudson, chairman, presided.

And finally, Mr. Speaker, I present another news story from the June 4 issue of the Woonsocket Call:

TWO GROUPS SEEK TO AID INDUSTRY DENIED CITY BY IMMIGRATION BAN

Whether Roberts Hirss, a Latvian immigrant who is now an American citizen, will finally be able to begin his fine textile operations in the old Nyanza mill, Singleton Street, after more than 2 years of waiting, is a question with which two of the city's industrial groups are now wrestling.

Launching of the new industry hinges on the availability of four expert Latvian workers who are described by Hirss as keymen, and who are stranded in Toronto because of immigration complications.

Hirss already owns the mill property. He plans to set up an industry fabricating fine textile fabrics, the nature of which is so intricate that they are now manufactured only in France and Switzerland.

APPEALS TO TWO GROUPS

Hirss has appealed to both the industrial development committee of the Woonsocket Chamber of Commerce and the mayor's industrial committee and both groups are now striving to iron out his immediate problem.

The textile man needs eight experts from Latvia to set up his operation at the old Nyanza. Four of these experts are already in the country and are, in fact, living in Woonsocket with their families.

The other four, however, are in Toronto and are having difficulty gaining legal entry to the United States because of the nature of our immigration laws.

Hirss has everything else ready to start. He even has the machinery all threaded and ready to operate as soon as he can complete his keyman team of eight. These men, he says, are necessary to start operations and train American workers for the fine production work he plans to do.

RAN EUROPEAN MILLS

Prior to the war, Hirss had large mills in Latvia and Lithuania. His Latvian mill at Riga employed 2,800 hands, while his plant near Kaunas, the capital of Lithuania, employed about 1,600. He is not certain yet just how many his Woonsocket project will employ but he has plans for utilizing at least two-thirds of the sprawling Nyanza mill as soon as he starts operations.

At a joint meeting this week of the chamber of commerce group and the mayor's committee, Hirss' problem was outlined by his attorney, Harry Grossman, of New York and Washington.

Grossman disclosed that Representative ARTHUR G. KLEIN, of New York, had introduced into the Congress, at his request, a private bill which would permit admission to Woonsocket of the four Latvians now stranded in Toronto.

FOUR SPECIALLY SKILLED

This measure, which lists the men as Teodor Egle, Karlis Fogelis, Vasily Kilis and Aleksanders Zelmenis, is now in the Judiciary Committee's Subcommittee on Immigration and Naturalization, of which Representative FRANCIS E. WALTER, of Pennsylvania, is chairman.

The bill describes the four men as aliens possessing special skills and asserts that they possess special and unique skills vitally

needed for the operation of a textile mill by Roberts Hirss, of Woonsocket, R. I.

The measure provides that if, at the expiration of a year following their admission to this country, the Attorney General finds they are still employed with Hirss, he shall instruct the Commissioner of Immigration and Naturalization to admit them to permanent residence in this country as of the actual date of their entry.

NOT LISTED AS DP'S

It appears that the four Latvians in question do not come under the Displaced Persons Act since they left displaced persons areas prior to the time when they would have become eligible for admission as DP's. That is why special legislation or special efforts are necessary to permit their admission from Canada.

Hirss has told local officials he wants to establish his business in Woonsocket inasmuch as he has already invested a large sum of money in his plant. However, if he is not able to secure the services of his keymen he may find it necessary to move to Canada where the four in question may remain indefinitely.

For that reason both the mayor's industrial committee and the chamber are intensely interested in the case.

GIVES INDIVIDUAL SUPPORT

While the mayor's commission has taken no official stand as yet on the Klein bill, individual members are reportedly ready to give it support. A commission spokesman said the bill, together with other problems involving the Hirss operations, would be discussed at a commission meeting next week.

Meanwhile the chamber of commerce has taken official cognizance of Hirss' plight in its June bulletin, issued today

Says the bulletin:

"The industrial development committee of the chamber and the city's industrial commission are working closely together in an effort to assist the Roberts Hirss Co. to begin operations in Woonsocket.

"The problem centers on the necessity of bringing several technical specialists into this country. Immigration laws stand as a barrier. Over 2 years of effort have not been successful. Special legislation has now been prepared to meet the situation. We still need the active support of the entire community to be certain of success."

Byrnes on the Welfare State

EXTENSION OF REMARKS

OF

HON. ERNEST K. BRAMBLETT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. BRAMBLETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News for today:

BYRNES ON THE WELFARE STATE

James F. Byrnes made a remarkable speech Saturday at Washington and Lee University in Virginia. It will cause long and loud reverberations here in Washington.

For Mr. Byrnes asserted that the Truman administration is advocating "welfare state" policies which threaten to take this country "down the road to statism."

"Every segment of society is demanding special privileges," he said. "Too many people want more pay for less work. Too many people are trying to transfer power to the Government.

"We are not only transferring too much power from the individual to the Government, but we are transferring too many powers of State governments to the Federal Government.

"Where we will wind up, no one can tell. But if some of the new programs seriously proposed should be adopted there is danger that the individual, whether farmer, worker, manufacturer, lawyer or doctor, soon will be pulling an economic oar in the galley of the state with the Federal Government regimenting our lives from the cradle to the grave."

Mr. Byrnes gave vigorous support to the administration's foreign policy and the European recovery program, but added:

"Our first line of defense is a sound, solvent American economy. The only wise course is to reduce expenditures and live within our income." And he went on to advocate that Government spending for purposes other than fixed obligations and national defense should be cut or deferred.

None of that is new doctrine. All of it has been said many times before, but seldom if ever with the force it acquired when it was said by James F. Byrnes.

For Mr. Byrnes, though a southern Democrat, is no Dixiecrat.

He served long as a Senator from South Carolina. But he can't be tagged with the "reactionary" label which the administration has sought to fasten on Senators like BYRD of Virginia.

Mr. Byrnes was President Roosevelt's trouble-shooter in Congress. He was one of those most effective in steering New Deal measures to enactment. Mr. Roosevelt appointed him to the Supreme Court, and later called him to serve as wartime Director of Economic Stabilization.

President Truman chose him to be Secretary of State 2 months before the war ended; and, a year and a half later, when ill health compelled Mr. Byrnes to leave that post, Mr. Truman accepted his resignation "with great reluctance and heartfelt regret."

Mr. Byrnes, we may be sure, did not say the things he said at Washington and Lee without long and thoughtful consideration. Congress and the country cannot afford to dismiss lightly his warning of the dangers in the trend toward a welfare state.

Where the Blame Rests

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, June 20 (legislative day of Thursday, June 2), 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter entitled "Where the Blame Rests" written by William P. Morgan and published in the Honolulu Advertiser of June 12.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WHERE THE BLAME RESTS

EDITOR, THE ADVERTISER:

I am a school teacher at Lahainaluna High School. I am in charge of a poultry flock of 4,590 chickens. For the last 2 weeks we have been slaughtering birds. Our egg production is now down 50 percent. We have 3 days' feed supply on hand; what then? We have 1,200 pullets which would normally come into lay in the next few months. What shall we do with them? What shall we do with the young stock which is too small to market? We have spent years in breeding our own stock to its high rate of productivity. It's not pleasant to start over again. Since this is a public institution, how does the public feel about taking this loss?

As a school teacher, it is my duty to weigh all data carefully before expressing an opinion. This I have done. I have tried to give labor its due as I have been a laborer myself. Strong unions are necessary to the welfare of our country. It is not the rank-and-file labor that is to blame. I understand how difficult it is for them to buck organized leadership in the union. I do not blame them individually. Their leaders, however, I do blame.

I have come to the conclusion that the labor leaders are communistic and are out to break the Territory. I give them credit for being smart and shrewd. The shrewd thing would have been to allow ships to bring in all the food supplies necessary for both humans and livestock. This would have been smart. Tieing up our two fundamental industries, sugar and pineapple, would have served the purpose. Most of the public would not have then been as directly concerned as they are now. The union without personal public opinion against it might have won their demands.

Since the union leaders did not follow the shrewd attack, I am led to believe they are not out to win the strike. In fact, I now believe they would be disappointed if the strike was settled. They ask for an impossible raise to safeguard the company accepting a reasonable wage increase. In this way they can assure themselves of a strike lasting long enough to break industry, the workers, and the general public. This is good communistic strategy. They asked for arbitration because the companies are not in favor of it. If the companies had asked for arbitration first, they would have refused and demanded negotiations, anything to guarantee a stalemate.

Unfortunately for them, the American people have never stood for high-handed methods. They are slow to anger but they will conquer this ism as they have all others.

WILLIAM P. MORGAN.

LAHAINA, MAUI, *June 12.*

Westward Shift of Political Power Aids Democrats

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. MANSFIELD. Mr. Speaker, I am inserting in the RECORD an article carried in the St. Louis Post-Dispatch of February 20, 1949. Mr. Richard Neuberger, an Oregon State senator, is well qualified to write on the subject of politics and I know the Members of this House will find his article not only interesting but very much worth while.

WESTWARD SHIFT OF POLITICAL POWER AIDS DEMOCRATS

(By Richard L. Neuberger)

SEATTLE, WASH., February 19.—American political power is moving westward. As migrants head toward the sundown rim of the Nation, they bring with them additional

seats in Congress, more votes in the electoral college and extra strength in party-nominating conventions.

The 3 States of the Pacific seaboard—California, Oregon, and Washington—now have a total of 33 Members of the House of Representatives. Next year another census will be taken. If this census confirms present population estimates, the west coast's delegation in the House of Representatives will be increased to at least 44.

This gain in the House will be matched by equivalent increases in electoral votes and in delegates to national political conventions.

Even more striking is the fact that the new congressional desks acquired by the Pacific Coast States will be at the expense of the States which long have been considered the citadels of political might in the Nation.

New York, Pennsylvania, and Illinois are expected to lose House seats as a result of the 1950 census.

For many years Congress has followed a policy of continuing the size of the House of Representatives at 435 Members. This means that when certain States qualify for new seats as a result of population gains, other States must diminish correspondingly in congressional strength.

New York, Pennsylvania, and Illinois have not declined in population since 1940, but their increases have failed to keep pace with the national average. In the past 8 years New York has inched forward 6.6 percent in population, Pennsylvania 7.9 percent and Illinois 9.3 percent.

The gain throughout the country has been 10.6 percent. But the population boom along the Pacific's heaving surf has been prodigious—41.6 percent in the State of Washington, 44.3 percent in California, and 49.3 percent in Oregon.

California now has 23 House Members. It probably will have 30 after the next official census, which is taken at the turn of each decade. Washington is expected to ascend from 6 House seats to 7 or 8, and Oregon from 4 to 6.

At the same time, the State of New York, according to Census Bureau forecasts, will decline from 45 to 42 in House allotments, Pennsylvania from 33 to 31, Illinois from 26 to 25. Several other States may relinquish congressional posts, including the home bailwicks of the President and his Vice President.

Missouri may drop from 13 to 12 in House representation, Kentucky from 9 to 8. Other potential declines are Arkansas from 7 to 6, Oklahoma from 8 to 7, Alabama from 9 to 8, Georgia from 10 to 9. These States have failed to keep abreast of the national population spurt of 10.6 percent. Missouri has gained only 4.3 percent, while Kentucky has sustained an actual loss in population of 1.7 percent.

Most of these abandoned seats will be allocated to the Pacific coast, but not all of them. Michigan has climbed 17.8 percent in population since the previous census, and may notch upward to 19 seats in the House, from its present total of 17. Florida also is burgeoning, and will add 1 House seat to its current quota of 6.

But the bulk of the increases will be enjoyed along the Pacific coast. Indeed, the three States of the country's western rim will soon equal the political strength which has made New York the Nation's greatest prize in elections and party nominating conventions.

New York now has 45 Members of the House of Representatives. This, combined with the State's two Senators, gives it 47 electoral votes. However, New York in 1951 probably will slide to 42 House Members and 44 electoral votes. Simultaneously, the Pacific coast States will mount from their present aggregate of 39 electoral votes to a new total of 50.

Toward what political objectives will this new strength on the coast be directed?

All surveys have shown that the migrants rolling westward are preponderantly Democratic in their allegiance.

The majority of them are under 44 years of age and in the lower income brackets. Many left the plains to work in logging camps in Oregon's fir forests. Others rolled out of Grand Central Station in special trains to man Henry J. Kaiser's shipyards on the Columbia River.

Oregon, for example, has been the Western State most consistently Republican in its political sympathies, yet the Democrats have gained in party registration in Oregon ever since the population boom got under way. Now, with nearly 700,000 people on the polling books of the State, the Republicans hold a scant lead of less than 12,000. The Democratic surge has been most pronounced in those Oregon counties where the residences of newcomers are concentrated.

Indeed, of all the 11 States of the Far West, comparatively few have voted Republican since 1932. Colorado gave its votes to Wendell Willkie in 1940, Colorado and Wyoming supported Governor Dewey in 1944, and Oregon backed Dewey last November 2. This is the total of Republican victories in the Western States during the past five presidential elections. In fact, some Western Democrats speak of building a political citadel from the Continental Divide on westward which will replace their threatened dominance in the solid South.

Western population gains since 1940 represent one of the most amazing migrations in the Nation's history. More new inhabitants have entered Oregon during the past 8 years than in the entire first century after Lewis and Clark paddled down the Columbia to the sea. The frontier State of Washington has overtaken in population such industrial giants as West Virginia, Maryland, and Connecticut. And California presses Pennsylvania for second place in the country.

The bulk of the West's newcomers is in cities and towns. Relatively few are farming. Those beyond municipal limits generally are engaged in such industries as logging and dam-building. This also has given a Democratic slant to the political fealty of the migrants.

Marshall Plan a Howling Failure

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1949

Mr. REED of New York. Mr. Speaker, how long are the taxpayers going to finance this international boondoggling program? Is this to be a perpetual drain upon our resources and our taxpayers? Under leave to extend I am inserting an editorial which appeared in the Wall Street Journal of June 20, 1949:

NO HOWLING SUCCESS

Sir Stafford Cripps, no man to sugar-coat bad news, last week gave another report on Britain's economy and the Marshall plan aid program. Said he:

"The vast reliance we in this country (Great Britain) still have to place upon gifts and loans of dollars from the United States and Canada demonstrates how far we are from a solution of our problem of a balance of trade and payments with North America, nor do our problems appear to be growing less.

"Indeed, they are becoming temporarily greater as the gap tends to widen again due to changing economic conditions as we emerge from the period of acute world shortages into a less inflationary situation. Europe still needs Marshall plan aid on a scale that will enable it to maintain the dollar imports essential for its recovery."

We might well ponder what Sir Stafford is telling us.

Four years after the beginning of planned economy by the Socialist government, 3 years after the nearly $4,000,000,000 United States loan, and more than a year after the launching of a full-scale, multibillion dollar American aid program. Great Britain's economic position is not a whit better than before. Indeed, matters are getting worse.

Four years ago Britain, like nearly every other country, was suffering from shortages. People everywhere were on austerity, a short supply of nearly everything they used in their daily lives. Everywhere there was the paraphernalia of governmental planning, consumer rationing, industrial allocations, export-import curbs, price controls and the rest—all designed to manage the shortages.

Today the United States, which junked its straitjacket early, has shortages of practically nothing. Most of the other countries—even those like Belgium that suffered invasion—have made great strides forward toward freeing their economies and raising living standards. Only Britain, of all the countries of the west, has gone backward, not forward.

Britain had shortages when the rest of the world had them. It is still trying to manage shortages as the rest of the world turns to other problems.

Now it is true that the British people have "got by." But, as Sir Stafford says, this is due to the gifts and loans, running into many billions, from the United States and Canada. These gifts and loans have done little to raise the economy or living standards of the British people. They have merely provided the margin to keep Britain from toppling over into open bankruptcy.

And so what hope does Sir Stafford offer for the future? Why, that the United States keep up its subsidies. For how long? Well, the British admit they are going to still have a dollar shortage and all that goes with it even after ERP ends its 4-year span. Four years past and no end in sight for 4 years more.

Incidentally, Sir Stafford insists that we just pay and do no more. Any interference by us in British socialist policy would spell failure for the Marshall plan.

We don't know how Sir Stafford counts failure. But nearly 8 years of austerity and ten billions of charity that ends neither the austerity nor the need for more charity will not strike us as a howling success.

A Report to the People of Litchfield County and the Naugatuck Valley

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1949

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a report compiled by the Naugatuck Valley Industrial Council, Inc., which documents the financial

story, in comprehensive form, of 50 manufacturing companies of Litchfield County and the Naugatuck Valley.

I have never heretofore had occasion to see a financial report presented in this manner. It tells a story with a minimum of dry facts and figures.

THIS IS A CONSOLIDATED INCOME AND EXPENSE STATEMENT OF 50 NAUGATUCK VALLEY MANUFACTURING COMPANIES FOR THE YEAR 1948

1. These companies received from customers	$471,037,397.21

When they bought the products from these 50 companies, these customers paid for the following, as outlined below in numbers 2 to 8, inclusive:

2. The cost of materials and services supplied by others (52.25 percent)	$246,077,915.66
3. The cost of wages and salaries (pay roll plus benefits):	
Officer employees (0.71 percent)	3,338,925.61
All other employees (37.17 percent)	175,081,416.04
4. The cost of tools and plant (depreciation and obsolescence) (1.65 percent)	7,763,188.29
5. The cost of payments to the Government (that is taxes—local, State, and Federal) (4.04 percent)	19,050,326.60
6. The cost of using tools (payments to owners of business—that is stockholder's dividends) (2.42 percent)	11,406,024.00
7. Interest paid on money borrowed (0.11 percent)	535,354.66
8. Cost of expansion and other money plowed back into the business (1.65 percent)	7,764,246.35
Total payments made by customers (100 percent)	471,037,397.21

1. RECEIVED FROM CUSTOMERS, $471,037,397.21

The customers of the industries of the Naugatuck Valley are the bosses of both the workers and the management. If the customers won't buy from the industries then there are no jobs.

If managements don't plan ahead with an aggressive sales policy, up-to-date machinery, sound financing, and effective production, they lose their customers.

If workers are tempted to coast on the job; or if they do not do the job in such a way that inspectors can pass the work; or if they demand more pay per hour or more money in fringe benefits (pensions, free insurance, longer vacations, etc.) than the customers will pay, then they price their company out of the market.

That has happened right here in the valley recently.

2. THE COST OF SERVICES SUPPLIED BY OTHERS—$246,077,915.66, 52.25 PERCENT OF SALES

Practically everything that the 50 companies purchased in 1948 went up in price—steel, copper, wood, paint, plastics, rail and motor transportation, telephone, gas, coal, oil, advertising, building materials, engineering services—everything.

If purchasing agents, traffic men, and salesmen had not been on their toes, and if management of these companies generally, had not been on the alert, we would have seen more of the same kind of unemployment which did occur in some instances of wage pyramiding and customer desertion in the valley in 1948.

Now we are in 1949. Despite all efforts of management, customers are not buying as they did.

3. THE COST OF WAGES AND SALARIES—$178,420,341.65, 37.88 PERCENT OF SALES

In 1948, the 50 valley companies paid out—

To officer employees of the companies (0.71 percent)	$3,338,925.61
To all other employees (37.17 percent)	175,081,416.04

Weighted average cents per hour cost

Payments for time not worked in 1948:	
Paid vacations	0.040
Pay for holidays not worked	.017
Overtime premiums	.030
Shift premiums	.013
Wash-up time	.019
Other	.003
Total	.122
Supplemental payments in 1948: [1]	
Workmen's compensation insurance premiums	.013
Other insurance premiums, health, hospitals, etc	.004
Pension premiums	.007
Christmas bonus and service awards	.002
Recreation, etc	.001
Other benefits	.006
Total	.033
Total for time not worked and supplemental payments	.155

[1] Federal and State unemployment insurance and social security taxes not included. They are shown in No. 5.

Four or five cents an hour increase doesn't sound like much when it is given either in direct pay for hours worked or for hours not worked, but let's look at a plant with 1,000 workers, who worked 48 hours a week during 1948:

	Per week
4 cents per hour for 40 hours, equals	$1.60
6 cents per hour (time and a half for 8 hours)	.48
Total increase for 48 hours	2.08

$2.08 times 50 weeks equals $104 per year; 1,000 workers time 104 equals $104,000—which the customers of this plant employing 1,000 persons, are called upon to pay in addition to what they were paying before the increase. This goes all along the line wherever wages are raised, from the mine or forest, to the store where the public buys—and it piles up fast.

4. THE COST OF TOOLS AND PLANT—$7,763,188.29 1.65 PERCENT OF SALES

Here's something to think about:

One of the 50 companies bought a press in 1936 for $37,500. They figured it would last 15 years and so did the company which made the machine. Therefore, this Naugatuck Valley company set aside, as any company must do, a reserve in the form of 1/15 of the cost, $2,500, (1/15 of $37,500=$2,500) each year for 15 years.

They figured that in 1952, they would have laid aside enough to buy a new machine, but along came the Government tax men who said "You can't do that because we think that machine is good for 20 years. Therefore you can lay aside only 1/20 ($1,875) each year for 20 years.

However, the price for a new press of the same kind increased not long after 1936, and it increased several times after that, but still the Government tax men wouldn't permit the company to lay aside any more than $1,875 per year.

Well, because of the three-shift-beating the press took during the war it was completely worn out last August—that is August 1948.

The company had laid aside $22,500 to buy a new machine but when they inquired about the price, they found that it was now $52,500, so the company was short $30,000. Even if the cost of the machine had remained at the 1936 price of $37,500, the company would still have been short $15,000.

It takes a lot of money to buy tools and plants and the money must either be borrowed or set aside from the funds shown in No. 8. If a company doesn't show any money in No. 8, it has difficulty borrowing money, because its credit isn't good.

5. THE COST OF GOVERNMENT PAYMENTS—$19,050,326.60, 4.04 PERCENT OF SALES

How much did the customers pay the 50 Naugatuck Valley companies for taxes in 1948? Well, the figure is shown above—$19,050,326.60. Will they be willing to pay more in 1949 and the years to follow, or will they stop buying? Nobody knows for sure but most everybody agrees that the Federal, State, and local governments are spending an awful lot of money, probably a good deal more than they ought to spend.

When a person or a corporation puts a price on a thing, he or it wants to sell, they figure what their taxes are going to be and include that figure in the price of the thing they want to sell. Sometimes Congress and the State legislature pass a law which says that the taxes must not be passed on to the consumer. That's just a phony to fool the people, because the customer is the only source of money and he must therefore pay all the taxes, whether he pays them separately at the time he buys the article or whether they are included in the price of the article itself.

This stuff and nonsense about absorbing taxes just isn't possible if wages are to be paid, if money is to be plowed back into the business and if the owners of the business are to be paid for the use of their money.

We all know that the Federal, State, or local governments don't make any money of their own. They get the money they need to run the government's business by taxing the people. Therefore, they ought to be just as careful as the people are, of how they spend money.

6. THE COST OF USING TOOLS—$11,406,024, 2.42 PERCENT OF SALES

Tools include the plant and everything in it—not just hand tools and power machines.

The money which the owners (stockholders) of the 50 companies invested made possible full-time jobs for over 55,000 people in the valley in 1948.

If the stockholders went on a strike and said, "We want our money. We won't let it work for you any longer," what would happen? Well, it happens quite often. It is called liquidation and that means going out of business, which in turn means no jobs.

Yes; a business must pay its owners for the use of its money or they will take it out and let somebody use it who will pay them for the use of it. That is if they can get out before they lose their money.

For every $15.64 paid to employees by the 50 companies, only $1 is paid the owners of the businesses.

7. INTEREST PAID ON BORROWED MONEY—$535,354.66, 0.11 PERCENT OF SALES

Why was it necessary for some of these companies to borrow money on which they had to pay over half a million dollars in interest during the comparatively prosperous year of 1948?

A manufacturing company is in the same position as an individual when it comes to meeting obligations.

If John Doe, whose credit is good, but who has no money in the bank, needs money to buy food and clothing for his family, he charges the bill at the store but the storekeeper won't wait forever for him to pay.

Maybe John puts a mortgage on his house and gets the money that way (in the case of a manufacturing concern, that's "borrowing money to meet accounts payable").

If John has some money in stocks and bonds he may decide to put these stocks and bonds up as security at the bank and borrow money. (In the case of a manufacturing concern, that's "borrowing money on collateral").

If John needs to build an addition to his home, he may have to borrow money to finance that (that's "borrowing for plant expansion" for the manufacturing company).

Then again, Joe Dokes might owe John some money but can't pay it just now so John has to borrow money—(that, in the case of a manufacturing concern, is "borrowing money on accounts receivable").

Maybe John's wife needs a new sewing machine. He pays something down but he pays interest on the unpaid balance, whether he knows it or not. That's borrowing money for the press that we spoke about in No. 4.

If either John or any one of the 50 manufacturing companies doesn't lay aside enough to take care of these things, they are in trouble.

With high taxes, high cost of help, high cost of everything which a manufacturing plant buys or does, the day is past when new additions, new plants or new products can be financed entirely by getting more money from stockholders.

There have been only four new stock issues by Naugatuck Valley industries in 10 years.

Nowadays, the manufacturer, after he has paid off what he owes must plow what's left back into the business and in the case of some of the 50 companies, another $535,354.66 to boot, to keep things going.

It's just as foolish to call the money left, before everything but taxes and money which the stockholders are paid, profit, as it is to call profit, all that is left before wages are paid.

Both John and the manufacturing company have to pay all of their bills before they are out of debt and they aren't safe even then unless they carry insurance or have something laid away.

8. COST OF EXPANSION AND OTHER MONEY PLOWED BACK INTO THE BUSINESS—$7,784,246.35, 1.65 PERCENT OF SALES

No business can keep going if it pays out in wages or dividends an unwarranted amount of the money which its customers send in. Sometimes this is tried but it never, never succeeds. Tools wear out, buildings crumble and rot, products must be changed and additions built.

Money must come from some place to pay for these things. It can come from only one place and that is the customer.

Some of the customers' money must be set aside to pay for these things and that is what some call profit. It's plowed back into the business so as to keep things going and provide jobs.

When there is a big demand for goods, production is high and the profits are good. But remember this—when production drops, the profits go down much faster than the production.

There were no "huge profits" even in the prosperous year of 1948. As this consolidated financial statement shows, profits of these 50 companies employing over 55,000 people in that year were only slightly over 4 percent made up of dividend payments to stockholders of 2.42 percent and money put back into the business of 1.65 percent, 2.42 percent plus 1.65 percent equals 4.17 percent). What happens in a less prosperous year?

The management of one of the 50 valley companies worked it out for his company the other day and let us have the figures. He showed that his production (he is in the metal fabricating business) went down 10 percent in the first 4 months of 1949. His profits, which were 6.2 percent in 1948, will go down 21 percent if his production stays at the 10 percent for the rest of 1949. That means his profits will be cut to 1¼ percent and he can't pay the wages he now pays nor give the jobs he now gives.

One big reason why American industry is ahead of the industries of all other countries of the world is because it produces in large quantities.

If the customers decide that they are footing too big a bill and decide to stop buying (many of them have already decided) from the 50 Naugatuck Valley manufacturing companies, production of course, will suffer, and when industries in the valley suffer everybody suffers.

Bridgeport Isn't in Hock

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1949

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks, I desire to call the attention of my colleagues to a timely and interesting article by Mr. John Innes, Bridgeport (Conn.) Post-Reporter as it appeared in the Washington Post yesterday, June 19, 1949.

A week ago it was my pleasure to speak in the House about the plans for the P. T. Barnum festivities at Bridgeport. It was my privilege to participate in some of the programs on 2 of the 5 days set aside for what proved to be a tremendous success from every standpoint for the great cosmopolitan city. A gala celebration commemorating the great deeds and benevolences of Phineas T. Barnum will hereafter be an annual event at Bridgeport. The article follows:

HARD-HIT BRIDGEPORT ISN'T IN HOCK

(There were 3,289,000 unemployed in mid-May, the greatest number in more than 7 years. Yet fortunate cities like Washington have fewer jobless than they did in March. Obviously there are "soft spots" around the country which boost the total. One city which has been singled out as hard hit by the current trend is Bridgeport, Conn., which has 500 factories of various size to support a population of 154,000. Unemployment in Bridgeport is up to 12 percent, and 4,500 of the jobless have exhausted their unemployment compensation rights since January. But the city isn't too down in the mouth about the situation. There are some encouraging factors. Here is the situation in Bridgeport today, as presented by a local newspaperman at the request of the Washington Post.)

(By John Innes)

BRIDGEPORT, CONN., June 18.—A piece in one of the New York papers the other day made things look mighty grim for Bridgeport, the "industrial capital" of Connecticut.

Fellow who wrote it hinted that the city's real reason for staging a 5-day festival tribute to P. T. Barnum, once its mayor, might be desperation attendant upon taking inhabitants' minds off an unemployment problem worthy of the great circus showman's "colossal," "stupendous" and similar stock adjectives.

Actually, things aren't quite that bad. Mayor Jasper McLevy, thrifty Scot Socialist in his eighth term, hasn't even considered selling the city hall. Matter of fact, a brand new one is on his list of municipal projects.

No point in denying, though, that the number of Bridgeport area claimants for unemployment compensation for the week ended June 11 rose to 16,605—the highest since 1938—from 15,540 the preceding week and 6,002 a year earlier. Or that the 87,480 workers employed in factories and businesses reporting to the State labor department in mid-May failed to match the 92,230 on the pay rolls in mid-April and the 104,950 on the roster a year earlier.

Can't quibble, either, in admitting that the city's relief rolls, protected from mass onslaught thus far by the State unemployment set-up and other factors, will soar soon unless the trend is reversed. About 4,500 area claimants have exhausted compensation rights since January.

And, as the mayor notes, the unemployment compensation figures do not reflect the added numbers of our workers who are on part-time or reduced hours, with correspondingly reduced income.

Furthermore, the signs are present everywhere. Liquor store sales have dropped sharply, a sure indication that family budgets are being tightened. In other retail lines, even the most staggering bargains fail to produce anticipated results. Theater attendance is down. On the other hand, as evidence of a lesson once learned, savings deposits are up.

Diversification may well provide the answer for the community which ranks ninth among America's 11 principal industrial centers, although fifty-ninth in population, and produces thousands of items in 500 large and small plants, many of which have operated profitably from 50 to 100 years.

Bridgeport was a major production arsenal in both World Wars, and in both instances, after the shooting stopped, its industries varied production to meet the times. Currently, many manufacturers have taken on sidelines which promise to equal the volume of traditional products.

WOMEN A FACTOR

Relying on statistics to tell the story of Bridgeport (population 154,000) is risky; the result depends on whose statistics you use. According to one set, a pay roll estimated at $1,500,000 a week in 1937 reached $5,000,000 a week at its peak in 1943. Area employment, at 65,000 in December 1941, reached 118,500 in March 1943. At one time, women workers represented between 35 and 40 percent of the labor force, posing an interesting problem for compilers of current unemployment figures.

The chamber of commerce has compared postwar and prewar Bridgeport and found:

"In April 1939 there were 55,800 people employed, of which 41,500 were engaged in manufacturing. At that time there were 6,700 people unemployed, or 12 percent of total employment.

"In March 1948 there were 108,310 people employed, of which 75,760 were engaged in manufacturing. At that time there were 4,300 people unemployed, or 4 percent of total employment.

"In March 1949 there were 94,980 employed, of which 61,720 were engaged in manufacturing. There were 11,600 unemployed, or 12 percent of total employment."

BIG POPULATION GAIN

The decline in employment has continued since those figures were compiled, but at that time the chamber reported:

Several things stand out from these statistics. Total employment has gained by 39,180, an increase of 70 percent in 10 years. Industrial employment, 10 percent greater than the total employment of 55,800 in 1939, has increased by approximately 50 percent.

Our population in the Bridgeport area has increased by approximately 50,000 persons in the past decade. Bridgeport itself

accounts for approximately 28,000 of the increase, which is eight times the increase of the city's population from 1920 to 1940.

Before the war very few plants were working more than one shift. Even today, most plants are working two shifts and some three shifts.

United States Employment Service figures show 16,252 applicants (including would-be job-switchers) listed for 802 job openings. A year ago, 7,310 registrants were listed for 850 openings.

Appraising the current unemployment situation, it's necessary to bear in mind that the total of jobless workers includes 2,100 idled by a strike at the Singer Manufacturing Co.; also that the area has been absorbing 7,000 of the 8,500 workers paid $20,000,000 a year by Chance Vought A'rcraft before it transferred operations at the Navy's behest to Texas, taking along only the cream of its personnel.

A chamber's business survey shows a weekly average pay roll as reported by the two largest commercial banks, of $2,698,345, compared to $2,905,475 for the preceding month and $3,147,374 a year earlier; savings deposits of $248,179,269, compared to $248,183,311 for the preceding month and $246,275,824 a year earlier; bank clearings of $27,212,368, compared to $28,455,699 for the preceding month and $35,880,660 a year earlier, and postal receipts of $227,014, compared to $244,969 for the preceding month and $195,980 for a year earlier.

Federal Aid to Education

EXTENSION OF REMARKS
OF

HON. WILBUR D. MILLS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. MILLS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following testimony prepared for presentation before the House Committee on Education and Labor on Federal Aid to Education by Dr. George S. Benson, president Harding College, Searcy, Ark.:

My name is George S. Benson. I am president of Harding College of Searcy, Ark. I am appearing before you because of my very deep concern for the future of this Nation and because I am greatly exercised over the many definite steps that are now being taken, which, if carried to an ultimate conclusion, will lead the whole of our people into mediocrity.

One of the most dangerous and far-reaching requests now being made in that direction is for Federal aid to education. This request is usually justified on the grounds of equality of educational opportunity itself or on the grounds that the States are unable to provide the educational opportunities required.

I wish in the very beginning to agree that teachers' salaries during the war and immediately after the war were comparatively too low as most Government salaries were then and have remained. While much has been done throughout the Nation to correct that situation for teachers there is still more to be done particularly in some localities. Nevertheless, that situation is being very rapidly corrected. For instance, in Arkansas, my own State, teachers' salaries have been approximately trebled since 1940. This is probably a little more rapid than increases in some States but nevertheless, in all States the trend is upward. Finally, the cost of living is now going down. Wages for those in other fields of endeavor either are already or will likely go down over the next 1 or 2 years, whereas all of us are still increasing teachers' salaries. Accordingly, within 1 or 2 years we will probably have a reasonable measure of equality between teachers' salaries and other salaries in the same community.

It is my firm conviction that no single step now being considered by Congress has such far-reaching consequences and carries with it such dangerous implications as Federal aid to education.

I would not say this if the question involved no more than the present bill requesting $300,000,000 to be distributed among the States of the Union. However the question involved is not merely $300,000,000 to be distributed among the States. The question involved is one of principle. It is a question as to whether we shall keep State and local control of education or whether we shall go into a system of Federal support and Federal control of education. At this point, I am not merely dreaming. Basing my argument upon present bills before Congress and upon recommendation from influential sources, I want to indicate how serious these implications are.

The fact that the present $300,000,000 request is merely to serve as an opening wedge is evident for the following two reasons:

1. In 1941 a bill was presented in Congress calling for $300,000,000 for Federal aid to public education, on the grounds that certain southern States were in great need of this aid and must have help. However, the 19 States that would get more out of the present bill than the minimum of $5 per child have since 1940 increased their own funds for education $588,290,910. This means that these 19 poorer States alone have already increased funds for local education almost twice the total appropriation then sought, and approximately four times the aid that would have gone to these 19 States. However, we still have the same size request presented, even though the cause on which it was then sought has entirely disappeared.

2. In the second place, both friends and opponents of Federal aid have freely declared that the present bill would represent only the beginning. While none of those promoting bills in the past were courageous enough to indicate how rapidly they expected increases to follow, the President's Commission on Higher Education proved bolder. The President's Commission for instance, has recommended $120,000,000 in scholarships in higher education for the present school year and has indicated a scale of increase which would bring the total annual appropriation for scholarships up to $1,000,000,000 a year by 1960. The President's Commission further recommends that $63,000,000 more be allocated among the States for higher education, to be annually increased until it would reach $265,000,000 a year by 1960. The commission advocates another appropriation which should take the place of the present GI aid and which should be increased to $210,000,000 a year by 1960. The Commission further recommends $216,000,000 annually for buildings. This would make a grand total of about $2,250,000,000 annually by 1960 as aid to higher education alone.

If we were to apply this same measuring rod to present appropriations sought for aid to grammar schools and high schools we would find that the amount would increase to about $1,000,000,000 a year by 1960. The grand total would then be about $6,000,000,000 a year by 1960. This figure is approximately double the total amount required to support our entire educational program annually up to the beginning of World War II.

Should there be any real virtue in the present declaration that there would be no Federal control with this Federal aid, which I very seriously doubt, we could all understand that by the time the Federal Government was appropriating $6,000,000,000 a year as aid to education, there would no longer be any question about who would control it.

Serious minded people cannot be so naive as to believe that we can have Federal aid to education without Federal control, especially in view of the fact that the Federal aid would assuredly increase rapidly, once the principle were accepted. Let me state briefly the following reasons for this conclusion:

A. There has never yet been presented a Federal bill for aid to education in which there was not some actual control such as affirming the amount that each State must itself continue to contribute to education; affirming requirements relative to reports that must be made, and which must meet the approval of a Federal agency. More than once there have been attempts to put in a regulation relative to division of the funds and the funds they supplemented, with regard to white and colored. Moreover, it is my firm conviction that the Federal Government has a responsibility to regulate the use of the appropriations it makes. Money always carries with it responsibility and when the Federal Government appropriates sums of money on the basis of a blank check and without restrictions, it is contrary to the principles of moral integrity that must characterize a responsible governing agency.

B. No Congress can limit the power or determine the action of succeeding Congresses. When once the principle of Federal aid has been accepted, and the practice established, the public would submit to Federal regulation before they would permit the appropriation to cease. Hence the way would have been entirely paved for a succeeding Congress to add on any regulations that it might choose.

C. The Federal Government, according to a Supreme Court opinion, is already declared to have the right to control that which it subsidizes. Herein I am referring to a farm case which originated in the State of Ohio and regarding which Chief Justice Jackson ruled "It is hardly lack of due process for the Federal Government to control that which it subsidizes." For these reasons and in view of the fact that these appropriations would greatly increase until the Federal Government would likely be carrying the majority of the load, I believe you will agree with me that there would be Federal control of education within a few years after Federal aid was accepted as a principle.

Now, with your permission, I want to submit some statistics relative to the claim that the Southern States are unable to finance an adequate educational program.

1. First, I call your attention to the fact that each of the 19 poorer States have already more than doubled their teachers' salaries, and a few of them have actually trebled their teachers' salaries since 1940. Many of them are making additional local appropriations this year for further increases in teachers' salaries. These poorer States have increased teachers' salaries faster than the richer States and are approaching a satisfactory solution.

2. The cost of living is not so high in these 19 so-called poorer States and therefore they can maintain satisfactory educational opportunities without actually spending an equal amount of money per student in comparison with New York and California.

3. In the poorer States, new mineral discoveries are being made, ore deposits are being found, the wealth of the States is increasing, and industry is moving in at a rapid pace. For instance, more than 850 new industries

have come into Arkansas since 1940. Our industrial pay roll has quadrupled and the average per capita income has trebled since 1940.

4. Salaries for teachers in the poorer States are in keeping with salaries paid to policemen, firemen, and ministers. Gentlemen, do you not fear that these latter groups—the ministers, the policemen, the firemen—might feel greatly disheartened and seriously discouraged at seeing the Federal Government discriminating against them in favor of helping the teachers? Moreover, is there one reason why the Federal Government should supplement the salaries of teachers in these poorer States but not supplement the salaries of the firemen, the policemen, and the ministers who are rendering a service equally as effective and equally as important?

5. The quality of education moreover is not entirely determined by money. The great need in American education is not for more money but for more moral character. Utah is on about the medium line with regard to money spent on education. Yet, Utah, according to research statistics, is achieving better results in the field of education than any other State in the Union. Our poorer States are approaching and probably can within a few years reach that medium figure which now represents the expenditure per child in Utah. At any rate, Utah is proving that the efficiency of an education program is not entirely determined by the amount of money spent.

6. I am in agreement with a statement made by the late Nicholas Murray Butler who said "the glory and successes of education in the United States are due to its freedom, to its unevenesses, to its protection of the needs and ambitions and capacities of local communities and to its being kept in close and constant touch with the people involved.

Gentlemen, may I also call to your attention the fact that these 19 poorer States in 1948 paid to the Federal Government in income tax alone $2,975,065,000. These same 19 States would receive only $165,351,000 in aid from the present proposed appropriation. In other words, in income tax alone these poorer States are paying to the Federal Government 18 times what the Federal Government is proposing in turn to aid them. This means that if a 5½-percent reduction in Federal expenditures were made the saving to these poorer States alone would be approximately equal to the total of the present proposed Federal aid. I would like to propose gentlemen, that we make the 5½-percent reduction in expenditures and thus aid every State in the Union in genuine reality and aid even these poorer Southern States more than the present proposal would help them.

While we are talking about economizing, I'd also like to call attention to the fact that one-third of the Federal civilian employees could be removed from the pay roll without decreasing efficiency of Government services but thereby making a saving to the States of $2,109,000,000 in pay roll alone. The saving to Arkansas taxpayers alone would be approximately $16,000,000. This is 50 percent more than the amount offered Arkansas under the present Federal aid bill. Such an economy, gentlemen, would be heartening to the entire population of this Nation, would be a morale builder, would be a blessing to everybody and would bring far greater aid to every State in the Union than the present proposed Federal-aid bill.

Gentlemen, with your permission, I want to comment briefly in a general way on arguments that have been presented to you in favor of Federal aid to education. I want to call attention to the fact that those favoring Federal aid have for a number of years usually presented old figures relative to conditions in the South. As businessmen, I know that you recognize that these old figures are not representative and that we must have up-to-date figures. It is for this reason that I want to present the following tables:

TABLE 1.—*A statement of the expenditures in education for the 19 poorer States in 1940 and in 1948*

State	1940	1948	Increase	
			Amount	Percent
Ala	$20,488,649	$53,898,499	$33,409,850	163.1
Ariz	8,510,619	21,528,445	13,017,826	153.0
Ark	11,704,484	30,152,325	18,447,841	157.6

TABLE 4.—*Estimated cost of the Federal-aid bill to each of the 19 poorer States and the amount each would receive from the bill and the amount of final gain or loss*

State	Estimated allotments [1]	Cost to taxpayers of State	Net gain (+) or loss (−)
Alabama	$14,451,000	$3,036,000	+$11,395,000
Arizona	1,500,000	911,000	+589,000
Arkansas	11,708,000	1,716,000	+9,992,000
Georgia	14,163,000	3,780,000	+10,383,000
Kentucky	13,367,000	3,137,000	+10,230,000
Louisiana	10,370,000	3,003,000	+7,367,000
Mississippi	15,469,000	1,743,000	+13,726,000
New Mexico	3,130,000	697,000	+2,433,000
North Carolina	21,070,000	4,209,000	+16,861,000
North Dakota	860,000	911,000	−51,000
Oklahoma	8,350,000	2,868,000	+5,482,000
South Carolina	13,365,000	1,930,000	+11,435,000
South Dakota	1,080,000	885,000	+195,000
Tennessee	10,629,000	3,565,000	+7,064,000
Texas	10,845,000	10,804,000	+41,000
Utah	1,170,000	885,000	+285,000
Vermont	390,000	483,000	−93,000
Virginia	4,074,000	3,968,000	+106,000
West Virginia	9,360,000	2,305,000	+7,055,000

[1] Allotments computed by National Education Association and includes deductions in States which fail to spend 2.25 percent of the total income of all its citizens for schools.

Gentlemen, the testimony I have presented demonstrates that Federal aid is not a necessity but in reality an absurdity.

I have also shown that Federal aid once accepted as a principle will increase rapidly and ultimately end with the Federal Government carrying a very large share of the cost of education throughout the Nation and in dominating the program of education. Now, I wish to indicate briefly how dangerous it would be for the Federal Government to become the major supporter and the master of the Nation's educational program.

The totalitarian state is the enemy of human progress. Throughout the world individual freedom and human progress are going hand in hand. This has also been true back through the 6,000 years of human history.

Should our educational system become chiefly controlled from Washington, it is my very firm conviction that within a generation our children would have been educated to seek Federal control of our industries, of agriculture, and of our social welfare, thus making America a totalitarian state.

Gentlemen, we are now standing at the brink ready to step into those dark regions from which other nations have gone into totalitarianism. We have fought two world wars to preserve democracy. It now appears we are winning the cold war in Europe. Certainly this would be an unfortunate time to lose our struggle for freedom at home.

In all seriousness I consider this attempt to federalize public education in America the most serious step this Nation has considered in connection with our gradual trend toward state socialism.

Gentlemen, I must further call attention to the very sobering fact that this is a once-for-all decision. If we start down the road of Federal aid and the people become accustomed to depending upon it, there will be no turning back. We are actually at the point of deciding whether we shall keep education under management and control of the States and the local communities or whether we shall turn to a federalized program of education.

The argument that the States cannot afford an adequate educational program is absurd. The Federal Government is able to obtain no money except that which it obtains from the States. Moreover, it is my firm conviction that if the Federal Government were maintaining our present educational system at its present level and its present efficiency, the cost would be at least 50 percent more than the same system is now costing under State and local control. I say this because of the fact that the record of the Federal Government in anything that it long handles is a wasteful record. For instance, the Hoover Commission recommends that $140,000,000 a year could be saved by an efficient reorganization of the present postal system. The Hoover Commission estimates further that with the reorganization of the executive branch of Government at least $3,000,000,000 could be saved the American taxpayers annually, which is 10 times the amount of the present Federal-aid bill. To put the Federal Government in control of anything so big as our educational system would mean sufficient waste to constitute a millstone about our necks with which we would not long be able to swim. The poor States would all soon be worse off than they are now.

The late Nicholas Murray Butler declared "there is not enough money in the United States even if every dollar of it were spent on education to produce by Federal authority or through what is naively called cooperation with the Federal Government and the several States educational results that would be at all comparable with those that have already been reached under the free and natural system that has grown up among us."

With your permission, may I one time more refer to what we are doing with regard to public education in Arkansas. In 1948 Arkansas approved at the polls a plan to reorganize its own entire public-school system thereby putting high-school opportunity within reach of every child in Arkansas. This reorganization plan also means much better schools without increased cost. Yet had there been Federal aid to continue the old system we would have found it impossible to obtain the reform that was necessary to achieve these better results without increased cost to anybody.

Gentlemen, I might not be quite so concerned about these socialistic trends if I had not spent 11 years abroad and if I had not studied economic conditions under 20 different flags. In the Orient I observed much dire poverty caused by the absence of freedom of individual opportunity. I saw the best countries in Europe offering to their workers only half the purchasing power in food, clothing, housing, transportation, entertainment, and education for their children that American workers enjoy. Russia, a nation with a territory three times as large as our own, with an abundance of good farm land, and with as great a variety of resources as we and with twice the quantity, provides her workers with a purchasing power only one-fifth as great as that provided our workers at similar jobs. Russia's poverty is likewise clear because it has no freedom of individual opportunity. Regimentation and totalitarianism destroy enthusiasm and progress.

For 4 years England has experimented with government management of her major industries. Because of the law-abiding qualities of the British citizenry that country is probably the most favorably situated of any in the world to make state socialism work. But after 4 years of government management of major industries there we find present elections explaining that the people are unhappy with the results. The last 6 months have indicated more dissatisfaction than the previous 3½ years. This shows that the British were willing to give state socialism a very patient trial. But now, after 4 years of trial, the rapidly growing dissatisfaction is very evident.

In our own country, where wages are two times as high as in the best countries of Europe, five times as high as in Russia, and where we send more young people to high school and college than all the rest of the world combined, and where our national income is equal to the total national income of any other six nations in the world, I am thoroughly convinced that the outstanding results are due to freedom of individual opportunity—freedom from the regimentation of a totalitarian state.

It is my firm conviction that if we keep freedom of individual opportunity and maintain industrial harmony and understanding among our people, we can see the standard of living in this Nation increased by 100 percent within the next 33 years. I say this because for a generation we have been increasing man-hour productivity by 3 percent annually. There is every reason to believe this will continue and probably at an accelerated pace. Accordingly, it is quite certain that if we keep our American way of life our standard of living will rise 100 percent within the next 33 years. On the other hand, if we turn to a government-managed economy—to the totalitarian state—it is my firm conviction that our man-hour productivity, our national income, and our standard of living would go down by 50 percent within a generation. Consequently, whether we go on up 100 percent, or whether we go back 50 percent, depends upon what this generation does with regard to this very prominent trend toward statism.

I am closing my testimony with a prayer that God may give to you wisdom to make the right decision in this very important matter that so vitally affects the whole of our people and the future of our Nation.

Development of Low-Grade Iron Ores

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Monday, June 20 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, one of the most significant features of the proposed economic expansion bill of 1949, which has already evoked considerable discussion throughout the country and which I and other Members of the Senate will introduce in the near future, is its provisions for the development of low-grade iron ores. These provisions have been carefully drafted to solve one of the most crucial problems involved in the maintenance of our national security and in the prevention of economic depression.

It is a common saying that "As steel goes, so goes the country." But it is also true that our great steel industry, so essential to our military strength and to all our manufacturing industries, depends upon our sources of iron ore. It is also true that the high-grade iron ores of the Mesabi Range are being depleted at a rapid rate.

All experts who have studied this fundamental problem are agreed that it would be the height of folly for us to rely entirely upon iron ores from Labrador or iron ores from other countries. All are agreed that we have already been remiss in failing to develop the low-grade taconite ores in the Lake Superior iron ore district.

In this connection, the able and distinguished Senator from Montana [Mr. MURRAY] has made available to me a letter he has just received from Mr. Arthur B. Rathbone of Oglebay Norton & Co., one of the iron ore companies which has thus far shown the greatest foresight in trying to meet this grave national problem. Mr. Rathbone points out that steps should be taken now toward the replacement of present reserves through the development of new ores and that taconite is the only logical new ore to maintain the productivity of the Mesabi Range. He also endorses some of the major provisions of the economic expansion bill applicable to taconite ores and makes some very interesting and constructive suggestions for improvement in the measure.

I ask unanimous consent to have inserted in the RECORD Mr. Rathbone's letter on behalf of Oglebay Norton & Co., together with an attached memorandum entitled "Lake Superior Iron Ore District—The Need for More New Ore."

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ECONOMIC EXPANSION ACT OF 1949

OGLEBAY NORTON & CO.,
Cleveland, Ohio, June 10, 1949.

Hon. JAMES E. MURRAY,
Senate Office Building,
Washington, D. C.

DEAR SENATOR MURRAY: With reference to your letter of May 27 concerning the above act, my remarks will be limited to that section of the act, namely, sections 204 and 206 of title 2.

Our interest in the act is limited to what assistance may be given for the development of taconite ore in the Lake Superior district.

We believe that it is fairly common knowledge now that the ore reserves in the Lake Superior district are being depleted at a rather rapid rate and that steps should be taken now toward the replacement of these reserves through the development of new ores. Taconite is the only logical new ore to maintain the productivity of the Mesabi Range. As you probably know, taconite must be concentrated in about a 3 to 1 ratio in order to make it usable as a blast-furnace burden. This is a costly process involving crushing and fine grinding, separation of the iron units by a wet magnetic process and then agglomerating by sintering or pelletiz-

ing. The capital investment is estimated somewhere between $15 and $20 per annual ton of output, that is, to build a plant capable of producing 10,000,000 tons a year would cost in the neighborhood of a hundred and fifty million dollars or so.

Because the profit factor is not at all clear today and because of the terrific amount of capital investment required to build a plant, it may be that unless there is some governmental assistance in the construction of and financing of these plants now that this new ore will not come into being soon enough to replace the dwindling supply on the Mesabi Range. Attached is a very general summary of the ore reserve situation in the Lake Superior district.

With specific reference to section 204, "accelerated amortization" should be offered to the operators of taconite plants. This, of course, is merely a deferment on the payment of Federal income taxes. However, some companies may be prone to use the provision and some may not, but it should be available to the companies that would desire it. Also, under section 204, line 1, page 14, with reference to the procurement abroad of iron ore: We believe that the words "iron ore" should be omitted. It may very well be a stumbling block to corporations that take on the responsibility and obligation of building taconite plants to be faced with the possible competition through Government purchase of foreign and imported ores. I would strike the words "iron ore" from line 1 entirely.

Under section 206, we believe that in our own case the interest rate on any long-term loan of this nature should be in the neighborhood of 2½ percent. In line 14 on page 19, interest rates not in excess of 4 percent are satisfactory and we would, of course, be very willing to explain our reasons why a lesser interest rate should apply for the development of the taconite ores. Likewise, we feel that a 20-year loan is not long enough in the case of taconites. Once a plant of this kind is in operation the ore reserves are sufficient to keep it operating for at least a hundred years. My personal suggestion would be to make long-term loans payable on a production basis because it takes at least 4 or 5 years to build one of these plants which means that there is no revenue being produced during the first 4 or 5 years and it would be a financial hardship on the operators of taconite plants to make material loan payments with no income being generated by the plants. If payments are made on a production basis this would take care of depressed times when production would be cut or stopped. This method is better than negotiating the reduction or deferment of principal and interest payments during periods of national declines and demands of employment.

The Government has set up loaning agencies, namely, the International Bank, or the Export Import Bank, which can and do provide funds to foreign countries and foreign corporations for the development of foreign sources of raw materials. These loaning agencies have wide discretion as to the interest rates, the amount of the loan and the length of time the loan should run. It is clear to me that such opportunities should be offered to domestic corporations for the development of our own natural resources. RFC is limited to 10 years for the length of the loan and strictly 4 percent interest. It puts our own domestic corporations in a less competitive position for the development of our own national resources, employment, etc., than foreign corporations.

I trust that the above will be of some assistance to you in developing a bill that will be able to promote and maintain the production of iron ore from our own Lake Superior region.

Very truly yours,

ARTHUR B. RATHBONE.

LAKE SUPERIOR IRON-ORE DISTRICT—THE NEED FOR MORE NEW ORE

The Lake Superior iron-ore district lies within the States of Minnesota, Wisconsin, and Michigan as well as the Province of Ontario, Canada.

Shipments of iron ore have come from this district for almost a hundred years. Starting with the year 1854, 2,500,000,000 tons of iron ore have been dug and shipped from this district either by rail or vessel. It has come from the Mesabi, Cuyuna and Vermilion ranges in Minnesota and the Gogebic, Marquette and Menominee ranges in Michigan and Wisconsin and from the Michipicoton and Steep Rock areas in Canada.

Iron ore has three separate classifications:

1. Direct shipping open pit, meaning that ore which can be mined with a power shovel and sent direct to the blast furnace.

2. Direct shipping underground, meaning that type of ore hoisted by shaft and shipped direct to the blast furnace.

3. Open pit concentrates, meaning ore that is mined by a power shovel and then treated by a simple process of washing or sink-float to increase its iron content before being shipped to the furnace.

The first question is, that if 2,500,000,000 tons have been shipped to date, how many tons are left in the Lake Superior district? An exact figure is not known and many guesses have been made. The latest accepted figure is a billion seven hundred million gross tons of iron ore, distributed according to the ranges as follows:

Mesabi Range	1,200,000,000
Cuyuna Range	117,000,000
Vermilion Range	15,000,000
Gogebic Range	58,000,000
Menominee Range	72,000,000
Marquette Range	110,000,000
Ontario, Canada	128,000,000
Total	1,700,000,000

And divided as to the classifications as follows:

Direct shipping open pit	766,000,000
Direct shipping underground	601,000,000
Open pit washed ores	333,000,000
Total	1,700,000,000

How long the present rate of production can be maintained to keep pace with the present-day consumption, plus any increase in the natural growth in steel-making capacity, is a matter of some conjecture, but it is felt that within a year or two there will be a gradual decline in the rate of production because of mining deeper in the underground mines and the open pits, smaller ore bodies, as well as the exhaustion of others. A glaring example of this is the huge Hull Rust Mahoning pit which in 1942 shipped 25,000,000 gross tons and in 1948 shipped 14,000,000 gross tons.

There follows an estimate as to the maximum rates of production from the Lake Superior district to 1960:

1949	85,000,000
1952	81,300,000
1956	75,000,000
1960	67,000,000

This compares with actual shipments as follows:

1947	79,900,000
1948	84,700,000

The decrease in production will come almost wholly from the Mesabi Range open pit direct shipping and washed ores. Production from the other ranges combined should remain fairly constant, accounting for 20,000,000 tons annually.

The next question is prompted by the 1960 figure above, namely, what new ores are going to replace the deficiency from the Lake Superior region? The answer to this question is—

(a) Manufactured close-at-home taconite (magnetic iron-bearing material on the eastern end of the Mesabi Range) from the domestic Lake Superior district.

(b) Foreign ores imported from Chile, Venezuela, Brazil, Sweden, and Labrador.

If the American steel industry is going to depend upon iron ores within our own boundaries, both in peace and war, then this deficiency must first be made up from the manufactured taconite ores from the Lake Superior district.

There is an abundance (meaning billions of tons) of low-grade iron-bearing material in the Lake Superior district. It may be divided into two classes, that in which the iron-bearing material is predominantly hematite and that in which the iron-bearing material is predominantly magnetite. The only method known today to concentrate low grade hematite material is to roast it, converting the iron mineral to magnetite and then it is susceptible to separation by a magnetic process. Roasting is a costly process. It is estimated to be not less than 60 cents per ton of crude ore or $1.50 or more per tone of concentrate.

The iron ore industry today knows how to treat low-grade magnetite-bearing materials. It is simply a matter of crushing and fine grinding until the iron material is released from the gangue, usually silica, and extracting the magnetite by means of wet magnetic separators. On the Mesabi Range it takes about 3 tons of crude to produce one ton of concentrate analyzing approximately 65 percent magnetic iron. The other two tons are discarded. This extremely fine concentrate (about 300 mesh) must be put in usable form for the blast furnace. There are four means of agglomerating, namely, sintering, briquetting, nodulizing, and pelletizing. The latter process gives promise of being the most economical and large-scale research is now being conducted on the making of pellets endeavoring to develop a commercial process which will yield pellets of the proper size, shape, porosity and hardness. Within the next year the iron ore industry should have the complete answer as to how to agglomerate taconite concentrates.

One might ask that if this problem of manufacturing ores from magnetite taconite is so simple, then why aren't plants today in operation in the Lake Superior district? The answer to this lies primarily in the amount of capital required to produce a ton of concentrated taconite. The capital investment in an open-pit mine is about $3 per annual ton of output. In an underground mine the capital investment is between $5 and $6, and to produce taconite concentrates from the magnetic taconite ore the capital investment will run between $15 and $20 per annual ton of output. If one were to construct a manufacturing plant to produce 5,000,000 tons of concentrated magnetite taconite ore, the capital required would be between $75,000,000 and $100,000,000. It can be seen that steel manufacturers will continue to use the cheaply mined ores until it becomes an absolute necessity to invest huge sums in the manufactured ores.

A taconite iron ore manufacturing plant cannot be built overnight on the Mesabi Range. The time of construction will be somewhat between 4 and 5 years and the first unit plants will probably not exceed 2,500,000 tons per year. These smaller units will be operated a year or so before any attempt will be made to increase their productive capacity to 5,000,000 tons a year or greater. The year 1953 is about the earliest one could reasonably expect taconite plants to be operating on the Mesabi Range even if the capital were available today for the venture. Then, too, the profit factor is

not sufficiently clear today to permit risk capital being invested.

If the Government is interested in the preservation of easily mined open pit ores from Minnesota for national-security reasons, and also developing a new supply of ore to protect the domestic economy because of the dwindling supply of direct shipping ores from the Lake Superior region, then it would seem that Government financing should be offered to the interests that own the taconite reserves. Whether these interests will accept Government financing cannot be foreseen but as an inducement they might borrow funds for the venture if loans were offered with the following general terms:

(1) Length of loan, 30, 40, or 50 years. The mineral resources will last many years beyond the length of the loan.

(2) Low interest rates, not to exceed 2½ percent.

(3) The entire loan should be repaid, both principal and interest, on the basis of tons shipped. The reason for this is because of the length of time required to construct a plant before it can produce iron ore for sale to generate revenue and in times of depression principal and interest payments should be deferred when shipments are not being made.

Iron ore, the backbone of the steel industry and national security, should not be in short supply. Likewise, with an expanding domestic economy, there should be ample iron ore to supply the steel mills for the general welfare of the country. Concentrated taconite from our own domestic boundaries can and will be the new ore to complement and enhance the dwindling supply of Lake Superior direct shipping ores.

THE NEED FOR NEW ORE IN THE LAKE SUPERIOR IRON-ORE DISTRICT

1. Lake Superior district has shipped to date 2,500,000,000 tons of iron ore.

2. There remains an estimated 1,700,000,000 tons of iron ore.

3. The rate of production (85,000,000 in 1948) of the remaining tonnage will decline to about 67,000,000 in the next 10 to 12 years if the present rate of consumption continues.

4. The only domestic source of iron ore to offset the decrease in production is magnetite taconite from the Mesabi Range, which must be beneficiated.

5. Taconite beneficiation plants require invested capital of $15 to $20 per ton of annual output, i. e., to produce 5,000,000 tons annually would require $100,000,000 and 4 to 5 years to construct.

6. For national-security reasons, it would be prudent for the United States to have an ample supply of the basic raw material which so affects our domestic economy.

7. The offer of governmental financial assistance would induce the owners of the reserves to produce taconite concentrates if the loans were repayable over a period of 30 to 50 years; the interest rates were low, and capital and interest payments contingent upon the product shipped.

Economic Problems Affecting Farmers

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Monday, June 20 (legislative day of Thursday, June 2), 1949

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a summary of a discussion relating to the economic problems affecting farmers, prepared by O. B. Jesness, chief of the division of agricultural economics of the University of Minnesota. This discussion was presented at the thirty-first annual conference of the Minnesota vocational agriculture teachers, at Morris, Minn., on June 3, 1949.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

ECONOMIC PROBLEMS AFFECTING FARMERS

(By O. B. Jesness, chief, division of agricultural economics, University of Minnesota)

A combination of large output and favorable prices in recent years has resulted in record farm incomes. This is not to say that all farmers are rolling in wealth, but by and large the financial position of agriculture today is in a good shape. The debt burden of agriculture is much less than it was following World War I. Farmers are in a good financial situation in respect to current assets represented by investments in Government bonds and other securities, bank deposits, and cash.

In spite of the favorable situation in which agriculture finds itself, there is in evidence considerable uneasiness over what may lie ahead for the farmer. The experiences following World War I and more particularly those of the severe depression of the thirties are still fresh in the minds of many farmers and they are concerned lest World War II be followed by a similar period.

This fear is being played upon by some proponents of specific farm programs. They are inclined to argue that if their program is not adopted then agriculture will again find itself in a situation similar to that of 1932. This is something which we should not accept blindly. We ought to endeavor to think problems through and to see what actually is involved.

The last two decades have supplied two eloquent demonstrations of the interdependence among the various parts of our economy. The depression of the early thirties with its large unemployment and nonagricultural inactivity was reflected in greatly reduced demand for farm products and farmers consequently had to accept ruinously low prices. The war period brought full employment and a high level of money incomes for consumers. This situation was reflected in very strong markets for farm products. To be sure, lend-lease and military demands added to the farmers' market but the major strength came from the increased purchasing power on the part of domestic consumers. To be sure, there are those who still like to think of agriculture as the basic industry on which everything else depends and they are inclined to argue that if we will maintain agricultural income then we will have prosperity generally. Farming accounts for only a minor share of the population and of the total national income. It is well for us to recognize that there are a number of lines which are essential to our welfare today and that we will do better to recognize the interdependence among these lines rather than to single out any one for special emphasis. We need good health in all parts of the economy.

One reason for the farmers' concern today is that we are going through a shaking-down process at the present time. We have caught up or are catching up with the backlog of unfilled demands in various lines. Some downward readjustment of prices is taking place in some lines because of this situation. While this period may last somewhat longer and the adjustments may be somewhat greater than anticipated by some of the more optimistic forecasters, there seems to be strong support for the idea that there is no real reason for anticipating a return to the conditions of the early thirties in the near future. We are in a much more favorable situation than we were in 1929. Our banking structure is in much better shape. We have avoided a speculative boom in the stock market. There is still a backlog of unfilled wants in such fields as housing. Employment still is at a high figure. While we should not be blind to the readjustments which need to be made, we should not be overcome by fear of these readjustments.

There are a variety of farm programs in the picture today. Some of them are carryovers from the programs of the 1930's, some come from the war period, while still others represent proposals intended to deal with the situation ahead.

Price supports at 90 percent of parity are in force for this year or this year's crop on some of our major farm commodities. If the Agricultural Act of 1948, otherwise known as the Hope-Aiken Act, is permitted to go into effect in 1950 these price supports will be placed on a sliding scale from a high of 90 percent of parity to a possible low of 60 percent. This sliding scale is intended to adjust price supports to supplies. The 90-percent level will be in effect only if supplies are relatively short and the supports will drop to the 60-percent level only if surpluses accumulate so that supplies are 130 percent or more of normal. Moreover, in instances where production control or marketing quota programs are in effect, the participants are provided with supports 20 percent above this minimum level. The contention of some that this program will lower farm prices generally to 60 percent of parity is not tenable. Farm prices in general did not fall below this level even in the worst of the depression. While individual commodities for which production has been expanded greatly might fall to this level or below, a general situation of this sort is not foreseen.

Secretary Brannan recently has made some proposals for a program to replace the Agricultural Act of 1948. In brief, his proposal gets away from parity based on 1910–14 and develops a purchasing-power standard based on a recent 10-year period to be kept current by a moving average. He divides farm commodities into two classes, the storable and the nonstorable. The former includes such crops as wheat, corn, cotton, tobacco, rice, dry peas, dry beans, oilseeds, and the like are suggested for price supports determined by his purchasing-power standard. For the nonstorables, Secretary Brannan has proposed that the market be permitted to find its level and that farmers be paid production payments representing the difference between the average prices received by farmers and the figure indicated by the purchasing standard.

The storable commodities such as wheat, cotton, tobacco, and rice include major agricultural exports. Mr. Brannan has not yet outlined his views with respect to how we are to operate actively in export trade on such commodities if we maintain prices here at home on an arbitrary basis. It is not clear whether Secretary Brannan shares the view that we should have a two-price system on these commodities. Any such program at this time is open to serious question because of its nationalistic implications. Such an operation would involve export dumping and would be likely to get us into difficulties with other nations for that reason. Moreover, we would find it necessary to raise barriers to imports in order to protect such an artificial price structure. It is difficult to see how a program of this sort can be made consistent with our efforts to revive and expand world trade on a multilateral basis.

In appraising any program of agricultural-price support, it is well for us to note the functions which price plays in our every-day life. All of you know how conscious farmers are of prices and how interested they are in outlook. One of the functions performed

by farm prices is that of guiding the production plans of farmers. An attractive price serves as a magnet to draw out production. On the consumers' side, however, a high price works in the opposite direction in that it acts as a repellent and tends to reduce takings by consumers. The third function of price is to help decide how the national income is to be distributed. Price-support programs are concerned with this function. However, a price maintained at an arbitrarily high level will still continue to influence production and consumption. If the Government undertakes to maintain farm prices at an artificially high level over any period of time, it will have to assume controls over production and disposal necessary to make such a price effective.

These controls will have to be much more effective than those we talked about during the 1930's. There are a whole list of considerations which we need to weigh carefully before we embark on a program requiring such controls. Will these controls lead to the best use of resources? Will the decisions of some governmental agency lead to better resource use than the decisions of the individual farmer? Will controls tend to restrict desirable changes in production on individual farms, between areas, and between commodities? Will the arbitrary prices involved tend to be bid into higher land values and consequently be translated into costs rather than incomes? Will they tend to hinder rather than help desirable shifts in population?

Earlier in the discussion we pointed out that farmers are concerned over the possible return of a situation such as that which prevailed during the early thirties. Actually, however, we are not proposing programs primarily designed to protect the farmer against that situation but instead are proposing programs designed to maintain prices and farm incomes well above depression lows. Price supports at high levels are not the real answer to depression. If a serious depression should return at some time in the future, there certainly will be strong argument for providing some protection for farmers against conditions which they have had no part in creating and against which the individual farmer has little or no defense. There is no merit in letting prices fall clear to the bottom in a situation of that sort, consequently, a strong case can be made for price supports which will serve as a stop-loss in such a situation. Similarly, a case can be made for income payments in a period of that sort. That, however, is quite a different matter from having price supports or income payments in force as a regular situation.

Price manipulation, however, is not the only way in which help may be supplied to the rural population. Rural areas supply not only food and raw materials to urban centers but also are sources of population. This is a point which deserves recognition in connection with providing financial supports for schools. The disadvantages of rural areas in connection with medical and health services also deserve attention. They already have gone a considerable distance in sharing highway costs.

As far as the farmer is concerned, there is no adequate substitute for a strong market supplied by a high level of production and employment in nonagricultural lines. The answer to depression lies in finding ways and means of restoring productive activity in other lines. Instead of putting so much emphasis on farm price programs, farmers might do well to devote part of their thinking to the question of maintaining economic health generally. It would not be out of place for them to remind the leaders of industry, business, labor, and Government of the concern which agriculture has in a high level of productive activity generally. The farmer has demonstrated by deeds his belief in full production.

The tendency in our modern economy is to become too price-minded. No intelligent person will deny that price is important. However, we will do well to keep in mind at all times that it takes production as well as price to provide an income. Naturally, all of us are concerned with our prices because we want to get as large a share as possible of the national income. But if there is no production, there will be no income to distribute. Along with our interest in prices, we need consequently to have an enlarged concern over a fullest possible production of goods and services needed to satisfy human wants. Each individual and each group needs to recognize that they have a responsibility to produce income as well as a privilege of sharing in that income. The way to better living lies in better and more abundant production of goods and services as well as in the better distribution of the resulting income.

The Excise Tax on Copper Must Be Restored

REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. MANSFIELD. Mr. Speaker, I have been very much disturbed by events of recent weeks as they affect the price of metals, especially copper, in the United States. As the Members of this House know, I have opposed the lifting of the excise tax of 4 cents per pound on copper imported into this country because copper produced in the United States cannot compete with the low-cost copper production of Chile, Rhodesia, Katanga, and elsewhere. It costs approximately 12 to 13 cents to produce a pound of copper in the mines of Butte, Mont.; whereas copper from outside sources can be laid down in New York at anywhere from 7 to 10 cents a pound.

The economic well being of Butte and Anaconda depend entirely upon the production of copper from the Butte mines. Within the past 2 months the Lexington, the Belmont, Orphan Girl, and Badger mines have shut down in Butte and work on the Kelly shaft has been stopped completely. This means a bad situation is building up that will seriously affect the one type economy—the production of copper—in both Butte and Anaconda. If some action is not taken, it will seriously affect the welfare of the people in that area.

Mr. Speaker, on June 13, I introduced H. R. 5119, a bill to repeal the act entitled "An act to suspend certain import taxes on copper," approved March 31, 1949—Public Law 33, Eighty-first Congress. I have already written to the Ways and Means Committee asking that hearings be held on this measure because of the importance of it to my State and it is my hope hearings will be held soon so that those of us who are interested in restoring the excise tax on the importation of copper, can be heard. It has been my contention also, in view of the fact that certain parts of my State, like the Butte and Anaconda areas which are dependent upon one product only, would be able to be benefited in the future by the creation of a diversified economy in western Montana. Toward that end and for that purpose I have been advocating the building of Hungry Horse Dam as well as the building of transmission lines from Hungry Horse to Spokane, Hot Springs and Anaconda. If we are able to get these transmission lines, it will mean that we will be in a position to develop new industries such as the mining and processing of phosphate and manganese which are both in abundant supply in southwestern Montana and both of which are vitally important to the national economy.

As the Members of this House know, Russia has stopped its shipments of manganese to the United States with the result that we have less than one year's supply of that metal on hand. Manganese is necessary for the hardening of steel and the keeping alive of our economy which is based on that commodity to such a great extent. In the matter of phosphate the supply will not equal demand in the foreseeable future and in the Northwest we have 60 percent of the known reserves in this country in that particular product. These transmission lines which I am advocating and which passed the House by a three to one vote, are vitally necessary to supply the low-cost power in large enough blocks to attract the industry which is waiting and eager to come in and develop our phosphate and manganese resources. With these transmission lines we can create a degree of security heretofore unknown among the people of western Montana and take them out from under their dependence on one particular product. The best thing that could happen to western Montana would be the creation of a diversified economy so that in times of stress, such as we seem to be going through at the present time, our dependence on one product—copper—will not be so complete as to shut down cities like Butte and Anaconda and throw the people living in those cities out of work. The answer to the welfare of western Montana lies in the reimposing of the 4-cents-a-pound excise tax on copper and the building of the transmission lines from Hungry Horse to the vicinity of Anaconda so that industrial loads can be carried on them and new industries can be brought into our State. In this way, we can create a well-rounded type of economy which will function in the best interests of the people of Montana, in particular, and the welfare of the Nation as a whole.

Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. HARRY J. DAVENPORT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. DAVENPORT. Mr. Speaker, under leave to extend my remarks, I wish

to include in the RECORD a sermon delivered by the Reverend Thomas F. Coakley, pastor of Sacred Heart Church in Pittsburgh, Pa., on Sunday, June 12, and also to include a letter sent by Father Coakley to the Pittsburgh Press.

The matters referred to follow:

FEDERAL AID TO EDUCATION

The debate over Federal aid to education seems to engender a considerable amount of cross-fire emotionalism. But it should not; it need not; it would not if two essential facts were kept in mind. The first is that Catholic-school pupils are American citizens. All American citizens, including Catholics, are entitled to equal protection under the law. America is not America if this fact is ignored.

The pupils in Catholic schools were born in America, they have lived all their lives in the United States; their fathers and mothers were born in America, or else they became naturalized citizens of the United States; their fathers and brothers entered the armed services just as other American citizens. They paid taxes, engaged in civic undertakings, bought farms and houses, took part in American sports and elections, entered into American business organizations. They became doctors, lawyers, dentists, engineers, teachers, professors, nurses, aviators, architects, musicians, just like other American citizens. If we keep this tremendous fact in mind that Catholic-school pupils are American citizens, we would be far along the road to a swift solution, both amicable and just, of the whole problem of Federal aid to education.

The second fundamental fact to be forever remembered is that when a child goes to a Catholic school he is fulfilling a civic and a state obligation. He is obeying the law of the land which requires all pupils to attend school for a certain number of years. Compulsory school attendance is statute law all over the United States. The law says the child must be educated, but it does not say where. It very wisely permits parents to select the schools to which they will send their children.

The prime purpose of compulsory education laws is social; it is for the benefit of the State; it is legislation enacted by the State to insure that all American citizens of tomorrow will have the proper basic training in order to intelligently exercise their duties as citizens, and to be an asset and not a burden to the community.

The State has made compulsory education the law of the land to enable American citizens to make a living, so that they may increase thereby the total prosperity of the Nation. The State realizes that educated children are better able to found a home and raise a family, and to cooperate with others in community enterprises. Education enables them to conform to American ideals of living; it equips them with knowledge to enable them to vote properly and intelligently, and to form a sound public opinion, and to bear arms when necessary to defend the Nation when its very life is imperiled.

State compulsory legislation was made the law so that all American citizens could be properly educated, so that when they join labor unions for instance, or become officers of business corporations, they will know what they are doing, and because the State wants well-educated prospects for the medical, dental, legal, teaching, engineering, nursing, and other professions.

In other words the State wants an educated, intelligent body of citizens for tomorrow's America.

The public schools have carried the burden of educating American citizens, and they have done a remarkably fine job, and they are still achieving a striking success in this difficult task. But the public school system has not carried the burden alone. Catholic schools have educated millions of American citizens, indistinguishable in their patriotism and their learning, from the millions of American citizens who received their training in the public schools. These Catholic trained citizens entered the Army and Navy and Marines and Air Force, fought and bled and died side by side on all the seven seas, and in every test, at every point where there could be a comparison, the pupils of Catholic schools have shown themselves just as much loyal and intelligent and progressive Americans as the products of public schools.

The public-school system is not the American school system. It is only a part of it. Catholic schools are a very important section of the American system of education.

Therefore, when the question of Federal aid to education arises, it should be solved in the American way, the fair way, the just way, the equitable way. That means it should include all pupils being educated in America, whether in public or private schools, because all citizens are entitled to equal protection under the law, just as all American citizens are expected to share equally the Nation's burdens.

Not to give Catholic pupils equal advantages with public schools is unfair, it is unjust, it is discriminatory, it is un-American. Catholic schools have performed this notable service of making educated American citizens out of millions of young men and women, but they have done so under an enormous handicap. They are compelled to go down in their pockets twice for education in this country; once to educate all American citizens who are not Catholics, by submitting to taxation to support the public schools. Then again they must find many millions more as a voluntary tax upon themselves to educate their own children for the benefit of the State and Nation, and for which neither the State nor the Nation contributes a single dollar.

American citizens are accustomed to fair play: let us have fair play in Federal aid to education. When our fellow American citizens know and realize the stupendous double burden of taxation Catholics are carrying to make good American citizens, we feel sure they will make fair play not a theory but a fact.

[From the Pittsburgh Press of May 25, 1949]

SCHOOLS ARE PARTNERS, NOT COMPETITORS

EDITOR, THE PITTSBURGH PRESS:

There are too many angry words about Federal aid to education. May I ask your indulgence while I attempt to turn on some light minus heat?

Catholic schools and public schools are partners, not competitors. They are associates, not rivals. In the United States there are approximately 2,200,000 pupils in Catholic schools. Perhaps 2,500,000 more Catholic pupils are in public schools. Consequently Catholics have a very vital intellectual and financial interest and sympathy in the welfare and success of public schools, and there is friendly cooperation among them.

If there were no public schools Catholics would gladly erect and maintain them for their neighbors and fellow citizens, so highly does the Catholic church cherish popular education.

In local, State and national tests Catholic school pupils rank equal to and sometimes rank superior to pupils in public schools. Buildings and physical equipment in new Catholic schools are among the finest, rivaling and at times exceeding public schools. One new school for 1,000 pupils would cost at least $850,000, and 2,200 of them would cost the staggering sum of $1,875,000,000. However, it is not the first cost but the upkeep that brings headaches to school administrators.

It would take nearly 2 years to buy land and erect all the 2,200 new public schools necessary to care for the immense increase from Catholic enrollment. Many thousands of trained and certificated teachers must be procured. Billions of dollars borrowed by school boards to erect, staff and maintain these new schools would enormously increase school taxes, even though our backs are now just about broken with the tax burden.

No American multimillionaire, be he a Rockefeller, Carnegie, Frick or Mellon, or all of them combined, ever has made such a gigantic contribution to education as have the Catholic people of the United States. American taxpayers should be everlastingly grateful to their Catholic neighbors and fellow citizens, most of whom are poor, for the magnitude of their contribution every year to give to millions of American children a thorough training which emphasizes the over-all religious significance of life.

Sacred Heart Church.

German War Crimes Trials

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered in the House of Lords, by the Lord Bishop of Chichester:

GERMAN WAR CRIMES TRIALS

(The Lord Bishop of Chichester rose to call attention to the present situation in Germany in relation to war crimes trials; and to move for papers. The right reverend prelate said:)

My Lords, the motion which stands in my name raises issues of justice, humanity, and political wisdom. It affects the Germans, for the future of the new West German Republic, and indeed of Germany, depend in no small part on the question whether or not it develops in an atmosphere of confidence; and the war crimes trials are among the deepest troubles of the German people. But still more this motion affects ourselves, and our reputation for justice and humanity; and on that ground in particular I plead against a further continuance of trials in any form, including the prosecution of the three German generals, and I ask for a review of the sentences of all war criminals who have been already convicted. This subject has been much discussed in this House and elsewhere, and there is general agreement on the magnitude of the atrocities perpetrated by the instruments of Hitler's domination in the occupied countries, and on the legal rightness of punishing the main criminals. But it has been recognized from the start, first, that the important thing is to establish a proper idea of the international rule of law and to make examples and, next, that the dealing with the criminals should be just and prompt.

Now, my Lords, it is 4 years since the end of the war, and the War Crimes Commission was itself deliberately wound up in March 1948; and, whatever we may think of the ultimate principle involved in the whole system, the longer it continues the more difficult it is to defend, and to carry the

conscience of the enemy with us. We have to remember that nothing like it was instituted before on such a scale—and note the gravity and the vulnerability of the position of the President. No one could have presided over the International Military Tribunal in a more masterly or more fair manner than did Lord Oaksey; but the law imposed upon the tribunal was a very rigid law, in some respects, novel; and the making of a special charter at all opens out all sorts of dangers in circumstances different from those which were under our control.

There are three main points of criticism. First, the charter deals only with the crimes of the vanquished; but, it is very difficult for a defeated foe to appreciate the justice of punishing such crimes as the deportation of civilian populations in occupied territory, looting, murder of prisoners of war, and devastation not justified by military necessity, when similar charges could be brought against one or more of the Allies, but are not brought. The second point of criticism is that the charter makes war of aggression a crime against peace. I can at least safely say, as an amateur, that this is much disputed among international lawyers; and the history, just published, of the United Nations War Crimes Commission gives a very interesting and full account of this disputability—not in morals but in international law. It points out that the majority of the special subcommittee and of the Legal Committee of the War Crimes Commission regarded it as by far the most important issue of substantive law before taking the view that aggressive war, however reprehensible, did not represent a crime in international law, and that this position was not altered by the Kellogg Pact. The arguments at Nuremberg and Tokyo agreed with the charter. All I would say is that the issue is highly controversial, and that Nuremberg made a new enactment.

The third point of criticism concerns the rule about superior orders. Article 8 of the Nuremberg Charter runs thus:

"The fact that the defendant acted pursuant to order of his Government or of a superior shall not free him from responsibility but may be considered in mitigation of punishment."

Law No. 10, under which all subsequent proceedings took place, defines that responsibility much more precisely. Article 11 of this law says that "any person without regard to nationality or the capacity in which he acted is deemed to have committed a crime * * * if he was (a) a principal or (b) was an accessory to the commission of any such crime or ordered or abetted the same, or (c) took a consenting part therein, or (d) was connected with plans or enterprises involving its commission, or (e) was a member of any organization or group connected with the commission of any such crime."

I do not see how anyone, however remotely connected, could under these provisions be free from responsibility. The principle respondeat superior must be recognized as important in law—and all the more when we remember that Germany was a military, and, indeed, a police state, and that a man was likely to be shot if he disobeyed.

Again, so far as war crimes proper are concerned, this article in the charter goes much further than the manuals of military law in force when the war broke out. I have studied some of the actual texts of these, and I find that the German, the French, the Russian, the American, and the British manuals all allow superior orders to be a valid defense on a charge of war crimes. The British manual, up to April 1944, was the plainest of all. Paragraph 443 of the British Manual of Military Law includes these words:

"It is important, however, to note that members of the armed forces who commit such violations of the recognized rules of warfare as are ordered by their government, or by their commander, are not war criminals and cannot, therefore, be punished by the enemy."

This paragraph, and a similar paragraph in the American Manual, were drastically altered in April 1944; but that was the rule from 1914 to 1944. It was the rule at the time of the Moscow declaration of atrocities of October 1943.

All these points have a bearing on the general issues. But the last point of criticism deals with a principle of the greatest importance, concerning the responsibility of individuals in the case of all types of war crime—crimes against peace and against humanity, especially where administrators, diplomats, and naval and military chiefs are concerned. The ultimate guilt lies with the makers of policy. It is the originators of the policy—men like Hitler, that man of diabolical power, and his most intimate political accomplices—on whom the gravest responsibility lies. I think we ought to have distinguished, far more radically than any government has yet distinguished, between the primary and principally guilty men and the rest.

The last Nuremberg trial took place under three American judges, and ended in April. It is, I believe, their last trial. It tried diplomats and civil servants. Some of these were deeply involved in policy; others were diplomats and administrators only. Von Weizsacher, the Permanent Secretary of State in the Foreign Office, was the most important of the diplomats. Two judges sentenced him on certain counts to 7 years' imprisonment. Judge Powers gave a dissenting judgment that he was not guilty at all, but the majority opinion includes this surprising statement:

"While admitting that many things passed over his desk and received his initials of approval as to which he harbored mental reservations and objections, he states he remained in office for two reasons: First, that he might thereby continue to be at least a cohesive factor in the underground opposition to Hitler by occupying an important listening post, maintaining members of the opposition in strategic positions, distributing information between opposition groups in the Wehrmacht, the various governmental departments, and in civil life; and, second, that he might be in a position to initiate or aid in attempts to negotiate peace. We believe him."

That phrase "We believe him" is extremely important. We may wish that he and many others had refused to cooperate, but many diplomats, including permanent Under Secretaries of State in other Foreign Offices, have disapproved the policy of their Prime Minister or Foreign Secretary and have yet not resigned. I hope that there may be a radical revision of the majority verdict.

The case is hardly less strong in connection with naval and military chiefs. I personally greatly regret the weakness and timidity of the generals in failing to stand up against Hitler, both before and during the late war. Many of their actions, or their failures to act merit strong moral condemnation. But we must beware lest the ultimate result of the policy adopted by the victors after the war has this result, as described by Brig. Gen. J. H. Morgton, K. C., in his examination at Nuremberg. He says:

"It may be that in the wars of the future, the belligerents, confronted with the possibility of losing them and, in that event, of being predestined, if vanquished, to be accused of 'aggression,' will wage them with all the greater fury and inhumanity, on the principle that it is as well to be hung for a sheep as a lamb."

Field Marshal Viscount Montgomery in Paris, at the Franco-British luncheon on July 8 of last year, said that the Nuremberg trials made the waging of unsuccessful war a crime, for the generals of the defeated side would be tried and then hanged. I shall come to the two field marshals and the one general in a moment, but with this background I urge the time has come to bring all prosecutions to an end and grant a general amnesty.

Let us just look at the figures. The history of the United Nations War Crimes Commission states that on March 31, 1948, there were 34,270 German individuals listed, of whom 22,409 were war criminals proper, 9,339 were suspects, and 2,522 were material witnesses. If we add 1,677 war criminals proper of other European nationalities, we arrive at a total of 23,086 war criminals proper listed by the War Crimes Commission. Of these, on March 31, 1948, a year ago, 3,470 had been brought to trial in Europe and 2,857 had been convicted. Lord Wright, the Chairman of the War Crimes Commission, said in your Lordships' House on March 30, 1945, that if 10 percent of the war criminals were apprehended and dealt with, it would be more than satisfactory.

Let us see who now await trial in the British zone. I know there are not many left. A great many have been tried and convicted and some have been acquitted; but there are three classes awaiting either trial or consideration for surrender. First—as I believe; I do not know now the exact figure because it varies—there are 12 Germans accused of crimes against humanity. There may be grave offenders among them. I do not know any of their names but, in view of the time that has elapsed, I think we should be prepared to risk now that some criminals escape punishment. The second category is the category of those two field marshals and one general to whom so much attention has been directed. Field Marshal Von Runstedt and General Strauss are old and ill. Field Marshal Von Manstein, younger, aged 61, is not so ill, although I understand his eyes are very bad. The answer to the question which the noble and learned viscount on the woolsack put last November: "Are these men fit to stand their trial?" maybe "No" in the case of two, and "Yes" in the case of one. But, in my opinion, to allow any trials to proceed is to miss the main principle, which is one of justice at this date.

The circumstances of their removal from Britain are well remembered. It is sufficient to say that the first formal notice that they would be tried by a military court was received on August 28, 1948, 3 days before the last day for deciding on further prosecutions at all, but no precise details were given as to charges or facts. Last November the noble and learned viscount on the woolsack spoke of the immense amount of work to be done and of papers in the United States. On January 1, so-called holding charges of war crimes were delivered to these three survivors. I have seen them. They consist of short sentences describing the type of crime without giving any details enabling the defense to prepare its case. Up to the end of last week—I do not know what the position is today—no detailed statement of the case for a prosecution together with copies of documents had been handed to them. Supposing that indictment is handed to them next week the defense must be given sufficient time to prepare their answers, and they should surely have access to the files of the military establishments which were under their command. The noble and learned viscount in November hoped that the trial might be staged in March, though he gave no promises. It will be June or July, or even August, before the trial is likely to be staged now; and

my question is: How shall we be able to justify to history the trial of any, in these circumstances, at this date?

I do not dispute that the charges may be very grave. Nor do I dispute that their subordinate, Lt. Gen. Carl von Rogues, was sentenced by an American tribunal in October last to 20 years' imprisonment, and Lt. Gen. Otto Wothler Von Manstein's chief of staff, to 7 years' imprisonment. We know that both Von Manstein and Von Runstedt were asked in July, to give evidence in these cases. Important facts regarding them must surely have been known in March 1948, when the Russians pressed for the delivery of these two field marshals. It is the delay that is the crux of the matter. After all this time, at this distance from the Moscow declaration, after 4 years of imprisonment, let them go. Incidentally I would like to ask whether they and other war criminals, after they have served their sentences, or after they have been set free, are subjected to denazification in German courts if they want their funds unlocked or for any other purpose.

There is the third category—namely, the much larger class of alleged war criminals in British custody whose surrender is asked to the governments of the countries in which the crimes were committed, in accordance with the Moscow declaration. The method of deciding what is prima facie evidence justifying surrender has been greatly improved since the tribunals were established in 1947, but we can understand the terror of surrender to certain eastern countries. I need only remark that, according to the history of the War Crimes Commission, up to May 1947, Yugoslavia had tried 79 war criminals, 63 of whom were sentenced to death and none acquitted. A recent order has been given that no fresh applications for surrender will be entertained except on charges of murder. But murder charges are often an excuse for the interrogation of such persons about the politics of other people in the country to which they have been surrendered. A death sentence passed in absence on a person who was a boy of 15 when the war broke out—and there are such cases—can hardly be regarded as adequate prima facie evidence. I have much correspondence on these matters and I am grateful to the foreign office for the trouble they have taken in them, and I know personally many cases of a most tragic character, many suicides in different camps, after the order of surrender has been given. They have chosen suicide rather than go to certain torture or death in particular countries. So I would urge an end to the surrenders.

I have spoken of the field marshals and the general; I have spoken of those charged with crimes against humanity and of those demanded for surrender. As I have no doubt the noble lord will tell us in his reply, there are many signs of a general closing down of these war-crimes trials, in the British zone as well as elsewhere. So in my plea for a general amnesty I ask for a reconsideration of the sentences already passed. In the American zone last year charges were made, to us the words of the American judge, Judge Van Roden, "of atrocities committed by American investigators in the name of American justice at the United States court in Dachau." The American Army Department accordingly appointed a commission consisting of Judge Simpson, Judge Van Roden, and Colonel Lawrence, to investigate 139 confirmed but unexecuted death sentences, and their circumstances. The Commission's report was published in January of this year. They found that no general charge of improper methods could be sustained but that in the Malmedy case—and here I quote:

"The propriety of many of the methods employed to secure statements from the accused is highly questionable and, we conclude, cannot be condoned."

They recommended the commutation of death sentences in altogether 29 cases. They also recommended—and this is my point—that the Commander in Chief should establish as soon as practicable a permanent clemency program for the consideration of the sentences of prisoners convicted in war-crimes cases. So I would ask His Majesty's Government to establish a similar permanent-clemency program, with machinery for reconsideration of all sentences of persons convicted. It is only too well known that some prisoners who were sentenced earlier in a rather severe way would not today have been prosecuted.

I have one final point before I sit down. I would ask His Majesty's Government to look at the conditions in which the major war criminals are imprisoned at Spandau Prison in the British sector of Berlin. I am not speaking of the merits or, rather, the demerits of the major war criminals, but I would call attention to this point. All these major war criminals at Spandau are completely isolated from the outside world and forbidden to read newspapers or to get any news. Their relatives are allowed to visit them for a quarter of an hour every other month. Correspondence between prisoners and their families is so delayed and so heavily censored at times that it is often stopped for weeks, and so defaced as to be unintelligible. And the severity of the confinement is such that the chaplain is able to administer spiritual counsel only in the presence of a sentry. Probably the decision a year ago to terminate the Allied Control Council, which decision is now to be reversed, has made it impossible to secure consideration of individual cases.

My Lords, I have put the general situation before you. I ask for an amnesty at this stage; no more prosecutions; no more surrenders to other governments, and a reconsideration of all sentences passed. I do it, not because I am under any illusion as to the gravity of the crimes or as to the terrible part so many have played in bringing misery and suffering to millions, but because a time comes when an end ought to be put to the penal process. The noble and learned Lord, Lord Wright, in the course of some words upon the United Nations war crimes trials, stated:

"Once it is felt that the idea of an international rule of law and its suitable endorsement, have been established, with the support of sufficient precedents, humanity is glad to be relieved of the nightmare of the past. * * * The majority of the war criminals will find safety in their numbers. It is physically impossible to punish more than a fraction. All that can be done is to make examples."

The rule of law has been demonstrated, many examples have been made, and exactly a year ago—on May 5, 1948—the noble and learned viscount who sits on the woolsack said in this House, in a debate on the United Nations Commission on Human Rights:

"I look forward to the day when at long last these trials can come to an end. I think that the indefinite prolongation of the trials, although of course there may be exceptional cases where delay is necessary, is no longer performing a useful or a desirable task. If justice is spread out over too long a period it begins to look like vengeance, which is very different from justice."

He closed with the remark that, in saying what he had said, he had the support of an overwhelming body of opinion among all parties. With the proviso that after one more year it can no longer be necessary to maintain even one exception, these words of the noble and learned viscount are truer than ever today, and I ask His Majesty's Government to act upon them. I beg to move for papers.

What F. D. R. and Stalin Really Did at Yalta

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, June 20 (legislative day of Thursday, June 2), 1949

Mr. PEPPER. Mr. President, I think it very fortunate that there was published in the June 21 issue of Look magazine an article by Hon. Edward R. Stettinius, Jr., on the subject of what really happened at Yalta. I ask unanimous consent that the article by Mr. Stettinius, former Secretary of State, be published in the RECORD.

An estimate from the Government Printing Office indicates that the article will exceed by one-quarter of a page the two printed pages allowed under the rule without a statement of cost, and that the cost will be $168.75.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT F. D. R. AND STALIN REALLY DID AT YALTA

(By Edward R. Stettinius, Jr.)

The American people have encountered grave disappointments in our relations with the Soviet Union since 1945. These have resulted in widespread acceptance of the idea that at Yalta vital interests of the United States were sacrificed to appeasement of the Soviet Union.

The idea is false.

It is important for the public to know exactly what took place at Yalta and, almost equally important, what did not take place. I was present at Yalta as Secretary of State, and there are certain facts that may be known to me alone since the deaths of President Roosevelt and Harry Hopkins.

The record of the Yalta Conference clearly reveals that the Soviet Union made greater concessions to the United States and Great Britain than it won from them. The agreements reached among President Roosevelt, Prime Minister Churchill, and Marshal Stalin were, on the whole, a diplomatic triumph for the United States and Great Britain.

The attacks on the Yalta Conference, excluding those which seem to be motivated by a blind hatred of Franklin D. Roosevelt, are really the result of bitter disappointment over what happened afterward. Difficulties developed, not from the agreements reached at Yalta, but from the failure of the Soviet Union to honor those agreements.

Yalta was an honest effort on the part of Great Britain and the United States to determine whether or not long-range collaboration with the Soviet Union could be attained. Had such an effort not been made, the world would quite rightly be in doubt as to where the blame lies for the present world situation.

I firmly believe that when all the evidence is in, and when the conference is seen in its proper perspective, Yalta will become a symbol—not of appeasement, but of a wise and courageous attempt by President Roosevelt and Prime Minister Churchill to set the world on the road to lasting peace.

LEADERS REACH AGREEMENTS

The Yalta Conference lasted for 7 days—from February 4 to February 11, 1945. It was not only the longest meeting of the three war leaders, it was also the first time in a

formal conference that the three leaders reached fundamental agreements on postwar problems as distinct from mere statements of aims and purposes.

Two of the most controversial matters on which agreements were made concerned the United Nations world organization and Poland. What did Marshal Stalin concede on these questions?

In the agreement on the world organization, the Soviet Union accepted the American formula for voting in the Security Council. Originally, the Russians wanted a big power veto in all decisions of the Council where one of the big powers was involved in a conflict. But the United States insisted that the veto should not apply when the Council sought a peaceful settlement, as opposed to economic and military sanctions. And Marshal Stalin finally agreed.

John Foster Dulles reported to the American delegation at San Francisco on May 26, 1945, that "Ambassador Gromyko recently had told him the voting formula represented a big compromise from the Russian point of view."

It was clear from the discussions at Yalta that Marshal Stalin was primarily interested in an alliance of Great Britain, the United States, and the Soviet Union. By securing his agreement to the American voting formula, however, President Roosevelt was able to achieve more than an alliance of the great powers.

UNITED STATES FAVORED VETO

It is absolutely incorrect that the permanent members were granted the veto power on most questions only because of Russian insistence. The American delegation, at Dumbarton Oaks and after, favored the big power veto on matters involving sanctions. The United States delegation had been advised that the Secretary of War, the Secretary of the Navy, and the Joint Chiefs of Staff were united on this question, as a matter of fundamental military policy. They felt that the United States should not join any world organization in which its forces could be used without its consent. The veto was also favored by the Members of Congress who were consulted on the plans for the United Nations.

The whole controversy over the veto power of the permanent members of the Security Council overlooks the fact, anyway, that it is not the veto itself but the misuse of the power to veto that has impeded the effectiveness of the Security Council.

Another concession by the Soviet Union on the world organization came when it withdrew its request for 16 votes in the face of the adamant position of the United States and Great Britain.

The Soviet Union also withdrew its request that Great Britain and the United States agree at Yalta to invite the Ukraine and White Russia to the opening session of the San Francisco Conference. The President and the Prime Minister did pledge to support admission of the two when the San Francisco Conference voted on this matter. The additional votes in the Assembly were not too significant. They have not been an important factor in the work of the United Nations, one way or the other. The effectiveness of the United Nations has been limited by the inability of the Soviet Union, Great Britain and the United States to work together in an amicable fashion, not because the Soviet Union has three votes in the Assembly.

In view of the many concessions made by the Soviet Union to the American position on world organization, the two additional votes were only a minor concession to the Russians. It was far wiser, President Roosevelt decided, to meet the request of the Soviet Union on this point, and secure its participation in a United Nations Conference, than possibly to drive it entirely away.

F. D. R. WINS UN CONCESSIONS

It is also worth noting the assurances the President got from the other two leaders in this connection. Both promised to support a proposal for additional votes for the United States if he should find it necessary to ask for them. Mr. Roosevelt, however, decided before his death that the United States would not ask for additional votes.

Other matters the Soviet Union agreed to included the American definition of the countries to be invited to the San Francisco Conference. As a result, those associated nations who declared war by March 1, 1945, were able to take part in the conference as original members. This decision made it possible for a number of Latin-American nations, particularly, to take part. Here was a substantial concession that Stalin made at the urging of Mr. Roosevelt.

Still further, President Roosevelt insisted on the right of full and frank discussions in the world organization. Although the Soviet Union did not like it too well, the President made it clear that all nations had the right to be heard. As a result, the smaller nations have been able to use the United Nations as a forum to present their views to the world.

So much for the concessions Mr. Roosevelt won on the world organization. How did he fare on the Polish issue?

RED ARMY IN CONTROL

This proved to be the most controversial and the most difficult of all the questions considered at Yalta. While the three leaders were meeting, American and British troops had just recovered ground lost in the Battle of the Bulge. The Allies had not yet bridged the Rhine. In Italy, our advance had bogged down in the Apennines. The Soviet troops, on the other hand, had just swept into almost all of Poland and East Prussia, and had reached at some points the Oder River in Germany. Most of Hungary had been liberated, eastern Czechoslovakia had been occupied, and the Yugoslav Partisans had recaptured Belgrade in October 1944.

By February 1945, therefore, Poland and all of eastern Europe, except for most of Czechoslovakia, were in the hands of the Red army. As a result of this military situation, it was not a question of what Great Britain and the United States would permit Russia to do in Poland, but what the two countries could persuade the Soviet Union to accept.

President Roosevelt refused, as did the Prime Minister, to accept the Russian request that the western boundary of Poland be the western Neisse River. Marshal Stalin finally withdrew this demand and agreed to leave the western frontier of Poland to be settled at the peace conference.

Later, at Potsdam, the Oder-Neisse was made the boundary between Poland and the Soviet Zone of Occupation in Germany. But the final determination of the western boundary continues to await a German peace treaty.

At the eastern frontier of Poland, Marshal Stalin insisted upon the Curzon Line. The Curzon Line had been drawn on December 8, 1919, by an Allied Commission, headed by Lord Curzon of Great Britain, in an attempt to define Poland's eastern frontier. The line roughly followed ethnographical frontiers. The Soviet Union considered that the area east of that line had been taken from them by force after World War I. Before the Yalta conference, Mr. Churchill had already supported the Curzon Line in the House of Commons.

STALIN INSISTS ON CURZON LINE

President Roosevelt suggested that the Soviet Union might consider leaving the Polish city of Lwow and some oil lands to Poland. The Prime Minister also suggested that some such gesture would be reassuring to the world. But Marshal Stalin insisted that he could not be "less Russian" than Curzon and Clemenceau, who had first agreed to this frontier line. However, he did later propose minor deviations of from six to eight kilometers in favor of Poland.

The United States was in no position at Yalta to change the Russian attitude on the eastern boundary.

The question of Poland had been further complicated by the Lublin Provisional Polish Government which the Soviet Union had established by the time of the Yalta Conference. Both President Roosevelt and Prime Minister Churchill adamantly refused to recognize this puppet regime. Agreement on the government of Poland proved to be the most difficult and time-consuming question at Yalta.

The Soviet Union insisted that all that should be done to the Lublin Government was to enlarge it. President Roosevelt and the British insisted that it had to be reorganized so as to include democratic leaders from both inside and outside Poland. This position took into account the existence of the Polish Government in London.

LEADERS GIVE AND TAKE

Marshal Stalin finally agreed to the reorganization of the Lublin Government by the inclusion of democratic leaders from at home and abroad. He also agreed with the British and American request that free and unfettered elections be held at an early date.

President Roosevelt withdrew from the American formula the phrase that "the Ambassadors of the three powers in Warsaw following such recognition (of the reorganized government) would be charged with the responsibility of observing and reporting to their respective Governments on the carrying out of the pledge in regard to free and unfettered elections."

Although President Roosevelt did withdraw this wording, he made it clear that the Ambassadors would nonetheless still perform this function. The sentence was reworded, therefore, to read that the three powers "will exchange Ambassadors (with Poland) by whose reports the respective Governments will be kept informed about the situation in Poland."

It is true, of course, that the decision was not as clear-cut as President Roosevelt had desired. President Truman, in discussing the Polish agreement with me on April 21, 1945, expressed regret that the agreement was not more specific. But he added that he realized President Roosevelt had made every effort to make it crystal clear.

The agreement on Poland was—under the circumstances—a concession by Marshal Stalin to the President and the Prime Minister. It was not exactly what he wanted, but, on the other hand, it was not exactly what the Soviet Union wanted.

POLAND NOT SOLD OUT

It was not a sell-out of democratic Poland, as has been widely charged, but a pledge from Marshal Stalin that he would allow a new government to be organized and that free elections would be held in a country that was entirely at his mercy. The trouble was not the Yalta formula but that the Soviet Union failed to live up to the terms of the agreement.

Many other questions taken up at Yalta found the President winning concessions from Stalin. At Mr. Roosevelt's request, Stalin agreed, for the first time in the war, that there should be a real coordination of Russian and western military activities.

Marshal Stalin also agreed with the President's request that Soviet air bases near Budapest and elsewhere be made available to the United States Army Air Force.

For the first time, too, there was a frank statement by the Soviet Union of its future plans for offensive operations.

SOVIETS ACCEPT FRENCH ZONE

The Russians also backed down on the subject of the French zone of occupation and

France's membership on the German Control Commission.

Very early in the conference, the Soviet Union withdrew its objection to the recommendation made by the President and the Prime Minister that the French be assigned a zone of occupation from the British and American zones.

The British all along had insisted that the French should also be on the control commission. When President Roosevelt eventually agreed with the British, the Soviet Union also withdrew its vigorous opposition to this proposal.

It should be noted that the German zones of occupation were worked out by the European Advisory Commission in London before Yalta. I know of no evidence to support the charge that President Roosevelt agreed at Yalta that American troops should not capture Berlin ahead of the Red Army. General Eisenhower has written that the question of American troops not pushing into Berlin was decided in March 1945 solely on military grounds.

GERMAN REPARATIONS DISCUSSED

The subject of German reparations, as settled at Yalta, also has been misunderstood. Both Great Britain and the United States agreed on the principle of exacting reparations. But we were most anxious to avoid the disastrous experience of reparations after the First World War.

In July 1946, V. M. Molotov, at a meeting of the foreign ministers, stated that President Roosevelt at Yalta had agreed to $10,000,000,000 of reparations for the Soviet Union. This was incorrect. President Roosevelt was willing that the Russian figure of $20,000,000,000—with 50 percent to go to the Soviets—be considered by the Reparations Commission in its initial studies only as a basis for discussion and not as an agreed amount. The Soviet Union accepted the American position.

Ivan Maisky, Russian vice commissar of foreign affairs, at the foreign ministers' meeting on February 10 at Yalta—and Molotov was present—agreed that the reparations formula "did not commit the Allies to the exact figure." Marshal Stalin at the plenary session that same day stated that no commitment as to figures was involved. The figures mentioned, he explained, would be used merely as a basis for discussion by the Reparations Commission.

Two final questions on the postwar settlement of Europe on which the Russians backed down concerned the agreement on Yugoslavia and the declaration on liberated Europe.

The Yugoslav agreement called for a new government for that country. The Soviet Union accepted two British amendments to the agreement.

And the declaration on liberated Europe followed the American draft, which was accepted with almost no opposition. When Marshal Stalin realized that President Roosevelt would not accept two amendments proposed by Molotov, the Marshal withdrew them.

What then did the Soviet Union gain in eastern Europe that she did not already have as the result of the smashing victories of the Red Army? The answer is nothing. And yet the United States and Great Britain were able to secure pledges at Yalta, unfortunately not honored, beyond anything that could be expected.

Some critics point to the Far Eastern Agreement made at Yalta. This agreement specified that Russia would declare war on Japan 2 or 3 months after VE-day. The conditions attached to it included preservation of the status quo in Outer Mongolia; restoration of Russian rights in the Far East violated by Japan in 1904 and the transfer of the Kurile Islands to the Soviet Union.

What, with the possible exception of the Kuriles, did the Soviet Union receive that she might not have taken without any agreement? If there had been no agreement, the Soviet Union could have swept into North China. The United States and the Chinese would have been in no real position to prevent it.

It must never be forgotten that the Pacific war was far from won while the Yalta Conference was taking place. President Roosevelt had been told by his military advisers that the surrender of Japan might not occur until 1947. Some predicted an even later date.

It must be remembered, too, that it was still uncertain whether the atomic bomb could be perfected. And, since the Battle of the Bulge, it was uncertain how long it might take to crush Germany. More than a military reversal, the Battle of the Bulge cast a deep gloom over the confident expectation that the German war would end soon.

In hindsight, it might be said that the widespread pessimism was unwarranted. The significant fact is not this hindsight, however, but the effect of this pessimistic thinking on the strategy and agreements worked out at Yalta.

It was important to bring the Soviet Union into the war against Japan and win the same cooperation there as on the European fronts and in the world organization.

Furthermore, critics of the Far Eastern Agreement have tended to overlook the fact that the Soviet Union made two pledges in the agreement; that China was to retain full sovereignty in Manchuria and that the Soviet Union would conclude a pact of friendship with the Chinese Nationalist Government.

The far eastern agreement was not handled by the State Department. President Roosevelt advised me at Yalta that, since it was primarily a military matter, he and Ambassador W. Averell Harriman would conduct the negotiations with Stalin. Harriman—our over-all coordinator of American military and civilian affairs in Moscow—had had conversations with the Russians on this before Yalta.

It is my understanding that the American military leaders felt that the war had to be concluded as soon as possible. There was the fear that heavy casualties in Japan or the possible lack of continuous victories would have an unfortunate effect on the attitude of the American people.

President Roosevelt had great faith in his Army and Navy staffs, and he wholeheartedly relied upon them. Their insistent advice was that the Soviet Union had to be brought into the far eastern war soon after Germany's collapse. The President, therefore, in signing the far eastern agreement, acted upon the advice of his military advisers. He did not approve the agreement from any desire to appease Stalin and the Soviet Union.

It is apparently the belief of some critics of the Yalta Conference that it would have been better to have made no agreements with the Soviet Union. Yet if we had made no agreements at Yalta, the Russians still would have been in full possession of the territory in Europe that President Roosevelt is alleged to have given them.

The failure to agree would have been a serious blow to the morale of the Allied world, already suffering from 5 years of war. It would have meant the prolongation of the German and Japanese wars; it would have prevented the establishment of the United Nations and it would probably have led to other consequences incalculable in their tragedy for the world.

President Roosevelt did not surrender anything significant at Yalta which was within his power to withhold. The agreements, on the other hand, speeded up the end of the war and greatly reduced American casualties.

The Yalta Conference also made it possible to create the United Nations. Events since Yalta have made it difficult for the United Nations to operate effectively. But I am convinced that the United Nations still can become the greatest achievement in history toward the building of a stable and peaceful world.

Resolution of House Republican Conference

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. MARTIN of Massachusetts. Mr. Speaker, in the last meeting of the House Republicans in conference, the following resolution was adopted:

Whereas the Eightieth Congress, recognizing the need for greater economy and efficiency in the conduct of public business, enacted H. R. 775, by Mr. BROWN of Ohio and Senator LODGE in the Senate, now known as Public Law 162, to create the bipartisan Commission on Organization of the Executive Branch of the Government; and

Whereas the Commission has completed nearly 2 years of study and investigation of the executive branch of the Government, and has submitted to the Congress 3,018 recommendations and findings, which, if adopted, can save at least $3,000,000,000 a year in the operational costs of the Federal Government and bring about greater efficiency in public affairs; and

Whereas it will require not only the cooperation of the Chief Executive and his various subordinates in the executive branch, but also the enactment of various legislative measures by the Congress to put the recommendations of this Commission into effect; and

Whereas it is of the greatest importance to the welfare of the United States that the reforms and changes recommended by the Commission, which was headed by our only living ex-President, the Honorable Herbert Hoover, be put into effect at the earliest possible moment; and

Whereas the President of the United States has publicly stated that he would extend his full cooperation to the end that the objectives sought may be obtained; and that "the present organization of the executive branch, in many instances, imposes handicaps on effective and economical administration and must be brought up to date," and that the "task * * * is to crystallize this general belief into concrete and wise proposals for action." In a recent special message to the Congress the President hailed the work of the Commission as representing "a landmark in the field of Government organization": Therefore be it

Resolved, That this conference of the Republican Members in the House of Representatives of the Congress of the United States hereby officially pledges its support of all endeavors to obtain prompt consideration of the recommendations of the Commission as submitted to the Congress; and be it further

Resolved, That it will be the purpose and intent of this conference to support all proper and necessary legislation which will most effectively carry forward and translate into action the recommendations and findings of the Commission as far as it is practical and possible to do so by legislative procedure; and be it further

Resolved, That the Republican conference will extend its cooperation to all other efforts which may be made by other branches of the Government to properly implement recommendations and findings of the Commission on Organization of the Executive Branch of the Government.

Address of Admiral Louis E. Denfeld

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1949

Mr. McCORMACK. Mr. Speaker, I herewith include, with pleasure, in my remarks a splendid and inspiring address delivered on June 12, 1949, by Admiral Louis E. Denfeld, United States Navy, Chief of Naval Operations, at the commencement exercises of Father Flanagan's Boys' Town.

"By your actions will you be known," said Admiral Denfeld. How true. These words, if adhered to and lived up to constitute the road to worldly and eternal happiness.

The address follows:

Your Excellency Archbishop Bergen, Monsignor Wegner, the Honorable Secretary of the Navy, Father Walsh, graduates, undergraduates, and friends of Father Flanagan's Boys' Town, ladies and gentlemen, it has been a privilege and an inspiration for me to have had the opportunity to spend the past 2 days at Boys' Town and to see the wonderful work done by Monsignor Wegner and his staff for the boys here.

A few days ago, I attended the graduation exercises at the United States Naval Academy, a school that is justly proud of its traditions and of the men who are its sons. It was my happy duty to administer the oath of office to the several hundred graduates entering the naval service, the young men who are dedicating themselves to a way of life.

Boys' Town too has its noble traditions, its share of illustrious sons, and I am grateful to you for asking me to speak to you today.

The beautiful surroundings of this school that are a living monument to a great man's practical dream inspire me, and it is with a deep sense of humility that I pay tribute to him now.

I count it a privilege to have known Father Flanagan; his friendship was, and is, one of my most valued possessions. He was a national figure when I first met him, a man loved by people of all faiths and races.

But 32 years ago Father Flanagan was hardly known. He had, however, a great vision, an even greater heart. It was then that he borrowed $90, enough for the first month's rent on a two-story house in Omaha to found what became Boys' Town.

Father Flanagan had faith. A strong, Christian faith. He knew that "faith would move mountains." The mountains he had to move was the lethargy of his fellow men. But Father Flanagan moved that; and now Boys' Town is not just a single house in a city, but many houses and an area of over 1,000 acres.

The growth of Boys' Town is a lasting example of the power of faith; faith in an ideal; faith in God.

But with his sublime faith Father Flanagan also was endowed with a generous amount of courage.. It was the kind of courage that has made our Nation morally strong.

It is the kind of courage all of us must display if we are to achieve peace and decency in a world that for all too long has seemed bent on its own destruction.

History is replete with Father Flanagans—gentle men, humble men, but it is to their faith and courage that we owe the progress of all mankind.

You boys who are graduating today are indeed fortunate to have had the privilege of living in Boys' Town. All your education, all your training has been directed to this day.

I congratulate you.

But as the Commander in Chief of your Navy, let me ask you individually, where do you go from here?

That is the question I would ask any young man entering the Navy. It is a question that every man should ask himself all the days of his life.

Asking, however, is not enough. You must look ahead and plan. Like the navigator at sea, you cannot sail blindly. Use the many aids that are available to guide you. Consult the sailing directions—the things you learned here at Boys' Town by precept and example. Follow the charts of the teachers you have known. They will keep you away from the reefs of trouble. Be guided always by the pure light of the men who have given so much to you.

There will be times, of course, when you will be tried to the limit of your endurance. And because of your youthfulness you will wonder why certain things happen to you. But don't just sit and wonder. Do something about it. Search yourself for the answer, and once you find a ray of hope, carry through to the best of your ability. Your action may be important not only to you but to others around you.

There were many examples of this during the last war. I will relate one case of one branch of the Navy—the submarine service.

One of our submarines had finished an attack on a Japanese convoy. The attack had gone off well. The submarine had fired its torpedoes and heard the explosions as they hit home. Then came another sound—the sound of enemy destroyers bent on vengeance as they dashed in quickly for the counterattack.

The skipper of the submarine ordered his craft to dive deeply. Down the boat went until it reached the bottom. Then with engines silent the crew quietly awaited the depth charges that were sure to come.

Waiting in a submarine, hearing depth charges go off all around, and not knowing whether the next one will bring destruction to you and your boat, is a terrifying ordeal. It is terrifying because there is nothing you can do except wait and hope that the enemy will lose the scent and give up the hunt. The submarine's only protection in such a situation is to keep quiet, hidden in the black depths of the ocean.

This particular attack lasted a long time. The Japanese destroyer kept on hunting, and many of its depth charges went off uncomfortably close. So close that the submarine suffered a lot of damage—water came into the boat and the men were understandably extremely tense. Moreover they were losing hope.

It was then that the captain decided he would make a tour through the compartments of his ship and try and cheer up the men. As he went from one compartment to another, as he looked in the drawn faces of his men, he mustered all the courage and faith at his command and said: "Don't worry, men. I got you into this. Trust me and I'll get you out."

The men were cheered by the captain's action, and in a little while the explosions stopped. The submarine eventually limped back to port for repair. Now my point in relating this episode is that although the captain couldn't do much, he at least did something.

I hope, of course, that you boys will have, as sailormen say, fair weather in your life's cruise. But I know you won't always have calm seas. In any cruise, be it that of a ship going from one port to another—or a man's life—there are bound to be periods of stormy weather. When the storm hits you, turn adversity to your advantage. Meet the challenge by overcoming it, and in its wake will come a gratifying sense of accomplishment, the only lasting reward that life can give you.

We live in a democracy. The basic tenet of a democratic society is that people in it work for the welfare of all the individuals comprising the democracy. This requires teamwork—the same kind of teamwork that has given Boys' Town such an enviable record.

Our democracy also makes it possible for the individual to become recognized in his chosen field. We do not tolerate any preconceived notions that a boy must follow his father's trade or profession. Neither is a man's rise limited because he happens to come from a certain section of the country. Race and religion likewise are no barriers to a man's ambitions in this great unification of States.

Your own State of Nebraska is hundreds of miles from the sea, yet it has given the Navy some of its finest sons. Without regard to religion or color, there are men from Nebraska who are serving in all grades and ranks, from seaman to admiral.

Recently, Mr. Francis P. Matthews from this State was appointed as Secretary of the Navy. As Chief of Naval Operations, I want you people who have known Mr. Matthews to know my pleasure and that of the Navy in having Mr. Matthews as our Secretary.

There is no leveling off permitted by our democratic philosophy; rather our way of life encourages men to rise as high as the individual's intelligence and industry will take him. And because of our concept of what human freedom really means, our country has grown great and prosperous, and we have used that combination of strength to help others besides ourselves. Since the end of the war, our Nation has given without stint of goods and men to help rebuild the ravaged countries of the world.

We will probably have to keep on doing this for some time to come. Our farms and our factories will of necessity have to continue their gigantic efforts, for only by means such as this can the peoples of the world find their way back to peace.

Peace is what we all want. Only in peace can we progress. Only in peace can we spread the ideals of our way of life. And the proof that our way of life is good, that it is appreciated and desired by peoples of other lands, is the extreme means taken by some malignant forces in the world to discount it. I am firm in the faith, however, that outside forces will never be able to destroy our way of life. If democracy ever fails, it will come from within, we ourselves will be the destructive forces. That day will arrive only when we are no longer equal to our heritage, when we are not worthy of meeting the demands of the moment, when we fail to have a clear vision of the future. Thus far, the generations of our people have carried the burden without faltering. Our strength is still equal to the task, in fact, it is swelling, rolling onward as certain as the tides of the mighty oceans.

You boys have a responsible part of the load to carry. You are Americans. In a little while you will be alumni of a truly democratic institution. At this moment you have, I am sure, mixed feelings. While naturally happy and full of enthusiasm, ready and willing to pit your strength in the world, you are also, I know, feeling a twinge of sadness because you are leaving one home for another of your own making. Henceforth you assume the responsibilities of earning a living and directing your life, not only for

your own betterment but for the betterment of your fellow citizens and your country.

I would not have you leave, though, without reminding you that you have until this time lived by a pattern. In the early, formative years, it is necessary that all of us follow a design of life if we are later to fit in the scheme of things to come. We are all guided by the wisdom and experience of older men while we conform to that pattern. Later we progress, and then possessed with a new awareness, we come to hold certain principles, to live by the things we know to be right.

By the time you boys reach maturity, these principles will have become so ingrained that you will have a code to live by. I don't mean to infer that you will discard your early teachings, but rather you will use them as the foundation upon which to build your character, the thing that is really you. And in your building you will evaluate, appreciate, and accept.

Only then will you know and live a full life.

The development of a man's character is the cornerstone of all human endeavor. Without character a man can do little—but with character all things are possible. Strong character was the force motivating the men who manned the continental Navy; strong character bound in common cause the men who signed the Declaration of Independence. Strong character has preserved our Nation to the present moment.

I, therefore, like to think of you as modern apostles of your founder. "By your actions, will ye be known." Take this with you, but in departing remember that you also take with you the love and hopes of all who have been associated with Father Flanagan's Boys' Town.

Goodbye, good luck, and may God bless you!

Diplomatic Relations With Spain

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Monday, June 20 (legislative day of Thursday, June 2), 1949

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Perpetuating a Fraud," from the Washington Evening Star of May 17, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PERPETUATING A FRAUD

Fifteen of the fifty-seven nations represented in the UN General Assembly have succeeded in retaining the fraudulent ban on the maintenance of top-level diplomatic relations with Spain.

The delegates from 26 countries voted in favor of a resolution which would have left each member nation free to send an ambassador or minister to Spain if it wanted to do so. A two-thirds majority was needed for passage of the resolution, however, and its supporters fell four votes short of the required total. The delegations of 16 nations, including that of the United States, contributed to this result by sitting on their hands when the vote was taken. They took refuge in the device of abstention, refusing to take a stand either for or against the resolution.

This is a notable victory for the iron-curtain bloc in the UN. The fight against the resolution was led by that model of democracy, Poland. And voting with Poland among the 15 successful dissenters were Byelorussia, Czechoslovakia, the Soviet Union, the Ukraine, and Yugoslavia.

It is this aspect of the matter which lends the fraudulent taint to the position of the General Assembly. The opposition to Spain pretends to rest on moral grounds. It is said that he aided the Axis, that he is a dictator, that he suppresses civil liberties and religious freedom. Perhaps all of this is true. But Russia also gave aid and comfort to the Axis before the German attack. And in all of the iron-curtain countries there is a more ruthless form of dictatorship, and less freedom, than in Spain. Yet the General Assembly, with some pretension to morality, singles out Spain for censure, and the United States cannot bring itself to choose one way or the other.

If anything more is required to demonstrate the unhappy dilemma in which this leaves an organization which is supposed to be above cheap expediency, it can be found in the vote on a Polish proposal to denounce the Franco regime as Fascist and as having been imposed by force by the Axis. If this is not true the whole case against Spain falls to the ground. Yet this resolution was beaten, 32 to 11. And the General Assembly is thereby reduced to the absurdity of being unwilling to affirm what is, essentially, the whole basis of its refusal to lift the ban on the exchange of Ambassadors with Spain.

Even a child can see that this is a result which is dictated, not by principle, but by shallow politics. It is a result which is an affront to any sense of justice that is rooted in the doctrine of even-handed treatment, and it reflects nothing but discredit on the UN, and on those governments, including our own, which had not the moral courage to stand up and be counted when the decisive vote was taken.

Federal Aid in Construction of Public-School Facilities

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, June 20 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I have prepared on the subject of Federal participation in financing the construction of public school facilities.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SCHOOLS FOR OUR CHILDREN

Mr. President, during the past several weeks a Subcommittee of the Committee on Labor and Public Welfare has been holding hearings on proposals on Federal participation in financing the construction of public school facilities. The evidence is amazing and the situation is so critical that I wish to summarize some of this evidence for the Senate at this time. We in the Senate have taken a first and necessary step in educational legislation, which we hope and believe the House will also take very soon, by the recent passage of S. 246. But the better teachers this insures must have places to teach, and their increased millions of pupils must have schools to attend.

THE NEED FOR SCHOOL CONSTRUCTION

Mr. President, the critical need for school plant construction is a matter that must be of concern to all Americans who are acquainted with the facts. The testimony we have heard makes clear the reasons why this need exists and points to some of the solutions of the problem.

Estimates of the extent of the need range from $7,000,000,000 to $12,000,000,000 of construction by 1957. Some of these estimates are based on careful surveys in a number of States. A conservative average of the statistics and estimates leads to the conclusion that public elementary and secondary school construction of a total value of $1,000,000,000 each year for the next 10 years will barely meet the minimum requirements. The needs are, on the basis of State surveys, as follows:

Public elementary and secondary school plant needs as reported to the Office of Education as of Jan. 1, 1949, by the State departments of education

	Percent of national population, 5 to 17, inclusive	6-year school plant needs as reported	Remarks
Alabama	2.614	$125,000,000	
Arizona	.512		No report.
Arkansas	1.706	100,000,000	
California	8.606	1,238,000,000	
Colorado	.846	35,000,000	(1).
Connecticut	1.151	163,625,000	
Delaware	.190	5,000,000	(1).
Florida	1.582	192,700,000	
Georgia	2.804	132,429,000	
Idaho	.438	50,000,000	(1).
Illinois	5.051		No report.
Indiana	2.604	190,000,000	Adjusted to 6 years.
Iowa	1.818	50,000,000	(1).
Kansas	1.283	75,000,000	(1).
Kentucky	2.420	110,000,000	
Louisiana	2.100	104,364,000	(2).
Maine	.651	50,000,000	
Maryland	1.382	139,800,000	For 5 years.
Massachusetts	2.814		No report.
Michigan	4.378	400,000,000	
Minnesota	2.002	100,000,000	(1).
Mississippi	1.997	110,000,000	(2).
Missouri	2.600	144,300,000	
Montana	.403		No report.
Nebraska	.923	40,000,000	
Nevada	.083	10,584,000	(1).
New Hampshire	.340	35,000,000	
New Jersey	2.478	252,000,000	(2).
New Mexico	.535	40,000,000	
New York	8.108	1,250,000,000	
North Carolina	3.363	156,588,000	
North Dakota	.508	30,000,000	
Ohio	5.002	245,000,000	
Oklahoma	1.891	80,000,000	
Oregon	.916	76,900,000	
Pennsylvania	6.842	500,000,000	(1).
Rhode Island	.453	15,000,000	(1).
South Carolina	1.855	45,815,000	(2).
South Dakota	.487	27,000,000	(2).
Tennessee	2.543	150,000,000	
Texas	5.497	250,000,000	(1).
Utah	.561	68,997,000	Adjusted to 6 years.
Vermont	.264	20,000,000	
Virginia	2.332	325,000,000	Adjusted to 6 years.
Washington	1.499	282,000,000	(1).
West Virginia	1.695	46,785,000	(2).
Wisconsin	2.277	50,244,000	(2).
Wyoming	.206	12,000,000	
District of Columbia	.300	38,000,000	(4).
Total, States reporting	91.220	7,552,131,000	
National projection	100.000	[5]8,280,000,000	(6).

[1] As reported on a study made by another agency during the fall of 1948.

[2] As reported to the Office of Education in October 1947. The national projected total on that study was $6,600,000,000.

[3] Reported $100,000,000 on another study.

[4] Strayer report for 5 years.

[5] Approximately.

[6] This amounts to $1,380,000,000 per year for the next 6 years.

Increased birth rate

One of the major causes of school building shortage is the progressive increase in the national birth rate from 17.9 per thousand population in 1940 to 25.9 per thousand population in 1947. Thus far, only the lower grades of the elementary schools have felt the impact of this increased birth rate, but there will be tremendous cumulative increases in school enrollments during the next few years. The Bureau of the Census predicts that the total enrollment in elementary and secondary schools will jump from 24,546,000 in 1947 to 34,091,000 in 1957. Reliable estimates show that more than 200,000 new classrooms are needed now and that at least another 250,000 new classrooms will be needed by the time the children already born are in school. The stork has been busy. The children are here. Schools must be provided for them.

The lag in school construction

The lag in construction of school plant facilities has existed since 1930. During the depression years, local communities were unable to finance the schools needed, although some were built with Federal assistance primarily to create employment. During the war years neither materials nor labor were available, and there was no appreciable amount of new school construction from 1939 to 1946. Since 1946 building costs have soared beyond the financial reach of numerous local school districts. The present rate of construction is totally inadequate to meet replacement requirements and the necessity for additional school building space.

The shifting population since 1940

Another cause for the great need of school facilities is found in the shifting school population. Certain far Western States have increased their school populations more than 50 percent during and since the war and will double their school enrollment in the next decade. Even in most States where the average increase in population since 1940 has been smaller, certain communities have mushroomed in population, often because of the activities of the Federal Government in the area.

Expansion of school programs

Part of the backlog of school building needs results from the expansion of the school programs beyond the three R's. The Federal Government itself has provided funds for the current operation of some aspects of vocational education since 1917, but it has done nothing to provide classrooms in which to offer such education. The national school-lunch program is financed partly through Federal funds and surplus commodities are supplied by the Federal Government but there is no provision for the construction of lunch rooms in which the meals must be prepared and served. There are Federal funds for industrial education but there are no provisions for the construction of trade schools and shops which are necessary to provide for the industrial expansion of the country.

Mr. President, the three R's are still important, but they are not enough. Our schools must go far beyond the rudiments to prepare American citizens to live in our modern world. It is no longer a simple world, and a short and simple education will no longer prepare Americans to live adequately in it. We need facilities for making the school the community center it should be. We need to make our educational system the basis for the most effective operating democracy the world has ever seen.

INABILITY OF SCHOOL DISTRICTS IN STATES TO MEET SCHOOL BUILDING NEEDS

The people have emphasized their desires for additional school facilities, but they have not been able to meet their building needs through State and community action alone. Many of our 100,000 local districts are handicapped by statutory debt and tax restrictions and limitations in State constitutions, some of which require a minimum of several years to change. The education of growing children of school age cannot await the necessary changes in laws and constitutions. Sometimes, in some communities and States, there are forces which prevent the making of these changes. We must move forward in spite of these forces. The children are growing up. The classrooms and other facilities are needed now.

Increased State and local funds have often been used to increase teacher salaries in order to check the exodus of teachers from the classrooms, leaving little for the construction of facilities. Some States, because of a large proportion of children in the total population and low per capita income, are unable to provide either needed school buildings or adequately trained teachers. The range of financial ability per child is about 4:1 between the wealthiest and the poorest States. The range is sometimes more than 100:1 between the poorest and richest local school districts within an individual State

Wide variations in school loads, in per capita income, and in relative efforts to support schools in terms of income have been detailed in a recent study made by the Council of State Governments.[1] This comprehensive report shows that in one State 28.3 percent of the population is of school age while in another State only 17.1 percent of the total population is of school age. The educational load due to the larger proportion of school-age children in the population is almost twice as heavy in the first State as in the second, yet the per capita income in the first State is $1,053, while in the second State it is $1,671. The State with the low income (and I might say, Mr. President, that this is not an extreme case but that there are several States with lower per capita income than this one) spends 3.6 percent of its income for public education compared with 1.5 percent for the wealthier State. With more than twice as much effort in proportion to income the first State has an educational program which for current expenditures averaged $169.50 per child in 1947-48. With comparatively slight effort the second State had a program the same year which averaged $220.92 per child.

The report of the Council of State Governments shows that State governments are contributing 39.8 percent of all funds used for current expenses by local school districts throughout the United States. This is where the States have concentrated their financial efforts, although nearly half the States also expend some funds for school construction. The States often cannot meet the needs for school construction which are beyond the abilities of their local school districts. Other States could do so only if they decreased drastically their State financing of current educational costs. State aid for current operational costs is a prior obligation and the States cannot reduce this already inadequate program without immediate and serious effects on the entire system of public education.

There is no way for some districts and counties and States to meet school building needs without Federal assistance. Mr. President, I ask that the Members of the Senate consider the evidence brought out in these hearings concerning hundreds of local school districts with critical needs for school facilities to discover these facts for themselves. I submit, Mr. President, the conclusion that there must be Federal assistance is obvious and inescapable, provided we are to have reasonably decent schools for all the children in this country. Our national policy should be, I believe, to place good schools high on the list of conditions which must be maintained as the basis of our democracy.

Overwhelming need in rural areas

Public education in rural America is chaotic because of the lack of school building facilities and qualified teachers. It is in rural areas that the ratio of school children to total population is greatest and the per capita income is lowest. An analogy is in order here. The shortage of medical services in rural areas is an accepted fact, and one of the reasons given for this shortage is the lack of hospital facilities in which to treat patients. For several years the Federal Government has assisted in the financing of hospital construction. Is there any more reason to expect teachers to teach with antiquated and completely overloaded plant facilities than to expect doctors to treat patients without adequate hospital facilities?

The country committed itself to improvement of rural education in 1862 through plans for land-grant colleges, and again in 1917 through aid to vocational education for current operation, but we have left the burden of making capital investment for education buildings on rural America. Vocational education begins in the ninth grade. Do we not have an obligation as a Nation to aid in providing education to children to reach the ninth grade? We must do even more. We must assist the rural areas to obtain school buildings to serve both children and adults. We must assist them to provide vigorous and broad educational programs, so the rural areas will have a fair chance to pull their own weight in their economy and in that of the Nation. The local capital is not there for the initial capital investment in adequate school plants. Rural districts must look to a broader governmental base for a large part of this investment. It is more than an investment in school buildings. It is an investment in people. It is an investment in democracy. It is an investment in national defense. It is the best investment we can make.

The special needs in areas affected by Federal activities

In or near several hundred school districts throughout the country, the Federal Government has set up tax-exempt operations which have almost wrecked the educational systems of those communities. These Federal activities have often removed much of the local property from the tax rolls and have made the owners of the remaining property pay for the education of both their own children and those of the Federal employees. Children are on double sessions in basements, churches, and temporary structures which are often unsuitable for school purposes. There is a clear responsibility, Mr. President, to aid these communities to restore normal school services. Many of them have done everything possible locally, including issuance of bonds to the limit allowed by law.

The special needs for Negroes

Mr. President, the backlog of school construction necessary to provide adequate education for Negroes is especially acute in the South. In many southern communities school buildings now in use were constructed a long time ago on a matching basis, with the people donating part of the cost. As a result poor communities failed to obtain adequate classrooms. The Federal courts have become more insistent that the facilities be equalized between the races. This necessity strikes at a time when there is also a great shortage of school facilities for white children. The testimony indicates that segregated schools for the races have not contributed significantly to the classroom shortage, since both the schools for Negroes and those for whites are overcrowded. In spite of great progress which has resulted from exceptional local and State effort, numerous southern school boards simply cannot finance the equalization of school facilities for the

[1] The 48 State School Systems. Council of State Governments, Chicago.

races. Federal aid is desperately needed to alleviate this situation.

MEETING THE NEED

Mr. President, the record of the hearings makes clear that something must be done. It makes clear that the Federal Government has a definite responsibility. The witnesses before our subcommittee have evaluated all the bills before us. All who represented either official or professional agencies of education have supported either an amended S. 287 as introduced by Senators NEELY, MAGNUSON, and nine other Senators or S. 1670 which was introduced by the junior Senator from Minnesota. With the evidence at hand our subcommittee will be able to submit a bill which will go a long way toward meeting the Federal responsibility.

Mr. President, there are a number of important issues involved in this legislation. Some of these are similar to those we have encountered in the consideration of the Thomas-Taft bill, S. 246, and involve Federal-State-local relationships in education. It has been my attitude as chairman of the subcommittee that in these matters we ought to consider seriously the recommendations of official educational agencies and the professional educators who must have a major part in the construction of the facilities. After all, more than 1,000,000 administrators and teachers in America are concerned about what is done. They must plan facilities. They must be constantly at work with school boards and building committees as the facilities are constructed in local communities. Then they must use these facilities day after day and year after year for the next several decades. It seems to me, Mr. President, that their recommendations ought not to be shunted aside in the absence of clear and impelling reasons.

The testimony has shown that the construction of school facilities directly affects numerous aspects of the educational program. We want to help, not to hinder. For instance, we plan to recommend Federal assistance under circumstances which will encourage rather than discourage the proper reorganization of local school districts in the United States. At least 15 States now have sound State-wide programs of school district reorganization. These involve the building of larger and more useful schools.

We plan to coordinate any Federal program to assist in the financing of school construction with the present systems of cooperative State and local financing of schools. We should provide for some equalization among the States according to their respective pupil loads and per capita incomes. We want to fit Federal assistance into the State systems of equalization among local school districts within States, leaving the States free to assist districts in critical situations which have reached the limits of their legal bonded indebtedness and which must have substantial amounts of assistance to provide reasonably adequate school facilities for their children.

We should bring out a bill which will meet the immediate and urgent need for assistance in school districts which have been upset and undermined in their educational programs because of the activities of the Federal Government. There has been little or no conflict in the testimony on these points.

The great preponderance of testimony has been in favor of State and local responsibility for planning of facilities, for standards of construction, and for supervision of construction in local school districts. The same is true of the principle that the State educational agencies, as in the instance of Federal funds for current expenditures under S. 246, should be fully responsible for the accounting to the Federal Government for Federal funds.

Most of the testimony favors a simplified Federal administration through a single Federal educational agency. There is also strong sentiment in favor of protecting the construction of local school facilities against any sort of direct Federal control, on the convincing grounds that educational facilities determine to a large extent what the educational program itself shall be. As a former teacher, Mr. President, I know that this is true. School buildings should be constructed to fit the educational program. It should not be necessary for teachers and administrators to change their educational programs to fit the buildings.

TIMING

There are undoubtedly those among my colleagues here who will say that this is not the time for the Federal Government to aid in the construction of school facilities. They will say that the Federal budget is not in balance, and that the country has entered upon a business recession which may even deepen into a depression. They will point out that business is declining and that the economic danger signals are out.

Mr. President, we recognize both the business situation and the precarious state of the Federal budget for 1950. Federal assistance for school construction is, of course, related to the budget problem. We have to pay for some things and refuse to pay for others. It is primarily a question of relative values. Mr. President, day after day we vote millions and billions of dollars for purposes which are less important to the welfare of this country than the provision of adequate school facilities for our children. We vote extra billions for European aid. We vote extra billions to strengthen the physical aspects of our national defense. We vote hundreds of millions to build civil works, many of which are undoubtedly less important than needed school buildings for the welfare of our country. We need to develop the habit of putting first things first. On the basis of relative values involved, Mr. President, we ought to be anxious to meet the Federal responsibility to our children for safe and suitable school facilities.

There are honest differences in economic philosophy among us. I am one who believes we ought not to wait until we become so poor that we cannot afford to build schools before we begin to build them. I believe we ought not to wait until we are in the depths of a depression before we extend Federal funds and encouragement to those aspects of the economy which can prevent us from sinking into depression. I believe the time to build the schoolhouse is now.

Mr. President, the major reason why schools should be built now is because they are absolutely necessary and indispensable to give reasonable educational opportunities to American children. These children are the hope of our democracy; they are the hope of a truly effective national defense; they are the basic element in the future welfare of our country. But to those of my colleagues who may decide the issue of Federal assistance for school construction mostly on economic grounds, I say we should pass such legislation in this session on economic grounds. We need to see that programs of Statewide planning for school construction in all the States are begun at once on a modest basis, that acute emergency needs are met, and that the groundwork is laid for an immediate and large extension of building activity as soon as labor and materials are fully available.

Mr. President, I would like to close on a repetitive note. The sense of values of the American people does not remain static. They are coming to value education more and more, and they value less and less some of the things for which we almost automatically pass huge appropriations. In the scale of relative values, we have long neglected education; I hope, Mr. President, that we will meet our responsibilities for assisting in the construction of necessary school facilities by passing suitable legislation as soon as possible.

Cost of Housing Bill H. R. 4009

EXTENSION OF REMARKS

OF

HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

MAXIMUM FINANCIAL COMMITMENTS UNDER H. R. 4009

Mr. MITCHELL. Mr. Speaker, when I say to the Members of the House of Representatives that total costs over the life of the proposed housing bill of 1949 (H. R. 4009) will amount to approximately $10,500,000,000, I am expressing a simple truth.

And, moreover, this cost will be spread over a long period of years, not exceeding 40. In the first fiscal year of the program, the cost will amount to only a few million dollars; thereafter, the annual costs will gradually increase until at the maximum about $310,000,000 a year would be required.

Of course, I am fully aware that figures of $20,000,000,000 and more have been broadcast throughout this Nation to frighten the people and Members of this body. I know how opponents of public low-rent housing have added repayable loans to maximum grants and maximum annual contributions, then multiplied by 40, and reached false totals because they were based on false premise.

For the purpose of the record, and I hope for the information of this body, it is my purpose to present a few simple facts, each of which can be verified, so that the House of Representatives may discuss this vital legislation in an atmosphere of fact, rather than fiction.

GRANTS AND CONTRIBUTIONS REPRESENT COST

Under H. R. 4009, loan funds of $1,950,000,000 are authorized for the various programs. These loans are fully repayable together with interest at the cost of money to the Federal Government. They therefore in no sense represent costs to the taxpayer, and the inclusion of them in estimates of cost by opponents of the program is manifestly misleading.

The actual cost of the program to the taxpayer is represented by capital grants made in lump sums and annual contributions payable over a period of years.

Capital grants: Under title I, grants for slum clearance amount over a 5-year period to $500,000,000. Under title IV, grants for farm housing over a 4-year period amount to $12,500,000.

A total of all grants amounts to $512,500,000.

Annual contributions: Under title II, annual contributions for low-rent housing would reach a total maximum of $400,000,000, at the end of 5 years. These annual contributions may be paid over a 40-year period.

Under title IV, annual contributions for farm housing would reach a total maximum of $5,000,000 at the end of 4 years. These annual contributions may be paid over a 10-year period.

By simple arithmetic you multiply total annual maximum contributions for low-rent housing by 40, total farm housing annual contributions by 10, and you obtain a figure of $16,050,000,000 for an-

nual contributions. To that you add total grants of $512,500,000 and obtain a total possible maximum cost over a 40-year period of $16,562,500,000.

If maximum annual contributions are required over the full 40-year period of the commitment, that figure would be accurate and therefore fair. That, however, is not the case.

WHAT ARE ANNUAL CONTRIBUTIONS?

Annual contributions serve to make up the difference between the gross rent that low-income families can afford to pay, and the cost of operating public housing projects including interest and amortization. The amount required to meet annual contributions is, therefore, subject to many variants. Economies in operation and increases in family incomes are reflected in lower annual contributions.

Any one of us who has studied this question knowns that as a practical matter maximum annual contributions will probably not be paid either for the maximum number of years or at the maximum annual rate. That is true because:

The number of years depends upon the amount available for principal repayments each year. The lower the rate of interest obtainable on the bonds issued by local housing authorities, the larger would be the amount remaining for debt retirement, and the sooner the debt could be retired. The Director of the Budget, Frank Pace, Jr., recently advised the chairman of the House Committee on Rules that on the basis of expected interest rates, the contributions would run for 29 to 33 years.

Mr. Pace pointed out also that under the present low-rent-housing program in recent years only 25 to 30 percent of the maximum amount contracted for has been required. This is unusually low due to war and postwar increases in incomes and rent-paying ability of tenants. In an average year under the new program, contributions actually paid will probably not exceed 75 to 80 percent of the $400,000,000 authorized or roughly $310,000,000 annually.

An honest statement of the total cost of the low-rent program, as Mr. Pace pointed out, would therefore be about $10,000,000,000 over a period of 29 to 33 years, and might be as low as $9,000,000,000. Adding the capital grants of $512,500,000 and the farm contributions of $50,000,000 brings a total probable cost of about $10,500,000,000 over the life of the program.

THE AMERICAN PEOPLE PROFIT

We know what decent living environments will mean to the millions of families which will benefit from this program. We know that there will be billions of dollars saved in health, police, and fire costs that would otherwise be spent from city-tax dollars to maintain slums.

We know that when the projects have been amortized and Federal contributions cease, our cities will own housing plants throughout the Nation amounting to billions of dollars, which will continue to serve families of low income at no cost to the Federal Government.

In simple, fair, and honest terms the cost of the housing program under H. R. 4009 will result in one of the greatest profits to the American people this Nation has ever known. It is our greatest insurance for the continuation of our democratic way of life that we in this body will ever have the privilege to endorse.

Mr. Speaker, I ask that the following objective letter I received from Miss Anna Lord Strauss, president of the League of Women Voters, be printed as a part of my remarks:

LEAGUE OF WOMEN VOTERS,
Washington, D. C., June 20, 1949.

Hon. HUGH B. MITCHELL,
House of Representatives,
Washington, D. C.

DEAR MR. MITCHELL: The substance of the national housing bill, H. R. 4009, which is now before the Members of the House of Representatives for consideration, has been the object of many years of study and deliberation both inside the Congress and out. A similar bill (S. 1070), with wide bipartisan support, was recently passed for the third time by the other body of Congress by overwhelming vote.

We in the League of Women Voters have been supporting this legislation since 1945. We are disturbed by one of the arguments now being circulated by the opponents of the measure—namely that for reasons of economy the United States should not undertake a housing program at this time.

The large national debt and the need for curtailing governmental expenditures wherever possible are indeed matters of great concern to all of us. Every authorization of Federal funds must, in our opinion, be weighed in terms of its contribution to the safety and well-being of the Nation.

It is recognized that the country must be kept strong from a military standpoint and Congress, with the consent of the people, makes available billions of dollars for this purpose. Some expenditures must also be made, in our opinion, to assure a citizenry morally and physically strong and devoted to its institutions. We must demonstrate before the world that within the democratic form of government the basic needs of living can be attained. Of these, housing is one of the most important.

Some who in previous years opposed the housing bill as inflationary are now opposing it on the grounds of economy. We think the bill should be judged primarily on what it does to fill a basic need of our society. Another major consideration is what effect enactment of such legislation will have on the economy. On this basis, a period of economic recession is a particularly appropriate time for enacting a housing program. Such a program can make a substantial contribution toward a more stable economy by employing labor and increasing the national wealth.

Unfortunately, the cost of the program has often been misrepresented. The facts are that no appropriation (except for administrative expenses and a small amount for the farm housing program) will be required for fiscal 1950. Thereafter, the cost of contributions and grants will increase gradually over a 5- or 6-year period and finally level off at about $300,000,000 a year for an estimated period of about 30 years.

According to the official communication of the Bureau of the Budget, inserted in the Appendix of the CONGRESSIONAL RECORD at p. A3585, instead of requiring total contributions of $16,000,000,000 for the low-rent housing program, a reasonable estimate of the total amount actually required for contributions would be nine to ten billion dollars over the life of this program; to which would be added the contributions for slum clearance and farm housing, totalling somewhat over $500,000,000.

We know you will want to make your decision as your vote on H. R. 4009 on the basis of facts and in the interest of your constituents and the country as a whole. We feel confident that on both of these counts the housing bill merits your support.

Sincerely yours,
ANNA LORD STRAUSS,
President.

The Housing Bill, H. R. 4009

EXTENSION OF REMARKS
OF

HON. GEORGE D. O'BRIEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. O'BRIEN of Michigan. Mr. Speaker, under leave to extend my remarks, I include in the RECORD the following article which appeared in the New York Times, Sunday, June 19, 1949:

Mr. Truman's attack of last Friday on what he called the little group of ruthless men who are opposing the administration's housing program has the merit of dramatizing the housing problem. The members and backers of the housing lobby may not be as wicked as Mr. Truman thinks they are. For all we know every one of them may be completely sincere. Nevertheless, forgetting for a moment the extremely personal nature of Mr. Truman's letter to Mr. RAYBURN, the arguments therein presented are powerful.

The program presented in the House bill, which is to be taken up Wednesday, would probably cost, over a period of about 30 years, $10,000,000,000, not $20,000,000,000. A great part of this sum would take the form of annnual Federal contributions to local housing authorities for the benefit of low-income families. These families would be selected from among those who could not possibly pay for decent housing. The cost of construction would be kept down under the House bill to an average of $8,465 for each dwelling unit. There would be aid to farmers and some money spent in research. The whole program is a continuation of a previous housing program. It should benefit by the experience and even the mistakes of that program.

There are two points to be noted about any Federal housing plan. One is that subsidized housing with the aid of the national Government, the States and the cities could not take care of all the need. There remains an enormous field for private enterprise. If private builders can get their costs down sufficiently, they may in time make subsidized housing unnecessary. The building industry faces a challenge. We can hope that, like the automobile industry of a generation ago, it can eventually modernize itself. Meanwhile, low-rent housing and slum clearance are legitimate objects of governmental activity.

In order to get his housing legislation Mr. Truman will need Republican support to offset Democratic desertions. He should have such support and, on the past record, he will have it. Even though the housing plank in last year's Republican platform was almost meaningless, there are many Republicans—Senator TAFT among them—who have worked for progressive housing legislation. Compromises may be necessary. There is a wide gap between the Senate bill providing for 810,000 public housing units in the next 6 years and the House bill calling for 1,050,000 such units in a 7-year period. But the need for low-rent housing is so great and we still have so many veterans living

in crowded and unwholesome conditions that Federal action is certainly called for. Those who denounce such action as socialistic can make their own answer by working to bring down the costs of private housing.

The Basing-Point System — Monopoly, Cartels, Trusts Growing Bigger and Stronger—Is Socialism the Alternative to Big-Business Control?

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article written by W. K. Kelsey for the Detroit News of Saturday, June 18, 1949:

This week the United States Supreme Court, in a 5–4 decision, upheld an injunction granted by a California court against the Standard Oil Co. of California, restraining it from enforcing or entering exclusive supply contracts with any independent dealer in petroleum products and automobile accessories.

Standard had contracts with 5,937 independent gas stations, by which the independent dealers operating those stations agreed to purchase one or more of their products from Standard exclusively. Such contracts the majority opinion pronounced invalid under a section of the Clayton Act, which provides that certain arrangements are illegal if their effect "may be to substantially lessen competition or tend to create a monopoly in any line of commerce."

The division in the court was created by the quoted words. The minority opinion of Justice Jackson, in which Chief Justice Vinson and Justice Burton concurred, stated in effect that there had been no showing that the practices complained about had diminished competition, or tended to do so. Because of lack of such proof, the minority would have reversed the decision of the district court.

But Justice Frankfurter, who wrote the majority opinion, said:

"To interpret that section as requiring proof that competition has actually diminished would make its very specificity a means of conferring immunity upon the practices which it singles out. Congress has authoritatively determined that those practices are detrimental where their effect may be to lessen competition. * * *

"To insist upon such an investigation would be to stultify the force of Congress' declaration that requirements contracts are to be prohibited wherever their effect may be to substantially lessen competition.

"If in fact it is economically desirable for service stations to confine themselves to the sale of the petroleum products of a single supplier, they will continue to do so though not bound by contract, and if in fact it is important to retail dealers to assure the supply of their requirements by obtaining the commitment of a single supplier to fulfill them, competition for their patronage should enable them to insist upon such an arrangement without binding them to refrain from looking elsewhere."

THE KEFAUVER AMENDMENTS

Now it is exactly this "substantial lessening of competition" which is at issue in the measure pending in Congress to permit basing prices and freight absorption when entered into in good faith to meet the price of a competitor.

It was Senator KEFAUVER, of Tennessee, who insisted on amending the Senate bill to permit these practices only "where the effect of such absorption of freight will be to substantially lessen competition," which is the language of the Clayton Act, except that the Clayton's "may" is changed to "will"—which is, in the commentator's opinion, a weakening of the Clayton Act.

However, the Judiciary Committee of the House seems determined that the Kefauver language be thrown out and that the bill be passed without the language which was the crux of the Supreme Court's decision of last Monday.

The effect of such action would be to take from the Federal Trade Commission power which it now possesses to proceed under the Robinson-Patman amendment to the Clayton Act, since the House measure, without the Kefauver amendments, tells the FTC not to enforce what the Supreme Court has now held the Clayton Act provides for the protection of the public interest.

The first effort of big business was to obtain from Congress a moratorium, or prohibition of enforcement of the law against basing-point and other practices found illegal by the Federal courts, until Congress had studied the matter and enacted a law which, big business hoped, would legalize these practices. But the Senate hastily put together and passed a bill providing what it considered a proper definition of the conditions under which these practices could legally be indulged in.

It was made evident this week that the Senate bill is satisfactory to big business only if the Kefauver language is knocked out of it, thus making inapplicable the Federal court decisions.

THE FEARS OF JUSTICE DOUGLAS

Turn now to the independent opinion written by Justice Douglas, who said that the "economic theories which the court has read into the antitrust laws have favored rather than discouraged monopoly * * *. Monopoly has flourished. Cartels have increased their hold on the Nation. The trusts wax strong. There is less and less place for the independent."

Justice Douglas continued: "The increased concentration of industrial power in the hands of the few has changed habits of thought. A new age has been introduced. It is more and more an age of 'monopoly competition.' Monopoly competition is a regime of friendly alliances, of quick and easy accommodation of prices even without the benefit of trade associations, of what Brandeis said was euphemistically called 'cooperation.' The lessons Brandeis taught on the curse of bigness have largely been forgotten in high places. Size is allowed to become a menace to existing and putative competitors. Price control is allowed to escape the influence of the competitive market and to gravitate into the hands of the few. But beyond all that there is the effect on the community when independents are swallowed up by the trusts and entrepreneurs become employees of absentee owners.

"Then there is a serious loss of citizenship. Local leadership is diluted. He who was a leader in the village becomes dependent on outsiders for his action and policy. Clerks responsible to a superior in a distant place take the place of resident proprietors beholden to no one. These are the prices which the Nation pays for the almost ceaseless growth in bigness on the part of industry."

NOT THE COURTS, BUT CONGRESS

This is all true; but why blame the courts? Archangels, if there were any in the Justice Department, would find it all but impossible to get cases decided in face of the tactics of the best legal brains in the country, for which big business can afford to pay. The Government's case against the oil interests has been pending since 1940, tied up in technicalities in the lower courts, while heaven and earth have been moved by the oil attorneys to get the Justice Department to drop it.

And now the House, with the Senate probably acquiescent, appears determined to do big business another favor, and help along the movement which Justice Douglas deplores so strongly. Big business shouts that we are sliding down the hill toward socialism. Big business is getting behind us and pushing; for just as soon as big business gets control, socialism will be the only alternative for a people determined not to be governed by financiers and industrialists.

Shortage of Venture Capital

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1949

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following summary of an address by Emil Schram, president, New York Stock Exchange, at the General Management Conference of the American Management Association, at the Waldorf-Astoria Hotel, New York City, Thursday, June 9, 1949:

The lack of vitality in the equity markets is of personal concern to all—those who work, those who seek jobs, those whose money is invested in enterprise, those who are seeking employment for their idle funds. Our largest and best established companies cannot sell stock on an attractive basis. The liquid position of small and medium-sized companies is deteriorating.

Those contemplating new enterprise or debating expansion are adversely affected. Consequently jobs are curtailed. Savings, at record level, will not run uphill and are flowing toward riskless investment.

A faulty tax structure is to blame. It has dampened the venturous American spirit. It needs complete overhauling. This is impossible now, but the following tax changes can be made at this time and they would do much to reverse a dangerous trend:

1. As a step toward the elimination of double taxation of dividends, allow the taxpayer a credit of 10 percent on all dividends received.

2. Reduce the maximum effective rate on capital gains from 25 percent to 10 percent and shorten the holding period from 6 to 3 months. Allow $5,000 of capital losses to be charged against each year's ordinary income.

All of the conventional arguments fail to explain the current business hesitation. Shortage of venture capital and the basic reasons for the shortage do explain the problem.

My message to you is that we should begin at once a new campaign—a venture capital campaign. You and your associates can, out of your unusual experience and knowledge, tell Congress, in specific, understandable terms, how much your company has to invest to hire an additional employee, or install an additional machine; how much you or others who might be in a position to assume risks of enterprise would have to receive to make a dividend attractive, after taxes; what your rate of profit on a dollar's

additional investment would have to be to pay such a dividend; the change in your debt-net worth ratio and the reasons why you would prefer, under more equitable tax treatment, to obtain permanent ownership funds rather than debts. And you can tell Congress why capital-gains taxes represent a mingling of two different concepts, income and capital, and why the present rate cuts into the willingness to put funds to work to bear the brunt of inevitable economic squalls and storms; tell the story to stockholders and workers, in annual reports and enclosures with dividend checks and in house organs, at social gatherings and in meetings of businessmen. No story is fraught with greater significance to the country's economic welfare.

What I propose is an all-out attack on a tax structure that is obstructing expansion and throttling incentive and initiative. Squeezed between institutional changes of a deep nature and a hostile tax structure, ownership savings urgently need realistic treatment. When farmers were injured by forces of a general character in relation to the conditions affecting the rest of the country, farm parity was devised to correct the situation; when legislation lagged behind economic forces and labor was at a disadvantage, labor was granted the equivalent of parity treatment. Ownership, which lies at the base of the whole economic structure, is threatend. The situation must be corrected. What I am striving for, in effect, is merely fair treatment for ownership insofar as the extraordinary fiscal situation will permit. Fortunately, strategic changes can be made that will help activate stagnant pools of existing funds and energize current savings. But these changes cannot wait.

This isn't a fight in behalf of a few imaginary absentee owners of industry; or executives who have already made their place in industry. It is a fight to encourage industry, to remove the basis for the fear that is spreading, to prevent hardening of the economic arteries.

Equity for equity capital is the slogan in this venture capital campaign. I ask you to join with me in the interest of the Nation's continued well-being.

All of Us Get Hit

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1949

Mr. GOODWIN. One of the distressing experiences of a Member of Congress is to find so many constituents who seem to feel that they have no stake in the Government and no real interest in keeping down the expenses thereof because they do not appear to be aware that they are contributing to the cost of Government unless they happen to be substantial taxpayers. Under leave to extend these remarks, I append an excellent editorial which recently appeared in the Somerville (Mass.) Journal. The editorial follows:

ALL OF US GET HIT

When the average person thinks of taxes he visualizes the withholding tax on his salary or wages, the tax he must pay on his real estate, if any, and other assessments which are easy to see and even easier to feel. But it must be apparent to anyone with any knowledge of our economy and how it works that in the end all taxes must come out of the pockets of the consumer.

When the Federal Government slaps a heavy tax on a corporation, it is really taxing the man who buys the corporation's product. This is because of the simple economic fact of life that all costs that enter into the manufacture of a product must be covered by its selling price. And when the State increases the tax on savings banks, the cost of the services the bank gives to its customers—the depositors—goes up and the interest rate paid on savings goes down.

The trouble is, however, that many, many people do not know how our economy works; nor do they realize that in the end all taxes must come out of the pocket of the consumer. It is an old saying that you can tax the shirt off a man's back if you do it indirectly in the form of hidden taxes. If the people can be made to realize that they pay the taxes in the final analysis, unless they are indigents living entirely off charity, there will be a decided swing toward economy in Government spending, whether it be at the Federal, State, or municipal level. But it will take a real campaign of education to bring about this realization.

Basing Point and Conspiracy—What May Happen to Independent Merchants if O'Mahoney Bill Passes

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by W. K. Kelsey which appeared in the Detroit News of May 25, 1949:

Irate defenders of the basing-point system of fixing prices have been blaming the Supreme Court for finding it illegal, and the Federal Trade Commission for attacking it on the ground that it constitutes conspiracy in restraint of trade.

The truth is that the FTC has been trying to enforce the statutes as it reads them, and the Supreme Court has merely held that the FTC's lawyers have read them correctly.

If businessmen don't like the laws passed by Congress to maintain competition, their remedy is to get the laws changed, not to assail the agencies of Government which interpret and enforce them.

This is prelude to a report in the Wall Street Journal that Pittsburgh is making a mighty effort to induce industries to locate in that city and its environs. It says:

"Pittsburgh's industrial and political leaders are well aware that the city turns out more steel than her fabricating companies consume, and they see trouble ahead unless new steel-using industries locate here.

"In boom years when supply is short, like the past decade, Pittsburgh's economy is not hurt by this 'oversupply' of steel. It can be sold to consumers in all parts of the country. But as the Nation's prosperity wave recedes, consumers will hunt mills nearer their plants to cut freight costs, and Pittsburgh's steel makers will have a hard time peddling their metal outside the area.

"Under the old basing-point system of pricing, Pittsburgh producers were able to sell their steel in other areas at competitive prices by absorbing freight costs themselves. But they generally discarded this system last year after the Supreme Court ruled it was illegal as used by the cement companies, so the burden of high freight costs falls on distant customers. With this price disadvantage—and steel getting harder to sell—Pittsburgh must find new customers close at hand."

Yeah. Or cut prices, and really compete.

WHO ABSORBS FREIGHT RATES?

A word as to the "absorption" of freight rates by the seller, under the basing-point system. Here is a quotation from a letter the Commentator has received from a defender of the practice:

"The heart of the basing-point system is that the seller farther from the buyer will absorb the difference in his freight charges and what the charges would be if the materials were sold and shipped by the nearest seller to that buyer. This means, for example, that the Detroit customers buying iron and steel could buy his iron at Cleveland, the nearest producer, or Pittsburgh farther away, at the same delivered price to him in Detroit."

True; and he could buy it from a Detroit producer at the same price. All of which means that the price was fixed so that the seller would not lose by paying the freight to any point within the basing-point area. Who, then, paid the freight which was "absorbed" by the seller? The natural deduction is that most of it was paid by his nearby customers.

Therefore, Pittsburgh can now put up this argument:

"Locate your industry here, next door to the mills, because now you can buy f. o. b. mill at a price which doesn't include freight charges. You don't have to pay a price which would enable the mill to sell profitably in Cleveland or Detroit, since the buyers there are now paying their own freight."

BASING POINTS AND CONSPIRACY

How could the basing-point system be maintained without conspiracy on the part of sellers?

The magazine Business Week took up that question recently with Thurman Arnold, the Government's trust buster in 1938-43. Mr. Arnold said:

"I don't think there ever has been the rule that you have to catch two people talking together before you can prove conspiracy. * * * A conspiracy is an illegal combination, or an illegal agreement, or an illegal concert of action. * * * I think if you read the opinion"—of the Supreme Court in the rigid-steel-conduit case—"it was the same old one—that the producers were utilizing the basing-point system as a method of controlling prices. And the Court said they can't do this.

"Now it often happens in an antitrust case that where machinery has been set up which has been used to control prices, the Court will break down the machinery. * * * For instance, there has been a very famous oil case. There we had a policy on the part of the oil company not to deal with jobbers who weren't gentlemen. And it just so curiously happened that none of the gentlemanly jobbers they selected were price cutters. They may have fooled even themselves. They may have honestly wanted only gentlemen as jobbers, and at the same time have been convinced that anyone who cut prices was not a gentleman.

"But there was also the fact that an artificial differential was kept between high-test and low-test gasoline at 2 cents. Prices were kept stable because they were using this method of fixing prices. Again we had no evidence of a meeting. Yet this organization was enjoined by the court."

WHAT MAY HAPPEN TO INDEPENDENTS

Mr. Arnold continued in this happy vein:

"Now, in one case investigated by the TNEC the big concerns testified that they

were making the price independently, and the small people testified they followed them only because they knew that the big organizations knew so much about prices, and they must be the wise boys, and so the prices were the same.

"I got one of the independents off to the side, and I said: 'Now, this won't be made part of the record. * * * Just tell me privately what would happen to you if you didn't follow the prices of the major companies.' And he said: 'That is something, Mr. Arnold, which I expect never to learn from personal experience.' "

Business Week asked if he would say that "per se the basing-point system is a conspiracy."

Mr. Arnold replied: "I would say that, if you wanted to put in a basing-point system and did it on your own, there is nothing that would prevent you. But I would also say that it is unquestionably true that the basing-point system has been used as a method of not only fixing prices but fixing production."

The Commentator repeats that the gist of the matter is that Congress has passed laws to compel competition, the FTC has been enforcing these statutes, and the courts have upheld the FTC. If the people of the United States don't want competition in business, all they have to do is elect Members of Congress who will repeal that legislation. Maybe they have already elected them unwittingly.

The New Task in Germany—Cartels Must Be Broken Up

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article which appeared in the New Republic on June 20, 1949. This article was written by James Stewart Martin, and contains most valuable information about our policies in Germany.

The article follows:

THE NEW TASK IN GERMANY

(By James Stewart Martin)

On Tuesday, May 17, 1949, Gen. Lucius D. Clay returned home triumphant from the new Trizonal Germany. He had left that newly unified portion of the former Third Reich a land restored to third place in European economic potential, and advanced to first place in combined direct relief and ECA grants; a country which, while receiving billions in American dollars, has promised to other countries as reparations a total of only $178,000,000 in external assets and $203,000,000 in industrial plants, the latter amount now subject to reduction in a move to retain plants in Germany.

General Clay left a land whose citizens are increasingly cynical about democracy, many going so far as to conceal past records of anti-Nazi activities, more and more of them openly espousing a militant nationalism. He left a country where, by accidents of history, a few of the industrialists responsible for financing Hitler were given prison terms, but where a greater number equally guilty, got key jobs in control of the new economy.

This is not what we asked for. It is what we got. We had better decide soon whether we like what we have, because in a short time we are going to be stuck with it.

In the next months we will witness the change-over in Germany from 4 years of military government to an era of Allied civilian observation of a new German Government of Trizonia. Once a German Government takes hold and the occupying powers relegate themselves to the spectators' bench, the day of basic reforms or drastic changes from our side will have passed. The appointment of John J. McCloy, lawyer of the Chase Bank group, to be the new civilian High Commissioner, and the prospect of outwardly sweeping changes in American personnel and in the pattern of administration offer an occasion of reassessment.

The job facing a civilian High Commissioner will above all demand statesmanship. It cannot be rated as a job for a general or an investment banker as such. If the appointment of McCloy is confirmed, it must be assumed that those who vote for confirmation believe him to have the necessary qualities of statesmanship.

For a statesman, the prospects and possibilities in Germany are not all bad. Plans and policies were restated in a revised directive approved by President Truman on July 15, 1947. This policy directive took account of the many changes that had occurred in the first 2 years of occupation. As a document, it is surprisingly good; the new High Commissioner could do a great deal just by swinging his organization behind the official directive. Unfortunately, that may not be easy. Policy squabbles and the organization Clay has left behind him—an organization disposed toward Germany first—must be straightened out before there can be a return to first principles.

Aside from international troubles, the years of military government were marked by violent internal storms, mostly generated by disagreement between AMG and Washington over economic policies; and by an unnatural claim in such areas as education and social reform, where not the actions but the omissions of military government made trouble. The High Commissioner may step into a first-class policy battle, based on the false premise that recovery and reform must exclude one another. Even the Ferguson committee report on cartels which ripped into the pet theme of the Germany-first group, that any effort to eliminate the excessive concentration of power in the German economy would delay recovery, has not ended this kind of thinking.

That report, submitted to the Department of the Army on April 15, 1949, by the three-man investigating committee (Federal Trade Commissioner Garland S. Ferguson, chairman; Samuel S. Isseks, the Attorney General's representative; and A. T. Kearny, ECA representative), exploded as a middleweight bombshell on April 29 despite a press release designed to make it sound like a vindication of military government's "hands off" policy on the cartel system. The Ferguson committee "found no support for the proposition that deconcentration procedures would interfere when carried out along the lines of a sound policy." The report found that the official policy, which had remained unchanged throughout the occupation, was sound and ought to have been energetically enforced. Military government simply had failed to carry it out. The decision to vest the High Commissioner with power over ECA matters in Germany will not prevent industrial advisers in ECA from advocating "recovery" measures of a type that will collide with necessary reform.

Throughout the first 4 years of the occupation the course of military government's behavior on reforms has been an unusually accurate weather vane for the economic program as a whole. Some recovery measures have delayed both recovery and reform. Previous issues of the New Republic have raised storm warnings over military government's complacency in allowing the economic advisers to throw the weight of recovery efforts behind the cartel-dominated heavy industries, thereby frustrating the recovery and development of light or consumer-goods industries in the western zones. For this reason it was no surprise to read in the Wall Street Journal for May 16, 1949, of the sudden "Paradox in Trizonia." As the headlines put it, "West German industries boost output, but dip hits consumer goods. Unemployment rises, retail sales fall; steel and coal producers top targets."

It has been clear from the beginning that the lack of balance between heavy and light industry in Germany was going to prove the biggest single stumbling block in the way of a sensible, as well as peaceful, solution of a European economic problem that dates back at least to World War I. From the outset General Clay's economic advisers allowed the managerial groups who ran the Hitler economy to exploit their hold-up value and to set the conditions under which they would cooperate with military government. Despite military government's almost absolute authority, General Clay's policy of turning the important reform measures over to "the Germans themselves" tied our hands and enabled the German old guard to rebuild a system in which their own services would be considered essential.

The reappearance of Hermann J. Abs, formerly of the Deutsche Bank, in his new capacity as deputy chairman of the Reconstruction Loan Corporation under the German Bizonal Economic Administration, is only one of many cases where important valves in the new economic pipe-line system have come under the control of the old operators. In 1945 Abs and other heads of the Deutsche Bank were kicked out, and the Deutche Bank itself was dissolved by the finance division of military government, because of the bank's big role in the rise of Hitler.

Quite aside from policy squabbles, it will be no simple matter for McCloy to clean up the organization he is inheriting. Too many booby traps are already in evidence. A man thoroughly determined to correct the previous defaults and mistakes of military government would, by best estimates, be in office about 3 weeks before he was completely submerged in the sea of troubles already prepared for him by the existing organization. That organization has built itself into its present shape and manufactured its own policies through 4 years of suppressing, weeding out, freezing out, frustrating, and discharging practically everyone who gave any active support to occupation policies as written by Washington.

The military government organization in Germany had been completely overhauled from the inside, between November 1946 and November 1948, in the expectation of a Dewey administration. Trying to make it perform now in the service of peace, the Fair Deal and the brave new world will be like trying to make waffles on a turret lathe.

What then are the prospects of a new economic policy for Germany? Granted that a lot of water has gone over the dam in 4 years, that many conditions have changed, that many things which could have been shifted about in 1945 have now become permanently rooted, what might be done, ideally, by a new civilian high commissioner who came in with a stock of new brooms?

There has been no lack of specific plans and proposals for treatment of German problems. But all the current crop is subject to the overriding criticism that we have not established firm agreement among ourselves on final objectives. No system guarantees its own success. It is not enough to say we want a democratic economy in Germany. Military government has found it convenient, in certain cases where control over the German industrial brass was clearly essen-

tial, to plead that it would be undemocratic to dictate to the Germans. In other cases, the needs of a working democracy have been blandly ignored, and military government has intervened to save the American taxpayer's money.

Assuming the new high commission starts with the objective of establishing a democratic economy in Germany and not merely establishing certain forms of voting and office holding, several general principles must be preserved no matter what particular schemes may be adopted. Here are a few of them:

1. Forget the idea that reorganization of the ownership and control of German finance and industry, especially the Ruhr industry, will cause German "irredentism."

German nationalism produces a great drive for horizontal or geographical unification of Germany, a drive that will scarcely be stopped by splitting off trizonal Germany into a separate western German federal republic. Germany is not by any means unified vertically under the leadership of the industrialists who controlled the heavy combines and the banks. To see a threat of irredentism growing out of changes in the control of the Ruhr industry is to ignore the fact that German labor, by and large, and most other segments of the German population, regardless of previous Nazi affiliation, waste no love on the top Ruhr industrialists. The proposal to extend the area of international control by including the industries of neighboring countries, and to give these same German industrialists a voice in international management as a way of avoiding "irredentism," would only discourage the few democratic elements in German labor.

2. Revise the balance between heavy and light industries in Germany to accord with the needs of a balanced economy for Europe as a whole.

Two of the biggest mistakes under military government were: (a) looking at Germany exclusively and shaping economic policies to reduce costs there as quickly as possible, regardless of the effect on other nations of Europe; and (b) rebuilding Germany along the old lines, to avoid collision with previously established business interests. When the United States assumed responsibility under the Marshall plan to underwrite the recovery of all western Europe, the shortsighted Germany-first policy of military government no longer made any sense at all. And with the American public spending billions to bolster the European economy, protection of a few hundred millions in private investments in Germany at the expense of the whole plan amounts to sabotage.

3. Face up to the fact that necessary changes in the economic balance of Germany will bring protests from the business groups in the United States that are affected.

A rapprochement among top American, British, and German interests after World War I, working through international cartel agreements and other devices, established Germany as the major European exporter of heavy equipment and made other European countries dependent on Germany for capital equipment. To correct this unbalance while maintaining full employment in Germany means greater concentration on building up light industries. This means that countries like the United States must be willing to import products of light and consumer-goods industries. The first attempts in this direction brought screams from American business that new imports would cause unemployment here. The proper answer is not the restrictive one of excluding German products. Ability of American consumers to purchase must instead be increased, to absorb both the domestic and the imported production.

4. Get rid of the autarchy principle.

Prewar Germany, whose natural resources included only coal, potash, and forests, tried to produce synthetically at high cost all the items needed for the economy, in peace and in war. In addition, continued currency restrictions in Europe have driven most European countries toward an economy of self-sufficiency. German autarchy wasted prodigious amounts of coal to make synthetically the kinds of products that tropical sunshine and vegetation produce naturally in other parts of the world. Continuing autarchy, while it may reduce slightly the current year's burden on the American taxpayer, will build an economy that is permanently costly and permanently dependent on trade restrictions, tariffs, exchange controls, or other expensive protective devices. The only way out in the long run is to adopt a functionally sound scheme in the first place. The prospects for an autarchy program do not improve with age.

5. Resist the centralization of power.

The principle of organizing a Federal Government to take the place of a loose confederation of sovereign States was the great political invention of the eighteenth century. It made possible the modern Federal Republic, combining the advantages of great geographical extent with the preservation of individual freedom. This Federal principle has equally valid application to the organization of a national economy. In the United States, a corporate giant like General Motors approximates a federal organization of separate firms making different automobiles, in contrast with the centralized organization of a company like U. S. Steel, dominated by a full-fledged bureaucracy centered in its Pittsburgh office.

Under military govern.nent, application of the federal principle to economic organization was not only directed by official policies, but was practically demanded by the existing division of Germany into zones and the grave difficulties of transport and communication. Instead, on the specious claim that a centralized bureaucracy will be an asset in the event of a future decision to socialize industry, a complex system of licensing and other restrictions has been set up in the bizonal agencies at Frankfurt with the help of pfenning-a-month men from the old Big Six banks and the top industrial combines.

Attempting to maintain centralized bureaucratic control, with detailed management decisions from the top, has kept control in the hands of a few, at the cost of frustration and inefficient production. Despite daily evidence of this fact, General Clay's economic advisers resisted decentralization in practice, and pressed constantly for tightly centralized control over economic details. An honest study would show tremendous opportunities for delegation of powers, which would distribute responsibility more widely, while releasing productive energies which in the past have been stymied by licensing arrangements and other red tape.

6. Face the need for new and younger technicians and industrial plant supervisors.

Instead of trying to keep the old management personnel, along with their habitual preferences in economic organization, military government should have recognized that the old experienced management is not only 10 years older than it was when direct economic dealings were broken off between Germany and Britain in 1939. Those who survived either had agreed with Hitler in the first place, or had learned to do so in the 12 years of Nazi power. The attempt, begun in 1945, to teach the old dogs new tricks of democratic economic organization was quixotic in prospect and is a flop in retrospect.

7. Place more reliance on laws and general rules, less on individuals and personal whims.

The concept of centralized rule from the top by a small clique of uninhibited and able men is fast becoming a fixed characteristic of our age. John Marshall's dictum that ours is a government of laws, not of men, may have been starry-eyed in one way, but this current practice, running in the opposite direction, is bleary-eyed. From the beginning of the occupation, Germany has had need of both economic and political guide posts, with a clear statement of what thou shalt and shalt not do. Instead, the Germans got military government administrators vested with almost unlimited discretionary powers, and endowed with practically no idea of what is meant by the rule of law.

These seven points of policy are not exhaustive, but they may provide some basis for measuring gains and losses when the results of the present meeting of the Council of Foreign Ministers become apparent. Military government sold part of our birthright 3 years ago by abandoning the federal principle and working with the British for economic centralization. Now that the Russians have espoused centralism, our negotiators face some of their own guns in trying to readopt decentralization.

We need something better than mere jumping to the other side of any fence from the Russians. Too many clashes with the Soviets have already provided the occasion for counter moves that "happened" to preserve the trusts, to reinstall Nazis in powerful positions, and to pave the way for new cartel-like arrangements.

The new High Commissioner can show where he stands by the changes he makes in the American organization in Germany. If he falls down on the job, we may have lost our opportunity for peace.

Our Air Force Policy

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1949

Mr. GRANT. Mr. Speaker, on Friday, June 17, 1949, Hon. W. Stuart Symington delivered the commencement address on Air Force policies to the graduating classes of the Air War College and the Air Command and Staff School at Maxwell Air Force Base, Montgomery, Ala.

I doubt that any public official in the Nation is doing a better job than is Secretary Symington. His work with the Air Force is showing definite results and I am sure that he has the thanks of a grateful Nation.

The Air University is headed by Gen. George C. Kenney as commanding general. The Air War College by Maj. Gen. Orvil A. Anderson as commandant, and the Air Command and Staff School by Brig. Gen. John A. Samford as commandant.

The people of this Nation can rest assured that these officers and their competent aides are doing everything within their power to assure this Nation air supremacy.

The excellent address of Secretary Symington is as follows:

In these remarks I plan to discuss Air Force policy in terms of those basic facts of the world situation and those basic elements of national policy from which Air Force policy is derived.

I am sure all of you are aware that the military services do not exist for their own

sake, but rather as a vehicle for expressing the national will. The policy of a military service, therefore, must be derived from national policy, and not the other way around. The fundamental test of military policy is whether it is designed to carry out the national policy.

I would not burden you with such truisms were it not for the fact that there are still some who seem to believe that the Military Establishment is led by men who put service interest ahead of the national interest.

That attitude is not supported by the facts as I have found them during years of close contact with ranking members of the Army, Navy, and Air Force. I believe these critics of the military represent a definite minority point of view.

Nevertheless, they are quite vocal, as evidenced by the following extracts from the recently publicized volume I of the report of the Eberstadt task force committee of the Hoover Commission.

"The result (of Air Force efforts in behalf of its program in the late spring of 1948) was, however, a case of a service program making national policy rather than national policy being implemented by a service program."

"The military have picked up the ball of national policy and are starting down the field with it."

"Both services (Air Force and Navy) have too often allowed their statements of requirements to be affected by service ambitions and a desire to hold their end up."

Again I say that these criticisms are contrary to the facts as I see them, and to Air Force policy as I know it to be.

This antimilitary attitude is recurrently pronounced after a war. We of the military departments must earnestly search our souls to be sure that we act and think in such a way that there is no justification for such accusations. But, on the other hand, we must realize that we are the repositories of professional experience and therefore responsible for judgments on military matters. And when convinced that the national interest requires a strong military position we must not permit any fear of possible criticism to deflect us from recommending that position.

I shall first state three principal Air Force objectives and then touch briefly on 10 broad factors which produce the requirement for those objectives.

In essence, Air Force policy and programs are aimed toward concurrently achieving these three goals:

1. Air supremacy for the United States and the other democratic nations of the world.

2. Adequate air power at minimum cost to the American taxpayer and at minimum sacrifice of our individual liberties.

3. Real unification, both within the National Military Establishment and within the framework of the entire integrated national security program. Without this unification the other two objectives cannot be achieved.

Now for a brief mention of the essential elements of the international situation—and our national policy—which establish the validity of these Air Force objectives. Let me quickly list them and then go back and discuss each one in turn.

As I see it, the American people recognize that:

1. Our so-called traditional national policy of political, economic, and military isolationism has been abandoned.

2. Our traditional dependence on ocean and polar barriers must yield to the necessity for military readiness.

3. There exists only one current source of threat to our national security, instead of multiple sources as in the past.

This threat is quite different from the one we last faced; and, therefore, we must be sure that the military means we develop are designed to meet the new threat, and not the old one.

4. Our resources—both manpower and matériel—are not unlimited, hence they must be husbanded, lest we squander our children's heritage.

5. The military forces of democracy are numerically inferior to the military forces of communism; therefore, the military forces of democracy must attain and maintain qualitative—technological—superiority.

6. We cannot afford to face repeated wars, and threats of wars; and, therefore, our current military effort must be designed to destroy the root sources of an enemy's military power—this as distinguished from merely defeating his military forces in the field.

7. Modern war is fought on four major fronts—diplomatic, economic, psychological, and military. Military strength is essential, but the role of the military nevertheless is distinctly limited.

8. In the process of preparing to defeat a regimented enemy, we must not ourselves surrender to regimentation.

9. We must develop and maintain adequate military strength without committing economic suicide.

10. We are in the midst of a battle for the minds of men, and in such a battle the only absolute weapon is truth.

I do not pretend that the above list completely covers all the factors bearing on the problem, but to me those are the essential elements as they pertain to this discussion of Air Force policy.

Turning now to a brief elaboration of each of these 10 points.

The first point was abandonment of our former national policy of isolationism. The world knows that this Nation will always continue to seek a formula for settling international disputes without resorting to arms. But never again with our eyes closed; never again through a policy of self-inflicted unilateral weakness.

Two recent world wars have convinced the American people that it is futile to seek peace and security through isolationism and disarmament. We know now that we must maintain sufficient military strength to meet our obligations in the world community of nations. Without this strength a pact or treaty is little more than a pious wish.

The political isolationism of the United States ended with the United Nations charter.

Our economic isolationism ended with the Marshall plan.

And now our world position may end our military isolationism.

Whether these recent changes in national policy represent a reversal of our so-called traditional isolationism depends on how far back in our Nation's history you go to establish the tradition. If you go all the way back to our founding fathers you will find that they felt then as we feel now. As example, George Washington said:

"There is a rank due to the United States among nations which will be withheld, if not absolutely lost, by the reputation of weakness. If we desire to avoid insult, we must be able to repel it; if we desire to secure peace, one of the most powerful instruments of our rising prosperity, it must be known that we are at all times ready for war."

The chairman of the Senate Armed Services Committee said much the same thing in his recent Army Day speech. These are his words:

"Whether we like it or not, time, destiny, and the will of God have made us the leader in the coming contest for the survival of civilization. We must be internationally minded enough to meet this challenge. If we wear the blinkers of isolationism in this modern day, we will do nothing more than refuse to see our eventual, inevitable destruction. If we are alert to our new role, if we discharge well our responsibility, if we furnish the leadership necessary, if we keep this Nation strong, God willing, I believe that eventually we will bring forth on this planet a new code which will make mass killings a thing of the past."

This military strength, so obviously essential to our national security, must be strength in being—this as distinguished from potential military strength, which does not become combat-effective until long after the call for mobilization. That was the second of our principal points.

More than any other factor, the airplane is responsible for this requirement that we maintain a much larger Regular Military Establishment in so-called peacetime. The airplane robbed us of those ocean and polar barriers which for centuries were the principal safeguards of our security. The airplane has brought the battlefield into every man's front yard, regardless of where he lives. The ramparts we must watch in this air-atomic age are aloft—and every literate person in these United States knows it.

Time—that is, time to mobilize our resources for war—has been shortened to a tiny fraction of what it formerly was.

The incredibly rapid development of weapons is responsible for this. As example, the existence of the intercontinental bomber carrying the atomic bomb, or other weapons of mass destruction, has created a military task without parallel in the world's history.

The task is this: To make sure that the first day of a future war will not be our day of defeat.

And by defeat I do not mean surrender in the traditional sense. I mean the infliction of a mortal wound from which the Nation could not recover, no matter how long, desperate, and agonizing the ensuing struggle might be.

In brief, we must maintain adequate military strength in being, and an essential element of this military strength must be an adequate Air Force in being.

This obvious requirement for adequate air power is but a part of the larger problem of determining over-all force requirements for the Military Establishment as a whole—the Army-Navy-Air Force team. And that leads us to consider the source and nature of the external military threat we face. This you will recall, was the third in our list of 10 principal factors affecting our problem.

The beginning of wisdom in military planning is to size up your opponent. In this respect we are now in a peculiarly advantageous position. Our military-planning problem is now more clearly isolated than ever before.

This should enable us to bring our military plans into much sharper focus than in the past, when we had to provide plans and forces for several possible combinations of opponents.

With our plans in sharper focus, we should be able to balance our forces more specifically against the tasks to be performed—which is the true objective of balancing forces.

As General Eisenhower has expressed it:

"The problem of balance between the armed services is the creation of those forces which enable each service to make its contribution to the over-all strategic plan."

I interpret that to mean that balance among military forces is a quantitative and qualitative relationship, based on the sequence of military tasks called for in the strategic timetable.

That is the kind of balance that provides greatest effectiveness, at least cost in lives and treasure. That is the kind of balance the Air Force seeks.

It's also the kind of balance the Nation must have—because our national resources cannot support any other.

That, you will recall, was our fourth point—we now recognize that our national resources are clearly limited, and therefore we cannot repeat our past errors of trying to produce huge quantities of everything that might conceivably be useful in a war. There is now no military necessity for

tolerating such errors. Our military problem is clearly isolated. Hence, our strategic plans must exploit this opportunity for greater focus, and thus make optimum use of our land-sea-air team.

Then—and not until then—will we get really big economies from unification.

I dare say you recognize the truth of that position, so I won't belabor it further, except to quote you this illuminating extract from the War Department "Plan for Industrial Mobilization" produced in 1931, just 18 years ago:

"In practice, therefore, it is customary to approach our mobilization problem from the standpoint of determining how many men we believe it necessary to organize * * * rather than how many we could safely organize. Since the maximum forces we are potentially capable of supporting greatly exceeds any we would conceivably mobilize, this is a logical and certainly the most direct method we could use."

The thinking behind that plan of just 18 years ago is in striking contrast to our thinking today. We now recognize that even with total mobilization for war, the military forces of democracy would be much smaller numerically than the forces of communism. And therefore, in order to win, the military forces of democracy must be qualitatively superior, and must be employed so as to make the most of that qualitative advantage—by proper timing and sequence of military operations.

Recognition of that fact underlies the Joint Chiefs of Staff's emergency defense plan, which as you know, calls for a powerful air offense at the very outset of hostilities.

The core of this air offense is the strategic bombing effort. As General Bradley stated in a speech last February 4: "At the instant of aggression, the United States must fling the full force of its strategic bombing offensive against the enemy's heartland."

The strategic-bombing elements of the Air Force are, therefore, primarily designed to destroy—at the very outset of hostilities—the enemy's means of making, and supporting an attack against this Nation and its allies. This vital job, well done at the proper time, is the essential foundation—the beginning point—in the joint plan for using the mobilized land-sea-air team.

"The proper time," as General Bradley emphasized, is first—at the very start. Therefore, Air Force policy requires that an adequate strategic-bombing force be maintained in a constant state of combat readiness to do this job on a moment's notice.

Unfortunately, this particular aspect of Air Force policy is being misinterpreted, misquoted, and distorted completely out of perspective.

The stress placed by the Air Force on the importance of a successful strategic-bombing offensive has led some critics to accuse the Air Force of claiming it could win a future war by itself—perhaps by the use of strategic bombers alone.

That is a misinterpretation of the Air Force position. The Air Force is fully aware that a future war can be won only by the highest degree of teamwork among the three services. That is, and always has been, the policy of the Air Force. General Vandenberg and his staff have stated that policy—and only that policy—many, many times. I, too, have constantly reiterated it.

In fact, if that were not the Air Force policy, the group composition of the Air Force—indeed, the composition of the Military Establishment as a whole—simply wouldn't make any sense.

The group composition of the Air Force demonstrates that the Air Force knows a future war could be won only by the highest degree of teamwork among the Army, Navy, and Air Force. Two-thirds of the Regular Air Force groups are equipped primarily for air defense, and the support of land and sea operations. In addition, the Air National Guard—which would be mobilized immediately upon outbreak of hostilities—consists entirely of groups equipped primarily for air defense, and the support of land and sea operations. Thus, upon mobilization, more than 80 percent of the Air Force would consist of groups primarily equipped for purposes other than strategic bombardment.

On the other hand, if the composition of the Air Force did not contain enough strategic bomber groups—equipped with aircraft capable of accomplishing the required mission—then both the Air Force and the whole Military Establishment would be out of balance.

The strategic bombing groups are primarily designed to destroy the root source of any enemy's military power. That is the grand objective in modern total war, as distinguished from the mere defeat of the enemy's military forces. That was our sixth principal point for discussion.

If anyone doubts the validity of this objective, he has but to recall the rebuilding of German military power between World Wars I and II. Germany's military forces were defeated in World War I, and for many years the world believed the German military threat had been eliminated. However, the rebuilding of German military power—especially German air power—began before the ink was dry on the Treaty of Versailles.

By 1926—the year Germany became a member of the League of Nations—she possessed an enormously important war potential. Her leaders perceived the decisive importance of weapons superiority, and the opportunity for exploiting weapons research and development without overtly violating the terms of the Treaty. As example, although denied a military air force, Germany nevertheless launched her glider program and developed commercial aviation in such a way that her aircraft industry could be promptly converted to war purposes. And thus, during 5 short years—1935 through 1939—Germany produced Hitler's big stick—the Luftwaffe.

"Britain and France were caught with their aerial defenses weak and their fleets and fortifications outmoded. They had no alternative but to appease Germany's political demands until they could fill their own aerial scabbard."[1] At the risk of oversimplification, you might say that the failure of Britain and France to recognize the importance of adequate air power as a principal factor in modern warfare, led directly to Munich—where the threat of the Luftwaffe was used as an instrument of national diplomacy.

Our national objection, of course, is to prevent war, not to invite it. But should we ever be committed again to war, we must make sure that the end of those hostilities leaves little likelihood that the enemy's military threat will soon rise again, phoenix-like, from the ashes. We must destroy the enemy's war-making capacity for a long time to come—this in the hope that we may in time convince him of the immorality of aggression and the idiocy of war—so that he will genuinely cooperate in an international brotherhood wherein war is effectively outlawed.

If a potential enemy is aware that this is our war objective—and further that we are fully capable of accomplishing it—he will not attack us. That of course, is the fundamental basis underlying our national policy of maintaining a strong military posture.

That same principle is fundamental in determining the missions of the Army, Navy, and Air Force. To destroy the enemy's air force is only part of the offensive mission of our Air Force. The other part is—by strategic bombing—to destroy the enemy's war-making capacity as discussed above.

By so doing, a successful strategic bombing offensive assists the Army and Navy in accomplishing their offensive missions. That is real unified military teamwork of the highest order, and of the character that really decides the outcome of the military phase of modern war.

But we must not lose sight of the fact that this military phase is not the only phase—or even the decisive phase of modern war. This is the seventh of the 10 principal points we have been discussing.

I shall not dwell on the fourfold nature of modern war—the fact that such war is fought on diplomatic, economic, and psychological grounds as well as on the military front—because you have already covered that subject in your studies here and elsewhere in your military education.

Also there is a masterful discussion of this subject in the report of the President's Advisory Commission on Universal Training—the Compton Commission. However, the fact that I only give it passing mention should not be taken to mean that the Air Force regards it lightly. On the contrary, you could not establish the policy of the Air Force without first recognizing this fourfold nature of modern war—hence, the relatively limited role of all armed force in such a war.

This leads us to the eighth and ninth of our ten points of discussion—the necessity for maintaining military strength without losing our individual liberties and without committing economic suicide.

There is no denying that a totalitarian government, exercising dictatorial powers over a completely regimented population, can attain more flexibility in the use of manpower and other resources for military purposes than can a democracy. Consequently, a totalitarian government can place itself in a high degree of military readiness at relatively low cost. But should we resort to such methods and regimentation in a democracy, we would lose the very thing we would be preparing to fight for—our freedom as individuals. By regimenting ourselves in order to put ourselves on an equal footing with the totalitarian nation we would, in effect, be surrendering to totalitarianism.

This is not just an academic observation. It has very practical applications in our current military planning.

Equally applicable is the necessity for maintaining a sound national economy. In our efforts to achieve necessary military readiness we must not tax ourselves into defeat by economic collapse. It makes no difference whether the purpose of unbearable taxation is to finance military preparedness. The result would be the same: economic collapse followed by a political surrender to internal forces of disorder, some form of totalitarianism which would destroy our cherished freedom.

Those two political and economic facts of life point up the critical need for genuine unified effort to tailor our Military Establishment to a sound strategic plan, and thus eliminate unnecessary duplication of forces, with its attendant waste and inefficiency.

That is basic to the Air Force concept of unification in the national military establishment. In plain language it is:

1. That the above three services are mutual interdependent.

2. That in order to avoid costly duplication, each service should specialize in developing forces for certain specific functions.

3. That these specialized forces should be combined into a balanced team, as parts of the Military Establishment in which each component will be assigned those missions which it can perform most effectively, and most economically.

---

[1] The Impact of Air Power Upon History, by Prof. Eugene M. Emme.

The Air Force is striving earnestly to put these principles into practice. Within the Air Force itself we are aggressively pursuing a modern management program—designed to keep our capacity up and our costs down. I won't go into the details of this program—management control through cost control—because you are already familiar with it.

Turning now to the tenth and last of our principal points for discussion—the fact that we are in the midst of an ideological struggle—a battle for the minds of men, as distinguished from a material objective.

This fact strictly limits the role of all armed force in the current conflict. Armed force, fighting for an immoral principle or objective, has never been able to gain a lasting victory over a morally superior idea.

The wars against Christianity are sufficient case in point.

In brief, the only real way to defeat a bad idea, is with a good idea. Ideas are the currency of thought—and good currency always outlives the bad.

In this struggle between democracy and totalitarianism, therefore, the only absolute weapon is truth—which is not a military weapon.

Armed force, fighting on behalf of truth, at best can only create conditions favorable to the spread of truth. If armed force fails to do this, it defeats itself.

"Might cannot make right" is a basic policy of democracy and therefore, it is basic to all military policy within a democracy.

And so we complete the discussion of our 10 principal points.

From this discussion w.. conclude that:

1. As leader of world democracies, the United States must support the United Nations, and be prepared to carry out other commitments such as the North Atlantic Pact.

2. The principal threat to world peace is totalitarian aggression. To meet this threat requires an integrated security program which includes many elements in addition to the purely military element.

3. The maintenance of armed force in being is a basic requirement, and an adequate air force is an essential element.

These facts being true and self-evident, air force policy must be designed to achieve concurrently the three goals defined at the beginning of these remarks, namely:

1. Air supremacy for the United States and the other democratic nations of the world.

2. Adequate air power at minimum cost to the American taxpayer, and at minimum sacrifice of our individual liberties.

3. Real unification, both within the National Military Establishment and within the framework of the entire integrated national security program. Without this unification, the other two objectives cannot be achieved, and therefore our freedom as a Nation will be jeopardized.

Yalta—The United States Reaps Fruit of a Diabolical Agreement

---

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, the evil that was committed at Yalta becomes more apparent every day. Kiyoshi Kawakami in the current issue of Human Events, June 15, 1949, points out what is happening as a result of the Roosevelt agreement and under leave to extend my remarks, I am including the article in question:

THE FRUITS OF YALTA

(By Kiyoshi K. Kawakami)

The debacle of Chiang Kai-shek's China has already forced the Department of State to urge an emergency appropriation of $150,000,000 for southern Korea. Here is an initial consequence of abandonment by the United States of its twin traditional policies in the Far East—the open door and the balance of power.

Enunciated by John Hay, as Secretary of State just 50 years ago, the open-door doctrine was officially abandoned when the United States in 1945 approved special treaty rights and privileges for Soviet Russia in Manchuria. This was wholly at variance with Secretary Hay's assertion of September 6, 1899:

"The Government of the United States will in no way commit itself to a recognition of exclusive rights of any power within or control over any portion of the Chinese Empire."

On the other hand, the principle of the balance of power was never officially proclaimed in Washington. Not a few American statesmen and publicists, indeed, have expressed abhorrence at suggestions that their country should embrace this principle in the conduct of its diplomacy. Balance of power, which of course is the acceptance of a condition rather than the promulgation of a theory, has often been denounced as an evil British invention designed to perpetuate an empire upon which the sun never sets.

And yet the very principle so distasteful to Americans has actually guided the Far Eastern diplomacy of their own country. Unhonored and unsung, the American policy of maintaining political equilibrium in Asia has played an even more important role than the much publicized open-door doctrine. This is wholly logical, because the open door inevitably swings shut when any single power in a given area becomes so strong as to dominate all others.

As long as American diplomacy adhered to the principle of the balance of power, American prestige and interests in the Far East were preserved, though sometimes precariously. When this principle was abandoned at Tehran and Yalta the carefully developed moral and material investment of the United States was doomed to disintegration.

II

Theodore Roosevelt was the first President who adopted the balance of power as the guiding principle of American diplomacy in the Far East, though he never officially proclaimed it. On June 16, 1905, when the Russo-Japanese war was approaching a climacteric stage, Roosevelt wrote Senator Henry Cabot Lodge:

"While for the rest of us, Russia's triumph would have been a blow to civilization, her destruction as an eastern Asiatic power would also in my opinion be unfortunate. It is best that she should be left face to face with Japan so that each may have a moderating action on the other."

And later, on July 24, 1905, Roosevelt confided to his friend Sir Cecil Arthur Spring-Rice (later British Ambassador to Washington) this significant information:

"As soon as this (Russo-Japanese) war broke out I notified Germany and France in the most polite and discreet fashion that in event of a combination against Japan to try to do what Russia, Germany, and France did to her in 1894 (1895) I should promptly side with Japan and proceed to whatever length was necessary on her behalf."

A Russo-French-German coalition had forced Japan out of Port Arthur and Dairen when these Manchurian strongholds were surrendered by China as a result of the Sino-Japanese War of 1894–95. Theodore Roosevelt, a decade later, would tolerate no repetition of this combination at Japan's expense. Quite possibly this President, in thus committing himself to a policy of grave international significance, acted in contravention of the spirit of the Constitution. More certainly, his action kept France or Germany, or both, from coming to Russia's aid and thus localized the war to Manchuria.

From the closing decades of the last century, down to the opening of World War I, Russia was a perpetual menace to China, Korea, and Japan. To preserve even a semblance of power equilibrium across the Pacific, Theodore Roosevelt therefore thought it in the American interest to support Japan, since China and Korea, even with foreign aid, seemed incapable of standing up to what Rudyard Kipling contemporaneously called "the bear that walks like a man."

Even after the peace of Portsmouth, N. H., effected through Theodore Roosevelt's good offices, the Russian menace was not removed. To guard against Russia's possible war of revenge, Japan allied itself with Britain, a step which had Roosevelt's support.

III

World War I brought temporary eclipse to Russia's Asiatic ambitions and resulted in a radical realinement in the Far East. The Japanese Navy had come to rule much of the Pacific; the German foothold in Shantung was taken over by Tokyo; the Japanese leaders cast covetous eyes on eastern Siberia. In short, Japan in turn threatened that balance of power which Theodore Roosevelt had sought to maintain.

Now the American policy was to restrain Japan. In 1918 an American contingent was dispatched to Siberia ostensibly to cooperate with Japan against the establishment of Communist control, but perhaps as much to keep a watchful eye on the exuberant Japanese forces. Washington even maneuvered to appoint an American engineer as supervisor of the Russian-owned north Manchurian railway, to forestall possible Japanese domination of the road.

The Washington Conference of 1921–22, whatever its stated purpose, was actually promoted to restore the balance of power in the Far East. This aim was revealed in the treaties and agreements adopted by the conference. The United States successfully brought pressure to terminate the Anglo-Japanese Alliance. Japan was deprived of her new acquisitions in Shantung. The Japanese Navy was reduced to the ratio of 3 as compared with 5 each for the United States and Britain.

For some years after the conference Japan, mollified by the temporary prosperity engendered by wartime and postwar business expansion, seemed inclined toward a course of moderation. Then came the great depression of 1929. The Japanese military leaders seized their opportunity. Tokyo again embarked upon a course of overseas expansion, particularly in Manchuria and north China.

In the eyes of official Washington, the resurgent Japanese expansionism brought a renewed threat to the balance of power so carefully restored at the Washington Conference. The nonrecognition principle, enunciated by Secretary Stimson in 1931 toward the puppet state of Manchuko, and President F. D. Roosevelt's recognition of Soviet Russia in 1933, both had for their purpose the reestablishment of balance of power in the Far East. Franklin D. Roosevelt, perhaps unwittingly, then upheld Theodore Roosevelt's policy of keeping Russia "face to face with Japan so that each may have a moderating action on the other."

IV

The end of World War II brought the United States—rather than Japan—face to

face with Russia. It was entirely foreseeable, but American statesmen and strategists responsible for the conduct of the war seemed curiously blind in their adoption of measures which were cumulatively certain to produce the present overshadowing problems.

Even at the height of Japan's victories in the Pacific no one with a knowledge of its resources, relative to those of the United States, could fail to foresee the ultimate American victory. By the time of the Yalta Conference Japan had suffered defeat after defeat; the greater part of its naval and merchant fleets were sunk, the country was on the verge of starvation, its surrender only a matter of time.

Surely the problem for American statesmen, then, was how to salvage what they could out of the wreckage of the balance of power. To every well-informed layman it was as clear as day that Soviet Russia, riding the crest of the American victories, would press toward the Pacific and help the well-organized Chinese Communists toward the control of China.

In 1945, as Human Events at least then pointed out, it was the historically logical and politically obvious course of American diplomacy to support Nationalist China as a counterbalance against the certain Soviet advance. Most of all, American leaders should have seen to it that Manchuria should be wholly restored to Nationalist China. For whoever controls Manchuria, at once the most industrialized and the most prosperous agricultural region of China, will eventually control the entire country.

Yet, at Yalta, Mr. Roosevelt virtually surrendered Manchuria to Soviet Russia, which in turn handed it over to the Chinese Communists. The defeat and obliteration of Chiang Kai-shek has been the wholly predictable result. Even now many Americans are deluding themselves, by hopefully asserting that Mao Tse-tung will prove a Chinese Tito, or that he cannot extend his control much further south because he has not enough administrative personnel for the purpose.

Mao has been a most faithful follower of Moscow. But should he prove unsatisfactory to Russia, Stalin could and probably would give Manchuria and North China to Mao's old and bitter rival, Li Li-san, whom the Kremlin has already set up at Harbin as administrator of Manchuria. Li was brought back to Harbin after years of indoctrination in Moscow, and is said to be Stalin's fairhaired boy.

The balance of power, which for half a century served as America's diplomatic bulwark across the Pacific, died an ignominious death at Yalta, as did the "open door." Inevitably Soviet Russia became the master of the Far East. Extension of the Marshall plan to southern Korea is scarcely an effective measure to retrieve the loss which the United States has inflicted upon itself, and upon China.

[Mr. Kawakami is a veteran Japanese liberal who has lived in the United States since 1901.]

To Prevent Criminal Waste

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I append hereto a recent editorial from the Christian Science Monitor bearing upon the report of the Hoover Commission and commenting upon some of the difficulties which will stand in the way of carrying into execution the recommendations made by the Commission:

TO PREVENT CRIMINAL WASTE

Over the last week end the Hoover Commission turned in its final report on reorganization of Federal administration. Judging by headlines, the American press and public gave it less attention than the latest "whodunit." Yet this effort represents a magnificent program for improving their Government. Adoption of these reforms is more than a matter of preventing billion-dollar waste; it is a matter of preventing the criminal waste of this unique opportunity to make democracy work more successfully.

When again can America hope for this conjunction of advantages in a plan to reform their Government: A nonpartisan project, initiated by Congress, headed by a former Republican President and indorsed by an incumbent Democratic President, representing 2 years' work by a staff of 500 people, including top-rank executives in the fields of business, public service, and the professions, and directed by a man whose skill and experience in administrative organization has won world-wide recognition.

It is not going to be easy to simplify and dramatize this massive, complicated body of information and recommendations. This newspaper hopes to do its part in helping the public to understand the major purposes and methods. Success will also require continuing insistence on action. We intend to keep this reform steadfastly in the forefront of discussion until its principal objectives are attained.

The greatest business in the world—the conglomerate of Federal administrative agencies—has, like Topsy, "just growed." As Mr. Hoover says, it is like a forest of lean-to's around the Presidency. In the last 20 years it has increased 4 times in size and 12 times in cost. Only 10 percent of it is in Washington. The Commission estimates that every present Federal service—it did not attempt to say any service is unnecessary—can be performed with a 10 percent reduction in personnel. Savings are estimated at from $3,000,000,000 to $5,000,000,000.
